By the "comprehensive approach" I do not mean rigidly centralized planning and administration. Far from it. There always will be room for separate responsibility and initiative by local, State, and Federal Governments, and by private groups. That is part of the American pattern. What I do mean is that the various agencies and groups need to be more aware of the total situation for outdoor recreation, and more responsive to it. Although in many instances—but not all—there is friendly cooperation between workers in the recreation vineyard, each of the many units is naturally digging in its own backyard, and sometimes the dirt flies over into the neighbor's plot. The National Park Service, for example, must always consider its own legislative charter. So must the Forest Service, the Corps of Engineers, and other Federal agencies. The various State agencies must think first of their own electorate and legislature. Most of the private groups have special clienteles with particular interests. Corporate and individual landowners usually have objectives which may be incompatible with recreation. Lost opportunities are the inevitable results. This is too bad, for the family planning a vacation or weekend outing doesn't care whether the facilities are provided by Federal, State, or local governments or by private owners. They want to have a pleasant time outdoors within the limits of their budgets of time and money.

As one example of how a better approach would help, let us take a look at how recreation acreage is distributed throughout the country and at how the present locations compare with current and future patterns of population. Less than a quarter of the cities have enough nearby recreation space. The shortage is especially marked in the South. A great many States don't have enough intermediate recreation areas. Here, too, portions of the South are in a particularly bad way. But so also are several of the Mountain States, probably because they rely so heavily on the national forests and national park areas. More than 80 percent of the federally owned resource-based areas are in the West, where only 13 percent of the people live. By the year 2000 there will have been a westward shift in population; although the northeast and north central regions will have more people, they will have a smaller share of the national total. But more important than regional shifts is the prospect that most of the increase in population will be urban. Large cities from southern Maine to northern Virginia will form an almost continuous zone of heavy settlement, which already has been referred to as a megalopolis. There will be other great concentrations around the Great Lakes and along the gulf and Pacific coasts. In a word, the contrasts on the population map of 2000 will look much like those for 1950, only more so.

More city, county, and State areas in the urbanized regions will not only meet increases in the present pattern of demand, but will also offer attractive alternatives to families who otherwise would have no choice but to strike out for more distant, resource-based recreation lands. More of such user-oriented and intermediate areas in the West will provide, perhaps even better than today, for thousands of families who use Federal lands because no others are available.

There will be more and more situations in which development of local and intermediate recreation areas will be more urgently required in the long-range, nationwide interest than in the immediate direct interest of a particular city, county, or State. If we are to keep up with growing recreation demand, there must be better ways of keeping the whole picture before even the most localized agencies and for encouraging local actions that will contribute to countrywide improvement.

USE OF THE FEE SETTING

Another great advantage of a comprehensive approach would come in the complicated area of fee setting. This is bound to be a live issue in any case, for any serious effort to keep up with demand for outdoor recreation is going to cost a lot of money—perhaps $50 billion or more just for buying and improving land between now and the year 2000, at the land-cost and required-acreage rates on user-oriented and intermediate land suggested earlier in this article. Most of the money will probably continue to come from local, State, and Federal taxes; the rest—very likely an increasing proportion—will come from direct charges on users of recreation land and facilities. The basic problem is to reconcile two widely held principles that often clash in application: That equal recreation opportunity for all is a public responsibility and that direct beneficiaries should pay for services rendered. This issue is already familiar, and there is no use in going into it here. The sense of public responsibility will keep a ceiling on fees, though there may be some hot arguments over just where a particular ceiling ought to be.

The chance to do something new will lie in using the scale of charges to promote more effective use of all outdoor recreation areas. This would mean setting fees with an eye to their general effects on recreation as well as on the particular area and agency involved. For instance, the fees for using most of the top-grade, resource-based areas might be considerably higher than they are today—an average of around $25, say, instead of around $3. This would reduce the number of casual visits and leave room for more people with a deep love of camping or sightseeing in remote areas. The more casual vacationists would be diverted to intermediate or user-oriented lands where fees were lower. Similar distinctions might be drawn between county and State facilities. Another reason for giving more attention to the relation between the charges in different places is the increasing mobility that will come from more cars and better roads. Many of the larger county and State parks are serving more and more people from outside their political boundaries. The only way to share the burden equitably (unless a State or county deliberately sets out to capture tourist trade) is to get back more of the costs from the users.

The comprehensive approach to outdoor recreation cannot, as we have already noted, be imposed from the top down. It will have to come from voluntary cooperation of all levels of government and private groups. The most promising forward step in many years was the establishment of the National Outdoor Recreation Resources Review Commission. Although even its broad charter for studies and recommendations excludes city recreation facilities, it includes all the others, a breadth of scope that represents a long step forward. Even more important, its operations and its report may offer suggestions for continued planning on a comprehensive scale.

GOVERNMENT AGENCIES AND FUNCTIONS RELATING TO OUTDOOR RECREATION AREAS

GOVERNMENT BRANCH OR AGENCY—GENERAL FUNCTIONS

Federal Government (1)

Congress: Passes laws, makes appropriations, investigates.

President: General direction of executive branch.

Department of Agriculture: Directs agricultural and forestry programs.

Forest Service: Manages national forests.

Department of the Interior: Directs various resource programs.

National Park Service: Manages national park system.

Fish and Wildlife Service: Manages Federal wildlife areas.

Bureau of Land Management: Manages grazing districts and public domain.

Bureau of Reclamation: Builds and operates reservoirs.

Department of the Army: Has certain civil works responsibilities.

Corps of Engineers: Plans and builds flood control and navigation projects.

State governments (49)

(Situation differs greatly among States; common situation described here.)

Legislature: Passes laws, makes appropriations, investigates.

Governor: General supervision over executive branch.

Park board [1] or department: Manages State park system.

Forestry board [1] or department: Manages State forests.

Wildlife board [1] or department: Manages State wildlife refuges.

State highway department: Manages waysides and other areas along highways.

Counties

(About 3,000—most do not have specialized recreation agencies.)

Usually have some general governing group, often called commissioners or supervisors.

May have park and/or recreation departments or officers, to manage parks (if any) and to direct activities on playgrounds or other outdoor areas.

May manage school systems, including use of playgrounds for general recreation.

Cities

(Over 4,000 with 2,500 or more population—more than half have specialized recreation agencies.)

Generally have mayor, city council, and sometimes appointed general manager.

Like counties, may have park departments or officers, recreation directors, and school administration, each of which is concerned with management of particular outdoor recreation areas.

---

[1] May be an agency independent of the Governor.

Clara Barton, of Oxford, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend

my remarks, I include therein a brilliant article on Clara Barton, founder of the American Red Cross, by the able writer of the Worcester Gazette editorial staff, Mr. Albert B. Southwick.

Since the great Clara Barton was born in Oxford, Mass., in my district, it is quite natural that our people should be particularly proud of her immortal contributions to the cause of humanity:

CLARA BARTON AND THE AMERICAN RED CROSS

(By Albert B. Southwick)

She was 40 years old and a politically appointed copy clerk in the Patent Office in Washington, D.C. She was physically unattractive, short and homely. She was in poor health and spirits.

Thus Clara Barton on the eve of one of history's great careers.

Born in North Oxford, Mass., in 1821, she was trained to be a schoolteacher. She had to give it up at 33 because of throat trouble. Political finagling landed her the Patent Office job, where she stayed for the next 7 years.

Then, in April 1861, Fort Sumter fell, the savage guns began to roar, the cries of the wounded began to resound from the battlefield, and Clara Barton found her destiny.

Some legends have no factual substance behind them. But the Clara Barton life was greater than the legend, tremendous though that was to become. With her devoted band of volunteers, she and her wagon trains of supplies, food, and bandages moved across the ravaged battlefields of Virginia behind the armies, feeding the wounded, binding up their bloody bodies, ministering to them in the hour of death, trying to keep track of the nameless graves.

GREAT EPIC

It was one of the great epics of human compassion, and it is only fitting that Charles Hurd's new book, "The Compact History of the Red Cross," (Hawthorn, $4.95), should begin with a graphic description of it. For out of that experience was born the drive, the dedication, the know-how and the determination that culminated in the establishment of the American Red Cross in 1881, by that same frail, indomitable little woman, Clara Barton.

Controversy swirled around the beginning of the Red Cross in this country, and controversy has been no stranger to it ever since. Initial resistance to any official tieup with the International Red Cross came from the traditional American feeling about "entangling alliances" with anything European. But, by one means or another, Miss Barton and her followers gradually got their way. When the battleship *Maine* was sunk in Havana Harbor, Clara Barton was on the scene in a few days. At 75, still frail, she went ashore at Siboney, followed by a train of six-mule Army wagons, to find a field full of wounded, dying men. "I had not thought to ever make gruel again over a campfire," she wrote, but she did, and once again, as in 1861–65, became "The Angel of the Battlefield."

CONTROVERSIAL FIGURE

But Miss Barton was getting old, and the Red Cross was facing new challenges. Her autocratic rule was challenged again and again after 1900, and she finally resigned in 1905, to die in 1911 at the age of 90. According to Hurd, her exact place in Red Cross history is still a matter for violent controversy. Like many another pioneer, she clung too long to power and to the old way of doing things. But her contribution is undeniable.

The American Red Cross as we know it today was largely shaped in the First World War, according to Hurd. It set up hospitals, operated them, ran ambulances, fought plague and starvation, dispensed $120 million—a huge sum for that time—served the needs of refugees, built up its famed system of volunteers, and, in short, did a tremendous job.

Then came the backwash.

In February 1920, Senator John Sherman of Illinois attacked the Red Cross for mismanagement and extravagance, claiming that it used 40 percent of its funds for salaries and traveling expenses. The Hearst papers called it a cold-blooded, highly professionalized charity trust that was usurping Government function. Its Russian relief program inspired violent attacks from the liberals, who accused it of supporting the old order; and from the conservatives, who said it was helping the Bolsheviks.

TWO CHARGES

In the era of prohibition, when tobacco was also banned in some States, two charges were brought against the Red Cross. First, it was charged with having sold cigarettes to soldiers in the trenches. Second, it was charged with having given away cigarettes thus demoralizing young American manhood.

Such charges have been going on ever since.

In World War II, the Red Cross was really an efficient, going organization. One of its supreme services during those years was the collection of 13,300,000 pints of blood for the armed services.

Indeed it is blood, and the fractionation of it, that has been one of the Red Cross great contributions to human welfare. Its laboratories and funds have led the way to gamma globulin, serum albumin, fibrinogen and other blood fractions of such importance to medical science.

Yet it is the blood collection program that has aroused the most recent attacks and controversy. The myth has spread that the Red Cross charges money for the blood it gives. Here in Hurd's words, are the facts:

"Red Cross blood is free, given freely by donors and handled as a charge paid from funds of national headquarters and chapters. In recent years the hospitals and clinics drawing upon the Red Cross blood banks have paid the small cost of the special containers in which it is packed. Hospitals using this blood do make regular charges for administering it. In too many cases, patients have not understood that their bills in connection with blood transfusions of Red Cross supplies have been exclusively for service, not for the blood itself.

WRONGLY CRITICIZED

"Yet despite this continuing battle for understanding, the blood program has become a miracle of organization and, under Red Cross development, a service that would be difficult to duplicate otherwise."

These words apply to the Red Cross itself. Misunderstood, wrongly criticized, subject to human and organizational mistakes, it has become an essential part of our national life.

It is fitting praise for Hurd's book to say that it gives an honest and appreciative picture of this great organization, which deserves the wholehearted support of every American.

Analysis of the Labor-Management Reporting and Disclosure Act of 1959

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. GOLDWATER. Mr. President, today, September 14, 1959, the President signed into law the new labor reform bill, and in doing so substantially achieved his own goals in this legislative area.

The new act, herein referred to as the conference report, with a few significant modifications, is essentially the Landrum-Griffin bill which passed the House on August 14, 1959. It also incorporates most of the President's recommendations originally made by him shortly after the opening of the 86th Congress early this year, 1959. Moreover, the President, immediately following the inclusion of the bill of rights for union members in the bill which passed the Senate late in April 1959, publicly expressed his approval of that provision, no similar provision having been included either in the President's original recommendations or in the Kennedy-Ervin bill either as introduced or reported in the Senate.

Again, a few days before the passage of the Landrum-Griffin bill in the House on August 14, 1959, the President, in a nationwide radio and television broadcast, stated his support of the Landrum-Griffin bill, and specifically indicated those provisions of that bill which, in substance, embodied his own proposals and which were either totally absent or inadequately provided for in the measure passed by the Senate. He had previously criticized the latter as being a weak and ineffectual proposal.

This memorandum analyzes the various provisions of the new labor law, and where appropriate, indicates those changes made in the original Senate bill—Kennedy-Ervin, S. 505—at the initiative of Republican Members of the Senate, as well as those made by the sponsors of the Landrum-Griffin bill in the House.

DEFINITIONS

Section 3(i) defines a labor organization to include "any conference, general committee, joint or system board, or joint council."

Organizations or associations of this type were not defined as labor unions in the bill reported by the Senate Labor Committee to the Senate. In executive session, I offered an amendment to include them which was rejected. On the floor, I again offered this amendment, which was, in substantial part, approved.

Failure to include such an amendment would have meant that these so-called intermediate labor bodies would have been exempted from the bill's many restrictions, requirements, and sanctions designed to achieve the minimum of necessary reform in labor unions. Among the organizations so exempted would have been the Western Conference of Teamsters, formerly headed by Frank Brewster, one of the most corrupt and dishonestly run labor organizations among the many shocking situations revealed by the McClellan rackets committee.

Section 3(k) defines "secret ballot" in labor union voting and elections. In committee, I offered an amendment to prohibit voting by proxy. This was rejected in the committee bill as reported but was adopted by the Senate, thus closing a significant loophole by eliminating one of the devices used by corrupt union

officers to perpetuate themselves in office.

Section 3(m) defines "labor relations consultant." The Senate committee rejected my amendment to define this term, but the Senate nevertheless adopted such an amendment. Inasmuch as the bill regulates the activities of these consultants, the failure to define them would have resulted in chaos, confusion, and endless litigation to determine precisely who were meant to be covered by such regulatory provisions.

Section 3(n) defines "officer" of a labor organization. The Senate bill, as reported from committee, contained no such definition despite the many provisions of the bill regulating and restricting the activiites of union officers, and the many prohibitions and sanctions, including criminal ones, directed against them as part of the reform program. Inasmuch as the Supreme Court had held that the term "union officer" as used in Taft-Hartley applies only to those so designated in the union's constitution, and does not apply to those not so designated even if they perform the functions of officers, the rejection in committee of my amendment defining the term, constituted an open invitation to unions to evade those provisions of the bill expressly designed to eliminate dishonesty and corruption in unions and among union officials. Fortunately, the Senate itself approved the inclusion of the needed definition.

Section 3(o) defines "member" or "member in good standing" of a labor union. No such definition was in the bill reported to the Senate despite the fact that a number of its provisions referred to "union members" or "members in good standing," particularly with respect to the rights of union members to vote, run for and hold union office, and certain limitations on trusteeships imposed by international unions on subordinate or local labor unions. Such definiiton was proposed and accepted on the Senate floor.

Section 3(q) defines "officer, agent, shop steward, or other representative" of a labor organization to include elected officials, and key administrative personnel of unions, whether elected or appointed. This provision, although necessary to illuminate certain provisions of the bill, was never included in the Senate bill at all, but was accepted in conference from the Landrum-Griffin bill.

All of the foregoing definitions, so necessary to an effective labor reform bill, yet so inexcusably omitted at one stage or another of the Senate bill's progress, are contained in the Landrum-Griffin bill both as introduced and as it passed the House, as well as in the conference report overwhelmingly approved by both Houses of Congress, and signed into law by the President.

In the Senate Labor Committee, I offered an amendment to exclude from the coverage of the labor reform bill, labor unions composed of government employees at all levels of government.

Inasmuch as these unions, in most instances, do not have the right to strike or even to compel their governmental employers to bargain collectively with them, and even more significantly, are powerless to compel employees to join and hence are truly voluntary associations, I believe that they should be free from the regulations imposed by the new bill. As long as their members were free to resign from such unions without any harm or injury to themselves resulting therefrom, the members exercised an ultimate control over their officers sufficient, if properly exercised, to assure freedom from corruption, racketeering, and other abuses.

This amendment was accepted in the bill as reported and both the Landrum-Griffin bill and the conference report similarly exempt government-employee unions.

TITLE I—BILL OF RIGHTS OF UNION MEMBERS

The Senate bill, as reported, contained no bill of rights for union members. These provisions were offered on the Senate floor by Senator MCCLELLAN, and adopted with some modifications. The Landrum-Griffin bill, as introduced and as passed by the House, contained such a bill of rights.

Section 101(a)(1) gives every union member an equal right within his union to nominate candidates, to vote in union elections, to attend union meetings, and to participate in and vote upon the business of such meetings subject to reasonable regulation imposed by the union's own governing rules. House and Senate provisions were the same.

Section 101(a)(2) gives union members the right to meet and assemble freely with each other, to express any of their views and opinions, to express their views at union meetings on candidates for union office, and on any of the business before the meeting subject to the union's established and reasonable rules for conducting meetings, as well as to the union's right to establish reasonable rules as to the responsibility of members toward their union and to prohibit conduct by members that would interfere with the union's carrying out its legal or contractual obligations.

The Senate and House bills were almost identical in this respect with one important difference. The Senate-passed provision could be construed to limit the right of free speech by union members to communications made to other members and not to persons or sources outside the union. Thus, for example, there would have been no right of a union member to write a letter to a nonunion newspaper or publication criticizing the union or its officials. In the Landrum-Griffin House bill there was no such limitation on the right of the union members to express themselves freely. The conferees accepted the Landrum-Griffin provision.

Section 101(a)(3) provides that union dues, initiation fees, and assessments shall not be increased except by secret vote of the union members in good standing after reasonable notice of intention to vote on such question, or by majority vote of the delegates at a union convention following at least 30 days notice that such question will be voted on, or by majority vote of the union's executive or governing board in which case the increase shall be effective only until the next convention.

Section 101(a)(4) protects the right of a union member to sue in the courts or to initiate proceedings before administrative agencies, even if these are against the union or its officials. This is an absolutely essential safeguard because many union constitutions provide for disciplining any union member who sues the union or its officers. This provision was substantially identical in both the Senate and House bills with this important difference.

The Senate bill required the union member to exhaust his internal union hearing procedures before bringing suit, but permitted the union to spread these procedures over a 6-month period. As a result, a union member who wished to file charges of unfair labor practices against the union with the National Labor Relations Board would lose this protection of the bill of rights because the Taft-Hartley Act requires these charges to be filed within 6 months of the commission of the alleged misconduct. I attempted on the floor to correct this gimmick by shortening the waiting period of 6 months set forth in the bill of rights so as to preclude the possible loss of a union member's right to go to the NLRB. This proposal was not accepted.

The Landrum-Griffin bill, both as introduced and as passed, cut such waiting period to 4 months thus eliminating the gimmick and preserving the union member's rights both under the bill of rights and under the Taft-Hartley Act. The conferees accepted the provision of the House bill.

On the Senate floor, however, when Senator MCCLELLAN'S original bill of rights previously approved, was in the process of being modified, it was proposed further to limit this right of a union member to bring legal action to suits or proceedings brought by him which were not, directly or indirectly, financed, encouraged, or participated in—except as a party—by any employer or employer association.

I objected vigorously to this sweeping limitation. I pointed out, for example, that many banks were "employers" as defined in the bill, and hence that a union member would lose the protection of his right to sue if he borrowed money from a bank to finance his suit, or if a relative or close friend, who was also an employer, helped him in his suit.

At my urging, therefore, the Senate modified the limitation to apply to interested employers only, the legislative history making it clear that employers such as those in the foregoing examples were not included in the limitation which would apply only to employers who had a concrete interest in the litigation because of some relationship in the union other than the mere connection with the union member bringing the suit.

Section 101(a)(5) prohibits a union or its officers from in any way disciplining a member—except for nonpayment of dues—unless the member has been first, served with written specific charges; second, given a reasonable time to prepare his defense; and, third, given a full and fair hearing. The House and Senate bills were identical in this provision.

Section 101(b) makes null and void any union governing rule which is inconsistent with the bill of rights.

Section 102 gives a union member the right to sue a union in a Federal court, including the right to an injunction against the union, for violating his rights.

Section 103 preserves any other rights and remedies which a union member may have under any other State or Federal law, or before any other court or agency, or under any union constitution or bylaws. It thus guards against the application of the preemption problem in connection with the newly granted bill of rights, and preserves any broader safeguards for union members which may be contained in some union constitutions or bylaws.

Section 104 requires unions to make available copies of their collective bargaining agreements to those of their members who are covered by such agreements. The Secretary of Labor is given authority to enforce this provision by civil suit in a Federal court, including the securing of an injunction.

Section 105 requires every union to inform its members of the provisions of the new law. This provision developed from a proposal made by Senator JAVITS in committee and accepted in the bill as reported to the Senate.

TITLE II—REPORTING BY UNIONS, THEIR OFFICERS AND EMPLOYEES, AND BY EMPLOYERS

1. REPORTS BY UNIONS

Section 201(a) requires every labor union to adopt a constitution and bylaws and to file copies thereof with the Secretary of Labor, together with a report containing all of the significant data concerning the structure and organization of the union, such as names and titles of officers, initiation fees, dues, work permit fees, other periodic member payments, qualifications for membership, audits, expenditure authorization, selection of officers, discipline procedures, and so forth, and so forth, so as to give a complete picture as to how the union is authorized to operate in all significant fields of its activity. This is substantially the same in both the House and Senate bills with these important differences.

The House bill required every union to adopt a constitution and bylaws. The Senate bill did not, despite the fact that there are some unions which have neither constitution nor bylaws, leaving their members completely in the dark as to their rights or as to the powers and authority of their union and its officers. The conferees adopted the House provision.

In committee, I offered an amendment requiring the reporting of fees to be paid by transferred members which was accepted in the bill as reported. Similarly, the committee accepted a minority amendment requiring the report to state the address of the union's principal office as well as any other address at which the union's books and records were kept. Both the Landrum-Griffin bill and the conference report contain these amendments.

The Senate bill did not require reporting the fees charged by the union for work permits nor the procedures for issuing the same. These are a device whereby a union which cannot provide all the labor needed on a job permits nonunion employees to work, excludes them from membership in the union, but charges them for the privilege of working. Both the Landrum-Griffin bill and the conference report contain this requirements.

The Senate bill did not require the union to report periodic payments in lieu of dues required from nonunion employees. These are a device for securing the equivalent of union dues in States where compulsory union membership agreements are illegal, thereby attempting to circumvent what appear to be the prohibitions of such State laws. Both the Landrum-Griffin bill and the conference report contain this provision.

At the insistence of the minority members, the Senate Labor Committee accepted several amendments in the bill as reported which required the union to report its procedures for disciplining or removing union officials and for imposing fines, suspensions and expulsions of union members including the grounds upon which such disciplinary action may be taken, as well as any provision made for notice, hearings, judgment on the evidence, and appeal procedure. Both the Landrum-Griffin bill and the conference report contain these requirements.

The Kennedy-Ervin bill (S. 505), as introduced, as well as the committee bill reported to the Senate, merely required the union to report its procedures for the election of officers and stewards. On the Senate floor, this was expanded to reporting its procedures for the selection of officers and stewards and of any representatives to other bodies composed of organizations' representatives, with a specific statement of the manner in which each officer of the union was elected, appointed, or otherwise selected.

This much more comprehensive and effective provision is included in both the Landrum-Griffin bill and the conference report.

Section 201(b) requires every labor union to file an annual report with the Secretary of Labor, broken down into categories prescribed by the Secretary, showing the following information about the union's financial status for the preceding year: First, assets and liabilities at the beginning and end of the year; second, receipts and their sources; third, all payments made to each officer, and to each employee who received a gross of more than $10,000, from the union or any affiliated union, or from any other local of the same internationals; fourth, any loan made to any officer, union employee or member aggregating more than $250, together with the purpose of, security for, and arrangement for repayment of such loan; fifth, any loan to any business enterprise, together with its purpose, security, and arrangement for repayment; and, sixth, any other disbursements and their purposes.

The bill as it passed the Senate did not require reporting payments made by the international to officers, employees, or members of any of the affiliated locals, or made by a local to officers, employees, or members of the international with which such local was affiliated. The Landrum-Griffin bill closed the loophole and the House provision was included in the conference report. Similarly, the Senate bill, as introduced—S. 505—did not require reporting of direct or indirect disbursements to union officers and employees other than salaries and allowances. In committee this amendment was offered by members of the minority and accepted in the form in which it appeared in both the Landrum-Griffin bill and the conference report.

Again, the Senate bill, as introduced—S. 505—although it required reporting of loans by unions to union officers, employees and members, as well as to business enterprises, did not require a statement of the purpose of such loans. Members of the minority of the Senate Labor Committee insisted that such a provision be included and it was so included in the Senate bill as reported and ultimately in the Landrum-Griffin bill, the Senate bill, and the conference report.

The Kennedy-Ervin bill—S. 505—as introduced, required unions to report loans to any union officer, employee, or member, only if it aggregated in excess of $500. In committee, members of the minority sought to require the unions to report all such loans, regardless of amount. The issue was compromised by reducing the amount to $250, and that is the figure which appears in both the Landrum-Griffin bill and the conference report.

Section 201(c) provides that every labor union must make the information it is required to report available to all of its members, and gives each member a right to sue in a Federal court to compel the union to permit such member, for just cause, to examine "any books, records, and accounts necessary to verify such report." The Senate bill, as reported, contained no provision of any kind giving union members any access to such basic union books, accounts, and records. The amendment to that effect which I introduced in committee was rejected, but was adopted by the Senate, substantially in its present form, when I renewed this amendment on the floor. The Landrum-Griffin bill and the conference report both contain such a provision.

The Senate bill, S. 505, as originally introduced, permitted the Secretary of Labor to exempt from the financial reporting requirements described above, small unions having fewer than 200 members and gross annual receipts of less than $20,000. In the opinion of minority members of the Senate committee, this constituted a possible loophole permitting some of the most corrupt unions to escape the reporting requirements, and thus avoid the publicity concerning their affairs which it was the professed purpose of the bill to achieve. In committee, my amendment to remove this permissive exemption was rejected and a similar amendment offered on the floor by Senator CASE of New Jersey was likewise rejected. The Landrum-Griffin bill contained no exemption for any union and the conference report is the same.

2. REPORT OF OFFICERS AND EMPLOYEES OF LABOR UNIONS

Section 202(a) requires every union officer and nonclerical, noncustodial employee, to file a report with the Secretary of Labor describing any holding or transaction involving himself or his immediate family and occurring during the preceding year, which would constitute a conflict-of-interest on the part of such union officer or employee. No report is required in the absence of such a holding of interest or participation in any such transaction.

Briefly, what must be reported are holdings of interest in or the receipt of economic benefits from employers who deal or might deal with such union official's union, or holdings in or benefits from enterprises which do business with such union official's union. Section 202(b) exempts from these reporting requirements any bona fide investment or income therefrom in securities traded on a national securities exchange, or shares in an investment company, or securities of a public utility holding company, which such securities exchanges and companies are registered under applicable Federal law.

These provisions of the conference report, as did the Landrum-Griffin bill, close a number of loopholes and correct a number of serious defects which were present at one stage or another of the Senate bill's progress from initial introduction to final passage.

Thus, under S. 505, the Senate bill as introduced, the only benefit's required to be reported were income from conflict-of-interest transactions. Under the internal revenue laws there are a number of types of benefits which do not constitute income. A capital gain is not income; a genuine gift is not income; a prize for which no services are rendered is not income. To close this loophole, minority members in the Senate committee secured an amendment extending the reporting requirement to any income or other benefit with monetary value, a provision which is in both the Landrum-Griffin bill and the conference report.

Again, the original Senate bill although requiring disclosure of income derived from a business which buys, sells, or leases to the reporting official's union failed to include the language "or otherwise deals with" his union. An amendment to that effect by the minority was accepted by the Senate committee and is in both the Landrum-Griffin bill and the conference report.

The original Senate bill required a report by a union official of a payment to him from an employer or an employer's labor relations consultant only if it was in return for the union official's undertaking to influence or affect employees in the exercise of their rights under Taft-Hartley. The minority in the Senate committee secured an amendment extending the reporting requirement to any employer payment to a union official regardless of its objective, except for those payments specifically exempted from the criminal prohibitions in section 302(c) of Taft-Hartley. This provision is in the Landrum-Griffin bill and the conference report.

Throughout this section of the bill as it passed the Senate there was a failure to include reimbursed expenses as information to be reported under the heading of "Income or Other Benefits," as well as a failure to include benefits received by the official's spouse or minor child in one of the listed conflict-of-interest situations. These omissions were corrected in both the Landrum-Griffin bill and the conference report.

The Senate bill, as passed, required these conflict-of-interest reports from union employees, only if their gross payments from the union exceeded $5,000. This left a gaping loophole for the corrupt union official whose financial gains from his doubledealing activities were greater than what the union paid him. To avoid reporting, such an official would merely arrange for his compensation from the union to be fixed at a figure of $5,000 or less, and he could then continue to receive his ill-gotten conflict-of-interest gains without disclosing them either to his union members or to the public. Both in committee and on the Senate floor, I was unsuccessful in securing an amendment to require all union officials to report these conflict-of-interest situations regardless of what the union paid them. The Landrum-Griffin bill and the conference report, however, both close this loophole by requiring these reports without any such exemption.

As introduced, the Senate bill required a report of a conflict-of-interest holding only if the interest was actually still held at the moment of reporting. This would have permitted a union official to divest himself of such holding just prior to the reporting date, and thus, lawfully, to avoid reporting. The minority in the Senate committee closed this loophole by securing an amendment which required a report of an interest which a union official holds or has held during the preceding year. The Landrum-Griffin bill and the conference report achieve the same result as this Senate committee minority amendment.

And, finally, the Senate bill as passed, in granting an exemption from these conflict-of-interest reporting requirements with respect to the types of securities or shares described above, used language which would have granted the exemption to a union official who received his "benefit with monetary value" from the employer in the form of such securities or shares. Thus, under the Senate bill's language, if an employer had paid off a union official with whose union he was bargaining by giving him $10,000 in General Motors stock, this would not need to have been reported. The Landrum-Griffin bill, as well as the conference report, limited this exemption to bona fide investments made by the union official in such securities or shares, and thereby required reporting of any payoff regardless of the form it takes.

3. REPORT OF EMPLOYERS

Section 203(a) requires employers to report annually to the Secretary of Labor the terms, details, and identity of the parties involved, of any of the following payments or transactions, made by him during the preceding year:

First. Any payment or loan, direct or indirect, of anything of value—including expenses—or any promise or agreement to pay or lend, to any labor union or labor union official or employee, except payments or loans exempted under section 302(c) of Taft-Hartley or made by enterprises whose business consists of making loans and payments such as banks, insurance companies, et cetera;

Second. Any payment including expenses to any of his employees to get them to persuade other employees in the exercise of their union organizing or collective bargaining rights unless the latter employees are informed simultaneously or previously that such payments are made;

Third. Any expenditure an object of which is to violate the Taft-Hartley Act by interfering with, restraining or coercing employees in the exercise of their union organizing and bargaining rights under that act;

Fourth. Any expenditure an object of which is to obtain information about the activities of a union or of employees in connection with a labor dispute involvin the employer unless the information is to be used solely in an administrative or arbitration proceeding or in a civil or criminal court case;

Fifth. Any agreement or arrangement with a labor relations consultant who is not a regular officer, supervisor or employee of the employer, under which the consultant undertakes, directly or indirectly, to persuade employees in the exercise of their union organizing or bargaining rights, or to supply the employer with information about the activities of a union or of employees in connection with a labor dispute involving the employer unless the information is to be used solely in an administrative or arbitration proceeding or in a civil or criminal court case;

Sixth. Any payment—including expenses—pursuant to such agreement or arrangement with a labor relations consultant.

There was one basic difference between the House-passed Landrum-Griffin bill and the Senate-passed bill in connection with the employer reporting requirements. Under the Senate bill the employer was required to report any payment or expenditure or any arrangement with a labor relations consultant an object of which was to persuade employees in conection with the exercise of their union organizing and collective bargaining rights even if such payment was completely within the law. Under the House-passed Landrum-Griffin bill, reports from employers with respect to expenditures in connection with employees' rights, were required only if such expenditures were designed to interfere with, restrain and coerce employees in violation of the Taft-Hartley Act.

In conference, a compromise was reached. As indicated above, the employer, under the conference report, must report such expenditures only if an object is interference, restraint, or coercion, except where he gives something of value to any of his employees in order to get them to persuade other employees

with respect to their union organizing and collective bargaining rights. This type of payment constitutes interference in violation of the Taft-Hartley Act, but even so, need not be reported if disclosed to the employees being persuaded. As will be shown below, the requirement to report expenditures designed merely to persuade, as provided in the Senate bill, is retained with respect to arrangement with and activities by labor relations consultants.

Several other changes were accepted by the Senate conferees at the insistence of the House conferees in connection with the employer reporting requirements. Thus, the Senate bill required reporting by both employers and labor relations consultants of expenditures for information about activities of employees and unions in connection with a labor dispute. The House conferees, supported by the minority of the Senate conferees, secured an amendment limiting this reporting requirement to a dispute in which the reporting employer himself was involved, and not to labor disputes in general as provided in the Senate bill. The Senate bill, through the same process, was also modified by broadening its exemption from reporting expenditures for information to be used in administrative, arbitration and civil judicial proceedings to exempt information to be used in criminal proceedings. Thus, if the union, any of its members, or any of the employees, engage in criminal acts in a labor dispute—violence on a picket line, for example—the employer need not report any money he spends to secure evidence of such criminal conduct, if his purpose is to submit the same to the public prosecutor for use in a criminal proceeding.

Section 203(b) sets forth the reporting requirements for labor relations consultants. It provides that any person who pursuant to an agreement or arrangement with an employer undertakes to first, persuade employees as to the exercise of their rights to engage in union organizing and collective bargaining activities; or, second, furnish an employer with information about the activities of employees or a union in connection with a labor dispute involving the employer with whom he has the agreement or arrangement, must do the following:

First. File a report with the Secretary within 30 days of entering into the agreement or arrangement giving all the details concerning it.

Second. File annually with the Secretary for the preceding fiscal year if he received any payments pursuant to the agreement or arrangement, a report setting forth all receipts from all employers, and the sources thereof, on account of labor relations advice or services, as well as any disbursements and their purposes, in connection with such services, and this information shall be set forth as broken down into categories prescribed by the Secretary.

Section 203(c) exempts from all of the employer and consultant reporting requirements any information with respect to services in advising employers or agreeing to represent them before any court, administrative agency, or arbitrator, or agreeing to engage in collective bargaining or negotiate a collective bargaining contract in behalf of the employer.

Under section 203(d), no employer or consultant reports need be filed unless the specific circumstances set forth above are present.

Under section 203(e), as indicated above, none of the reporting requirements are applicable where the services are rendered by a regular officer, supervisor, or employee of the employer.

Section 203(f) preserves the rights of free speech and communication which are protected by section 8(c), the existing free speech section of title I of the Taft-Hartley Act. This specific safeguard was not in the Senate bill, but was accepted by the conferees just as it appeared in the Landrum-Griffin bill.

Section 203(g) defines "interfere with, restrain or coerce" as used in the employer and consultant reporting provisions to mean an unfair labor practice committed by an employer in violation of section 8(a) of title I of the Taft-Hartley Act. This, too, was taken by the conferees from the Landrum-Griffin bill.

ATTORNEY-CLIENT COMMUNICATIONS EXEMPTED

Section 204 exempts an attorney in good standing in any State from reporting any information which was lawfully given to him by any of his clients in the course of a legitimate attorney-client relationship.

The Kennedy-Ervin bill (S. 505), as introduced, contained no exemption for the confidential communications made by a client to his attorney. In committee, I offered an amendment to that effect which was rejected. I renewed this amendment on the Senate floor and it was there agreed to. Such exemption is included in both the Landrum-Griffin bill and the conference report.

REPORTS MADE PUBLIC INFORMATION

Section 205(a) makes all the reports filed with the Secretary public information and authorizes the Secretary to publish any of the information so obtained, to use it for statistical and research purposes, and to publish studies and analyses based on such information.

Section 205(b) directs the Secretary to issue regulations for the examination, by any person who requests it, of such information.

Section 205(c) directs the Secretary to issue regulations providing for the sale, at cost, of copies of such reports. He is also directed to furnish such copies free of charge to appropriate authorized State agencies. Any person who has filed a report under the act need not file a similar report or furnish the same information under any State law if he gives the State agency a copy of his report filed with the Secretary.

The Senate bill, as introduced, did not authorize the Secretary to make conflict-of-interest reports available to State agencies. An amendment offered in the committee by the minority members, closed this loophole and it remains closed in the conference report, as it did in the Landrum-Griffin bill.

RETENTION OF RECORDS

Section 206 requires every person who must file one of the above reports to maintain records which will furnish enough detailed and necessary basic information to verify, explain, clarify or check the accuracy and completeness of such reports, including, but not limited to vouchers, worksheets, receipts, and applicable resolutions. These records must be kept available for examination for at least 5 years after the filing of the reports to which they pertain.

The Kennedy-Ervin bill (S. 505), as introduced, did not require the making and preservation of these basic records with respect to conflict-of-interest reports by union officials. The minority members in committee succeeded in extending the requirement to these latter reports as well and the bill, as reported to the Senate, so provided. The conference report retains this essential safeguard as did the Landrum-Griffin bill.

The Senate bill as passed merely required the preservation of these basic records under conditions and for periods of time prescribed by the Secretary. The Landrum-Griffin bill, as well as the conference report, eliminate this discretionary authority of the Secretary and lay down a flat and unequivocal order, which permits of no exceptions, that they be kept available for at least 5 years. The 5-year period coincides with the length of the statute of limitations for criminally prosecuting acts of perjury under Federal law.

EFFECTIVE DATE

Section 207 sets forth the effective dates on which the foregoing reports must be filed with the Secretary.

RULES AND REGULATIONS

Section 208 authorizes the Secretary to issue rules and regulations prescribing the form in which the reports must be filed and such other reasonable rules and regulations—including rules requiring reports on trusts in which a union is interested—as he finds necessary to prevent circumvention of the reporting requirements. The Secretary is also directed to prescribe by general rule—and not on a case-by-case basis—simplified reports for unions and employers if he finds that because of their size—which actually means their lack of size—a detailed, regular report would be unduly burdensome. Once granted, he may revoke this permission to use a simplified report only if, after investigation, due notice, and an opportunity for a hearing, he decides that the reporting requirements are being or may be circumvented through the use of the simplified report.

The Senate bill as introduced (S. 505) authorized the Secretary to permit the use of simplified reports without any limitation as to size. This would have given the Secretary power to permit even very large employers and unions to use the simplified reports and thus to evade the detailed publicity about their financial affairs which it was the professed purpose of the legislation to achieve in order to cure the evils and abuses revealed by the McClellan committee.

The minority in the Senate committee secured the amendment limiting the use of simplified reports to small employers and unions, thus plugging a dangerous loophole, and both the Landrum-Griffin bill and the conference report contain the same limitation.

The Senate bill contained a provision authorizing the Secretary to exempt from the reporting requirements for unlimited periods of time any union "or class thereof temporarily convened either for the sole purpose of negotiating a labor agreement or for carrying out educational activity."

In the discussions concerning this exemption which took place in the Senate committee, it was never quite clear as to precisely what types of organization were intended to be included in this exemption. No realistic concrete example of such an organization was ever precisely described. The Landrum-Griffin bill contained no similar exemption, and a majority of the conferees, concerned that this provision might afford a loophole through which some unions might evade the reporting requirements of the bill, refused to include it in the conference report.

CRIMINAL PROVISIONS

Section 209(a) makes it a misdemeanor punishable by imprisonment and fine up to $10,000 and 1 year, for any person who willfully violates the provisions of title II, that is, primarily the reporting requirements.

Section 209(b) makes it a similar misdemeanor for any person knowingly to make a false statement of a material fact or fail to disclose a material fact in any document, report, or other information required under title II.

Section 209(c) makes it a similar misdemeanor for any person willfully to make a false entry in or to conceal, withhold, or destroy any books, records, reports, or statements required to be kept under title II. The Kennedy-Ervin bill (S. 905) as introduced omitted the words "conceal" and "withhold" and merely prohibited "destroying" any books, records, and so forth. In committee, I offered the amendment inserting the words "conceal" and "withhold" which was accepted, thus closing an obvious loophole. The Landrum-Griffin bill and the conference report both include this amendment.

Section 209(d) provides that each individual who is required to sign a union report under section 201 or an employer and consultant report under section 203, shall be personally responsible for the filing of such reports and for any statement contained therein which he knows to be false. This means that where the union or the employer, as such, are required to file reports, the officials who are required to sign these reports in behalf of the union or employer, as agents or representatives thereof, are just as responsible for both the filing and the truth of the reports, as are the principals in whose behalf they sign. The penalties imposed on the principals for noncompliance, are equally applicable to these officials.

CIVIL ENFORCEMENT

Section 210 provides that whenever it shall appear that any person has violated or is about to violate title II—which means primarily the reporting requirements—the Secretary may bring a civil action in a Federal district court for appropriate relief including injunctions. This means, among other things, that where there has been a failure to comply with these reporting requirements, the Secretary, through a judicial action, can compel such compliance even though it may not be possible to secure a criminal conviction for such noncompliance. And it should be emphasized that in invoking this remedy, the Secretary need not wait until a violation has occurred, but may initiate it even when it appears that no violation has as yet taken place but that it may occur. Hence this particular provision, if properly administered, provides the strongest possible guarantee that the reporting requirements of the bill will not be circumvented or violated.

The Kennedy-Ervin bill (S. 505) as introduced, contained no provision of any kind giving the Secretary this authority so essential to the effective enforcement of the bill's reporting requirements. In committee, at my urging, such an amendment was accepted and included in the Senate bill as reported. It is in the Landrum-Griffin bill as well as in the conference report.

TITLE III—TRUSTEESHIPS

Section 301(a) requires every labor union—usually an international—which imposes a trusteeship on a subordinate union—usually a local—to file with the Secretary within 30 days, and twice a year thereafter, a report signed by the international president and treasurer, and the designated trustee, containing first, name and address of the trusteed local; second, the date the trusteeship was established; third, the reasons for establishing or continuing the trusteeship; and, fourth, the nature and extent of the participation by the members of the trusteed local in the selection of delegates to conventions or other policy-making bodies, as well as in the election of the international's officers. The initial report must also include a complete account of the financial condition of the trusteed local at the time the trusteeship was imposed. During the life of a trusteeship, the international must file, on behalf of and concerning the trusteed local, the annual financial report required of all unions under section 201(b), signed by the president and treasurer of the international.

The Kennedy-Ervin bill (S. 505) as originally introduced, did not require the trustee designated by the international to sign the above report. In committee, Senator PROUTY offered an amendment to that effect which was accepted. It appears in the Landrum-Griffin bill and the conference report as well.

The Senate bill did not contain the provision requiring the international, during the life of the trusteeship, to file on behalf of the trusteed local the annual financial reports required of all labor unions, and hence provided a loophole which both the Landrum-Griffin bill and the conference report have plugged effectively. Moreover, the Senate bill's provision allegedly requiring unions to keep and preserve the basic records and documents on which the trusteeship reports are based was ambiguous and could have been construed as not requiring such keeping and preservation. The Landrum-Griffin bill and the conference report make this requirement unmistakably clear.

Again, as indicated above, the Senate bill, as passed, failed to make applicable to these trusteeship reports, the provision described—section 210—authorizing the Secretary to bring suit in a Federal court for injunctive as well as other relief, to compel compliance where there is a violation or threatened violation of the reporting requirements of the bill. The Landrum-Griffin bill and the conference report remedy this defect.

And finaly, the Kennedy-Ervin bill (S. 505), as introduced, made no provisions for access by union members to the basic books and records from which the trusteeship reports were prepared, thus rendering it extremely difficult, if not impossible, for the union members to apply some reliable check to the truth and accuracy of the reports. In committee, I offered an amendment to this effect which was rejected. I again offered it on the Senate floor where it was agreed to. A similar provision is contained in both the Landrum-Griffin bill and the conference report.

Section 301(c) makes it a misdemeanor punishable by fine and imprisonment up to $10,000 and 1 year for any person willfully to violate section 301, which means primarily the trusteeship reporting requirements.

Section 301(d) similarly makes it a misdemeanor for any person knowingly to make a false statement of a material fact or fail to disclose a material fact in any required trusteeship report, or willfully to make any false entry in or withhold, conceal, or destroy any documents, books, records, and so forth, upon which such report is based.

The Senate bill, as passed, failed to include the prohibition against making a false entry in such basic books or records. This left a gaping loophole for frustrating the object of this part of the bill—accurate public disclosure of the essential factors connected with a trusteeship. This loophole is closed both in the Landrum-Griffin bill and the conference report.

Section 301(e) like the corresponding provision in title II dealing with financial reporting of unions, described above, makes personally responsible for filing trusteeship reports and for knowingly false statements contained therein, each individual who is required under the bill to sign such report in behalf and as the agent or representative of the international union from whom such report is required.

PURPOSES FOR WHICH A TRUSTEESHIP MAY BE ESTABLISHED

Section 302 requires unions—usually international—to impose trusteeships over subordinate unions—usually locals—only in accordance with the constitution and by-laws of the international and for the following purposes only, regardless of inconsistent provisions in such constitution or bylaws: First, to correct corruption or financial malpractice; second, to assure the carrying out of collective bargaining agreements or other duties of a bargaining representative; third, to restore democratic procedures; or, fourth, otherwise to carry out the legitimate objects of the international.

The Senate bill, as passed, imposed these limitations for imposing trusteeships only on national or international unions, by which it is true, they are usually imposed. However, it is possible that a trusteeship may be imposed by a labor organization other than a national or international union, and the Landrum-Griffin bill uses language broad enough to encompass every trusteeship imposed by one union over a subordinate body. The conference accepted the provision of the Landrum-Griffin bill.

UNLAWFUL ACTS RELATING TO LABOR ORGANIZATION UNDER TRUSTEESHIP

Sections 303(a) makes it unlawful during a trusteeship; first, in any convention or election of international officers to count the votes of delegates from the trusteed subordinate union—or local—unless the delegates were chosen in a secret ballot election in which all the members in good standing of the trusteed local were eligible to participate; or, second, to transfer to the international any current receipts or other funds of the trusteed local except the normal per capita tax and assessments. Upon the bona fide dissolution of any labor union its assets may be distributed in accordance with its constitution and bylaws.

Section 303(b) makes it a misdemeanor, punishable by not more than a $10,000 fine and a year in prison, for anyone willfully to violate the preceding subsection 303(a).

ENFORCEMENT

Section 304(a) provides that upon the written complaint of any member of a trusteed local charging that the international has violated any provision of section 302 which prescribes the conditions under which and the purposes for which a trusteeship may be imposed or the provisions of section 303 dealing with voting rights and the selection of convention or other delegates in a trusteed local as well as the safeguarding of its receipts and other funds, the Secretary of Labor must investigate and if he finds probable cause to believe that such violation has not been remedied, he must, without identifying the complaining union member, bring a suit in a Federal district court for appropriate relief, including injunctions, to remedy the violation.

Any member of a trusteed local or such local itself, if they are affected by such violations, may sue in a Federal district court for similar relief.

It should be noted that these two types of civil action are not applicable to violations of section 301 which requires trusteeship reports to be filed with the Secretary. These latter violations, as indicated above, are punishable through criminal prosecution and subject to a civil suit, brought by the Secretary at his own discretion, under section 210.

The Senate passed bill, unlike the Landrum-Griffin bill, failed to permit members of a trusteed local or such local itself to bring a suit. The conferees adopted the provision of the Landrum-Griffin bill.

Section 304(b) provides that the civil suits for violation of sections 302 or 303 may be brought, first, in the district where the international has its principal office; or, second, in any district in which the authorized officials of the international are conducting the affairs of the trusteeship.

Section 304(c) provides that a trusteeship validly established in conformity with sections 302 or 303, and authorized or ratified by the executive board or other constitutional governing body of the international, shall be presumed valid and not subject to attack for 18 months except upon clear and convincing proof that the trusteeship was not established or is not being maintained, in good faith, for one of the four allowable purposes set forth in section 302. After the first 18 months, the trusteeship is presumed invalid in any such civil court action and the court must order it discontinued unless the international shows by clear and convincing proof that the trusteeship is still needed in order to achieve one of the four allowable purposes set forth in section 302. It should be noted that a trusteeship cannot be dissolved for a violation of the provisions of section 303 dealing with violations of voting rights, selection of delegates, and the use of the trusteed local's funds. These violations can be remedied by the civil court actions previously described, but they do not affect the continuance or bring about the discontinuance of the trusteeship.

The Senate-passed bill did not provide for termination of the trusteeship upon proof that although properly established, the trusteeship was not being maintained for one of the four allowable purposes in section 302. Thus, a trusteeship validly established to restore democratic procedures in the trusteed local, one of the four allowable purposes, might continue to be maintained after this purpose had been achieved, for a purpose other than one of the allowable four. Under the Senate bill, none of the provisions permitted any action for terminating such trusteeship inasmuch as it had been validly established in the first place. The Landrum-Griffin bill corrected this defect and the conferees accepted the provisions of the Landrum-Griffin bill.

REPORT TO CONGRESS

Section 305 requires the Secretary to submit to Congress 3 years after the bill become law, a report on how the trusteeship title has operated.

COMPLAINT BY SECRETARY

Section 306 provides that any of the rights and remedies granted by the trusteeship title are in addition to any other rights or remedies under any other provisions of Federal or State law. In other words, there is no Federal preemption under this title, except that once the Secretary of Labor files a complaint in a Federal court alleging a violation of any provisions of the trusteeship title, the jurisdiction of the Federal court becomes exclusive—all other rights and remedies are preempted—and any final judgment of such court is res adjudicata, that is, conclusive and binding on every other court.

TITLE IV—ELECTIONS

TERMS OF OFFICE; ELECTION PROCEDURES

Section 401(a) requires every national or international labor union except a parent federation like the AFL–CIO itself, to elect its officers at least once every 5 years by secret ballots cast by its members in good standing or at a convention of delegates chosen by secret ballot.

The Senate bill, as passed, applied this requirement solely to the officers named in the union constitution. As a result, other officials, not so named, but authorized to perform the functions of officers and thus falling within the definition of "officer" in the bill, could be elected at intervals greater than 5 years, thereby defeating one of the indispensable objectives of reform legislation, to wit, an opportunity to compel rotation in office thereby enabling the membership to get rid of an undesirable incumbent officer and replace him with one whom they prefer.

The Landrum-Griffin bill closes this loophole by requiring all national or international officers—as defined in the bill—to be selected at least once every 5 years. The conferees accepted the Landrum-Griffin bill provision.

Section 401(b) requires that local union officers be chosen at least once every 3 years by secret ballots cast by its members in good standing. The Senate bill contained the same loophole with respect to these local officers as it did in connection with the election of international and national officers, as described above, and was similarly corrected by the conferees in accepting the Landrum-Griffin bill provision.

Section 401(c) provides that every union, except a parent federation like the AFL–CIO, has a duty, enforcible by a suit in a Federal court brought by any bona fide candidate for office in such union, to comply with all reasonable requests of any candidate to distribute by mail or otherwise at the candidate's expense, campaign literature in aid of his candidacy to all the union's members in good standing, and to refrain from discriminating in favor of or against any candidate with respect to the use of its membership lists; and, whenever the union or its officers authorize such distribution on behalf of any candidate or of the union itself, it must make similar distribution at the request of any other bona fide candidate, with equal treatment as to the expense thereof.

Every bona fide candidate has the right, once within 30 days before the election, to inspect a list containing the names and addresses of all the union's members who are covered by a compulsory union membership collective bargaining agreement, which list must be kept at the union's principal office by a designated official. The union must establish adequate safeguards to insure a fair election, including, but not limited to, the right of any candidate to have an observer at the polls and at the counting of the ballots.

Under the Senate bill, contrary to the Landrum-Griffin bill, these safeguards, designed to insure both equal treatment for all candidates for union office and fair union elections, were applicable only to elections for local union office and not to the elections of national or international union officers. The conferees closed this loophole by adopting the Landrum-Griffin approach.

The Kennedy-Ervin bill (S. 505), as introduced, contained no provisions guaranteeing equal treatment of bona fide candidates for union office, thus leaving every advantage in the hands of the incumbent union officers. Thus, it would have done nothing to correct the conditions, so prevalent in many unions, which permit the incumbent officers to perpetuate themselves in office indefinitely. In committee, minority members offered an amendment which required equal opportunity for all candidates with respect to the use of the membership lists for transmitting campaign literature as well as the requirement permitting all candidates to have observers at both the casting and counting of the ballots. This amendment was accepted in the Senate bill as reported. It is also part of the Landrum-Griffin bill and is retained in the conference report.

As reported, the Senate bill contained no provision requiring that bona fide candidates be permitted to make a physical inspection of the union's membership lists. Senator PROUTY offered an amendment to that effect which was rejected. The Landrum-Griffin bill contains such a provision permitting inspection of lists of members covered by a union-shop agreement and the conferees accepted such provision.

The Senate bill requires the union to establish safeguards for a fair count of the ballots. The Landrum-Griffin bill contained a much broader protection—it required adequate safeguards for a fair election which goes beyond a mere count of the ballots. The conferees accepted the language of the Landrum-Griffin bill.

Section 401(d) provides that officers of intermediate bodies, such as general committees, system boards, joint boards, or joint councils, must be elected at least once every 4 years, by secret ballot among the members in good standing, or by union officers, elected by secret ballot as representatives of such members.

Section 401(e) provides that in any of the foregoing elections required by section 401, a reasonable opportunity shall be given to nominate officers, and every union member in good standing shall be eligible to be a candidate, and to hold office subject to reasonable qualifications uniformly imposed except for those disqualified as criminals and convicts under section 504, and to vote for or otherwise support the candidates of his choice, without being subject to any disciplining, interference, or reprisal by the union or any of its members. Not less than 15 days before an election, a notice thereof must be mailed to each member at his last known address, and each member in good standing is entitled to one vote.

No member whose dues have been withheld by his employer under a check-off provision voluntarily authorized by such member under the collectve bargaining agreement shall be ineligible to vote for alleged failure to pay dues on time. The votes cast by members of each local shall be counted and the results published separately. The constitutionally designated union officials, or the union secretary, shall preserve for 1 year the ballots and all other records pertaining to the election which shall be conducted in accordance with the union's constitution and bylaws if they are not inconsistent with the provisions of title IV of the bill.

The Kennedy-Ervin bill (S. 505), as introduced, provided merely that a reasonable opportunity be given to nominate candidates. In committee, minority members offered the amendment that every member in good standing be eligible to be a candidate, to hold office, and to support the candidate of his choice, without being subject to penalty, interference, or reprisal of any kind by the union or its officers. This amendment was accepted. A similar provision is in the Landrum-Griffin bill as well as in the conference report.

The Kennedy-Ervin bill (S. 505), as introduced, dispensed with the 15-day mail notice to members of an election, if the union constitution and bylaws specified a regular time for holding elections. Minority members in committee objected to this provision, insisting that the 15-day mail notice be required in all union elections without exception but their objection was rejected in the bill as reported to the Senate, which in turn rejected the position of the majority members of the committee and accepted that of the minority members. The Landrum-Griffin bill and the conference report are the same as the original position of the minority members of the Senate committee.

Section 401(f) provides that when union officers are chosen in convention by delegates elected by secret ballot, the convention must be conducted in accordance with the union's constitution and bylaws if they are not inconsistent with the provisions of this title IV, and such union's constitutionally designated officials or its secretary must preserve for 1 year the credentials of the delegates and all minutes and records of the convention pertaining to the election of officers.

Section 401(g) provides that no union funds derived from dues, assessments, or any similar levy, and no money from an employer shall be contributed or used to promote the candidacy of any person for union office where such election is regulated by the provisions of this title IV. Such union funds—but not money from an employer—may be used for notices, factual statements of issues not involving candidates, and other expenses necessary for the holding of an election.

The Senate bill, as reported, did not limit the use of union funds to "a factual statement of the issues," so as to prevent the incumbent officers running for reelection from presenting such factual statement in a manner designed to further their own candidacies. On the floor of the Senate, Senator MUNDT offered the amendment, which the Senate accepted, limiting the presentation to a "factual statement of the issues" so as to preclude such candidates from gaining an advantage thereby. The conference report contains the same safeguard.

Section 401(h) provides that a member of a local union may complain to the Secretary that the constitution and bylaws of his local do not provide an adequate procedure for the removal of an elected officer guilty of serious misconduct. If the Secretary, after a hearing in accordance with the Administrative Procedure Act, finds such complaint to be true, then the officer so charged may be removed for cause shown, and after notice and hearing, by the members in good standing voting in a secret ballot conducted by the officers of such union in accordance with its constitution and bylaws insofar as they are not inconsistent with the provisions of this title IV.

Section 401(i) provides that the Secretary shall promulgate rules and regulations prescribing minimum standards and procedures for determining the adequacy of the removal procedures referred to in the preceding section 401(h).

ENFORCEMENT

Section 402(a) provides that a union member who has, first, exhausted the remedies provided by his union's or its parent body's constitution and bylaws; or, second, invoked such remedies for 3 calendar months without obtaining a final decision, may, within 1 calendar month thereafter, file a complaint with the Secretary alleging the violations of any of the foregoing provisions of section 401 or the provisions of the union's constitution and bylaws pertaining to the election or removal of officers. The challenged election shall be presumed valid pending a final decision thereon and in the interim the business of the union shall be conducted by the officers elected or in any other manner provided in the union's constitution and bylaws.

The Kennedy-Ervin bill (S.505), as introduced, required a union member to invoke his union remedies for 4 months rather than 3 before complaining to the Secretary that the election provisions of section 401 had been violated. The minority in committee secured an amendment reducing this to 3 months as it appears in the conference report.

The Kennedy-Ervin bill (S. 505), as introduced, failed to provide that such a complaint could be filed by a union mem-

ber where his union's constitution and bylaws did contain an adequate removal procedure but the union or its officials were refusing to permit such procedure to be invoked or applied. In committee, I offered an amendment to correct this defect which was accepted, and it is contained in the Conference Report.

Section 402(b) provides that the Secretary must investigate such complaint by a union member, and if he finds probable cause to believe that a violation of this title IV has occurred and has not been remedied, he must within 60 days after such complaint has been filed, bring a civil suit in a Federal district court to set aside the invalid election, if any, and to direct the conduct of an election, or of a hearing and vote upon the removal of officers, both under his own supervision and in accordance with this title IV and such rules and regulations as he prescribed. The court is authorized to take such action as it deems proper to preserve the union's assets.

The Kennedy-Ervin bill (S. 505), as introduced, failed to give the Secretary the authority to supervise the hearing and vote upon the removal of officers. The minority members of the Senate committee offered an amendment to supply this omission which was accepted in the bill as reported and included in the conference report. Again, the Senate bill, as introduced, gave the court power to preserve and safeguard the union's assets if the court's decision declared an election to be void. The minority members of the Senate committee pointed out that this would permit the unlawfully elected officers to dissipate the union's assets during the substantial period which must elapse before the court reached a decision. They therefore offered an amendment permitting the court to take the necessary steps to preserve the union's assets as soon as the suit was begun. This was accepted in the bill as reported and is in the conference report.

Section 402(c) provides that if upon a preponderance of the evidence after a trial on the merits, the court finds, first, that a union election has not been held as frequently as required by section 401; or, second, that any violation of section 401 may have affected the outcome of a union election, the court shall declare the election, if any, to be void and direct a new election under the Secretary's supervision, and in conformity with the union's constitution and bylaws as far as that is practicable and consistent with the law. The Secretary must promptly certify to the court the names of the persons elected, and the court must thereupon enter a decree declaring such persons to be the union's officers. If the suit is for the removal of officers, the Secretary must certify the results of the vote and the court must enter a decree declaring whether such persons have been removed as officers of the union.

The Kennedy-Ervin bill (S. 505), as introduced, authorized the court to declare an election void only if the violation of section 401 actually affected the outcome of the election rather than may have affected such outcome. The difficulty of proving such an actuality would be so great as to render the professed remedy practically worthless. Minority members in committee secured an amendment correcting this glaring defect and the amendment is contained in the conference report.

The Kennedy-Ervin bill (S. 505), as introduced, made no provision in this subsection 402(c) for authorizing the court to entertain a suit for violation of the provisions pertaining to the removal of union officers. Minority members in committee offered an amendment to supply this serious omission which was accepted and included in the conference report.

Section 402(d) provides that a court order directing a union election, dismissing a complaint, or designating elected officers of a labor union, shall be appealable in the same manner as the final judgment in a civil action, but an order directing an election shall not be stayed pending appeal.

APPLICATION OF OTHER LAWS

Section 403 provides that no union shall be required to hold elections of officers more frequently or in a different manner than is required by its own constitution and bylaws except as otherwise provided by this title IV. Existing rights and remedies to enforce the union's constitution and bylaws with respect to elections before such elections are actually held are preserved and not preempted, but the remedy provided by this title IV for challenging an election shall be exclusive, that is, shall preempt all other provisions of law.

In the Senate committee, the proponents of the Kennedy-Ervin bill inserted language, which, literally read, would have permitted the union, by modifying its constitution and bylaws, to evade the bill's requirements as to the form and manner of conducting elections for officers, and to hold such elections at longer intervals than the maximum of 5 and 3 years, respectively, required by this title IV. The minority members objected vigorously and the bill, as reported, accepted their objections, and closed this loophole in the language to preclude such evasion. The conference report adopts this safeguard.

The Kennedy-Ervin bill (S. 505), as introduced, completely preempted the entire field of union election procedures and requirements and their violation. As a result of the objections of members of the minority in committee, the compromise which is also in both the Landrum-Griffin bill and the conference report, was accepted, preempting only those rights and remedies in connection with challenging an election which has already been held, but preserving all other rights and remedies with respect to elections before they are conducted.

EFFECTIVE DATE

Section 404 provides that the union election provisions of this title IV shall become applicable, first, 90 days after enactment of the bill into law in the case of a union whose constitution and bylaws permit their amendment or modification by action of its constitutional officers or governing body; or, second, where such change in constitution and bylaws can only be made by a constitutional convention of the union, not later than the next constitutional convention of such union after the enacting date of this bill, or one year after such date, whichever occurs sooner.

If no such convention is held within such 1-year period, the executive board or similar governing body empowered to act for such union between conventions, is empowered to make such interim constitutional changes as are necessary to carry out the provisions of this title IV regardless of any provisions in the union's constitution and bylaws to the contrary.

These provisions are not to be construed as permitting a local and international election of union officers to be deferred until 3 and 5 years respectively after the act becomes effective regardless of how many additional years have elapsed since such elections were held. Thus, for example, an international which has not held an election for officers in the 10 years preceding enactment of this bill, is not granted an additional 5 years after such enactment, before being required to hold such an election. Such election must be held, at the very latest, not more than 1 year after date of enactment.

The Senate bill, as introduced, reported out of committee, and passed by the Senate, provided a grace period of up to 2 years for complying with the election provisions of this title IV. The conference report reduced this to 1 year.

TITLE V—SAFEGUARDS FOR LABOR UNIONS

FIDUCIARY RESPONSIBILITY OF OFFICERS OF LABOR UNIONS

Section 501(a) provides that union officers, agents, shop stewards, and other representatives occupy positions of trust in relation to the union and its members as a group. It makes it their duty, taking into account the special problems and functions of a labor union, to hold the union's money and property solely for the benefit of the union and its members; to manage, invest, and expend the same in accordance with its constitution, bylaws, and any resolution of the union's governing bodies adopted thereunder; to refrain from dealing with their union as an adverse party or in behalf of an adverse party in any matter connected with their duties and from holding or acquiring any pecuniary or personal interest which conflicts with the interests of the union; and to account to the union for any profit received by them in whatever capacity in connection with transactions conducted by them or under their direction on behalf of the union. A general provision in the constitution and bylaws of the union or a general resolution of its governing body purporting to relieve any such union official of liability for breach of the duties imposed on him by this section is void as against public policy.

The Kennedy-Ervin bill (S. 505), as introduced, contained no provision of any kind imposing fiduciary status and obligations on union officials. In committee, minority members protested vigorously against this omission and

urged an amendment to impose such status and obligations and for an effective remedy against any breach thereof. This amendment was rejected and instead a statement was included in the policy section of the bill as reported to the Senate—in other words, in the preamble—declaring it to be the policy of the United States to encourage the faithful observance by union officials of their fiduciary responsibilities by requiring them to file conflict-of-interest reports—which the bill required anyway under title II—and to file reports on all expenditures by them, for community welfare, educational or charitable purposes, loans, and other transactions involving union funds—which were not required under the bill to be filed by them personally.

This statement in the preamble was a mere pious gesture, having no legal effect, providing no remedy for enforcement, and designed to create the misleading public impression that the bill effectively placed union officials in the status of fiduciaries, a status which the public was demanding.

On the Senate floor, an amendment was adopted, imposing a fiduciary status on union officials with respect to money or property in possession of such official by virtue of his office. No remedy for breach of such obligation was provided, nor did the amendment specifically provide that such officials were under a legal duty to refrain from engaging in conflict-of-interest transactions or holdings. The Landrum-Griffin bill both imposed the fiduciary status and provided a remedy for breach thereof. The conference report provided such remedy—as described below—and made it clear that involvement of a union official in a conflict-of-interest situation was a breach of his fiduciary responsibility.

Section 501(b) provides that when any such union official is alleged to have violated his fiduciary duties, and the union or its governing board, or its officers, refuse or fail to sue or recover damages or secure an accounting or other appropriate relief within a reasonable time after being requested to do so by any member of the union, such member may sue the official in a Federal district court or a State court of competent jurisdiction to recover damages or secure an accounting or other appropriate relief—including injunctive relief—for the benefit of the union. No such suit shall be brought except upon leave of the court obtained upon verified application—meaning a sworn application—and for good cause shown, which application may be made ex parte—that is to say without notice to the union to appear in court and offer its defense.

The judge may allot a reasonable part of the recovery in any such suit to pay the fees of the lawyer bringing the suit for the union member, and to compensate such member for any expenses necessarily paid or incurred by him in connection with the litigation.

As indicated above, at no stage of the Senate bill was a remedy for breach of fiduciary duty provided. It is in both the Landrum-Griffin bill and the conference report.

Section 501(c) provides that any person who embezzles, steals, or unlawfully and willfully abstracts or converts to his own use, or the use of another, any of the moneys, funds, securities, property, or other assets of a labor union of which he is an officer, or by which he is employed, directly or indirectly, shall be guilty of a felony and fined not more than $10,000 or imprisoned for not more than 5 years or both.

This section makes embezzlement or any unlawful taking of union funds a Federal crime in addition to its already being a crime under all the laws of all the States. In addition, under section 501(b), described above, a union member may bring suit, where such an unlawful taking is engaged in by a union official, for breach of the fiduciary duty of such official.

Although the Senate bill, both as introduced and as reported from committee, also made such unlawful taking of union funds a Federal crime, it did not permit a civil suit by a union member unless the union official charged with the taking had been already convicted in a criminal proceeding of actually having committed such a crime. Thus, in effect, no recovery in a civil action for such unlawful taking was permitted except upon proof of guilt beyond a reasonable doubt rather than upon the mere preponderance of the evidence which is all that is required for recovery in a civil suit.

I offered an amendment in committee to permit such civil suit at least upon indictment of the union official, as well as conviction, but this was rejected. On the Senate floor, an amendment was adopted permitting such suit upon a mere allegation of an unlawful taking, but the conference report solves the entire problem by providing an adequate civil remedy for breach of the fiduciary obligation including an alleged embezzlement or other unlawful taking of union funds or property by a union official, and relief is awarded on a mere preponderance of the evidence.

In the Kennedy-Ervin bill—S. 505—as introduced, the provision making embezzlement and unlawful taking a Federal crime was applicable to the funds and property of all tax-exempt organizations, not merely to labor unions. In no hearing before any congressional committee at any time had there ever been even the slightest evidence that such crimes were being committed in connection with the funds or property of any tax-exempt organizations other than labor unions. In committee, the provision was made applicable to labor unions only, as it is in both the Landrum-Griffin bill and the conference report.

And finally, the Kennedy-Ervin bill (S. 505), as introduced, although permitting a union member to bring a civil suit to recover embezzled or unlawfully taken union funds against a union official convicted of such unlawful taking, required the union member to wait until the union or its governing body or officers had themselves failed or refused to bring such suit following a demand that they do so. But no time limit was placed on how long the union member had to wait before bringing suit where the union failed to sue.

In committee, I offered an amendment which was accepted in the bill as reported to the Senate, requiring the union member to wait no longer than 6 months where the union failed to do so following such demand.

BONDING

Section 502(a) provides that every officer, agent, shop steward, or other representative of a union, the property and annual receipts of which exceed $5,000, or of a trust in which such union is interested, who handles funds or other property of such union or trust must be bonded for the faithful discharge of his duties.

Each such person's bond shall be fixed at the beginning of the union's or trust's fiscal year and shall not be for less than 10 percent of the funds handled by him or his predecessors during the preceding fiscal year, but not more than for $500,000. If the union or trust does not have a fiscal year, the bond shall be at least $1,000 for a local union and $10,000 for a trust or any nonlocal union.

Such bonds must be individual or schedule in form—that is, the individual holding the office must personally be bonded and not merely the position he holds—and shall have a corporate surety company as surety thereon. Any person who is not covered by such bond shall not be permitted to receive, handle, disburse, or otherwise exercise custody or control of the funds or other property of such union or trust.

No such bond shall be placed through an agent or broker, or with a surety company, in which any labor union or any of its officials have a direct or indirect interest. Such surety company shall be a corporate surety which holds a grant of authority from the Secretary of the Treasury under the act of July 30, 1947 (6 U.S.C. 6–13), as an acceptable surety on Federal bonds.

Neither the Senate bill, as introduced, nor as reported by the committee to the Senate, contained any provision for the bonding of union officials. Senator McCLELLAN, on the Senate floor, secured adoption of an amendment requiring bonding of union officials handling the funds or property of such union or trust. But the bonding provision contained in the Landrum-Griffin bill was more effective in the following respects:

First. The bond must be a personal one, thus insuring a thorough investigation by the bonding company of the financial reliability of the applicant for the bond. This results in prohibiting any individual to handle union funds if he is unable to secure such bond because the results of his investigation are unfavorable. This constitutes a built-in safeguard against the holding of union office by many of the crooks, racketeers, and criminals who have infiltrated the labor movement. There was no similar requirement in the Senate bill;

Second. No bonding company is eligible to furnish a bond for any union official pursuant to the bonding requirements of the bill if any labor union or union official has any interest in such company or in the agent or broker through whom the bond is placed. There was no such safeguard in the Senate bill.

Third. The only bonding companies which are eligible to provide bonds under this section are those on the approved list of the Secretary of the Treasury. The Senate bill contained no such requirement.

In conference, the conferees adopted a provision imposing a maximum ceiling of $500,000 on the amount of any single bond required. This is twice as great as the $250,000 maximum provided in the Senate bill.

Section 502(b) provides that any person who willfully violated the bonding provision shall be guilty of a misdemeanor or punishable by fine and imprisonment up to $10,000 and 1 year. This would apply to both the individual who, as a union official, handles union funds or property without having such bond and to the labor union or its officers who knowingly permit him to do so.

The bonding provision in the Senate bill merely prescribed bonding for union officials handling union funds or property. Unlike the Landrum-Griffin bill and the conference report, it failed to provide any remedy, sanction, or penalty, civil or criminal, for a violation of the bonding requirement.

MAKING OF LOANS; PAYMENT OF FINES

Section 503(a) forbids any labor union, directly or indirectly, to have out on loan at any time a total of more than $2,000 to any officer or employee of the union.

The Kennedy-Ervin bill (S. 505), as introduced, was so worded as to permit the union to make a series of loans, to any single union official, as long as each separate loan was not more than $1,500 when it was made, and without regard to such official's preceding indebtedness to the union and without any limit to the total indebtedness thereby permitted to be incurred by such official.

I offered in committee an amendment which was accepted, limiting the total indebtedness to be permitted to any union official by the lending union to the stated amount. This approach is the same as that in the Landrum-Griffin bill and the conference report.

Section 503(b) prohibits any labor union or employer from directly or indirectly paying the fine of any officer or employee convicted of any willful violation of the bill.

The Kennedy-Ervin bill (S. 505), as introduced, contained no such provision. At the initiative of minority members in committee, an amendment containing this prohibition was included in the bill as reported to the Senate. It is also contained in both the Landrum-Griffin bill and the conference report.

Section 503(c) makes it a misdemeanor, punishable by fine and imprisonment of up to $5,000 and 1 year, for any person to violate the loan limitations and prohibition against payment of fines contained in this section 503.

PROHIBITION AGAINST CERTAIN PERSONS HOLDING OFFICE

Section 504(a) prohibits any person who has been a Communist Party member or who has been convicted or served any part of a prison term for conviction of certain enumerated felonies or of violation of title II—reporting requirements or title III—trusteeships—or of conspiracy to commit any such crimes from serving first, as an officer, official, or employee—other than clerical or custodial—of any labor union; or, second, as a labor relations consultant to any person engaged in an activity affecting commerce or as an officer, official or employee—other than clerical or custodial—of any group or association of employers dealing with any union, for 5 years after termination of Communist Party membership, or for 5 years after such conviction or imprisonment, unless having been so convicted or imprisoned, (A) his citizenship rights having been revoked, have been fully restored, or (B) the Federal Parole Board determines that such person's service as a union official, labor relations consultant, or employee of an employer association would not be contrary to the purposes of this act.

Before making such determination, the Parole Board must hold an administrative hearing and give notice thereof to the State, county and Federal prosecuting officials in the jurisdiction in which such person was convicted, and the Board's determination shall be final.

No union or union officer shall knowingly permit any person to assume or hold any office or paid position in violation of this prohibition.

The Kennedy-Ervin bill (S. 505), as introduced, although prohibiting union officials and employees from so serving if they had been previously convicted of violations of the reporting requirements and trusteeship provisions of the bill, made an exception for paid personnel paid $4,000 per year or less. This was knocked out in committee and no such limitation is in either the Landrum-Griffin bill or the conference report.

Neither the Senate bill (S. 505), as introduced, nor as reported from committee, provided that the 5-year prohibition against holding union office or employment should run from the termination of imprisonment as well as from conviction, whichever occurs later. This would have permitted the 5 years to run while a felon was actually serving his prison term, and in many cases, permit him to hold office less than 5 years after such imprisonment or even immediately on the termination thereof. This was corrected on the Senate floor. Neither the Landrum-Griffin bill nor the conference report contained this defect.

The Kennedy-Ervin bill (S. 505), as introduced, forbade a labor union or any officer thereof, knowingly and willfully, to permit any person to hold any union office or paid position if he had been convicted of or imprisoned for violation of the reporting and trusteeship provisions of the bill, but not of any of the other felonious crimes referred to above.

In subcommittee, the majority proposed that even this limited prohibition be further limited to hold only the union officers, and not the union itself, responsible for permitting such persons to hold union office or employment. As a result of the vigorous objection of members of the minority, this further limitation was deleted in the bill, as reported to the Senate, but still only applicable to persons in violation of the reporting and trusteeship provisions of the bill.

The conference report makes it unlawful for the union or its officers knowingly to permit any person to hold union office or employment in violation not only of the reporting and trusteeship provisions of title II and III, but also those guilty of any of the other enumerated felonies, as well.

Section 504(b) makes it a misdemeanor, punishable by fine and imprisonment up to $10,000 and 1 year for violation of the foregoing provisions of section 504(a).

Section 504(c) provides that for the purposes of this section 504, a person shall be deemed to have been convicted and under the disability of conviction from the date of the judgment of the trial court or the date of the final sustaining of such judgment on appeal, whichever occurs later, regardless of whether such conviction occurred before or after the date of enactment of this act.

AMENDMENT TO SECTION 302 OF TAFT-HARTLEY

Section 505 amends section 302 of the Taft-Hartley Act. That section forbids employers to pay or deliver anything of value to any representative of his employees. It is now amended as section 302(a) to apply also to employer associations, labor relations consultants to employers, or persons acting in the interest of an employer, and to include loans as well as payment and deliveries. The prohibition is extended also to payments, deliveries or loans to first, labor unions, their officers or employees, which represent, seek to represent, or would admit to membership, any of the employees of such employer; or, second, any employee or group of employees of such employer, in excess of their normal wage, for the purpose of causing them, directly, or indirectly, to influence any other employees in the exercise of their right to organize and bargain collectively, or, third, any union officer or employee with intent to influence his actions, decisions, or duties as a representative of employees or as such union officer or employee.

Section 302(b)(1) of Taft-Hartley is amended to forbid all persons falling in the above categories—to whom payments or loans under section 302(a) may not be made—to request, demand, receive, or accept, or agree to receive or accept, any such payment, loan or delivery.

In the Senate bill, as introduced, reported and passed by the Senate, although it was made a crime for an employer, consultant, and so forth, to lend, as well as to pay or deliver, it was made a crime for the recipient only with respect to payments or deliveries and not to loans. Thus, under this provision an employer committed a crime by making a loan to an official of the union he bargained with, but no crime for the union official to accept the loan. The Landrum-Griffin bill corrected this loophole and the conference report includes this correction.

The Kennedy-Ervin bill (S. 505), as introduced, in prohibiting payments or loans to employees for the purpose of

persuading other employees in the exercise of their rights, failed to limit this prohibition to payments in excess of normal wages, and hence, merely paying of the usual and normal wages under these circumstances would have been unlawful. Minority members in committee offered an amendment limiting such illegality only to payments, and so forth, in excess of normal compensation, which was accepted in the bill as reported. This amendment is included in the Landrum-Griffin bill and the conference report.

A new provision is added to section 302 of Taft-Hartley, designated as 302(b)(2). This makes it a crime for any union, or for any person acting as an officer, agent, representative or employee of such union, to demand or accept from the operator of any motor vehicle—as defined in part II of the Interstate Commerce Act—employed in the transportation of property in interstate commerce, or the employer of any such operator, any money or other thing of value payable to such labor union or to an officer, agent, representative, or employee thereof as a fee or charge for the unloading, or in connection with the unloading, of the cargo of such vehicle, but this prohibition does not make it unlawful for an employer to make any payment to any of his employees as compensation for their services as employees.

The conference report also amends section 302(c) of Taft-Hartley which sets forth certain exemptions to the prohibition against employer payments and their acceptance under sections 302 (a) and (b).

The first exception in section 302(c) is expanded to exempt payments by an employer to any employee whose established duties include acting openly for such employer in matters of labor relations or personnel administration, or to any representative of his employees, or to any officer or employee of a labor union, who is also an employee or former employee of such employer, as wages for his services as an employee of such employer.

To the five exemptions listed in section 302(c), the conference report adds a sixth: anything of value paid by an employer to a trust fund established by a union for the purpose of pooled vacation, holiday severance or similar benefits, or defraying costs of apprenticeship or other training programs, all subject to the same conditions applicable to welfare and benefit plans under Taft-Hartley prior to its amendment by this bill.

In all stages of the Senate bill, from original introduction to final passage by the Senate, the fourth exemption of section 302(c) exempting checkoff of union dues was amended to exempt checkoff of periodic payments in lieu of dues. These periodic payments are a device now being used in some States to circumvent State right-to-work laws. The Landrum-Griffin bill provided no exemption for these payments and the conference report is the same.

TITLE VI—MISCELLANEOUS PROVISIONS

INVESTIGATIONS

Section 601(a) authorizes the Secretary, when he believes it necessary, to determine whether any person has violated or is about to violate any of the provisions of this act except the bill of rights in title I and the amendments made to Taft-Hartley, to make a complete investigation of such places, persons, and records as he deems necessary to determine the facts. The Secretary may report to interested persons or officials—the Department of Justice, for example—concerning the facts required to be shown in any report required by this act and concerning the reasons for failure to file such report, or concerning any other matter he deems appropriate as the result of such an investigation.

The Kennedy-Ervin bill (S. 505), as introduced, required the Secretary to investigate only if he had probable cause to believe that any person had violated any provision of the reporting title of the act only. Minority members of the committee offered an amendment which did three things: First, it struck out the requirement of "probable cause" as a condition for initiating an investigation; second, it broadened the Secretary's investigative power so that it applied not only to provisions of the title requiring the filing of reports, but to violations of any of the provisions of the entire act; and, third, it further broadened the Secretary's powers to extend not only to violations actually committed, but to those which he believed were about to be committed. These amendments were accepted in the Senate bill as reported, and are included in the conference report, together with an amendment making the use of the investigatory power discretionary with the Secretary instead of mandatory.

The effect of these provisions as they appear in the conference report is to give the Secretary of Labor the same unlimited investigatory power he is presently authorized to exercise under the Fair Labor Standards and Walsh-Healey Acts, and which are presently possessed by other Federal agencies such as the Commissioner of Internal Revenue and the General Counsel of the National Labor Relations Board in investigating actual or possible violations of the statutes which they administer.

In the Kennedy-Ervin bill (S. 505), as introduced, the Secretary was not only limited to investigating violations of the reporting requirements of the bill, but to reporting such violations to the members of the affected union only. In committee, as a result of a proposal by minority members this was broadened to permit the Secretary to report any facts contained in a required report or resulting from his investigation, to interested persons and officials. The conference report is the same.

Section 601(b) provides that for the purpose of any investigation under this act, the provisions of sections 9 and 10—relating to the attendance of witnesses and the production of books, papers, and documents—of the Federal Trade Commission Act of September 16, 1914, as amended (15 U.S.C. 49, 50), are made applicable to the jurisdiction, powers, and duties of the Secretary or any officers designated by him. This gives the Secretary the same powers given to him in the Fair Labor Standards Act by a substantially identical provision.

EXTORTIONATE PICKETING

Section 602(a) forbids picketing of an employer where the purpose is the personal profit or enrichment of any individual—except a genuine increase in wages or employee benefits—by taking or obtaining any money or other thing of value from such employer against his will or with his consent.

Section 602(b) makes it a felony punishable by fine or imprisonment up to $10,000 and 20 years to picket in willful violation of the foregoing prohibition in section 602(a).

In the Kennedy-Ervin bill (S. 505), as introduced, this type of extortionate picketing was also prohibited but merely as a new union unfair labor practice added to the Taft-Hartley Act instead of the serious felony which it is. Moreover, the language of the provision in the Senate bill did not exclude genuine wage raises or increased employee benefits from the concept of "personal enrichment of any individual." Thus, under the Senate bill, a picket line against an employer to induce him to grant a wage increase, would, in the literal language of the provision, constitute a violation of it.

Minority members in the committee offered an amendment to exempt genuine wage and employee benefit increases from the prohibition, and to make its violation a crime instead of an unfair labor practice. These amendments were accepted in the Senate bill as reported and are included in the Landrum-Griffin bill and the conference report.

RETENTION OF RIGHTS UNDER OTHER FEDERAL AND STATE LAWS

Section 603(a) is part of the antipreemption provisions of the act. It provides that except as explicitly provided to the contrary, nothing in the act shall reduce or limit the responsibilities of any union or any officer, agent, shop steward, or other representative of a union or of any trust in which a union is interested, under any other Federal law or under the laws of any State, and, except as explicitly provided to the contrary, nothing in this act shall take away any right or bar any remedy to which union members are entitled under such other Federal law or the law of any State.

The Kennedy-Ervin bill (S. 505), as introduced, and the bill as reported to the Senate did not contain this section nor any similar antipreemption provision, thus raising a serious question about the validity or enforcibility of State laws in the areas covered by this act. This antipreemption provision is contained in the Landrum-Griffin bill and included in the conference report.

Section 603(b) provides that nothing contained in the first six titles—excluding title VII which amends Taft-Hartley—shall be construed to supersede or impair or otherwise affect the provisions of the Railway Labor Act or any of the obligations, rights, benefits, privileges, immunities of any carrier, employee, organization, representative, or person subject to such act; nor shall anything contained in said six titles—except sec-

tion 505 amending section 302 of Taft-Hartley—of this act be construed to confer any rights, privileges, immunities, or defenses upon employers, or to impair or otherwise affect the rights of any person under title I of the Taft-Hartley Act.

EFFECT ON STATE LAWS

Section 604 provides that nothing in the act shall be construed to impair or diminish the authority of any State to enact and enforce general criminal laws with respect to robbery, bribery, extortion, embezzlement, grand larceny, burglary, arson, violation of narcotics laws, murder, rape, assault with intent to kill, or assault which inflicts grievous bodily injury, or conspiracy to commit any of such crimes.

This is the act's antipreemption provision with respect to State criminal law. It is designed to make it clear that State criminal laws prohibiting the same felonies, conviction of which constitutes a disqualification for union office, are not preempted but left in full force and effect and completely enforcible.

The Kennedy-Ervin bill (S. 505), as introduced, did not contain this or any similar provision preserving the authority of the States to enact and enforce their own criminal laws. In committee, Senator DIRKSEN offered an amendment, which was accepted in the bill as reported, preserving State authority to enact and enforce their criminal laws, thereby preventing Federal preemption in this area of the law. As modified somewhat on the Senate floor, this safeguard was included in the Landrum-Griffin bill as well as in the conference report.

SERVICE OF PROCESS

Section 605 provides that for the purposes of this act, service of summons, subpena, or other legal process of a court of the United States upon an officer or agent of a labor union in his capacity as such shall constitute service upon the labor union.

This provision was not contained in the Senate bill. It was taken by the conferees from the Landrum-Griffin bill.

ADMINISTRATIVE PROCEDURE ACT

Section 606 makes the provisions of the Administrative Procedure Act applicable to the issuance, amendment, or rescission of any rules or regulations, or any adjudication, authorized or required under the provisions of this act.

OTHER AGENCIES AND DEPARTMENTS

Section 607 authorizes the Secretary to make such arrangements or agreements for cooperation or mutual assistance with other Government agencies in the performance of his functions under this act as he may find practicable and legal. He may utilize the facilities or services of any department, agency, or establishment of the United States or of any State or its subdivisions with the lawful consent of such department, agency, or establishment; and each department, agency, or establishment of the United States is authorized and directed to cooperate with the Secretary and, to the extent permitted by law, to provide such information and facilities as he may request for his assistance in the performance of his functions under this act.

The Attorney General or his representative shall receive from the Secretary for appropriate action such evidence developed in the performance of his functions under this act as may be found to warrant consideration for criminal prosecution under the provisions of this act or other Federal law.

The Kennedy-Ervin bill (S. 505), as introduced, contained no such provision, and its omission would have seriously handicapped the Secretary in adequately carrying out his duties under the act and thereby made it more difficult to achieve the desired effective labor reform. Minority members in committee offered an amendment to supply this omission which was accepted in the bill as reported and included in both the Landrum-Griffin bill and the conference report.

CRIMINAL CONTEMPT

Section 608 provides that no person shall be punished for any criminal contempt allegedly committed outside the immediate presence of the court in connection with any civil action prosecuted by the Secretary or any other person in any Federal court under the provisions of this act unless the facts constituting such criminal contempt are established by the verdict of the jury in a Federal district court trial, which jury shall be chosen and empaneled in the manner prescribed by the law governing jury trials in criminal prosecutions in the Federal district courts.

This safeguard was not in the Senate bill either as introduced or as reported. It was included in the Landrum-Griffin bill and in the conference report.

PROHIBITION ON CERTAIN DISCIPLINE BY UNION

Section 609 makes it unlawful for any labor union or union officer, agent, shop steward, employee, or other representative thereof, to fine, suspend, expel, or otherwise discipline any of its members for exercising any right to which he is entitled under the provisions of this act. Any union member who has been subjected to conduct constituting a violation of this section may sue under section 102 for appropriate relief including injunctions in the Federal district court for the district where the alleged violation occurred, or where the principal office of such union is located.

The Kennedy-Ervin bill (S. 505), as introduced, contained no such provision. It was added in committee by an amendment offered by minority members and accepted in the bill as reported. This provision was included in the Landrum-Griffin bill with a civil enforcement sanction instead of a criminal penalty as in the Senate bill. The conference report embodies the approach of the House-passed bill.

DEPRIVATION OF RIGHTS UNDER ACT BY VIOLENCE

Section 610 makes it a misdemeanor punishable by fine and imprisonment up to $1,000 and 1 year for any person through the use of force or violence, or threat of the use of force or violence, to restrain, coerce, or intimidate, or attempt to restrain, coerce, or intimidate any member of a labor union for the purpose of interfering with or preventing the exercise of any right to which he is entitled under the provisions of this act.

The Kennedy-Ervin bill (S. 505), as introduced, contained no similar provision. It was added in committee by an amendment offered by minority members and accepted in the bill as reported. This provision was included in the Landrum-Griffin bill as well as in the conference report.

SEPARABILITY PROVISIONS

Section 611 provides that if any provision of this act, or the application of such provision to any person or circumstances, shall be held invalid, the remainder of this act or the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

TITLE VII—AMENDMENTS TO THE TAFT-HARTLEY ACT

The Kennedy-Ervin bill (S. 505), as introduced in the Senate, contained a number of amendments to Taft-Hartley, all of which were supported by the labor movement, none of which reflected the wishes of management, and none of which had any significant relevance to that internal reform of the labor movement which the American public was demanding.

The bill as reported from the committee, with few modifications of any importance, also contained these Taft-Hartley amendments. At some time before the bill went on to final passage in the Senate, the leaders of the American labor movement, particularly of the AFL–CIO, publicly made it perfectly plain that they would oppose any labor reform bill which did not contain these Taft-Hartley amendments favorable to them, amendments which in popular parlance became known as the sweeteners.

As this analysis will indicate, these sweeteners were either wholly eliminated or substantially modified in both the Landrum-Griffin bill and the conference report, and in their place are to be found instead, Taft-Hartley amendments substantially and directly connected with the problem of labor reform, particularly as related to corruption, racketeering, gangsterism and lack of democratic procedures in some sectors of the labor movements.

FEDERAL-STATE JURISDICTION

Section 701(a) amends section 14 of the National Labor Relations Act—title I, Taft-Hartley Act—by adding a new subsection (c) which provides as follows:

First. The Board—NLRB—is given discretion, either by decision or by published rules adopted pursuant to the Administrative Procedure Act, to decline to assert its jurisdiction over any labor dispute involving any class or category of employers where, in the Board's opinion, the effect of such dispute on interstate commerce is not substantial enough to warrant the Board's exercise of its jurisdiction, but the Board is prohibited from so declining with respect to any dispute over which it would have asserted jurisdiction under its own jurisdictional standards as they prevailed on August 1, 1959.

Second. The courts or agencies of every State and territory—including Puerto Rico, Guam, and the Virgin Islands—are authorized to assume and assert jurisdiction over all disputes over which the Board lawfully declines to assert jurisdiction as authorized under the preceding paragraph, and to apply their own laws, both procedural and substantive, in disposing of these cases.

These provisions overrule the Supreme Court's decision in the Guss case, for the first time establish a statutory basis for the Board's refusal to assert jurisdiction, and not only eliminate the so-called no man's land in the law of labor-relations, but effectively solve the no man's land problem by providing not only a forum, but relatively expeditious relief for small employers and their employees, and the labor unions which have a relationship to such employers.

The Kennedy-Ervin bill, S. 505, as introduced, took the opposite approach to eliminating the no man's land. It required the Board to assert its full jurisdiction at all times, that is, to take every case, no matter how small the impact on interstate commerce, as long as the enterprise involved was technically in or affected such commerce. Theoretically, this would have eliminated the no man's land but actually it would have failed to solve the basic no man's land problem, a fact recognized and admitted even by some of the supporters of the proposal. Given the tremendous backlog of the Board, requiring it to take every case would only have increased its backlog and made even relatively quick relief in most cases impossible.

In committee, I offered an amendment which took substantially the same approach as the provision which has now become part of the law. My amendment was rejected. Instead, the committee reported out a provision which professed to compromise the issue, but which, under another guise, for all practical purposes required the Board to take every case within its statutory jurisdiction.

Again, on the floor of the Senate, Senator MCCLELLAN and Senator ALLOTT offered an amendment substantially the same as that offered by Senator GOLDWATER in committee. This too was rejected. Instead, the Senate adopted a provision modifying the committee bill's provision somewhat by permitting State labor agencies—not courts—to take cases which the Board declines to take, but requiring the State agencies to apply Federal law—Taft-Hartley—in deciding such cases, and limiting all appeals from the State agencies to the Federal courts exclusively.

The Landrum-Griffin bill used the same approach as that contained in Senator GOLDWATER'S amendment. This was adopted by the conferees subject only to the limitation with respect to the Board's jurisdictional standards prevailing on August 1, 1959, previously referred to.

Section 701(b) amends section 3(b) of the National Labor Relations Act—title I, Taft-Hartley—as follows:

The Board is authorized to delegate to its regional directors its powers under section 9 to determine the appropriate unit for collective bargaining, to investigate, to provide for hearings where it determines a question of representation exists—that is, a question as to who shall represent employees as exclusive collective bargaining agent—and to direct an election or take a secret ballot under section 9 (c) or (e) and certify the results thereof, except that upon the filing of a request therefor with the Board by any interested person—anyone who is or might be concretely affected by the proceedings—the Board may review any action of a regional director delegated to him under this provision, but such a review shall not, unless specifically ordered by the Board, operate to halt any action taken by the regional director.

This is a new provision, not in either the House or Senate bills, designed to expedite final disposition of cases by the Board, by turning over part of its caseload to its regional directors for final determination.

Under this provision, the regional directors can exercise no authority in representation cases which is greater or not the same as the statutory powers of the Board with respect to such cases. In the handling of such cases, the regional directors are required to follow the lawful rules, regulations, procedures, and precedents of the Board and to act in all respects as the Board itself would act.

This decision is not mandatory. The Board may grant it, but need not, if it so prefers. It may delegate fewer than all of its statutory powers in representation cases, withholding some from the regional directors and reserving them for its own exercise. Thus, if the Board so decides, it may reserve for its own handling and decision, those representation cases which arise from petitions filed in connection with the new antipicketing, unfair labor practice provision section 8(b)(7), of the National Labor Relations Act. Or it may refuse to delegate authority to handle all or any part of the proceedings in contested representation cases.

This authority to delegate to the regional directors is designed, as indicated, to speed the work of the Board. In a sense it replaces the provision for prehearing elections contained both in the Senate bill as reported and as passed, and which both in committee and on the Senate floor was opposed by some members of the minority and which was contained in neither. The Landrum-Griffin bill contains no such provision, nor does the conference report.

The Kennedy-Ervin bill (S. 505), as reported, contained a provision narrowing the definition of a "supervisor" in the Taft-Hartley Act, thus bringing under the act's coverage as employees, a substantial number of personnel who were theretofore excluded as supervisors, that is, representatives of management. I vigorously resisted this change and it finally was considerably limited in scope by the committee and as thus modified, included in the bill reported to the Senate.

No such provision, even as modified, is contained either in the Kennedy-Ervin bill or in the conference report.

ECONOMIC STRIKERS

Section 702 amends section 9(c)(3) of the National Labor Relations Act—title I, Taft-Hartley—as follows:

Employees engaged in an economic—as distinguished from an unfair labor practice—strike who are not entitled to reinstatement are eligible to vote under such regulations as the Board finds to be consistent with the purposes and provisions of the Taft-Hartley Act in any election conducted by the Board within 12 months after the beginning of the strike. After 12 months have elapsed, such economic strikers may not vote. The Board, even during the first 12 months of a strike, may deny the vote, for example, to strikers who have engaged in criminal or unprotected activity for which the employer has the right to fire them, or to strikers who have ceased to be employees, as defined in Taft-Hartley, because they have "obtained other regular and substantially equivalent employment."

The Kennedy-Ervin bill (S. 505), as introduced, merely repealed the existing prohibition against voting by economic strikers not entitled to replacement, without attaching any limitations either as to time or circumstance and without expressly authorizing the Board to impose such limitations. The result would have been to give replaced economic strikers, not entitled to have their jobs back, the right to vote in Board elections indefinitely, and even if they had engaged in unprotected or illegal activity.

In committee, I offered an amendment to impose a time limitation but my amendment was rejected. On the Senate floor, this provision was modified to allow the Board to permit such strikers to vote under regulations consistent with the purposes and provisions of the act. This Senate bill provision was accepted by the conferees as modified by the addition of the 12-month time limitation on such voting rights.

VACANCY IN OFFICE OF GENERAL COUNSEL

Section 703 amends section 3(d) of the National Labor Relations Act—title I, Taft-Hartley—as follows:

In case of a vacancy in the office of the General Counsel, the President is authorized to designate the officer or employee who shall act as General Counsel during such vacancy—without Senate confirmation—but no person so designated shall so act, first, for more than 40 days when the Congress is in session unless a nomination to fill such vacancy shall have been submitted to the Senate—this prevents the President from keeping such appointee indefinitely in the job without Senate confirmation—or, second, after the adjournment sine die of the session of the Senate in which such nomination was submitted—this is because with the Senate's adjournment the President has the power immediately to make a recess appointment and the office therefore need not remain vacant.

Under Taft-Hartley only the General Counsel is authorized to issue complaints in unfair labor practice cases, that is, only he can initiate the official proceedings in such cases. Heretofore, when his office became vacant, until the Senate

confirmed the President's new appointee, the office had to remain vacant and no complaints could be issued. This brought the work of the Board to a halt in connection with new unfair labor practice cases and perforce left these violations of law unremedied and the victims thereof without an operating forum. This new provision makes it possible to preclude any such stoppage in the operations of the NLRB by permitting the President to designate an employee of the Board only, to act temporarily as General Counsel, possessed of all of the statutory powers of that office and until replaced by a permanent successor under the prescribed limitations described above.

The Kennedy-Ervin bill (S. 505), as introduced, contained no similar provision. In committee, I offered the provision as an amendment which was accepted in the bill as reported. It is included in both the Landrum-Griffin bill and the conference report.

BOYCOTTS AND RECOGNITION AND ORGANIZATIONAL PICKETING

Section 704(a) amends section 8(b)(4) of the National Labor Relations Act—Title I, Taft-Hartley—as follows:

It closes the three major loopholes which have heretofore existed in the Taft-Hartley Act's prohibition against secondary boycotts.

First, it does this by making it an unfair labor practice for a labor union to "threaten, coerce, or restrain," by economic and other means, any person—usually the secondary employer with whom the union may have no other dispute—to cease, in any way, or to any degree, to do business with any other person—usually the primary employer with whom the union may have a dispute. Under previous law, such pressure did not violate the ban on secondary boycotts because it was brought to bear directly on an employer rather than indirectly through inducement of his employees, the latter being the only means which the Board had held the law to prohibit.

Secondly, by substituting the term "person" for the term "employer," it broadens the scope of the latter term to its full dictionary meaning instead of the limited meaning which it has under the definition of "employer"—and "employee"—in Taft-Hartley. "Employer" is defined in Taft-Hartley to exclude employers subject to the Railway Labor Act; agricultural employers; all governmental agencies, bodies, or corporations; Federal Reserve banks; and nonprofit hospitals. "Employee" as defined does not include employees of the above excluded employers.

Thus, if the employers and employees involved in a secondary boycott are not "employers" and "employees" within the meaning of the above Taft-Hartley definitions, then the secondary boycott did not constitute a violation of the Taft-Hartley Act. Substituting the term "person" for "employer" in section 8(b)(4) makes such secondary boycotts illegal despite the fact that the employers and employees involved are among those excluded from the Taft-Hartley definitions of "employer" and "employee."

Under the Taft-Hartley Act, prior to these amendments, as construed by the Supreme Court, a union's inducement of an individual employee of a secondary employer individually to cease working or handling the goods of the primary employer was not an unlawful secondary boycott. The Court held that an inducement to cease working or handling was illegal only if directed at employees for the purpose of inducing them so to cease in concert, not individually. The new amendment in the conference report closes this third loophole by making an inducement to cease working or handling individually, also an unfair labor practice under section 8(b)(4).

This new amendment in the conference report also makes secondary consumer boycotts illegal subject to certain narrow and limited exceptions. Thus, under previous law a labor union having a dispute with the producer, company A, could lawfully picket the distributor, company B, who carried company A's products for sale, for the purpose of inducing consumers not to patronize company B, subject to certain restrictions imposed by the Board. Under the new amendment, such picketing becomes illegal, but the union is permitted to engage in publicity—by means other than picketing—truthfully advising the public that company B the distributor—the secondary employer—is distributing goods produced by company A, the producer with whom such labor union has a primary dispute. But even this permitted—but limited—type of union activity becomes unlawful if such publicity has an effect of inducing any individual employed by any person other than the producer, company A, in the course of his employment to refuse to pick up, deliver, or transport any goods, or not to perform any services, at the establishment of the secondary employer who is engaged in such distribution, that is, the distributor, company B.

The amendment does nothing to impair or disturb the decisional rules evolved by the Board in connection with the significance of the situs—primary or secondary—of the inducement in determining its legality. It does not eliminate, restrict or modify the limitations on picketing at the site of a primary labor dispute which were applicable prior to this amendment. The rules laid down in certain decisions with respect to such picketing are still the law, as for example, in *NLRB* v. *Denver Building and Construction Trades Council, et al.*, 341 U.S. 675 (1951); *Brotherhood of Painters, Decorators, and Paper Hangers, etc. and Pittsburgh Plate Glass Co.*, 110 NLRB 455 (1954); *Moore Drydock Co.*, 81 NLRB 1108; and *Washington Coca Cola Bottling Works, Inc.*, 107 NLRB 233 (1953).

The Kennedy-Ervin bill (S. 505), as introduced, contained no provision dealing with secondary boycotts. In committee, I offered the secondary boycott provision of the administration's labor reform bill as an amendment. It was, in substance, the same as the new provisions described above. It was rejected and the bill as reported contained no such provision. On the Senate floor, Senator MCCLELLAN offered a secondary boycott amendment which, in substance, was the same as that offered in committee by me. The amendment was not agreed to.

The Landrum-Griffin bill contained a provision on secondary boycotts, for all purposes practically the same as that contained in my rejected amendment. With the exceptions noted above, the conference report adopted these provisions of the Landrum-Griffin bill.

Section 704(b) amends section 8 of the National Labor Relations Act—title I, Taft-Hartley—by adding a new unfair labor practice prohibited to both employers and labor unions, dealing with the problem of "hot cargo" agreements and designated as section 8(e) which provides as follows:

It is an unfair labor practice for a labor union and an employer to enter into any contract or agreement, express or implied, whereby such employer ceases or refrains or agrees to cease or refrain from handling, using, selling, transporting or otherwise dealing in any of the products of any other employer, or to cease doing business with any other person, and any such agreement contained in any contract or agreement entered into either before or after the enactment of this provision shall be unenforcible and void for all purposes.

This means that such contractual clauses are per se illegal. It is unlawful for either party even to execute such an agreement, to insist that the other party bargain about or enter into it, to use any form of coercion or restraint—economic or otherwise—to compel the other party to enter into it or to live up to it even if his refusal to do so is in breach of a voluntary agreement to abide by the agreement, and finally, such breach does not constitute a good cause of action in a suit at law to recover damages for the breach or to secure specific performance of the agreement.

The new provision provides an exemption from all of these prohibitions—and from all of the prohibitions in the secondary boycott provisions of section 8(b)(4), as amended, as well—where the employer and the union involved, whether as contracting parties under this section 8(e) or as disputing parties under section 8(b)(4), are engaged in the apparel and clothing industry, and where the relationship between such employer and other employers in said industry—that is, between primary and secondary employers—is that of a jobber, manufacturer, contractor, or subcontractor and where first, the subcontractor performs his work for and on the premises of the contractor, jobber, or manufacturer; or, second, the subcontractor performs his work for and on goods or materials supplied by such contractor, jobber, or manufacturer; or, third, one employer is engaged in an integrated process of production with the other employer. Where these conditions are met, secondary boycotts are lawful as are "hot cargo" agreements and may be enforced by all the means prohibited in other industries under sections 8(b)(4) and 8(e).

There is a further exemption from the prohibitions against "hot cargo" agreements only, under section 8(e), with respect to a segment of the building construction industry and the labor unions representing employees in that segment of the industry. This exemption is granted only where the employer with whom such an agreement is signed is in the construction industry and engages only in construction work at the site; it does not apply where the employer, although in the construction industry, is not engaged in construction work at the site such as enterprises primarily engaged in supplying or transporting building construction materials. Where an employer falls into this limited category, it is not an unfair labor practice for such employer and a labor union to enter into an agreement whereby such employer ceases or refrains or agrees to cease or refrain from handling, using, selling, transporting or otherwise dealing in any of the products of another employer, or to cease doing business with any other person, and such an agreement is not per se unlawful. Unlike the exemption for the apparel and clothing industry, the prohibitions of the secondary boycott ban in section 8(b)(4), as amended, are however, applicable to these situations.

Thus, although employers and unions who are under this exemption may lawfully enter into such agreements, and may resort to the courts for their enforcement under applicable principles of contract law, no coercion or restraint—economic or otherwise—may be used by any party to such agreement, even if entered into voluntarily by both parties, to compel the other party to live up to the contract or to refrain from breaching it.

The new provision is silent with respect to the lawfulness of coercion or restraint—economic or otherwise—by one party to compel the other party to enter into, or even to bargain about entering into such an agreement. This question was one of those left unresolved by the Board and the courts under Taft-Hartley prior to this new legislation, but now specifically outlawed in all situations not falling within the exemption for the clothing and apparel and construction industries. It is the intention of Congress that the new legislation leave it in the same unresolved status under the building construction industry exemption and that the Board and the courts decide the issue for the building construction industry as if these new amendments contained in section 8(e) had not been enacted and in accordance with the previously applicable law. In other words, it is the congressional intent that section 8(b)(4), as amended, banning secondary boycotts, apply without qualification in the building construction industry and that the principles enunciated in the *SandDoor* case (Local 1796, *United Brotherhood of Carpenters* v. *NLRB*, 357 U.S. 93), the *Denver Building Trades* case (*NLRB* v. *Denver Building and Construction Trades Council, et al.*, 341 U.S. 675), and the *Moore Drydock* case (*Moore Drydock Co.*, 81 NLRB 1108), remain fully applicable.

Neither the Kennedy-Ervin bill (S. 505), as introduced, nor the committee bill as reported to the Senate, contained any provision dealing with "hot cargo" agreements. In committee, my rejected amendment on secondary boycotts contained a provision outlawing such agreements. On the floor, the Senate adopted an amendment outlawing "hot cargo" agreements only where they were between labor unions and employers who are common carriers subject to part II of the Interstate Commerce Act. This was designed to get at Jimmy Hoffa and the Teamsters Union exclusively. But it failed to accomplish even that.

Common carriers subject to part II of the Interstate Commerce Act represent only a part of the jurisdiction of the Teamsters Union. Other carriers and transportation enterprises not under part II of that act also employ members of and bargain collectively with the Teamsters Union. This is also true of the warehousing industry, the storage industry, and some segments of the retailing and wholesaling industries. "Hot cargo" agreements in these industries, involving mainly the Teamsters Union, would have been unaffected by the provision in the Senate passed bill.

The basic ban on "hot cargo" agreements in the new section 8(e), as described above, is contained in the Landrum-Griffin bill, and with the exemptions and modifications described above, was accepted by the Confereees.

Section 704(c) amends section 8(b) of the National Labor Relations Act—title I, Taft-Hartley—by adding a new union unfair labor practice, designated as section 8(b)(7), and designed to outlaw recognition and organizational picketing when they occur in certain specified circumstances. Under this provision, it is an unfair labor practice for a union, in three specific situations, to picket or cause to be picketed, or threaten to picket or cause to be picketed, any employer where one of the objects of such conduct is to force or require an employer to recognize or bargain with a labor union as the representative of his employees—recognition picketing—or to force or require the employees of an employer to join or select such labor union as their collective bargaining representative—organizational picketing—unless such labor union is currently certified as the representative of such employees—that is, unless the union has won a representation election conducted by the NLRB. The three situations in which such picketing or union conduct is unlawful are:

First. Where the employer has lawfully recognized, in accordance with Taft-Hartley, any other labor union, and such other union has either won an NLRB representation election and been certified by the Board, or such other union and the employer have signed a collective bargaining agreement during the term of which the Board will not conduct a representation or decertification election; or

Second. Where within the preceding 12 months a valid election under section 9(c) of the National Labor Relations Act has been conducted—as indicated, only the labor union which won such election and was certified by the Board may picket in such situation, but no other union—or

Third. Where such picketing has been conducted without a representation petition under section 9(c) being filed within a reasonable period of time not to exceed 30 days from the commencement of such picketing.

This third prohibited picketing situation simply means this: A union may not picket for recognition or for organizational purposes for more than a reasonable period which may be less than 30 days if the Board so determines, but may not be longer, without a petition for a representation election being filed with the Board. If no such petition is filed in such period, then at the end thereof, but not later than the 31st day from its commencement, such picketing, if continued or resumed, becomes an unfair labor practice.

This third prohibited picketing provision contains two provisos. The first provides that if a representation petition is filed with the Board within such reasonable period but not later than the 30th day following the start of the picketing, and regardless of whether such picketing has ceased and has not been resumed, the Board must, as quickly as possible, direct and conduct an election in the bargaining unit the Board finds to be appropriate, even though the requirements of section 9(c)(1) which are otherwise a condition of the Board's entertaining a petition for a representation election have not been complied with. These requirements are: First, for an employer petition, an allegation that an individual or labor union have requested recognition as the exclusive bargaining representative of his employees; and, second, for petitions by employees or labor unions, an allegation that a substantial number of employees in such bargaining unit—at least 30 percent of the employees under present NLRB policy—wish to be represented for collective bargaining and that their employer declines to recognize their representative as the exclusive bargaining agent as defined in section 9(a).

If a union wins such an election and is certified by the Board, it may picket without violating this section 8(b)(7); if no union wins the election, then no union may picket for recognition or organization for 12 months following the same, in accordance with the second prohibited picketing situation described above.

The second proviso to the third prohibited provision grants the following exemption from said third prohibition only—and not from the first two:

Where the union engages in picketing or other publicity for the sole purpose of truthfully advising the public that an employer does not employ members of or have a contract with a labor union. In those circumstances, such picketing may be carried on indefinitely. However, if one of the effects of such exempted picketing is to induce any individual employed by any other person—other than

the picketed employer—in the course of his employment, not to pick up, deliver, or transport any goods or not to perform any services, and a reasonable period—not longer than 30 days—has elapsed since such picketing began, and regardless of whether it has ceased thereafter and not been resumed, the employer may file a petition pursuant to which the Board shall conduct an election in the same manner, under the same procedure, and with the same effects as described above; for example, if no union wins, such picketing is banned for the next 12 months, and so forth, and so forth.

There is a further provision in this new section 8(b)(7) which provides that nothing therein makes lawful any conduct which would be unlawful under any of the other unfair labor practice provisions of section 8(b)(1) through (6). Thus, for example, conduct not unlawful under the new section 8(b)(7), by virtue of the exemption therein, may nevertheless be an unfair labor practice if engaged in contrary to the prohibition against coercion and restraint of employees in section 8(b)(1) or to the prohibition against secondary boycotts and jurisdictional strikes in section 8(b)(4).

These new bans on recognition and organizational picketing, commonly known as blackmail picketing because of their frequent use as devices to achieve corrupt and racketeering objectives, were completely absent from the Kennedy-Ervin bill (S. 505), as introduced. In committee, I offered as an amendment the anti-blackmail-picketing provisions of the administration bill which were substantially similar to those in the new act, as described above. My amendment was rejected; and the bill as reported to the Senate, like the bill as introduced, contained no provision on the subject of blackmail picketing.

On the Senate floor, Senator McCLELLAN'S picketing amendment, similar in important respects to my amendment, was defeated. Senator PROUTY thereafter offered an antipicketing amendment also along the lines of the administration bill, but more limited in the scope of its prohibition. This proposal was watered down by a number of amendments, and finally adopted in the much narrower, weaker and far less effective form in which it appears in the Senate passed bill.

The Landrum-Griffin bill contains substantially the administration's antipicketing provision, identical with those offered by me in committee and rejected by the majority. In conference, it was fundamentally the Landrum-Griffin proposal which was agreed to by the conferees after some modifications making for greater clarity and preciseness, making it easier to determine the prohibition's applicability in particular fact situations, and granting the very limited exemption from the prohibition, described above.

Section 704(d) amends section 10(l) of the National Labor Relations Act—title I, Taft-Hartley. Section 10(l) prior to its amendment, provided that the NLRB gives priority in case handling to secondary boycott cases under section 8(b)(4) and that when the NLRB regional office official handling a secondary boycott charge, after investigation, believes the charge to be true and that a complaint should issue, he must, on behalf of the Board, ask a Federal district court for an injunction or restraining order pending the final adjudication of the case by the Board. These provisions do not apply to unlawful jurisdictional strikes under section 8(b)(4)(D). The new amendment makes these provisions of section 10(l) also applicable in charges alleging violations of new section 8(e) dealing with "hot cargo" agreements and violations of new section 8(b)(7) dealing with recognition and organization picketing.

In connection with applying these priority of treatment and "mandatory" injunction provisions of section 10(l) to charges of violations of the antipicketing provisions of section 8(b)(7), there is a proviso which contains one exception. If a charge is filed against an employer alleging that he is committing an unfair labor practice in violation of section 8(a)(2) of the National Labor Relations Act—dominating, interfering with, or contributing to the support of a labor union by an employer—and if, after investigation, the regional official has reasonable cause to believe that such charge is true and that a complaint thereon should issue, he is forbidden to apply for an injunction or restraining order against the picketing union under section 10(l), as amended, even if he decides to issue a complaint against such picketing union alleging a violation of section 8(b)(7), as amended.

Neither the Kennedy-Ervin bill (S. 505), as introduced, nor the Senate bill, as reported, contained mandatory injunction provisions applicable to "hot cargo" agreements and blackmail picketing, although such amendment was rejected when I offered it in committee in conjunction with my antipicketing amendment. The bill, as it passed the Senate, amended section 10(l), to make the mandatory injunction provision applicable to cases involving the violation of the new section 8(e) which made "hot cargo" agreements unfair labor practices in a narrow segment of the motor transport industry. But the mandatory injunction provision was not made applicable to the newly added but narrow ban on blackmail—recognition and organization—picketing in section 8(b)(7) of the Senate bill. Instead, section 10(l) which provides for the mandatory injunction authority, was amended by making its last sentence alone applicable to such picketing, thereby creating the erroneous impression that the mandatory injunction procedure applied. However, the last sentence of section 10(l) deals with jurisdictional strikes in violation of section 8(b)(4)(D), and provides that the Board may, not must, seek an injunction in a Federal court. This procedure was made applicable to violations of new section 8(b)(7) dealing with picketing; in other words, not the mandatory but the discretionary injunction provisions were applicable to illegal picketing.

The Landrum-Griffin bill made the mandatory injunction provisions applicable to violations of both section 8(e) dealing with "hot cargo" agreements and section 8(b)(7) dealing with blackmail picketing, and this approach is included in the conference report.

Section 704(e) amends section 303(a) of the Taft-Hartley Act. That section authorizes a suit for damages in a Federal district court by anyone injured in his property or business by reason of conduct by a labor union which would be in violation of the language of section 8(b)(4) prohibiting secondary boycotts, certain types of recognition strikes, and jurisdictional strikes, such language being identically repeated in section 303(a).

Section 8(b)(4) having been amended to outlaw certain types of union activity not previously unlawful, it was necessary to amend section 303(a), as well, to make its provisions for damage suits equally applicable to the newly proscribed union conduct.

The Kennedy-Ervin bill (S. 505), as introduced, contained no such provision. In committee, I offered such an amendment in conjunction with my amendment to close the loopholes in the secondary boycott provision, section 8(b)(4). These were rejected. No such amendment was contained in the Senate passed bill inasmuch as that bill did not include any new secondary boycott provisions.

The Landrum-Griffin bill contains this amendment to section 303(a) as does the conference report.

BUILDING AND CONSTRUCTION INDUSTRY

Section 705(a) amends section 8 of the National Labor Relations Act—title I, Taft-Hartley—by adding a new subsection (f) thereto permitting prehire collective bargaining contracts in the building construction industry.

The new subsection 8(f) provides that an employer whose primary activity is building construction and a labor union whose members are building construction employees—and which has not been established or aided by employer unfair labor practice—may enter into a collective bargaining agreement covering such employees without thereby committing an unfair labor practice even if first, the majority status of such union has not been established in accordance with section 9 prior to the making of the agreement; or, second, the agreement requires membership in such union after the 7th day following the beginning of employment or the effective date of the agreement, whichever is later—instead of the 30th day as theretofore provided for all industries—or, third, the agreement requires the employer to notify such union of job openings with such employer, or gives the union an opportunity to refer qualified applicants for such job openings; or, fourth, the agreement specifies minimum training or experience qualifications for employment, or provides for preference in filling openings based upon seniority with such employer, in the industry, or in the particular geographical area.

Two provisos to this new section impose the following limitations:

First. No employer may discriminate against any employee or applicant for employment because of nonmembership in a union, if he believes that such nonmembership is the result of a discriminatory exclusion from union membership by the union, or of some cause other than a refusal by the employee to tender the periodic dues and initiation fees uniformly required of all members. This limitation is presently in the law as the last proviso to section 8(a)(3).

Second. A prehire agreement—under paragraph (1) above—lawfully entered into, shall not be a bar to a petition for an NLRB election filed pursuant to section 9(c) or 9(e)—this means a petition filed by an employer, by employees, or by a labor union. Such election may be held even during the life of such a prehire agreement.

Section 705(b) provides an additional safeguard with respect to agreements lawfully entered into pursuant to this new provision for the building construction industry. It makes it plain that nothing in the new provision has any weakening effect on section 14(b) which authorizes State right-to-work laws, that is, that nothing in the new provision permits the execution or application of agreements requiring membership in a labor union as a condition of employment—compulsory union-membership contracts—in any State or territory where such execution or application is prohibited by State or territorial law.

The Kennedy-Ervin bill (S. 505), as introduced, contained the prehire building construction provision described above but with several differences. In its original form in the Senate bill, these prehire contracts could lawfully be entered into by any labor union. In committee, I offered an amendment limiting them to labor unions of which building and construction employees are members, and no others. My amendment was accepted, and is contained in the conference report.

Again, the Kennedy-Ervin bill (S. 505), as introduced, authorized these contracts to require minimum training apprenticeship as a condition of employment. Inasmuch as apprenticeship training in some crafts and occupations can be secured only through the union, this provision would have been equivalent to the complete closed shop, that is, to requiring membership in the union as a condition of getting and holding a job in the industries employing those crafts and occupations.

I offered, in committee, an amendment eliminating the word "apprenticeship" thus permitting "minimum training" as a condition of employment, thereby setting up a purely objective job qualification, one wholly unrelated to membership or support of a union. This too was accepted, and is contained in the conference report.

PRIORITY IN CASE HANDLING

Section 706 amends section 10 of the National Labor Relations Act—title I, Taft-Hartley—by adding a new subsection "(m)" which provides for priority in the handling by the NLRB of unfair labor practices which are violations of sections 8(a)(3) and 8(b)(2). These are acts of discrimination against employees in connection with their jobs by employers or labor unions because of their membership or nonmembership in a union or because of their engaging or refusing to engage in concerted activities protected by the Taft-Hartley Act.

This provision was in neither the Kennedy-Ervin bill (S. 505), as introduced, nor in the bill reported by the committee to the Senate. It was offered by Senator Mundt as an amendment on the floor and agreed to by the Senate. It is also contained in both the Landrum-Griffin bill and the conference report.

EFFECTIVE DATE OF AMENDMENTS

Section 707 provides that the amendments made by this title VII to the Taft-Hartley Act shall take effect 60 days after enactment, and no provision of title VII shall be deemed to make any conduct engaged in prior to its enactment an unfair labor practice if it would not have been an unfair labor practice at the time it was engaged in.

The Senate bill, at no stage of its development from initial introduction to final passage, contained any specific effective date for these Taft-Hartley amendments. This would have made them effective on enactment, and as a result of such lack of notice and opportunity to prepare, both labor and management might well have been caused both confusion and hardship. The 60-day deferral of the effective date takes care of the problem. It is in both the Landrum-Griffin bill and the conference report.

The conference report also repeals sections 9(f), (g), and (h) of title I of the Taft-Hartley Act which provided for the old financial reporting requirements and the non-Communist oath for labor union officers. These repealers were immediately effective on enactment of the conference report, but they are not retroactive in effect.

CONCLUSION

The conference report, as enacted into law, is the result of a combination of many factors. There is no question that the investigations and revelations of the McClellan Rackets Committee were the primary cause for the irresistible public demand for an effective labor reform law.

The new law itself contains provisions derived from several sources and a number of individuals. Thus, Senator McCLELLAN is truly the father of the new bill of rights for union members. The bonding and fiduciary provisions in the Senate bill were first offered by him on the Senate floor, and appear in the conference report, even though in a more finished form. His too, at least on the Senate side, are the prohibitions against interfering with union members in the exercise of their newly acquired rights. And, although rejected by the Senate, he did offer, on the floor, amendments on no man's land, secondary boycotts, and blackmail picketing. Effective provisions on these three issues are in the conference report.

In the Senate Labor Committee and on the Senate floor, I offered amendments on almost every aspect of the Senate bill which I regarded as weak or inadequate. Some of these were accepted—most were rejected. But an overwhelming majority of my amendments, or their substantial equivalent, are contained in the conference report which has now become the law.

The new act, both in its major provisions, and in its basic approach, reflects the Landrum-Griffin bill, as passed by the House, the labor reform program of the administration, and the proposals made by Senator McCLELLAN and myself.

Little Old New York

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a column by Ed Sullivan which appeared in the New York Daily News on September 4, 1959:

LITTLE OLD NEW YORK
(By Ed Sullivan)

With New Yorkers in terror of walking the streets of this city after nightfall, it has been proposed by J. Edgar Hoover, members of the judiciary and of the clergy that (1) New York City police instantly be given greater police powers, and (2) that able-bodied policemen engaged in clerical work, ticketing of cars, and searching for prostitutes be replaced by women so that the police can be returned to their beats. All of these measures would immediately reduce the jungle aspects of New York City. Taxpayers again could walk the streets at night freely and safely; nurses leaving their hospital posts late at night would have some measure of protection; taxicab drivers on the night shift would not be bludgeoned; the areas bordering Central Park and the other great parks of the city would be swept clear of thugs. The mothers of the 20 youngsters who have been knifed to death in New York City since July, I think, would certainly approve of all of these things. In fact, the only two New Yorkers who object to such measures seem to be Mayor Bob Wagner and Police Commissioner Steve Kennedy.

Wagner and Kennedy obviously believe that the members of New York's Finest are not to be trusted. They apparently are convinced that our police would instantly start whaling the tar out of decent citizens. This is the silliest conclusion that either Wagner and Kennedy ever have come up with. It dates back to the late Mayor LaGuardia's emasculation of the powers of New York City police when LaGuardia was after Harlem votes. If you will examine the records of this city you will find that LaGuardia's politically inspired action opened the dikes for a general breakdown of law enforcement in our city. He was supported, at that time, by a group of fuzzy-thinking liberals, just as Wagner and Kennedy are being supported now by similar groups of daffodils, equally vocal. I think most of us would prefer to accept the seasoned judgment of J. Edgar Hoover plus evidence of our own eyes which reveal that the greatest city in the world has been taken over by a group of knife-wielding young punks.

When we were in Moscow and Leningrad, 2 weeks ago, if we had heard that 20 youngsters had been knifed to death in either or both of these cities, Rise Stevens, Marge and Gower Champion, the Barry Sisters, and the

rest of us would have hidden in the American Embassy at Moscow for protection. But murder has become a commonplace item in the city of New York and the grievous fault must be laid at the doorsteps of our mayor and our police commissioner. It is an ironical fact that these two high city officials have taken the handcuffs of New York's Finest to handcuff the police. This, I submit, is lunacy come full cycle. When we were in Europe, we read that Tammany had proposed Wagner as the Vice Presidential candidate of the Democratic Party. Judging from New York City's experience, would Wagner's first act in Washington be to disband the FBI and eliminate the Secret Service and Treasury agents on the grounds that they could not be trusted as he doesn't trust the police of New York City? The mothers of the 20 youngsters killed in cold blood since last July must conclude that New York City is a lunatic place.

Report to the People of the 12th Congressional District of New York

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. DORN of New York. Mr. Speaker, each year it has been my custom to submit to the people of the 12th Congressional District of New York, whom I have the honor to serve, a questionnaire setting forth various questions which will be considered by the Congress of the United States in its deliberations.

I appreciate the fine response to the questionnaire and am gratified to say that the people of the 12th Congressional District of New York are intensely interested in their Government and are willing to take time to participate in it by expressing their opinions and advice to their Representative in the Congress.

The following is the questionnaire and the results in percentages:

[In percent]

	Yes	No	No opinion
1. Do you approve of the President's policy of moderate government?	71	18	11
If "no" should he turn to the right (10 percent), left (6 percent), no opinion (84 percent).			
2. Do you favor a continuation of our present foreign policy?	68	21	11
(a) Continuing foreign military aid?	76	15	9
(b) Continuing foreign economic aid?	66	26	8
(c) Maintaining our forces in Berlin?	83	10	7
(d) Our defense of Quemoy and Matsu?	70	20	10
(e) Our defense of Formosa?	78	13	9
3. Do you favor ending of nuclear bomb tests?	40	53	7
4. Do you believe that past "summit meetings" have served the best interests of the United States?	31	56	13
5. Reduction of the Federal debt before reducing taxes?	78	18	7
6. Reduction in nondefense Government spending if existing functions are curtailed?	64	29	7
If "yes" would you suggest cutting foreign aid (16 percent), farm subsidies (28 percent), public works (14 percent), highways (10 percent), veterans' aid (13 percent), slum clearance (11 percent), others (8 percent).			
Do you favor:			
7. Raising minimum wage to $1.25 per hour?	67	26	7
8. Requiring registration of pension and welfare funds of labor unions and disclosure of financial transactions involving them?	93	4	3
9. The enactment of a strong civil rights program to enforce the voting rights of all citizens?	80	13	7
10. Making it a Federal crime to bomb churches, synagogues, or schools?	89	8	3
11. Further reduction in the age at which persons shall be eligible for social security benefits?	60	37	3
12. An increase in social security benefits?	70	26	4
13. Direct Federal grants to States for education?	56	38	6
14. More liberal credit and lower interest rates for small business?	77	17	6

The response to the questionnaire by thousands of residents of our district has been of great assistance to me in carrying out their wishes. Many persons who answered the questions also submitted comments on other issues and suggestions for solutions to some of the problems of the day.

They are the people who elected me to represent them in the Congress of the United States. If there is any way in which I can be of service to them I hope they will not hesitate to call upon me. During recess both my Washington and Brooklyn offices remain open. I have a competent staff and my services and theirs are available to my constituents. I want them to know that even when Congress is not in session I am on the job.

Polish Independence Day: A Day of Tribute and Reminder

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I want to join all Polish-Americans in their commemoration of Polish Independence Day, which falls on November 9. This was the day on which, in 1918, in the aftermath of the First World War, Poland was proclaimed an independent state.

It is fitting that all of us take note of this day, both by way of tribute and by way of reminder.

It should be a day on which we pay tribute to all the Polish people, who struggled so bitterly for independence and freedom, and who were forced to part with it so quickly.

At the same time, it serves as a poignant reminder of the true nature of Russian tyranny and imperialism.

Particularly at this time, when Khrushchev has just been with us professing peace and friendship, it is important to remember the fate of another country which was also once assured that Russia was her friend. As we begin to assess Mr. Khrushchev's words and intentions, it will not hurt to be reminded of the Katyn massacre, or of the betrayal at Warsaw. It will not hurt to remember what happened to another, weaker, people which put its trust in Soviet promises.

Poland's hopes were bitterly shattered, her momentary independence terminated, and her people placed under Russian subjugation. But despite Russian domination, the spirit of her people has remained strong. Hope has remained in their minds and hearts. It is this hope and spirit which we must applaud today, and which persuades us that one day, somehow, Poland may once again be free.

Story of Naming of Old Glory

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LOSER. Mr. Speaker, for some time now, Post No. 5 of the American Legion at Nashville, Tenn., has been interested in the flying of the American flag over the grave of Capt. William Driver who named our flag Old Glory.

This group of patriotic Americans has erected a fitting flagpole over the grave of Capt. William Driver in the City Cemetery at Nashville.

Mr. Speaker, this story of the naming of Old Glory is a most interesting one and I am sure it will be of great interest to patriotic American citizens everywhere.

I want to commend this outstanding post of the American Legion for having brought this matter to my attention and I feel that it would be a fitting tribute to Captain Driver to fly our flag throughout the day and night over the grave of this distinguished American.

Mr. Speaker, I introduced on August 31, 1959, in the House of Representatives a bill—H.R. 8957—to permit the flying of the flag of the United States for 24 hours each day over the grave of Capt.

William Driver in the City Cemetery, Nashville, Tenn. This bill has been referred to the Committee on the Judiciary and I am hopeful that the appropriate subcommittee of this great committee will hold a hearing on the bill early in the next session of the 86th Congress and that ultimately it will receive the approval of the committee and be passed by both Houses of the Congress of the United States.

I deeply appreciate the tremendous interest of Post No. 5 of the American Legion in this patriotic effort in the honoring of the memory of Captain Driver.

The most interesting story setting forth the history of the naming of the U.S. flag as Old Glory by Capt. William Driver follows:

THE FLAG OF THE UNITED STATES—ITS HISTORY AND SYMBOLISM

(By James A. Moss, colonel, U.S. Army, retired)

STORY OF NAMING OF OLD GLORY

It was on March 17, 1824, in Salem, Mass., upon the occasion of the celebration of his 21st birthday, that William Driver, whose heart and soul were in his occupation of sailing the seas, was presented by his mother and a group of Salem girls with a beautiful American flag they had made for him. "I name her Old Glory," said he, in response to the greetings of the givers—and thus was it that the name, Old Glory, made its advent into the history of our country. From that day on Old Glory accompanied William Driver whenever he went to sea, and many were the notable voyages made under its flying folds—twice around the world, once around Australia, and several cruises among the Archipelago Islands.

When in 1837, Captain Driver quit the sea and settled in Nashville, Tenn., as usual Old Glory accompanied him. On occasions such as Washington's Birthday, the Fourth of July, and St. Patrick's Day (also the anniversary of Captain Driver's birthday) Old Glory could be seen gracefully waiving from a rope extending from the captain's house to a tree across the street.

However, when in 1861 Tennessee seceded from the Union and hostilities began, Old Glory mysteriously vanished.

The morning of February 25, 1862, Union soldiers entered Nashville and took possession of the city. On that morning Captain Driver, accompanied by Captain Thatcher, of the Sixth Ohio Regiment, and several soldiers, came home, and calling his daughter Mary Jane, asked her to help him rip a bedcover he was holding. And lo and behold. As the comforter was ripped apart, there was Old Glory, which, for safekeeping, had been sewn between the folds of the cover when Tennessee had seceded and American flags were objects of attack in Nashville. At the sight of Old Glory the soldiers cheered, and then helped to fold the flag which Captain Driver took in his arms as the party left for the State House. As the captain climbed to the dome of the building and raised Old Glory over the capitol, he exclaimed, "Thank God. I lived to raise Old Glory on the dome of the Capitol of Tennessee; I am now ready to die and go to my forefathers."

One day, not long before the good old captain went to join his forefathers, he placed in the arms of his daughter a bundle, saying:

"Mary Jane, this is my old ship flag, Old Glory. It has been my constant companion on many voyages. I love it as a mother loves her child; take it and cherish it as I have cherished it, for it has been my steadfast friend and protector in all parts of the world, among savages, heathen, and civilized. Keep it always."

The flag that Capt. William Driver named Old Glory was kept and guarded as a precious heirloom in the Driver family until 1922, when it was sent to the Smithsonian Institution in Washington, where, carefully preserved under glass, surrounded by other priceless relics of the Nation, in silent eloquence it now tells to us of today, as it will to posterity, the beautiful story of Old Glory.

Food for Our Needy Citizens

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RABAUT. Mr. Speaker, for a long time now we in the United States have found ourselves in the curious and shameful position of seeing around us all the wealth and prosperity of the richest nation in the world and of seeing amidst all this wealth some of our fellow citizens going hungry.

In my opinion, it is a thoroughly disgraceful thing for the wealthiest nation in the world to allow any of its citizens to go hungry. Yet there are many Americans going hungry every day. Surely this is not the American way. It is not the human way either. What is worse, this shameful circumstance has been going on at the same time that our Government has been holding huge quantities—presently $9 billion worth—of surplus food in storage. This has been the deplorable situation for some time.

Happily something has finally been done to remedy this implausible disgrace. Legislation establishing a food stamp plan to distribute surplus foodstuffs to our own needy has finally passed Congress. This passage comes after several unsuccessful tries. For myself this was the fourth Congress in which I introduced food stamp legislation. In its final form the bill which passed will permit the Secretary of Agriculture to distribute up to $250 million worth of surplus foods to those in need. The mechanics of the distribution are simple. Food stamps will be issued to the needy and they will simply redeem these stamps at the nearest retail outlet participating in the plan for food items on the surplus list of the Department of Agriculture. Participation in the plan is not mandatory for anyone, although reaction by retail food merchants has been largely favorable.

State officials and local welfare authorities have also been enthusiastic. Last year 32 State Governors testified in favor of the enactment of food stamp legislation. I am sure that when this plan goes into operation, the wisdom of Congress will once more be made manifest. For, indeed, this is wise legislation. It is proper and humane legislation. This program will accomplish the dual objectives—both desirable—of supplying food to our hungry and indigent fellow citizens and of reducing in this wonderfully simple way the huge food surpluses that perennially plague our farmers, economists, and Government.

I believe the present bill will prove to be only a beginning. I beieve that the basic concept and the scope of the plan will burgeon beyond all anticipation. It is not too much to think that eventually the whole of our farm surplus may be reduced to a proper minimum by this simple and humane expedient of feeding our hungry countrymen. Let us hope so.

Tribute to Donald B. Fitzpatrick

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LAIRD. Mr. Speaker, I think it is always a testimonial to an American citizen if he gives freely of his time, without compensation, in an advisory capacity to his Government. That has happened in the case of Mr. Donald B. Fitzpatrick, who is in charge of recruitment and training of engineering personnel for the Allen-Bradley Co., of Milwaukee, Wis.

He came to Washington and served 6 months, without compensation, as adviser to the Director, Electrical Equipment Division of the Business and Defense Services Administration. I think a testimony to a citizen of such character, who has displayed such unselfishness to his country, deserves a place in the CONGRESSIONAL RECORD, and, under unanimous consent, I include a tribute to Mr. Fitzpatrick in the CONGRESSIONAL RECORD in connection with my remarks:

During the past 6 months, Donald B. Fitzpatrick, in charge of recruitment and training of engineering personnel for the Allen-Bradley Co., of Milwaukee, Wis., has served as W.O.C. adviser to the Director of the Electrical Equipment Division, in providing technical advice on the mobilization activities of the Business and Defense Services Administration and the Department of Commerce, as they applied to the products and facilities of the electrical industrial controls and related equipment.

Mr. Fitzpatrick served in the Navy during World War II. After discharge, he attended Rensselaer Polytechnic Institute and Purdue University and obtained his electrical engineering and master of science degrees. Through 1955 he taught control engineering at Purdue University. Both as a professor and with his company, his interests have been in the building of our defenses through scientific and engineering education. While serving as professor, and because of his interest in the underlying causes of juvenile delinquency as a deterrent to complete utilization of the Nation's resources, he used his free time cooperating with the Indiana State police in observing and analyzing causes.

His informal interest in psychology was later directed to the preparation and conducting of industrial exhibits.

The 6 months active service in the Electrical Equipment Division, BDSA, just concluded, is a prelude to his becoming associated with the BDSA executive reserve.

His wide knowledge of electrical controls enabled him to prepare reports affecting the overall mobilization readiness of the electrical industry, especially the highly important motor and control segment. America's posture of readiness has been advanced by the self-sacrificing willingness of Mr. Fitzpatrick in preparing himself for active participation under emergency conditions and by his review and criticism of mobilization plans.

On August 14, Mr. H. B. McCoy, Administrator of the Business and Defense Services Administration, presented to Mr. Fitzpatrick, on behalf of the Secretary of Commerce, a certificate of merit in recognition of his outstanding Government service during the past 6 months. In addition, the Secretary of Commerce gave Mr. Fitzpatrick a flag that was flown over the Capitol as a token of recognition of his service to the Nation, the Business and Defense Services Administration, and the Department of Commerce. Mr. McCoy in his own behalf presented a personal letter of congratulations.

Schedule of Hon. William G. Bray for the Seventh Congressional District of Indiana

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. BRAY. Mr. Speaker, in order to discuss the problems, interests, and wishes of the people of the Seventh Congressional District, I will meet interested persons at the various post offices in accordance with the following schedule:

Monday, October 26:
9 a.m., Oakland City.
10:15 a.m., Somerville.
11 a.m., Mackey.
12 noon, Fort Branch.
1:30 p.m., Owensville.
2:45 p.m., Haubstadt.
3:45 p.m., Buckskin.
5 p.m., Princeton.
Tuesday, October 27:
8 a.m., Francisco.
9 a.m., Patoka.
10 a.m., Hazleton.
10:30 a.m., Decker.
11:30 a.m., Vincennes.
2 p.m., Monroe City.
3 p.m., Wheatland.
4 p.m., Bruceville.
Wednesday, October 28:
8:30 a.m., Emison.
9:30 a.m., Oaktown.
10:30 a.m., Freelandville.
11:30 a.m., Ragsdale.
1:30 p.m., Bicknell.
2:30 p.m., Edwardsport.
3:15 p.m., Westphalia.
4 p.m., Sandborn.
Thursday, October 29:
9:30 a.m., Indian Springs.
10:30 a.m., Shoals.
11:30 a.m., Loogootee.
1:30 p.m., Alfordsville.
2:30 p.m., Burns City.
3:30 p.m., Crane.
Wednesday, November 4:
8:30 a.m., Harmony.
9 a.m., Knightsville.
10:30 a.m., Carbon.
11 a.m., Brazil.
1:30 p.m., Staunton.
2:30 p.m., Cory.
3:30 p.m., Poland.
Thursday, November 5:
9:30 a.m., Bowling Green.
10:30 a.m., Centerpoint.
11:30 a.m., Clay City.
1:30 p.m., Coal City.
2:30 p.m., Patricksburg.
3:30 p.m., Spencer.
Friday, November 6:
9 a.m., Freedom.
10 a.m., Gosport.
11 a.m., Quincy.
1:30 p.m., Eminence.
2:30 p.m., Hall.
3:30 p.m., Monrovia.
Monday, November 9:
8:30 a.m., Harrodsburg.
9:30 a.m., Smithville.
10:15 a.m., Clear Creek.
11:15 a.m., Stanford.
12:15 p.m., Bloomington.
2:30 p.m., Unionville.
3:30 p.m., Ellettsville.
4:30 p.m., Stinesville.
Tuesday, November 10:

11 a.m., Brooklyn.
12 noon, Mooresville.
2:30 p.m., Paragon.
3:30 p.m., Martinsville.

The Future of Democracy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, during the Communist World Youth Festival in Vienna, Austria, last summer, a daily newspaper, the Vienna Daily News, was published as an unofficial and independent voice against the official Communist line at the festival. I was asked by the editor of this paper to prepare a statement for the paper which was published in seven different languages and circulated widely among delegates and visitors to Vienna.

Mr. President, I ask unanimous consent to have my article "The Future of Democracy," inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Vienna Daily News, July 30, 1959]

THE FUTURE OF DEMOCRACY

(By Hon. HUBERT H. HUMPHREY, of Minnesota)

The word democracy will probably be the most used and the most misused word during the Vienna Youth Festival of 1959. Ever since the enlightenment the democratic creed has been the leading political philosophy in the Western World and in many parts of Asia and Africa as well. Today both the Communist world and the free world claim to be the standard bearers of genuine democracy.

The young leaders at this festival and their counterparts throughout the world cannot escape the fateful choice between the two major competing political philosophies in the world today, both of which claim to be democratic.

Let me state what I believe genuine political democracy is. Democracy means "government of the people, by the people, and for the people," to use the words of Abraham Lincoln. Almost every believer in democracy would agree with this definition, but there is considerable disagreement in applying it in practice.

PERVERSION OF MARXISM

"Government for the people" means that certain basic human rights must be guaranteed to all citizens, even to minority groups whose views may differ radically from those of the majority. In the United States, for example, Democrats, Republicans, Socialists, and Communists as citizens enjoy the same basic rights and privileges. They are protected by the same laws. If they are accused of violating any of these laws, they are tried by the same courts. All political groups have a right to freedom of speech and freedom of the press.

"Government by the people" means there must be free and periodic elections, in which the citizens can choose between alternative sets of leaders to govern them. A free election is not a single slate election. A free election is a secret election. A free election offers the voter choices between men and issues. A free election is open to all citizens

of voting age regardless of sex, creed, or color. In all candor, I must admit that the United States has not yet fully met this last requirement of a free election, but we are making progress in breaking down the last barriers which prevent some of our citizens from exercising their democratic birthright.

"Government of the people" means that political minorities should have the right to organize and to propagate their views as long as they do so peaceably. This includes the right to organize an opposition party, the right to seek public support for the views and candidates of that party, the right to vote for the party, the right to run for office if selected as the party candidate, and the right to serve in public office if elected.

Genuine democracy must meet these three standards if it is to be worthy of the high tradition which gave it birth. Not all governments which call themselves democratic meet all these standards, and some governments do not meet any of them.

Democracy grows out of the history and character of a people and it cannot be imposed by fiat. I believe that democratic government is the most effective form of government ever conceived by man, because it takes into account both man's longing for justice and man's inclination to injustice. Genuine democratic government is probably the most difficult form of government to achieve, but I believe it is worth the effort.

FUTURE OF DEMOCRACY

Does democracy have a future? Viewed against the backdrop of history, modern political democracy is still a relatively new and untried form of government. In the past three decades democratic government has been severely challenged from without by new systems of totalitarianism and tyranny which rule by coercion and fear rather than by freely given consent. Democracy is always challenged from within by ignorance, by apathy, and by the pursuit of special privileges at the expense of a common good. The future of democracy cannot be taken for granted—but it can be encouraged and promoted.

I believe democracy will survive and grow if those who understand its true meaning dedicate their lives to its fulfillment. It will survive if true democrats the world over recognize the peril in which genuine representative government stands today. Democracy can be the faith and fact of the future if the young people of today dedicate themselves to the proposition that "government of the people, by the people, and for the people shall not perish from the earth."

The New Spirit in Immigration

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RABAUT. Mr. Speaker, one of the more notable accomplishments of the recent Congress was in the field of immigration. The bill which Congress passed has now become Public Law 363—part of the immigration code of the land.

I should like to point the deserving finger of recognition at Representative FRANCIS WALTER, of Pennsylvania, for the long and arduous work he put in on this bill. Compliments are in order also for Representative CELLER, of New York, who was instrumental in getting the bill out on the House floor and for Senator PASTORE, of Rhode Island, who assisted in the improving amendments added in the Senate.

However, the most commendable aspect of all is that this act has written into the impersonal objectivity of our immigration laws the essence of the great American spirit. In short, a place has been made for the human element. A statement made on the floor during the debate on this bill hit exactly the right note:

This measure firmly reasserts the principle that the reuniting of families shall be one of the basic and permanent cornerstones of our immigration policy. By passing this bill we show once again that America, even though she operates through the cold quotas and figures of the Immigration and Nationality Act, is willing to change those figures where human suffering is at stake. We demonstrate that, in the final analysis, our democratic feelings shape our decisions.

Basically the bill reclassifies certain close relatives of U.S. citizens and aliens lawfully admitted for permanent residence in the United States. Such reclassification will expedite the reuniting of certain families. The bill also provides for the granting of nonquota status—that is, without regard to any existing quota—to certain close relatives of U.S. citizens and legal permanent resident aliens if these relatives were registered on a quota waiting list before December 31, 1953, and in whose behalf petitions were approved prior to January 1, 1959. This provision will benefit approximately 57,000 persons.

Mr. Speaker, this is basically a bill to reunite families that we have been seeking to bring together. It will help people who have been waiting hopelessly, often for years, to join their families here in the United States. As was said on the House floor, it is a bill that any person who has any human feeling must be glad to see become law.

Perhaps the true essence of the new law has best been summed up by Senator PASTORE when he called it an equitable bill fashioned sincerely in the American mold that makes for the sanctity of the family and the security of the home.

Let's Not Forget a Farm Bill

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WILSON. Mr. Speaker, the Appendix to the CONGRESSIONAL RECORD published on September 18, 1959, contains a statement and a report from the Secretary of Agriculture, Ezra Taft Benson, relative to the serious obligation we have to the farmers and people of America.

Mr. Speaker, under leave to extend my remarks, I include the following editorial from the September 8, 1959, issue of the San Diego Union in the RECORD. This editorial again points up the burden on us all:

LET'S NOT FORGET A FARM BILL

President Eisenhower said recently that he would take his fight for sensible farm legislation to the American people. The fact that Mr. Eisenhower's nationwide appeal on behalf of the Landrum-Griffin labor bill stimulated the Congress into action augurs well for a like presentation of the farm case.

The public had a great stake in the battle for beneficial labor legislation, and let the Congress know it. The Nation's taxpayers have an equally important stake in getting the Congress to do something about the farm mess.

The present system of price supports and output controls is woefully inadequate. Last January the President again acted to put agriculture programs back on a sensible, business-like basis in keeping with the free enterprise system. He recommended to Congress a change that would allow the support prices of farm commodities to move gradually into line with actual market prices. Thus prices would reflect current conditions of supply and demand.

This is reasonable. It would make price, rather than governmental acreage and marketing controls, the most important determining factor in production. A gradual conversion of the price-support mechanism from an instrument of subsidy into one of real stabilization would cause least dislocation to the farmers.

But the Democratic-controlled Congress, occupied with politics and star-chamber investigations of Presidential appointees, has done nothing. Could it be because the Congress thinks the public is indifferent?

Indifference is one thing we cannot afford with the farm problem. It is the biggest drain on the taxpayers aside from defense. It benefits only one-sixth of the taxpaying population. And there is strong evidence that the farmers benefiting most from the present program are those least in need of help.

Expenditures for the support of farm prices and farm income are estimated at $4½ billion for fiscal 1960. They may go even higher. It is obvious that such expenditures endanger hopes for balancing the budget and whittling down our national debt of $290 billion.

We have had the insatiable farm price-support program since the early New Deal days. It came in as a temporary and emergency measure. In the process of its overlong and unwelcome stay, it has threatened to eat us out of house and home. The bill so far is in excess of $19 billion.

Corrective action has been delayed far too long. The President has a strong case, and he is taking it to the right jury • • • the people.

The Seasons To Come

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BOYLE. Mr. Speaker, in light of the current Khrushchev visit, the question of comparative philosophies of the United States and the U.S.S.R. have been brought into clearer focus. I commend to the attention of my colleagues, the following article from the pen of Leo Lerner, editor of Lerner home news-

papers, entitled, "The Seasons To Come," which I feel sincerely merits the study of the American people.

Under leave to extend my remarks, I include the following article:

[From the North Town News]

THE FIRST COLUMN

(By Leo A. Lerner)

THE SEASONS TO COME

We are a "things" people.
We love things.
We have things.
We want things.

I know a man who is in love with his hi-fi. The only time I see an expression of complete happiness on his face is when he is playing his records, or just looking them over, holding them in that special way that shows he respects them.

This man is to be envied because he is so completely happy with his things.

Being a "things" nation has its drawbacks. As Walter Lippmann said in his column a few days ago, our preoccupation with things leaves us in an embarrassing position with regard to Russia. Lippmann says the Russians are "cohesive" because they have a purpose.

This is not really an insult to the United States, but just a comment that we have probably lost our way in our spiritual and democratic growth because we are somewhat too satisfied with our consumer goods distribution system, which sees to it that nearly everybody can have sewing machines that make buttonholes; and extra soft toilet tissue.

In fact we give a sort of spiritual flavor to our worship of things. We call it a way of life and we get kind of arrogant about it.

Mr. Khrushchev, on his visit, is getting a very convincing display of all the good things that we have. We thought we would bowl him over, but he seems to be resenting it a little. He is beginning to look like a jealous in-law.

Comfort and things are laudable, even necessary, but I feel that we would make a better showing in the world if there were a sound democratic foundation under our apparent consumer-goods worship.

If, as a nation we were doing more for our poor and unfortunate, we would look better; and if we were not making such asses of ourselves over the race problem, we would look better. All of us would feel better if we were more effective in selling democracy abroad.

President Eisenhower is both courageous and farseeing in his efforts to get together with Premier Khrushchev and try to work out a mutual understanding for peace, but he is not to be admired for his failure to push through Congress an adequate education bill that would put Federal funds behind new schools, colleges, medical schools, and hospitals.

I think this problem depends on the individuals in our society. Those who take their share from society and give nothing back are merely parasites. The fact that we have done well for ourselves does not necessarily mean we have a noble purpose.

This is obviously now a world community, and in order to live in it, we have to change some of our ways. We have to give as much as we get. More, perhaps. But by this I don't mean just foreign aid as much as I mean a part of our hearts, a deep desire to win the world with our own basic goodness.

These goof-ball demonstrations across the country against Khrushchev were crude, inhospitable, and silly. They were vain moral pretensions, vulgar, and inhospitable. You are not much of a hero when you bait Khrushchev from behind the desk of a Hearst newspaper.

America needs to purify its motives and to follow its words with example.

It needs to build ethical bases, instead of just military bases.

Democracy needs to be reintroduced as a way of life in America, and every man should ask himself before he goes to bed at night what he has done that day to advance democracy, even a tenth of a millionth of an inch.

The best words I have read during Mr. Khrushchev's visit are those of our friend Mr. Lippmann, who says:

"There are some among us, it would seem, who think that the Soviet challenge—the most formidable in the history of Western society—can be dealt with by not talking with the Russians, but by passing resolutions condemning communism and then by continuing business and pleasure as usual. They fancy themselves as great defenders of our civilization when they make a speech or write an article which answers some point made by Mr. Khrushchev.

"They are mistaken. The contest will not be won by nitpicking and pinpricking. These Americans do not realize the might of our adversary. The only answer to Mr. Khrushchev is to stop worrying whether he will seduce us, to stop huddling together for fear of his witchery, and to become again the confident and purposeful people which, except when we have duped ourselves, we really are."

Our "things" civilization grew from a strong root of freedom and democracy. Now the roots are becoming sclerotic. We must cultivate them and water them, and give them food, so that they will grow new leaves and new branches for the centuries of seasons to come.

General Pulaski, Polish Soldier of Liberty

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. RODINO. Mr. Speaker, October 1 is the day which we have set aside to honor Casimir Pulaski, the Polish soldier of liberty.

Our country has never forgotten the services and sacrifices of this great Polish patriot, who gave his life, 180 years ago, for the cause of American independence.

Pulaski's entire life was dedicated to the struggle for liberty and freedom. In Poland, he was born to wealth and privilege. Yet he did not hesitate to give up everything for his ideals and for his country. In a period when Poland was preyed upon by her neighbors, and kept in a state of weakness and decay by foreign invaders, Pulaski arose as the man who was willing to take desperate steps for the liberation of his nation.

By the time he was 21, he had fought and defeated the Russians in several battles. By the time he was 24, all Europe knew him as a great fighter and patriot; as one who was willing to fight and die for Polish freedom.

When he was forced to flee Poland, he set out for America, largely through the auspices of Benjamin Franklin, who recognized the value of his services to the War of Independence. He went to yet another country to fight once again for liberty.

His contributions to the Revolutionary cause are a matter of history. His daring and skill won the trust and support of George Washington. The zeal and exploits of his legion won the admiration and gratitude of all the Colonies.

Pulaski died, at the age of 32, at Savannah, in the thick of a battle for liberty. His is the story of a patriot and fighter: "an enemy of kings."

But Casimir Pulaski is more than a great soldier, patriot and idealist. He is the symbol of the unconquerable spirit of Poland, which today once again is beset by foreign invaders. His memory symbolizes the centuries-old struggle of Poland against subjugation, and the hope and the dedication in the hearts of Polish patriots everywhere to the cause of liberty. May Poland's valiant sons—the heirs of Casimir Pulaski—one day restore their great nation to sovereignty and independence.

Vienna Youth Festival: An Appraisal

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, on three previous occasions this year I have addressed the Senate on the World Youth Festival held this year from July 26 to August 4 in Vienna, Austria. Those three occasions were on March 10, July 23, and July 27.

My remarks were concerned with two main points. First, I wanted to say a word about the nature and purpose of these Communist-sponsored youth festivals which occur every 2 years; second, I attempted to make a case for the participation of intelligent and well-informed American young people and students.

This is the first youth festival held outside of the Iron Curtain. It presented an unique opportunity for an encounter between young people indoctrinated with the Communist idealogy and young people committed to democracy as we know it in Western Europe and the United States.

In a letter to the student body heads of American colleges and universities, I urge unofficial U.S. participation in the festival. The purpose of such participation was to present the case for genuine democracy, especially among delegates from the uncommitted countries of Asia and Africa.

The World Youth Festival of 1959 is now history, and I should like to take this occasion to say that I am convinced that the unofficial participation by American youths, guided to a great extent by the work of the independent service for information on the Vienna Youth Festival, was a great success. Many unofficial contacts, meetings, conversations, and debates were held between these unofficial delegates and

other participants in the festival. Those who participated in this way learned a great deal about Communist propaganda as well as about technique that can be used to reach persons from uncommitted areas. I am sure this experience in persuasion will pay off in the future.

In connection with appraising the festival, I ask unanimous consent to have printed in the Appendix of the RECORD three articles, as follows:

First. "Festival Branded 'Communist Tool' by U.S. Delegates," which appeared in the Vienna Daily News, an unofficial, non-Communist newspaper published during the festival, on August 5, 1959. This article illustrates the activities of the American group.

Second. "Moscow's Experimental Venture: The Vienna World Youth Festival," by Morton Schwartz, which appeared in Problems of Communism, September–October 1959. This publication is put out by the U.S. Information Agency.

Third. "Counterblast at the Vienna Festival," by Friedrich Katscher, which appeared in the August 17–24, 1959, the New Leader. Mr. Katscher shows how the democratic youth at the festival stymied the Communist impact.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Vienna Daily News, Aug. 5, 1959].

FESTIVAL BRANDED "COMMUNIST TOOL" BY U.S. DELEGATES

A statement issued by the majority of the U.S. delegates yesterday denounced the festival as "a tool for the advancement of world communism," at which the truth was distorted, free speech was suppressed and non-Communists were "beaten up by the festival police."

The statement was issued by an eight-man steering committee elected to represent the delegation which never obtained recognition from the Communist organizers of the festival. It was handed out by spokesman John Meller, 22, of Chicago, a student of political science at Stanford University. It said that the Americans remained throughout the festival to wage a continuing fight for freedom of speech and to try to give the festival delegates a fair and undistorted picture of life in the United States.

"But we did not expect," the statement said, "that the festival organizers would be as blatantly partisan as they were * * * and we did not expect that intimidation and violence would be used against those whose sentiments, political or nonpolitical, were not those of the festival organizers."

Meanwhile, Jean Garcias, general secretary of the International Preparatory Committee which organized the festival, said it had decided to send a delegation to the Foreign Ministers' Conference in Geneva.

The party will include one member from each of the countries whose foreign ministers are meeting in Geneva, and one delegate from each of the five continents. Mr. Garcias said the delegation would wish the Ministers a successful conference and would hand them a copy of the closing statements of the festival.

He said 18,864 delegates from 112 countries attended the festival.

[From Problems of Communism, September–October 1959, published by USIA]

MOSCOW'S EXPERIMENTAL VENTURE: THE VIENNA WORLD YOUTH FESTIVAL

In their biannual effort to foster "the consolidation of the democratic forces of youth," the World Federation of Democratic Youth (WFDY) and the International Union of Students (IUS), two major constellations in the solar system of Communist-front organizations, jointly sponsored the Seventh World Festival of Youth and Students in Vienna from July 26 to August 4 of this year. Under the banner of "Peace and Friendship" and behind a smokescreen of singing, dancing, cultural exhibitions and sports contests—an official handout stated that there were "on the average 80 events per day"—a major campaign was waged to demonstrate the moral and socioeconomic superiority of socialism over capitalism and to persuade the delegates, particularly those from the underdeveloped countries, that Communist "victories" are not only inevitable but desirable.

The history of the World Youth Festivals demonstrates that far from being nonpolitical and nonpartisan, as their publicity claims, they have consistently and unquestioningly followed the dictates of Soviet foreign policy. The first three festivals, held in Prague (1947), Budapest (1949), and East Berlin (1951), reflected the Soviet policy line in the most venomous stage of the cold war: They attacked the non-Communist leaders of Asian and African nationalism as "bourgeois imperialist lackies"; they directed violent condemnations at the United States, Britain, and the "Western imperialist warmongers"; they welcomed and then expelled Yugoslav youth delegates; they celebrated the Chinese Communist victory.

With the death of Stalin, the festivals held in Bucharest (1953), Warsaw (1955), and Moscow (1957), adopted the less blatant and more flexible tactics of the new Soviet policy: Asian and African national movements were praised and infiltrated instead of boycotted and condemned, non-Communist personalities and organizations were courted so as to add respectability to the festivals, and emphasis was placed on the need for international cooperation to solve the problems facing world youth. The festival in Vienna has been a continuation of this post-Stalin policy.

A major effort was made by the sponsors to make the event appear nonpartisan. As evidence, they pointed to the well-known figures who have endorsed the festival—e.g., Sean O'Casey, J. D. Bernall, Paul Robeson. Because the WFDY and the IUS have become so well known as Communist-front groups, they followed their usual custom of creating their own front—the International Preparatory Committee (IPC) of the Vienna Festival—as the organization formally responsible for operations. It was maintained that the festival staff was international and representative of all political tendencies, but most of the IPC members were WFDY and IUS veterans. Jean Garcias, the secretary of the IPC, is a 34-year-old French Communist official who worked at WFDY headquarters for 5 years prior to being sent to Vienna in April 1958 to take charge of preparations. At the 1957 Moscow festival, the leading organizer was Alexander Shelepin, former First Secretary of the Soviet Komsomol, vice president of IUS from 1946 to 1953, first vice president of WFDY in 1953–54, reelected for a 2-year term in the same office in August 1957—and three times a member of the IPC staffs formed to organize festivals. It is perhaps not surprising that his long years of service to the "youth of the world" were rewarded by his appointment last December to succeed Gen. Ivan Serov as chief of the Soviet security organization, the KGB. It is probable that 32-year-old Valentin Vdovin, Komsomol secretary at WFDY headquarters since 1955, Soviet secretary in IUS from 1951 to 1954 and close associate of Shelepin, played the major behind-the-scenes role during the Vienna activities.

As further proof of the non-Communist character of the festival, IPC literature repeatedly pointed to the choice of Vienna as its site. All previous festivals, with the exception of the 1947 gathering in Prague, which preceded the Communist coup by 6 months, have been held in the capitals of Communist countries. Keenly aware of criticism of the past gatherings as strictly Soviet bloc demonstrations, those responsible decided that moving the festival out of the bloc to a neutral capital would win respectability and prestige for the event and its sponsors. Though the advantages of total cooperation from local authorities, power over visas, mobilization of "volunteer" labor, direction of the mass media, and help from the police and army, were in this case absent, Vienna was not without its advantages. Four-power occupation of Vienna, from 1945 to 1955, had given the Soviets an opportunity to set up a number of front organizations in their sector. Though the major front groups with permanent headquarters there—the World Federation of Trade Unions and the World Peace Council—were expelled after the occupation for endangering Austrian neutrality, a network of services and facilities had been maintained. These organizations were instrumental in making the festival arrangements—housing the delegates, providing translation equipment and secretarial services, acting as a funnel for the vast moneys poured into the festival, etc. Such facilities are available in very few places outside the Soviet bloc.

The tone of the festival was set by the opening ceremonies at Wiener Stadium. For approximately 4 hours a crowd estimated at 50,000 was treated to a parade of 11,000 delegates, many in colorful national costumes, a gymnastics display by 1,200 athletes from Czechoslovakia (who were specially imported for this demonstration and returned home that same night), dancing by national groups from every continent, and an impressive fireworks display. As each delegation passed the reviewing stand they were greeted with the same words, "Friendship, peace—we welcome the young ambassadors of peace in Vienna." At the height of the proceedings several thousand "peace doves" were released. (Unfortunately for some of the spectators, the pigeons added their own personal touch to the festivities.) The peace and friendship chant—"Frieden und Freundschaft," "Mir i druzhba"—was on the lips of all of the delegations as they circled the stadium.

The most impressive delegations were from Iraq, China, the various East European countries, and the Soviet Union. As the Soviet delegation was being announced a barrage of fireworks suddenly began, and rocket-launched parachutes bearing the official festival flag dropped from the sky. There was no question but that the really important delegation had arrived. At the IPC press conference the following day the fact that the fireworks began just as the Soviet delegation was announced was deemed to be coincidence. It was explained that in agreement with the Viennese Fire Department, the fireworks display was set for a certain time. However, the delegates were one-half hour late as they marched into the stadium. The fact that the time specified coincided with the announcement of the Soviets was "purely accidental."

Another interesting tactic was the fact that the Japanese delegation carried the only overtly political banners in the opening parade, though they later appeared among other groups. As the Japanese slowly circled the stadium they bore signs which read "Atom-Free Zone in Asia." "Ban A- and H-Bombs." Throughout the whole festival, the Japanese played the major role in propagandizing the antinuclear weapons theme. At the August 1 "Celebration in Honor of Friendship and Peace Among the Peoples,

Against Atomic Weapons, for Disarmament and Peaceful Coexistence," a Japanese chorus sang "The Song of Hiroshima." They were introduced by a girl who gave an eyewitness account of the horrors of the first atom-bomb explosion. At this same demonstration, which began with a 2-hour parade along the Ring, Vienna's grand boulevard, banners were carried by various delegations protesting against nuclear weapons tests and the cold war. The Soviet delegation carried signs in Russian, German, French, English, and Arabic. Two delegations shouldered banners calling for a "Summit Conference for Peace."

The tendentious use of the "peace" slogan was more obviously revealed at the meeting "On the contribution of the youth of Asia and the Pacific region to the cause of peace, so that the Pacific Ocean will be a peace ocean, which is the common interest of the young people of Asia and the Pacific region." The tone of this meeting reflected the official Soviet position with regard to the existence of American bases in the Pacific.

During the festival's student program, organized by the IUS, many seminars, conferences, and lectures were held. Though discussion was essentially unrestricted and there were some opportunities to present non-Communist interpretations of the subject at hand, the complexion of these meetings was determined by the IPC, which selected both topics and speakers. Invariably these gatherings proclaimed the superiority of the Communist system and lashed out against the moral debauchery of the capitalist system, whether the subject under discussion was "The Problems of Contemporary Literature," "Nature and Man in the Light of the Achievements of Contemporary Science, Technology and Philosophy," or "Problems in the Conquest of Space." For instance, Soviet Prof. Georgi Vinogradoff, a member of the Academy of Sciences, speaking in a seminar on "Atomic Energy, Today and Tomorrow," included in his remarks on Soviet progress an attack against the atomic rearmament of West Germany. Many incidents of this type could be cited.

The most blatant examples of Communist propagandizing were to be seen at the international exhibitions of art and photography. Of these, the most unashamedly partisan pièce d'art was a posterlike Guatemalan painting, variously depicting an ugly-faced American soldier shooting an Oriental with hands tied behind his back, a partially buried "U.S. Air Force" bomb, another bomb from which vermin are crawling and carrying doves of peace, North Korean troops descending upon the imperialist marauders. Less obvious were three Japanese photographs showing respectively a column of marching Japanese troops, a group of American GI's, and Japanese youngsters playing at war with toy pistols: The caption under these pictures read "A city in which the American Army and Japanese Wermacht are situated." On the side of positive propaganda there were the expected themes: Friendship, personified by a smiling and waving Khrushchev in an East German photograph; socialist economic progress, highlighted by the predominantly industrial scenes in the North Korean, Rumanian, and Chinese displays; Soviet scientific achievements, subtly indicated by numerous watercolors on space travel done by young Soviet children, hung in the special children's section of the exhibition. In the American photographic display, pictures of privation and squalor dominated. The only caption to be found read "Slums and Young Toughs."

Though the Soviet delegation never took an overbearing lead in the various festival activities, the dominance of Soviet influence was felt everywhere. The ubiquitous impact of the 800-strong contingent, constantly chanting "Mir i Druzhba" and singing Dunayevski's "March of Enthusiasts" (the unofficial anthem of the WFDY); the Soviet trucks bearing the Soviet "Kino-khronima" klieg lights, used at every outdoor rally; the ever-present horde of Soviet newspaper photographers and radio correspondents carrying their portable tape recorders—all bore witness to the guiding hand behind the festival. At every festival event, the Soviet participation was the featured performance. Though others frequently made the passionate appeals, the Soviet speakers assumed the role of "elder statesmen." Virtually always together in large groups, the young (and some not so young) Soviet delegates were constantly smiling, waving, shaking hands, and distributing lapel pins.

The delegates were assisted—and applauded—by large numbers of Soviet tourists (approximately 4,000), who also carried about seemingly inexhaustible supplies of pins. Thousands of "tourists" also arrived from Poland, Hungary, and Czechoslovakia. Communist supporters from all parts of Austria were reported to have been brought to Vienna to attend the August 1 rally on disarmament. These moves to insure a show of enthusiasm from the sidelines apparently reflected the apprehension felt over the reception that would greet a festival outside the Iron Curtain.

That such apprehension was to some extent justified became clear in perhaps the most unique feature of the festival, as contrasted with past gatherings—and that was the presence of a counteractive opposition in Vienna. Austrian non-Communist youth groups set up information centers throughout the city, usually near the site of a festival activity. Large crowds, even including some people from the Communist delegations, frequently formed at these points to discuss political questions. There was notable cooperation between various nationalities of anti-Communist young people. Catholics and Socialists worked well together and with independent student groups. Anti-Communist literature was distributed by the Austrians, and a two-volume pocket edition of Dr. Zhivago, in Russian, was also available. The Austrian youth groups also arranged bus tours to the heavily fortified Hungarian border. The anti-Communist youth could count themselves successful in contacting eastern European delegates, particularly the Poles and East Germans, but unfortunately did not seem to attract much non-European attention.

The splits which occurred in some of the delegations, particularly the American, certainly disturbed the total harmony which usually prevails at the festivals. Garcia's heavy-handed efforts to get sole recognition for the fellow-traveling minority of the U.S. participants were widely known and provoked some adverse comments from other delegates. Frequently, but not uniformly, efforts were made to exclude unidentified delegates from the seminars. Special privilegs were accorded Communist newsmen, while representatives of the Western press had difficulty in obtaining admission to some conference activities. The latter discrimination, however, was not known to the delegates themselves.

As for the general public reception, the coolness of the local population to the festival must have been something of a surprise to those delegates who remembered the huge Moscow throngs cheering them on in 1957. The Viennese, who lived with Soviet occupation troops for 10 years, gaped rather than applauded.

A major defeat for the festival was the opposition of the Big Three of neutralism—Nasser, Nehru, and Nkrumah. Though it was never acknowledged by the IPC, there was no one present representing the UAR. Perhaps to compensate for this boycott, the nearly 400 delegates from Kassem's Iraq were given much attention. Most of the delegates from India and all from Ghana were students from European, mainly British, universities rather than representatives coming directly from their own countries. There was no official Pakistani delegation either, and one lone Burmese peace partisan carried his nation's banner in the procession.

Despite the presence of an opposition, the record of the Vienna Festival does not show that it was substantially deflected from the aims and traditions established by its predecessors. The dominant policy lines—peace and friendship, nuclear disarmament, anti-colonialism, Soviet-Communist invincibility—were forcefully propagated. In addition to the activities at the festival proper, many of the delegates were invited, at small or no cost to themselves, to visit various countries of the Socialist camp before the festival or on their way home. Most of the Asian delegates traveled to Vienna through the Soviet Union with the financial assistance of the Soviet Festival Committee. The Australian delegation, for example, came to Vienna via China and the Soviet Union. At every step along the route, their hosts made sure that they were greeted by huge throngs of enthusiastic well-wishers and supporters.

"It must be realized that the festival is not only for song and amusement: it is above all a political event on a world scale," said one Communist paper (Trybunu Ludu, May 25). That the organizers and sponsors took their task to heart has been clearly demonstrated.

MORTON SCHWARTZ.

[From the New Leader, Aug. 17–24, 1959]

COUNTERBLAST AT THE VIENNA FESTIVAL

(By Friedrich Katscher)

VIENNA.—Now that the World Youth Festival, held here from July 26 to August 4, is over, it is possible to draw up a balance sheet on it. This was the seventh such gathering, but the first held in a non-Iron Curtain city. Was it a success from the point of view of its Communist organizers? Did their calculated risk, in sponsoring it in a nominally neutral but actually anti-Communist, pro-West city, pay off? Or were the disruptive efforts of the many anti-Communist youth groups sufficiently successful to teach Moscow not to try such an experiment again outside the Iron Curtain? On balance, the latter would seem to be the case, though the Festival's propagandistic activities cannot be said to have been wholly without an effect on the delegates.

Some 18,000 youths from approximately 100 countries, representing three main geographical areas—Western, Afro-Asian and Iron Curtain—participated in the Festival. The Western group included Communists, fellow travelers, anti-Communists and indifferent people who came only to have a good time at inexpensive rates. The distinctions were not so clear among the Afro-Asians; many had no fixed political views and were open to influence in either direction.

The delegations from the Soviet-dominated countries consisted of both convinced Communists and young people eager to see something of the unknown but attractive West. The Communist managers of these delegations took every precaution to insulate the latter from the seductions lurking in Vienna. The Hungarians, Czechs, Rumanians and Bulgarians had been screened in such a way that they mostly included people who knew no western language. They were secluded like monks from any undesirable contacts with westerners and were transported by special buses from place to place. Many of them had their lodgings on heavily guarded ships anchored in the Danube.

The vast majority of Viennese remained completely aloof from the proceedings. In this they were abetted by the city's non-

Communist press, which undertook what it called "Operation Silence" about the festival: A few days before the jamboree began, all the newspapers explained editorially that they were clamping a news blackout on the event because they considered it not news but propaganda. And a few days after the festival's close, the press published brief roundups about it. For the duration of the festival, there was total silence about it in the press.

Austrian Communist activists, though small in number, played an important role by guarding the seclusion of the Iron Curtain youths and by using violence against open opponents. To counter them, the Federation of Austrian Youth and the Federation of Austrian Students played a key role in the major effort to weaken the impact of the Communist enterprise. These movements, under the slogan, "Friendship Yes, Communism No," worked with many other groups to explain why they refused to participate in the festival, but were eager to make contact with individual participants to tell the story of the free world.

The story was told in many ways. A four-page newspaper, the Vienna Daily News, was issued 12 days running in 7 different editions—English, German, French, Russian, Spanish, Hungarian, and Czech. All festival programs and attractions were regularly listed on an inside page, but cleverly interspersed with them were also listings of all the anti-Communist counterattractions. The paper also printed world news that placed the Soviet bloc in a poor light, and featured items about the dissensions and quarrels at the festival itself.

The newspapers, as well as books, leaflets, posters, and other printed materials, were widely distributed at the more than a dozen information centers set up by anti-Communist youth groups in booths near the camps where the delegates lived, near railroad stations, and at other focal points. The printed material in the Western languages was read by the Western and Afro-Asian participants, but it is difficult to assess the extent to which this literature reached the Iron Curtain groups.

Some success, at least, may be inferred from the fact that their living quarters were subjected to a thorough search for contraband books and periodicals by Communist guards. Some of the Austrian youths who were distributing the literature were severely beaten by the Communist commandoes, and a German television cameraman was also beaten and his camera destroyed (but the film saved) as he recorded how the Communist camp guards violently attacked the non-Communist youths.

The anti-Communist literature included a beautifully illustrated booklet called "Westwind," which described how young people live in the West; Boris Pasternak's "Dr. Zhivago" and Milovan Djilas' "The New Class" in several languages; and a much-sought-after magazine on modern art. The main anti-Communist information center housed an exhibition of "Young Painters of Today" and featured a phonobar where jazz recordings could be heard through earphones. Young Austrians and others speaking foreign languages were present throughout the day to answer questions about life in the West and to engage Communist and other disputants in the many lively discussions that took place.

Young Socialists from the West, from the Afro-Asian countries and from Austria itself, as well as young exiles from Hungary, Spain, and Algeria, performed a highly useful function. The Socialists, whose traditional and stanch history of opposition to all forms of totalitarianism and imperialism is a matter of record, sponsored a big rally against colonialism with prominent speakers from Africa and Asia, a commemoration of the Hungarian revolution with Anna Kethly, the Hungarian Social Democratic leader, as speaker, and a meeting on World Refugee Day (August 2) where refugees from Algeria, Spain, Hungary, and Tibet (the Dalai Lama's brother) spoke. Unfortunately, most of the young people from behind the Iron Curtain, except for the Poles, who were comparatively free and accessible, were either confined to their quarters or did not dare come.

Guided tours were arranged through Vienna and to factories in and out of the city. Seventy-one Soviet delegates took part in the factory tour. Visits were also organized to the Hungarian border. There were from 8 to 12 bus trips daily to the "murder frontier," and Western and Asian delegates were duly appalled by the visible manifestations of the Iron Curtain—the barbed wire entanglements, mine fields, watchtowers with searchlights and machineguns.

Three movie houses played motion pictures without censorship and free of charge. Among the films shown were documentaries on the 1953 East German uprising and the Hungarian Revolution, two films based on George Orwell's novels, "1984" and "Animal Farm," and Ernst Lubitsch's classic satire, "Ninotchka." Four free jazz concerts, advertised with the slogan, "Music Knows No Borders," filled Vienna's largest auditorium.

Perhaps the lowest act perpetrated by the Communists was to spread word that the Austrian Government had suspended the right of political asylum for the duration of the Festival and would arrest and return any refugee. The Vienna Daily News at once refuted this lie and quoted an official of the Austrian Ministry of Interior to the effect that "Austria is a free country and offers asylum to any political refugee." Two days after the festival closed, the Ministry announced that three East European youths who had come to the festival—a Czech metal grinder, a Rumanian music student, and a Hungarian music student—have asked for asylum, which was, of course, granted.

On balance, it would seem that more was gained than lost by allowing the Communists to hold their festival here. In the free atmosphere of this city, Communist supervisors were unable to keep control over all the participants from non-Communist countries. They won few new adherents and undoubtedly lost some, especially among the Iron Curtain youths who had their first breath of a free society and their first glimpse of its products. Though it would be self-deception to maintain that the Communists were wholly unsuccessful, it will probably be a long time before they stage another such rally in a Western city.

Problems Facing Congress When It Returns

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RODINO. Mr. Speaker, the adjournment period is traditionally one of reevaluation of past achievement and reassessment of future goals. I would like to discuss some of the problems which we have not yet solved, and which, in my opinion, should have immediate priority when Congress returns.

Many of these problems are concerned with serious gaps—areas of underdevelopment—in a country which is otherwise the most fully developed in the world. One of the biggest jobs before Congress, it seems to me, is to see to it that no group is left behind in the general prosperity.

This is, after all, an era of unprecedented national productivity and national wealth. With all the great resources at our command, there seems no reason why we cannot channel our productivity not only for an attack on the conquest of space, but for an attack on the very real problems yet remaining to us here on earth.

OUR SENIOR CITIZENS

One group for which we have failed to make adequate provision is our elder citizens.

Our elder citizens are a permanent and rapidly increasing part of our society. There are 15 million Americans 65 years or older in the United States today. According to present estimates, this figure will exceed 20 million by 1975.

Our scientific and medical achievement, which promises more and more of us increased longevity, leaves us with a great responsibility. We have helped people to live longer; now, we must help them to make those added years fruitful and more productive.

Instead, we end to treat them as a useless appendage, and we do very little to help them solve their problems. In this area, as in others, we tend to excel in scientific advances and suddenly wake up to find we can not keep pace sociologically with what we are doing scientifically.

The problems facing the aged are numerous: problems of mental and physical health, problems of finances, social integration, employment, and housing.

The urgent and pressing need for public housing for the elderly is being illustrated by the current experience in my State of New Jersey. In the first such project in the State, which opened on September 16 in Asbury Park, some 700 applications were received for facilities which could accommodate only 10 percent of that number. I am pleased to point out that New Jersey is planning several other housing projects of a similar nature, including the construction of 500 housing units in Newark which is expected to begin shortly.

I might mention that my State has been one of the first to recognize the need for constructive programs for the aged. Activities relating to the elderly have been transferred from the department of health to a special division on the aging, to demonstrate that the problem is not simply one of health, but rather a complex one requiring separate and specialized treatment. For some years now, New Jersey has been holding conferences on the State and community level and has begun positive activities on the basis of these studies and discussions.

The experience of New Jersey and of States with similar programs will be made available to the rest of the Nation

at the forthcoming White House Conference on the Aging. This conference is the result of a resolution sponsored by Congressman FOGARTY and myself, among others, in the 85th Congress, in order that all the experts and resources of the country may be pooled to determine what can best be done to help our senior citizens attain a full and useful adjustment.

It is my understanding that preparations for this conference, which will be held in January of 1961, are well advanced. The recommendations of the conferees will be available by May of that year, and Congress will be well advised to give their report immediate attention.

SOCIAL SECURITY

But the financial problems of the aged do not have to await further study. They can be solved immediately by amendment of the social-security laws.

I have long advocated a liberalization of benefits, and particularly of the income limitations, which are unfair and unrealistic. Instead of penalizing those older citizens who can and wish to engage in some form of employment, we should be encouraging them to engage in productive activity to the extent of their ability.

In addition to the elimination of the income limitations, I should like to see action in the second session on H.R. 1955, a bill which I introduced to reduce the age of eligibility to 60. Men who have worked for 40 or more years deserve the opportunity to spend a few more of their later years in comfort and leisure. The high rate of productivity which we have achieved in this country should make it possible for all working men and women, by retiring earlier, to share in its benefits.

Finally, I would like to see a system of health insurance for the elderly. I have received many letters from constituents who are concerned, and rightly so, with the difficulty of affording adequate medical care in their later years. Private health insurance companies have failed to adequately care for this need. It is therefore incumbent upon us to provide for adequate health insurance through the social security system.

HOUSING

In its recent report, the Civil Rights Commission delivered the following indictment:

> Congress has declared the goal of the Federal Housing policies to be a "decent home and a suitable living environment for every American family" with "the elimination of substandard and blighted areas." Yet, despite this national goal, and despite the national wealth, and despite the science and technology of the 20th century, the mounting housing needs of the American people are not being adequately met.

The Commission went on to point out that in 1950 there were 16 million substandard housing units in the United States, and that at least 2 million citizens occupy slum-type dwellings in New York City alone.

In testimony before congressional committees mayor after mayor of every major city stated that while local units could help—by enforcing housing codes and by sharing the cost—they could not make a dent in the problem of housing, slum clearance, and urban renewal without Federal assistance.

Yet, despite these facts and figures, the administration has maintained that we cannot afford either public housing nor adequate urban renewal.

In the face of determined Republican opposition, and over two vetoes, the Congress barely managed to retain the provisions for 37,000 new housing units—not enough to cover the needs of a single major city—and an equally scant $650 million for the clearance of slums.

I think the economy of failing to expand our housing program is short-sighted. It takes no account of the long-run expenditures for prisons, courts, police protection and health care which represent the hidden costs of the slums. Nor does it consider the fact that every neglected slum breeds more slums and presents future problems of even more gigantic proportions.

But the question transcends mere monetary considerations. The cost must be calculated in terms of human misery: In the failure to permit millions of Americans to live in conditions of sanitation and relative comfort, and in the depriving of millions of youngsters of the chance to develop into sound, contributing citizens.

The need for an expanded housing program has been fully documented. I hope that we may focus our attention more sharply on the problem and work toward a more adequate solution.

OUR ROLE IN EDUCATION

We are presently faced with tremendous scientific accomplishments by our foremost enemy. In a strikingly short period, Russia has managed, partly through emphasized education, to catch up with us in many areas and overreach us in others. Yet we seem willing to permit the educational potential of our population to remain largely untapped.

This is a tragedy, not only to the country as a whole, which must do without the contributions of those who lack the opportunity to develop to the full extent of their abilities, but also to those thousands of young men and women who are forced to lead dissatisfying and unproductive lives.

Education has too long been a forgotten program in our society. Partly due to the old bugaboo that Federal aid will mean Federal domination, we have for years put off doing something constructive in this direction. Now, that the National Defense Education Act, has passed, let us hope that this time-worn debate has been relegated to the mothballs to which it belongs. The Defense Act, token effort though it is, at least breaks through this one barrier, and establishes once and for all the principle that the Federal Government has a significant responsibility in the education of American youth.

But the National Defense Education Act was only a drop in the bucket, a little spurt in response to sputnik. Under it, a timid $770 million was authorized, to be spent over a period of years. Under its loan program, many youngsters were given the opportunity to continue their studies in 1958 and 1959, and many more will be given that opportunity in the years immediately ahead. But how many thousands of equally capable young men and women must still live out lives of frustrated ambitions and denied hopes?

Nor is an expansion of the scholarship-loan program the only thing that is necessary. We should become involved in school construction; and we need more teachers, better salaries, more classrooms, broadened curriculms, additional counselors, and school psychiatrists. I wonder how much of our juvenile delinquency might be solved if potential delinquents had uncrowded classrooms and competent, unharried teachers to help them grow and learn as individuals.

We need not only more scientific training, but extended curriculms in the humanities as well. A literate, educated citizenry is as important to our national defense as are trained physicists, not only because educated citizens can vote intelligently, but because they can provide the leadership and the ideas in the years to come.

The States cannot provide these facilities themselves. They need aid and direction from the Federal Government. We in Congress must take hold of our responsibilities and launch an intensive, full scale attack on the problem.

MINIMUM WAGE

One of the most immediate problems to face Congress on its return in January will be the minimum wage legislation. The bill which I, along with many others, introduced, would raise the minimum wage to $1.25 an hour and extend coverage of the Fair Labor Standards Act to many other workers, including those in retail and cannery industries.

The arguments for adequate minimum wage legislation are too well known to require repetition. We are all aware that, while many of our working men and women are the best paid in the world, many, many others are trying to raise families on substandard wages. And all of us know that inadequate standards permit unscrupulous employers to compete unfairly with other industries in other parts of the country which pay fair wages.

It is my understanding that the administration, after some vacillation, has decided to oppose any increase in the minimum wage and to recommend only very limited extension of minimum wage coverage.

I hope that Congress, notwithstanding this opposition, will see fit to make substantial improvements in the minimum wage law. We cannot have a healthy, balanced economy if some segments of our population are enjoying unprecedented prosperity and others are denied the right to earn $1.25 an hour. Our increasing productivity must be utilized so that everyone may share in a better standard of living.

CIVIL RIGHTS

The record of the first session of this Congress on civil rights was a great disappointment. As a member of the Civil Rights Subcommittee of the Judiciary

Committee I had hoped that this session would bring positive achievement in the fight for equal rights and opportunity for all.

The subcommittee reported to the full committee an eight-point program which to my mind is the absolute minimum legislation which must be enacted. We recommended:

First. Obstruction of court orders in the area of school desegregation is to be a Federal crime.

Second. Flight to avoid prosecution for bombing is to be a Federal crime.

Third. Federal election records are to be retained for 2 years, and may be subpenaed by the Attorney General.

Fourth The Civil Rights Commission is to be extended for 2 years.

Fifth. The Attorney General is to be authorized to institute civil proceedings against those who deny to others equal protection of the laws.

Sixth. The President's Commission on Equal Job Opportunity under Government Contracts is to be given a statutory basis.

Seventh. Schools are to be set up for the education of children of the Armed Forces stationed in areas where the schools have been closed because of desegregation.

Eighth. Grants are to be to States to aid them in effecting desegregation.

As we all know, only one of these proposals received consideration.

But the problem is not taking care of itself. The report just released by the Civil Rights Commission draws a graphic picture of how racial minorities are being denied rights which other Americans take for granted. The report pointed to communities which practice wholesale disenfranchisement of Negro citizens—frequently by intimidation and violence. And the documentation of discrimination in housing and education is equally shocking.

These conditions make immediate legislation necessary. The first session left the situation untouched. It will be up to the second session to enact effective civil rights legislation, along the lines I have outlined.

FOREIGN SERVICE ACADEMY

At this time of increasing tensions, which seem bound to be with us for the foreseeable future, a whole reassessment of the mechanics and machinery of our foreign policy is long over due. One of the directions this reassessment might take is whether we are equipped with adequate represenatives abroad.

Publications like "The Ugly American" have raised serious questions about the efficacy of our diplomats and the adequacy of their qualifications. But whatever the merit of that particular book, the recent visit of Khrushchev to this country points up the immense complexities of our relations with the Soviet Union, and the absolute need for diplomats and foreign affairs experts who are sufficiently trained and knowledgeable to deal with the situation.

I introduced a bill this past session which would establish a foreign service academy wherein young men and women interested in a foreign-service career could be trained at an early stage in their education for the complexities of the task which awaits them. Such a program could provide us with a pool of dedicated, trained people from which we could draw our diplomatic representatives. Moreover, it would insure that these representatives would be thoroughly familiar with the language, customs and people of the countries to which they are subsequently assigned.

Thought might be given, also, to whether or not heavy contributors to political campaigns necessarily make the finest ambassadors. We expect our doctors to study medicine and we send our lawyers to law school. I wonder whether we should not expect all our diplomats to undergo similar training. A Foreign Service Academy might go a long way in establishing a tradition of professionalism in all levels of the diplomatic service.

RESEARCH

Although we have made great strides in medical research, our achievement is probably far less that it might have been if we had been willing to give it our fullest support. Many diseases—cancer, heart disease, arthritis,—remain unconquered. They continue to kill many Americans every year.

Life, and the physical ability to live it fully, is, after all, the most prized possession we have. We have the responsibility to do whatever possible—without stint—in the war against disease and untimely death. We must be prepared to pour money and men into medical research to insure that our lives will be vigorous ones.

We have led the world in many of our scientific endeavors; we can also show the way here. Our advances in medical research could well be shared with others all over the world, and could prove to be one of the best approaches we could utilize in creating friendship and understanding. Certainly helping other countries in their battle against disease would be a wonderful way of spreading good will and bringing people together.

OTHER GOALS

These are just some of the goals before us. In addition, we must ask ourselves where we are going in civil defense, and what measures we must take to strengthen ourselves on this score.

We must reevaluate and increase our technical assistance program, so that other countries may be better able to approach our standard of living.

We must reexamine our entire tax structure, with a view toward both closing existing loopholes and lifting the burden from those least able to pay. Particular attention must be given to proposals for increasing tax exemptions to individual taxpayers.

We must redouble our efforts to prevent waste and inefficiency in Government spending. I am hopeful that my bill, H.R. 8105, will be given prompt consideration. This bill sets up a Joint Committee on the Budget, which would oversee all budgetary matters in order to forestall waste and effect the greatest efficiency and economy in Government expenditure.

Finally, we must deal in adequate terms with the problem of unemployment. Despite our economic recovery, 35 major labor areas are still classified as "critical," that is, with an unemployment rate exceeding 6 percent. We might also consider whether the 6 percent "norm" is not too high, and whether we can ever afford to be complacent about unemployment when this many Americans are out of a job. Nor can we ignore the implications of automation, and the need for directing future labor surpluses into other activity. All of these problems make necessary a long-range program which is designed to both prevent unemployment and make it less painful when it occurs. And particular emphasis must be placed on helping our depressed areas, which remain pockets of unemployment regardless of the general prosperity.

All these goals are not visionary. They are perfectly possible if we know how to set our sights and properly plan for their accomplishment. We are entering an era in which our achievements in the realm of space are almost phenomenal—certainly they were unthought of in the past. The conquest of space is fast becoming a reality because we were unwilling to say "it is impossible." Instead, we mobilized our efforts and are approaching success.

Why should we not have the same approach to problems on earth—problems we know about and understand. Surely we can win success with these as well if we attack them frontally and determinedly move forward.

We cannot rest on today's laurels. To be content with the status quo is inevitably to retrogress. There is only one direction, and that is forward—to further progress, expansion, and development, and to the elimination of all the gaps in our economy between those who have and those who have not. We can accomplish all these things if we are willing to focus all our attention and effort to the achievement of the programs I have outlined.

An Analysis of U.S. Policy and Communist Vulnerability

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, an excellent article appeared in the September 7 issue of New Leader magazine pointing out the vulnerabilities of the Communists. This article was written by one of our outstanding scholars on communism, Bertram D. Wolfe, and I recommend it as valuable reading to all who are concerned over the current world struggle between the free world and the Communist forces. I ask unanimous consent that this article, entitled "An Analysis of U.S. Policy and Communist

Vulnerability," be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ANALYSIS OF U.S. POLICY AND COMMUNIST VULNERABILITY

(By Bertram D. Wolfe)

Vulnerability implies an alert and determined opponent, ready to take advantage of every weakness and every opening. Only then do weaknesses and inconsistencies become vulnerabilities. But this determination and this readiness are today lacking in the free world.

The Communists know that they are engaged in what Prof. Robert Strausz-Hupé and his associates at the University of Pennsylvania Foreign Policy Research Institute have called a protracted war. They know that they are engaged in a war to the finish, a war for the world. Every separate issue, every negotiation, every conference, every utterance they regard as a move in that war, whereas for us in the West each is treated as a separate concrete issue to be settled once and for all in order that we may relax.

We aim to persuade our opponents that our intentions are friendly. We aim to reassure the Soviets as to their security. We aim to trade concessions, which in practice means only to give away positions we possess, so that the other side, which offers nothing in exchange, can renew the battle from a more advantageous position.

Edward Gibbon once wrote, "Persuasion is the resource of the feeble; and the feeble can seldom persuade." We are not feeble. Actually, America and the free world are at this moment stronger economically and militarily than the opponent that is determined to destroy us. But we are acting as though from feebleness, thus endangering peace by making the Communists underestimate our strength and luring them, without intending to do so, into the folly of an attack. Thus, the very moves we make to preserve peace are moves which profoundly endanger the peace.

Insofar as we act as if we were weak, as if our task were to persuade the unpersuadable and to settle what cannot be settled, instead of to win the war the Kremlin is waging against us; insofar as we have permitted the Communists to divide the world into their peace zone, where we may not and do not intervene, and our war zone, where the entire world and the United Nations and they also may intervene—to that extent it is not they but we who are vulnerable. We are proving vulnerable because of our incapacity and unwillingness to use the openings which their system has provided, does provide, and will continue to provide.

What we need, first of all, is an understanding of this universal, unitary, unending war to the finish. Second, we need a revolutionary strategy, to put the revolutionary forces of our time at our disposal and deny to them their use and exploitation. Only then will their system prove more vulnerable than ours, as potentially it is. With this caveat in mind, let us examine first their theoretical foundations and, second, their strategical and tactical vulnerabilities.

THE THEORETICAL FOUNDATION—MARXISM

The theoretical foundation lies in something called Marxism. We must first examine the self-refuting inconsistencies in Marxism and its prophecies that have been refuted by history.

The prophecies: One hundred and ten years ago, Karl Marx and Friedrich Engels issued their call to arms in the Communist Manifesto, with its dogmatic pronouncements and apocalyptic expectations. A decade later, Marx undertook to lay bare the law of motion of industrial society in a work called "Contribution to the Critique of Political Economy." Those 110 years have not dealt kindly with Marx's predictions and have mocked and refuted the very law of motion which he claimed to have discovered.

The heart of those works was an expectation of an early apocalypse. The world was headed toward immediate and total catastrophe. In 1848, this catastrophe was only days, or at most weeks, away. It would come with the next street skirmish. Before the year was up, it was to come with the next war, within the year. When it came neither with the street skirmishes nor with the wars which Marx advocated, he decided it would come with the next downswing in the business cycle. But the apocalypse failed to appear.

The second startling thing about the Communist Manifesto, which aimed to be the program for the revolution of 1848, is that it prophesied the end of nationalism. Yet 1848 witnessed the greatest explosion of nationalism in the history of Europe. And now, in the 20th century, two world wars and their revolutionary aftermaths have proved that nationalism is the one great cause for which millions are ready to fight and die. It has spread from Europe, which was its home, to Asia and Africa, which in Marx's time knew not the nation. National feeling provides great vulnerabilities in the Soviet empire, if we have the wit to exploit them. At the same time, it provides great vulnerabilities for the free world in Asia and Africa, because the men in the Kremlin do have the wit to exploit the nationalism which the Communist Manifesto said was on the way out or was already out.

Marx's third prophecy dealt with the increasing polarization of society. It treated industrial society, in mythical Hegelian terms, as a system, all the parts of which were so connected that no change could be made in it; the system could not be improved or reformed; it could not evolve; it could only be scrapped. The defects were treated as integral to the system and incapable of being removed defect by defect, and replaced by other structures or circumstances, but only shattered, replaced by another system. The special mission to do the shattering was assigned by Marx to the working class. When this did not come immediately, as the Communist Manifesto anticipated, Marx began his long work to give a scientific foundation to this expectation of the apocalypse.

Marx's "Capital" has this as its function. The book is strangely constructed so that most of it consists of empirical evidence, striking descriptions of the workings of industrial society, drawn from the England of Marx's day, or rather the England of the day before Marx's day. He took most of the evidence from the Parliamentary Blue Books, reports of a Parliament that had already investigated the evils of early industrialism and was busy regulating, moderating, reforming and removing the evil excrescences of industrialization. His book thus gives overwhelming evidence of this evolution and reform, as he himself is compelled finally to point out. When he is discussing the achievement of the 10-hour work law, regulation of child labor, and other such achievements of the England of his day, he writes: "Capital is under compulsion from society. The factory magnates have resigned themselves to the inevitable. The power of resistance of capital has gradually weakened. The power of attack of the working class has grown with the number of its allies. Hence, the comparatively rapid advance since 1860."

If one reads Marx's "Capital" as an empirical student should read it, the overwhelming evidence of the Blue Books drives one, as it drove him, to this conclusion. Yet when one comes to the last chapter, "the last for which the first was made," a chapter called "The Historical Tendency of Capitalist Accumulation," one finds that Capital came into the world, conceived in original sin, "a congenital bloodstain on its cheek, dripping with blood and dirt from head to foot, from every pore." And it is destined to leave it now in a fearful cataclysm, a day of wrath and doom, by the workings of "the imminent laws of capitalist production itself."

"One capitalist kills many"; all other classes are destined to be proletarianized; and, as if by mitosis, society is to be polarized. "Along with the constantly diminishing number of magnates of capital * * * grows the mass of misery, oppression, slavery, degradation, exploitation; but with this grows too the revolt of the working class. * * * The monopoly of capital becomes a fetter upon the mode of production. Centralization of the means of production, and socialization of labor, at last reach a point where they become incompatible with their capitalist integument. This integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated." Thus the conclusion of 1848 is tacked on again after the mass of empirical material to the contrary which makes up the bulk of the volume. But for this it was not necessary to study the Parliamentary Blue Books.

Such has been the perversity of history that it has not vouchsafed the revolution Marx expected in the countries of advanced industry, but has vouchsafed revolutions which invoke Marx's name only in underdeveloped countries on the eve or in the incipient stages of industrialization, in countries shaken by the impact of the West's economy and equality upon autocratic institutions which Marx regarded not as presocialist but as prebourgeois or nonbourgeois.

Industrial society not at the end but the beginning of its development. Another thing which would startle Marx were he to be resurrected today is the succession of industrial revolutions which followed his industrial revolution. He knew the development from cottage artisanship to machinofacture, from the use of wind and water and animal and manpower to the use of steam power. This was the industrial revolution that Marx studied. But the industrial revolution is unending. He thought that industrial society had reached "the end of its development" in 1848 when he pronounced its doom so stirringly. Actually it was but at the beginning of the development of its productive forces. Since then have come the age of electricity, of conveyor belt, combustion engine, synthetic chemistry, electronics, automation, fission, fusion; and the end is nowhere in sight, unless atomic war should bring a cataclysm indeed, but not Marx's cataclysm.

Not polarization but depolarization: The society which he thought was to polarize until it had reached the breaking point of total polarization has actually been depolarizing. Intermediate classes have not disappeared, they have multiplied. The industrial proletariat has not become the whole of society, except for the little handful of magnates at the opposite pole; it has lost in numerical weight in society while it has gained in status and in economic and political power. Classes have become more fluid and more equalized. Not merely in comparatively classless America, but in once caste-ridden England and France and Germany as well.

In America, absurdly Marx would think, one man, woman, and child in every eight is today a stockholder in the great corporations which he thought were going to provide the little handful of capitalists to be destroyed. Main Street frequently exercises more power than Wall Street, and labor and farmers have more influence on legislation than corporation executives or bankers. The latter could

only fume impotently and curse "that man in the White House" while we went through the tremendous revolution in our society known as the New Deal. And even the owning class was divided in its attitude.

The state thus has proved refractory to Marxist prophecies. In place of becoming an executive committee of a shrinking bourgeoisie, as he described it, it has been increasingly democratized, subjected to pressure of the labor vote, the farm vote, and the intermediate class votes, even to the pressure of strategically located minorities such as the Negroes in the big cities of the North. Out of labor's influence on Government and out of the classless pressure of the whole of society, has come a state regulation of economic life, a legal limitation of the hours of work, a minimum wage, collective bargaining, the legislated right to organize, and a whole sweep of social security legislation. "The state," as the French Socialist, Marcel Déat, wrote, "has undergone a process of socialisation, while socialism has undergone a process of nationalization."

The growing supremacy of politics over economics: In Marx's day there was a general superstition of which Marx was the most prominent advocate but which was general for most of the leading thinkers of his age: the superstition that economics determine politics. The 20th century has made it a commonplace that politics tends to determine economics. In fact, totalitarianism is, from this angle, an attempt totally to determine the economic and social structure of society by putting one's hand on the powerful political lever, the lever of unified centralized and exclusive power.

Thus what has happened to the economy is that it has been increasingly politicalized. Moreover, the whole notion of an autonomous economy, with its own autonomic laws, on which Marx based himself, and on which Marx's opponents in the mid-19th century based themselves no less, all this has become obsolete and revealed itself as no longer a workable hypothesis. In its place has come the increasing social and political regulation of the economy. Politics determines economics through tariffs, protectionism, quotas of export and import, currency regulation and manipulation, regulation of the interest rate, deficit spending, price floors, price ceilings, parities, subsidies, state fostering of cartelization as in Germany, state persecution of cartelization as in our antitrust acts in the United States, supranational economies like Benelux, the inner six common market, the outer seven free-trade area, and all the other supranational economies that are beginning to grow up. And in vast areas of the world there is total politicalization and autarchy. Not a word of what Marx has written is helpful in approaching the problems of our era. Whether these features are to be welcomed or to be feared, they have surely produced a world which makes the projections of Marx and the projections of his 19th century opponents alike irrelevant.

The worker rejects his mission: Unkindest cut of all, the worker himself has not consented to be increasingly proletarianzed, increasingly impoverished, and to have thrust upon him the mission with which Marx endowed him. If the worker has engaged in a class struggle, it has been one to put off from himself this increasing proletarianization, increasingly impoverished, and to have thrust upon him the mission with which Marx endowed him. If the worker has engaged in a class struggle, it has been one to put off from himself this increasing proletarianization and impoverishment and this mission which Marx and the Marxists would confer upon him. In this struggle, the workers have displayed stubbornness, tirelessness, courage, selfishness, solidarity, skill, incapacity to recognize when they are defeated, and the power to enlist the sympathy of the rest of society in fighting off this prophetic destiny and this prophetic assignment.

Unlike the intellectuals who offered them Socialist leadership, they have no stomach for being reduced to naught, the better to prepare themselves for becoming all. To win the suffrage on the continent of Europe, to influence and exert control over government, to legalize and contractualize improvements in the hours of their lives that are spent in labor, to win some security and dignity within the system in which they live, to become something in the world in which they have their being, rather than to be everything in the world which exists only in the fantasy of the utopians, of whom Marx was perhaps the greatest—it is to these aims that they have rallied. For this they have fought their struggle, and to these aims they have succeeded in rallying most of modern society.

Those who "being naught were to become all," having become something, the whole scheme loses its tidy outlines. Thus, the flaw in the foundation itself, the theory on which communism claims to build, lies in the fact that a hundred years of subsequent history have reduced every theoretical tenet of Marxism to a shambles.

Marxism as an ism: Insofar as it has claimed to be a science, it is dead. Marx and Engels in their last years were uncomfortably aware of this, and were beginning an uneasy and reluctant patching or revising of their dogmas. But after their death the revisionists who followed were outlawed and condemned, and ceased to be Marxists, and those who claimed to be Marxists survived only with the aid of the frozen orthodoxy of a dogmatic creed no longer subject to scientific examination or revision. Indeed, in this lies the strength and the staying powers of Marxism after Marxism as a science has proved itself bankrupt. As a science, it has produced only invalid results, but it is also an ism—Marxism. There is no "Lockeism," no "Smithism," "Millism," "Durckheimism," "Micheletism," "Rankeism" or "Gibbonism," but there is a Marxism. And this is a fundamental difference which we must strive to understand.

Besides having claimed to be a science, it has been a creed which can be clung to by faith when the intellect questions and rebels. While as a theory Marxism can be refuted by intellect talking to intellect, the strength of the Marxist movement as such lies not in the realm of ideas but in the realm of emotions. It is an ersatz religion, and this is harder to reach with rational argument and harder to cope with.

The world revolution of our time: Though the Marxist revolution never occurred, and is not likely to occur, we do indeed live in an age of revolution, a revolution which began before Marx's time and which will outlast our own lifetime. It is not the revolution which Marx predicted, nor did it grow from the seeds he sowed. His theory was but one of the misunderstandings of this revolution. The West's rapid expansion to all the continents of the world upset all the world's surviving civilizations. Western society planted everywhere the seeds of its own creativeness, its own problems, and its own dissensions.

This is a world revolution in the true sense. The Communists did not create it, but they study ceaselessly to utilize it for the spread of their power and for the destructions of ours. We did create it. But we do not try to understand or to utilize it, nor to aid it in finding new forms of abundance and of freedom. The Communists seek to give neither abundance nor freedom. What they propose to do is to extend their power and their sone: to set up regimes of specialized productivity for power and for war, not regimes of plenty and freedom; to link the revolutionary forces afoot in the world to their war for the winning of the world. Whoever harnesses the forces of that revolution which the West has set in motion yet has not striven to understand, whoever manages to put these forces in politics and economics, in science and technology, in all fields of life to its use, and to deny them to its opponent, that side will win the struggle for the world.

Insofar as the Communists are doing just that and we are not, they are slowly winning the war and will continue to win the war which will occupy the rest of our century. And, therefore, in spite of the inconsistencies, cruelties and absurdities of their system, the balance of vulnerability has been swinging from their side to ours.

THE STRATEGY AND TACTICS—LENINISM

Leninism is the strategy and tactics for waging this war, for utilizing the revolutionary forces afloat in the world for the purpose of building totalitarian single-party power throughout the world. Leninism claims to be Marxism: the Marxism "of the period of imperialism, world war and world revolution." Leninism claims to be Marxism, yet in all essential respects it has stood Marxism on its head as Marx claims to have stood Hegelianism on its head.

Marx: Economics determines politics. Lenin: Politics determines economics.

Marx: Revolution comes after capitalism has reached its pinnacle and comes first in the most advanced countries. Lenin: Revolution comes first where capitalism is weakest—"the break in the system at the point of its weakest link."

Marx: The revolution will come first in England, or perhaps Germany or France. Lenin: The revolution comes first in Russia, where capitalism is weakest, and then we carry the revolution to advanced Europe, or failing in that, to Asia and Africa from backward Russia in order to deny to the advanced countries their outlets and markets, cut them off from the backward part of the world and cut the undeveloped countries off from them.

Marx: The working class is destined to develop its own consciousness, its own theory, its own organization, its own party, and its own revolution. Lenin: The working class left to itself is capable only of bourgeois thought. Not the "bourgeois-minded and vacillating" working class but a revolutionary elite, a classless vanguard party, is the guardian of the working class. It dictates to the working class. It rules over the working class—and all other classes. It uses the working class as a battering ram because the urban working class is the most unified and concentrated, but it uses the peasantry as a battering ram too, and it tries to use discontent in all classes. And piling up the discontents, it aims to put in power not the working class but its own elite vanguard nonclass party.

If this is so, a revolution can be made in a backward country where the working class is not ripe, and the vanguard party can profess to be establishing a dictatorship in the name of the proletariat where it is only beginning to come into existence. Or, as in China, the peasantry can be used as the battering ram. And when the scepter of power has been seized, the vanguard party can claim that it has established the dictatorship of a proletariat which does not yet exist. Or where is the proletariat of north Vietnam? Ho Chi Minh, dictator in the name of a dictatorship of a nonexistent proletariat through a nonexistent party of the proletariat, dictates over a society which is not only not socialist but is still precapitalist.

Leninism can be understood as a strategy and tactics for the conquest of power, for the maintenance and expansion of power, for making that power absolute and total; as a prescription for the building of a party designed to seize and hold power; as a strategy and tactics for the utilization of

the discontents, the unrests, the disturbances and the revolutionary forces which the West has set afloat in the world—to the end of subverting and destroying all that the West stands for, and all that the West dreams of. It is a revolutionary strategy for the winning of the world and for the remaking of man according to Lenin's blueprint. As such, it is, of course, highly vulnerable if there is standing over against it an alert, determined and watchful opponent, ready to utilize the revolutionary situations and strategies and to contest for the leadership of the forces set free by Western civilization itself.

THE RUSSIAN REVOLUTION—PROMISE AND PERFORMANCE

The Russian revolution is now over 40 years old. In the four decades that this new power has existed and become total, all of its original promises have turned into their opposites. Here is where an alert opponent would find more vulnerabilities than he would know what to do with if he were really on the job.

1. It promised land to the peasants. But in the end it took away even the land which the peasants had under the czars, and it herded them into a new state-owned serfdom.

2. It promised perpetual peace. Instead it has produced a totalitarian state which forever wages a twofold war—a war on its own people to remake them according to its blueprint, and a war upon the world. And I don't mean the word "war" figuratively but literally. When it wages war on its own people, it is a real war, a war of nerves, a war of quarantine (the Iron Curtain), a war of propaganda, of agitation, of conditioning, of psychological warfare, of physical warfare, of prisons, of concentration camps, of bombardment by loud speakers and press and movies and all the means of cultural conditioning and, when necessary, a bullet in the base of the brain. At the same time it has used this war upon its own people to keep them mobilized for unending war to win the world.

3. It promised production for use, that is, for the sake of the consumer and consumers' goods. Instead it has set up production for production's sake, for the sake of expanding the oppressive power of the producer-owner state.

4. It promised plenty, and it has produced perpetual scarcity of all the goods that make life gracious, pleasant, easy, cultured, rewarding, full of promise and possibility.

5. The state that was to wither away has expanded to totality. Lenin promised that "every cook is to become master of the affairs of the state." Now the state is the master of the affairs of every cook.

6. It promised freedom, and it has abolished all freedoms.

7. It promised the workers' paradise, and has immured its people behind an impenetrable wall and turned their country into a prison for their thoughts and for their very lives, which cannot be penetrated by learning what happens on the outside, nor by the freedom to discuss what is happening to themselves on the inside.

8. It has raised the banner of national self-determination and anti-imperialism, but it has become the most aggressive, the most oppressive, the most rapidly expanding imperialist power in the history of man.

Thus, and I have named only a few of these potential vulnerabilities, all the revolutionary slogans which Lenin sought to use and which the Kremlin uses today against all peoples, governments, and institutions, could easily be turned by a determined opponent, in tune with our age and ready to use revolutionary strategy, into weapons in our hands. The Communists' hands would prove nerveless and lifeless if we would but grasp the weapons which they are using against us, which are not theirs by right and by right can be made to belong to us, for they are indeed our weapons.

We, not they, are today the advocates of genuine agrarian reform and the right of each man to till his own land. There is no country in the world more badly in need of agrarian reform than the U.S.S.R. itself.

We, not they, are the advocates of a just and enduring peace, based on the respect for the rights and the existence of all nations in being or aborning or yet to be.

We, not they, are the champions of the rights and freedoms of workingmen, the freedom of movement, the freedom to change jobs, the freedom to build organizations of their own choosing under their own control, the right to elect their own officials, to formulate and negotiate their own demands, the right to strike, the right to vote for a party and a program and candidates of their own choice.

We, not they, are able to call the armies to fraternize across the trenches, for it is they who must cut off their armies from the news of what is happening in the West, and we who must make our armies and theirs understand what is happening in their land.

We, not they, are the champions of the freedom of the human spirit, of the freedom of the arts and sciences, freedom of conscience, freedom of belief and worship, freedom from scarcity and want, and from the tyranny of irresponsible and omnipotent officials. Though in all these things the free world has its own imperfections and lapses, these are the things that the free world stands for and in good measure realizes, and these are the things which totalitarianism completely destroys and makes high treason even to think upon.

In the battle for the future shape of the world, all the creative and explosive weapons are in our hands if we have the wit and the understanding to take them up. If we do not, then there are no psychological or ideological vulnerabilities of communism. If we do, the Communists are vulnerable on every front and at every moment and in every layer of their society. Whether the answer to this question is yes or no will determine the outcome of the protracted war that is likely to occupy the rest of our lives and the rest of our century.

The Dividend Credit Tax Loophole: Who Benefits and How Much

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. CARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to invite your attention and that of my colleagues to another great giveaway area of our present Federal tax system where, instead of being of benefit to the public in general, a comparative handful of wealthy people are allowed to reap a multi-million-dollar harvest through the stock dividend credit loophole.

At this point I will include a table to demonstrate just who reaped the benefits, according to figures of the Internal Revenue Service for the year of 1957:

Total number of returns filed	59,825,121
Number claiming dividend credit	2,980,335
Percent of total returns claiming credit	5
Total number of taxable returns filed	46,865,315
Number claiming dividend credit	2,888,207
Percent of taxable returns claiming credit	6.2

Distribution of return showing dividend credit (taxable returns only)

Income level	Returns showing credit		Dividend credit claimed	
	Number	Percent of total	Amount	Percent of total
			Thousands	
Under $5,000	668,636	23.2	$15,685	5.3
$5,000, under $10,000	1,002,887	34.7	37,931	12.7
$10,000, under $20,000	736,272	25.5	56,337	18.9
$20,000, under $50,000	381,631	13.2	79,764	26.8
$50,000 and over	98,781	3.4	107,666	36.3
Total	2,888,207	100.0	297,383	100.0

You will note that in 1957 dividend credit claimed, or, in other words, revenues denied to the Government by virtue of this loophole, amounted to more than $297 million. And who do you think got the lion's share of this money? Three and four-tenths percent of the people claiming this credit—those in the over $50,000 income bracket—received 36.3 percent of that $297 million. By way of contrast, those people in the under $5,000 bracket, who comprised 23.2 percent of the returns claiming dividend credit, got only 5.3 percent of the $297 million. It is my understanding that this loophole is now costing the Federal Government in excess of $335 million, and in addition to that, there is a $70 million loss due to the $50 dividend exclusion provision, taken by stockholders prior to the actual tax computation.

I think you will agree, Mr. Speaker, that this type of loophole in our Federal tax system is clearly contrary to the principles of progressive taxation and the ability to pay. Neither can the elimination of this loophole be termed as harmful to incentives. Bear in mind that this money arises as stock dividends of corporations, corporations that have their own built-in methods through which to raise expansion capital. Today's administered prices are yielding record-high profits. In addition, other tax benefits yield them enormous depreciation reserves. The October 1958 issue of Survey of Current Business, page 20, shows that between 1947 and 1957 manufacturing corporations got only about 2 percent of their new money from stock sales. Seventy-four percent came from retained profits and depreciation reserves, and the remainder from borrowing.

So once again, Mr. Speaker, as I have done in the past, I call upon my colleagues on the Ways and Means Committee to be ever mindful of their duty to all Americans when they are in the process of framing our tax laws, to be unyielding in the face of pressure from special interest groups, and to place the burdens of taxation where they can best be borne.

Summary of Congressional Action, 1st Session, 86th Congress

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HENDERSON. Mr. Speaker, the following is a brief summary of action of the 1st session of the 86th Congress which is being distributed to my constituents in the 15th Congressional District of Ohio:

SUMMARY OF CONGRESSIONAL ACTION, 1ST SESSION, 86TH CONGRESS, PREPARED BY JOHN E. HENDERSON, MEMBER OF CONGRESS, 15TH DISTRICT, OHIO

The following is a brief summary of the 1st session of the 86th Congress which extended from January 7 through September 14, 1959.

STATISTICAL DATA

1. Of 12,037 bills introduced, 380 were enacted into new public laws during the session. Another 236 private bills for the assistance of individuals were enacted.

2. The House of Representatives was in session a total of 141 days. Senate sessions covered 140 days.

3. It took 18,180 pages of fine print to record the proceedings of the House and Senate in the CONGRESSIONAL RECORD. In addition, over 8,400 pages of comments and extraneous material were published in the Appendix of the CONGRESSIONAL RECORD.

4. There were 87 rollcall votes in the House.

5. The session authorized the expenditure of $78,678,598,352 by the Federal Government.

In addition to the billions mentioned above, here are some of the ways in which the action of Congress will affect you:

NEW TAXES

1. Extended the corporation income tax of 52 percent for another year.

2. Continued wartime excise taxes for another year.

3. Extended excise tax on telephone service, but added a termination date of June 30, 1960, for the tax on local phone service.

4. Extended excise tax on transportation to June 30, 1960, but agreed to reduce tax from 10 percent to 5 percent next year.

5. Increased life insurance company taxes to the extent of $215 million.

6. Increased the Federal gasoline tax another cent per gallon. Following the 2-cent increase in Ohio, I voted against this measure.

OTHER

1. Congress increased the national debt limit to $285 billion, with a further temporary increase to $295 billion. This further postponement of the day of repayment passed easily, delaying the inevitable time when the rising debt must be paid.

2. Extended the Draft Act to July 1, 1963.

3. Hawaii admitted to statehood. It is hoped these two new States, Hawaii and Alaska, will not insist on receiving special concessions accorded territories, but that they can carry on all of their local functions as equal States of the Union.

4. Enacted emergency legislation to prevent States from imposing income taxes on business transactions of corporations in another State where the firm maintains no plant, factory, office, or warehouse in the taxing State.

5. Continued the school lunch program.

6. Extended legislation to permit the barter of U.S. surplus agricultural commodities for certain needed resources from abroad.

7. Passed labor reform legislation (the so-called Landrum-Griffin bill).

8. Continued the foreign aid program. More billions, with not enough Members voting no.

9. Passed legislation establishing a new formula for payment of veterans pensions for non-service-connected disabilities. The legislation also gives widows of World War II and Korean conflict veterans pension rights similar to those previously enjoyed by World War I veterans' widows.

10. Irked Khrushchev and the Soviet Union by designating July 4 as "Captive Nations Week" and passed a resolution expressing the feeling that Red China should not be admitted to the United Nations.

11. Authorized the TVA to issue bonds for financing its operations.

12. Strengthened the Federal Trade Commission's powers to enforce its orders against unfair competition in American business.

13. Increased the interest rate on series E and H Government bonds.

14. Amended the Federal Communications Act to eliminate confusion in the requirement to grant equal radio and TV time for political candidates.

15. Enacted housing legislation. The President signed the third version passed by Congress.

16. Extended the life of the Civil Rights Commission to investigate charges of efforts to deny individuals the exercise of their constitutional rights.

ON THE MINUS SIDE

1. Among the failures of the session was the neglect of farm legislation. Congress failed to come to grips with the problem of farm surpluses, soaring storage charges, acreage controls and price supports. The present extravagant program, a demonstrated failure, has been with us for more than a generation. It does little to help the small farmer who needs help and is vastly increasing the cost of Government borne by farmer and nonfarmer alike.

2. Failed to answer the significant problems of inflation. The gusto of the majority to enact costly new legislation was blunted in mid-session by public demands against new spending which would apply new inflationary pressures. Increasing reduction in the value of the dollar can come from one-sided increases in interest rates on short-term Government bonds.

BOX SCORE

Voted "Yes" in 45 rollcall votes.
Voted "No" in 39 rollcall votes.
A "No" vote is very often a vote to defeat costly, unworkable legislation.

UNFINISHED BUSINESS (PARTIAL ACTION TAKEN)

1. The House took steps to provide that State laws which parallel Federal laws are concurrently enforcible except where Congress has specifically preempted jurisdiction in a given field. The Senate has not acted on this legislation.

2. The House also passed legislation to permit prosecutions for espionage committed outside the United States and another bill to deny passports to persons whose presence abroad would endanger American security. The Senate is still to act.

If you know of someone who would like a copy of this report, it may be obtained by writing Congressman JOHN E. HENDERSON, House Office Building, Washington 25, D.C. Should you wish additional information on the foregoing legislation, kindly call or write.

Special Milk Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER PIRNIE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. PIRNIE. Mr. Speaker, the health of our children is a matter of utmost concern to every Member of Congress and to every parent in the United States.

Providing extra milk to improve the health of our children is a program we can all support.

I want to commend the New Holland Machine Co., New Holland, Pa., for producing a fine color motion picture, "More Milk for Danny." The motion picture, produced with the cooperation of the National Milk Producers Federation, is designed to encourage more schools to participate in the special milk program established in 1954 by Congress, and supported by Congress since that time.

The purpose of the program is to enable children in schools, summer camps, and in child-care centers to obtain more milk by making milk available to children at reduced prices.

Program statistics show that the objectives of the program as stated by Congress are being realized. More schools and child-care institutions are participating in the program each year and more wholesome, nutritious milk is being consumed by children. Over the past 3 years the number of one-half pints of milk consumed under the program increased to more than 2 billion a year.

The fact that the special milk program has made it possible to move this quantity of milk through normal channels of trade at favorable producer prices, as well, adds support to the merits of the program. It benefits our dairy farmers; at the same time it improves the health of our children.

In encouraging greater school and community participation in the special milk program, the motion picture produced by the New Holland Machine Co. greatly furthers the interests of our children's health, our dairy farmers, and of Congress.

The picture, "More Milk for Danny," tells the dramatic story of how milk aids children's health and how parents and school officials can arrange to make it possible for their local schools to take part in the program. The film will be shown in communities coast to coast.

The value of the motion picture in aiding the special milk program has been noted by a number of officials of the U.S. Department of Agriculture which is charged with responsibility for administering the program. These following statements reflect a high regard and deep appreciation for the excellence of the film.

By Clarence L. Miller, Assistant Secretary, USDA:

Your movie, "More Milk for Danny," is a generous contribution to the advancement

of the special milk program. We appreciate your making this movie available for public use and hope it will receive wide distribution. It tells a convincing story of community action to localize a national program.

By O. V. Wells, Administrator, Agricultural Marketing Service:

This movie is very good. We welcome industry assistance in telling the special milk story. I congratulate the producer of this film for calling attention to the fact that the success and maintenance of the program depend primarily on local interest and support.

By Martin D. Garber, Director, Food Distribution Division, AMS, USDA:

Congratulations on a fine film. "More Milk for Danny" strikes me as much more than an interesting and entertaining documentary—and it surely is that. But it also tells a vital story, about an important Department activity, the special milk program. As audiences view it, and are moved by it, the film will serve to benefit both the children to whom more milk is made available—and the farmers who thus sell more milk. Both are commendable objectives.

By Herbert D. Rorex, Chief, School Lunch Branch, Food Distribution Division, AMS, USDA:

I want to compliment you on the effective way, in "More Milk for Danny," you have explained the Department's special milk program. We're very much pleased with your direct, understandable explanation of how the program works—and the true-to-life portrayal of the program's place in the community.

It is hoped that a widespread viewing of "More Milk for Danny" will stimulate increased consumption of milk by all our people, promoting a healthy America.

Progress Report for America's Veterans

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, yesterday's veterans have become our Nation's leading citizens of today. The patriotic service these Americans rendered to their country as young men in military life is now being translated in civilian life into leadership in government, agriculture, business, labor, and the professions. To my esteemed constituents who are included among our Nation's 23 million veterans, I would, Mr. Speaker, submit a progress report on recent achievements benefiting our deserving ex-servicemen.

The Republican Party has made commendable progress in leading our Nation toward the fulfillment of its obligation to America's veterans. The Republican administration, under the leadership of President Eisenhower, has provided for our veterans improved pensions and dependents' benefits, better medical and hospital care facilities, more realistic educational opportunities, and more adequate business aids.

As a consequence of this farsighted and understanding attitude of the Republican administration toward the veteran we find that for the fiscal year 1960 legislation was passed by the Congress and approved by the Executive providing approximately $5 billion in budgetary expenditures for veterans' services and benefits, including $3.3 billion for compensation in pensions, more than $900 million for hospital and medical care expenses, and approximately $500 million for veteran education and training.

Among other major legislation to be enacted in 1959 was the Veterans Pension Act providing liberalized pension levels which give the greatest recognition to those veterans in the greatest need. This important legislation also improved the equity in compensation paid to veterans' dependents and survivors. To assure a strong national defense the Selective Service Act was also extended during this recently completed first session of the 86th Congress. This legislation will assure that America's youth will be trained and highly skilled in military science in the event that a predator undertakes an attack upon our Nation.

The Congress has passed legislation to strengthen the protection accorded to veterans who become victims of multiple sclerosis and leprosy and has also liberalized the educational and training rights of veterans under the so-called GI bill. Steps also have been taken to assure effective housing programs for veterans. The status of American veterans under the Immigration and Naturalization Act has been improved.

Among other legislative measures that veteran organizations patriotically supported that were enacted during the 1st session of the 86th Congress were statehood for Hawaii, construction of modern naval vessels, protection of the estates of incompetent veterans derived from veterans' benefits, and improved educational opportunities for veterans' children.

The year 1959 has been a year of accomplishment for veterans. To date under the vocational rehabilitation available to disabled veterans we find that approximately 700,000 disabled veterans have been trained to assume a productive self-sustaining position in society. Ten million of our veterans have received education and training under the GI bill. Fifty-five million dollars has been devoted to providing homes for paraplegics, and more than 6 million veterans have received loans for homes, businesses, and agriculture. In 1959 we have found approximately 200,000 veterans a month receiving outpatient care at government medical installations, and 113,000 veterans were receiving hospital care in veterans and related hospitals. Approximately 6½ million American veterans have retained the protection for their survivors accorded by GI insurance. Almost 4 million veterans and dependents are presently receiving compensation and pensions.

Capable and patriotic work has been done by the numerous veterans organizations effectively representing the interests of veterans throughout the Nation. These organizations have worked not only for the benefit of the veteran but they have diligently sought to support the general welfare of all our citizens and to foster a realistic national preparedness program. These veteran organizations are to be commended for their endeavors in behalf of the veteran and for their patriotic interest in a strong America and a dynamic free enterprise economy.

Mr. Speaker, it is my privilege to be personally acquainted with many of the veterans who reside in my constituency. I know personally of the deeds of valor they performed in military life, and I am equally aware of the outstanding service they render to country and to their home communities in civilian life.

I have always been determined that our Nation should give proper and appropriate recognition to the veterans in any time of possible need after the battle is won. It is, therefore, with a sense of accomplishment that I can report these recent achievements in behalf of our veterans that have been accomplished under President Eisenhower—a distinguished veteran in his own right. Under his leadership and the leadership of the Republican Party I am sure we can look forward to continuing progress in providing proper benefits for our deserving veterans.

The Fight in 1959 Against Court Curbs

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. QUIGLEY. Mr. Speaker, happily, the attempts to restrict the powers of the Supreme Court made little headway in the 1st session of the 86th Congress. It is not often that a Member of the House gives thanks for the Senate of the United States, but when it comes to court-curbing legislation, I do it from the bottom of my heart.

It was on June 24, 1959, that the House by a rollcall vote of 225 to 192 passed H.R. 3, the perennial proposal of Virginia's arch-conservative, Congressman HOWARD SMITH, which presumes to tell the Supreme Court how to run its business. The Senate, which last year killed the bill by a margin of one vote, failed to move it out of subcommittee this year. And that, let us hope, is where it rests.

The June 24 vote was perhaps the high-water mark of the conservatives in the 1st session of the 86th. In that vote, only one Democratic Congressman north of the Mason-Dixon line—and not all those below it—voted with a solid phalanx of 115 Republicans for a measure that would have denied effectively civil rights within any State that wished to do it.

While in appearance H.R. 3 is one of the simplest bills ever considered by the

Congress, in reality, it is probably the most far-reaching piece of legislation ever to come before the House.

Congressman SMITH's bill concerns itself with what the lawyers call the doctrine of Federal preemption. In a nutshell, this legal doctrine holds that the States may act in certain areas of the law unless the Federal Government by act of Congress has preempted—that is, taken over—in those areas. The doctrine was first conceived by Chief Justice John Marshall as long ago as 1824 when we used it to decide the case of Gibbons against Ogden. Since that date it has been an integral part of the law in this country.

However, Judge SMITH and his followers contend that in recent years the Supreme Court has perverted this doctrine by devising a new and mean twist which they call implied exemption. This is lawyers' language for saying that the Court has implied an intention on the part of Congress to exclude States from areas of the law where Congress never intended this to happen. The supposedly classical example of implied exemption was the case of Pennsylvania against Nelson. In that case Steve Nelson, who was secretary of the Communist Party in Pittsburgh, was convicted under Pennsylvania law for sedition against the United States. The Pennsylvania Supreme Court threw out the conviction on the grounds that Congress, when it passed the Smith Act back in 1939, preempted for the Federal Government the matter of prosecution for sedition against the United States. On appeal, the U.S. Supreme Court agreed that the Pennsylvania Supreme Court had properly interpreted the law.

HOWARD SMITH thinks otherwise. As the author of the 1939 Alien Registration Act, he insists that he never intended to stop Pennsylvania or any other State from prosecuting all they wanted to in this area. He contends further that, since he did not intend it and his act did not say it, he cannot imagine how or why the Court would ever imply it.

The fact of the matter is that back in 1939 when the Smith Act passed, HOWARD SMITH nor any other Member of Congress even gave any thought to—let alone had any fixed intention on—the question of preemption. When the question arose later, the Court came to its conclusion by implication on the basis of the overall purpose and scope of what Congress did. As a matter of fact, this is exactly how Justice Marshall came to his conclusion as to congressional intention back in 1824, and, since Congress almost never spells out its intention on preemption, implication has been the way the Court has almost always had to resolve the question. "That which is clearly implied is of equal force as that which is expressed" was the way Justice Butler stated it back in 1929.

But for the Howard Smiths, what a conservative Butler Court could do is "verboten" to the more liberal Warren Court. H.R. 3 says that unless Congress says specifically that it preempted a field of law the Court may not imply it. And H.R. 3 would apply to every law that Congress ever passed, not just the ones it will pass hereafter.

In the end, unfortunately, the bill passed the House by 33 votes.

In defeat, however, I take consolation from a number of factors. First, I am pleased about the part I was able to play in fighting against this law-wrecking bill. Second, I am proud of the performance of the Democratic membership of the House which voted almost 3 to 2 against the bill as opposed to the Republicans who voted almost 4 to 1 in favor of the legislation. Finally, I feel secure in the knowledge that H.R. 3 and other similar court-restricting bills stand little chance of enactment in the Senate as it is presently constituted.

Centennial Anniversary of Sisters of Notre Dame de Namur in Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolutions sponsored by Senator William X. Wall, of Lawrence, Mass.:

Resolutions congratulating the Sisters of Notre Dame de Namur of Lawrence upon the celebration of their centennial anniversary of coming to St. Mary's Parish in Lawrence

Whereas on August 20, 1859, at the invitation of the Augustian Fathers of St. Mary's Church in Lawrence, a small group of four sisters from Cincinnati, Ohio, and a superior from Lowell, Mass., came to Lawrence to begin their noble work; and

Whereas, 100 years have passed today since that humble beginning during which by enobling sacrifice, they have made for themselves a most enviable record in the interest of Christian education; and

Whereas the good Sisters of Notre Dame de Namur have played a major part in the growth and development of religion and education in the life of the City of Lawrence; and

Whereas this growth spread from St. Mary's School to St. Laurence's School, St. Rita's School, Holy Rosary School, St. Augustine's School in Lawrence to St. Augustine's School in Andover and St. Monica's School in Methuen; and

Whereas confronted by grave difficulties and unusual privations, the Sisters of Notre Dame de Namur in Lawrence persevered and their perseverance was blessed with success; and

Whereas the children to whom the Sisters have so unselfishly ministered have gone forth from their guidance and care into the various spheres of endeavor and have reached the heights of fame and success; and

Whereas it is fitting that homage be paid to the Sisters of Notre Dame de Namur of Lawrence for their untiring efforts and sacrifices; Therefore be it

Resolved, That the Massachusetts State Senate hereby extends to the Sisters of Notre Dame de Namur of Lawrence, sincere congratulations on the occasion of the completion of 100 years of noble service for the glory of God; and be it further

Resolved, That an engrossed copy of these resolutions be sent forthwith to the Sisters of Notre Dame de Namur of Lawrence by the Secretary of the Commonwealth.

Adopted August 20, 1959.

IRVING N. HAYDEN,
Clerk.

Columbus Day: Symbol of American Brotherhood

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RODINO. Mr. Speaker, as the author of H.R. 418, which seeks to declare October 12 a legal holiday, I have a deep interest in the celebration of Columbus Day.

Columbus Day is already a legal holiday in many, many States. I look forward to the day, which I fully expect to be soon, when Congress will see fit to follow the lead of these States and appropriately honor the man who braved uncharted seas to discover America.

Particularly in these days of overwhelming challenges, in this space and atomic age, it is appropriate to recall the dauntless faith and courage which brought Columbus across the seas nearly 500 years ago. In facing the challenges of today—of the conquest of space, and of the attainment of peace on earth—we need to draw strength and encouragement from his daring example.

The celebration of Columbus Day has gathered increased momentum in recent years because of the activities of the National Citizenship Committee for Columbus Day. For the past 2 years, I have been happy to serve as national chairman of this committee. It has been an inspiring experience.

The great contribution which the National Citizenship Committee has made is the underlining of Columbus Day as a symbol of inter-American friendship. As a result, more and more people everywhere have become immediately aware that Columbus discovered America—both North and South—and that we are bound together by the bonds of brotherhood to some 20 other American Republics: that we are, in truth, Americans all.

Too many of us still know too little about the people in the other American Republics. It is the goal of Columbus Day celebrations to increase inter-American understanding, and Columbus Day is in fact rapidly becoming the occasion for a reaffirmation of inter-American solidarity and brotherhood.

Moreover, it is rapidly becoming the occasion for joint dedication to the great principle which all Americans have in common.

For all the nations in the Western Hemisphere are bound together, regardless of nationality, race, culture or religious belief, by their belief in freedom of the spirit and freedom of opportunity. These have been the spiritual symbols of America since her discovery, so many years ago, by the great Italian sailor.

These are the spiritual symbols by which America is known in many parts of the world. It is the joint mission of the Americas—North and South—to get these principles across to all other peoples, and thereby prove the value and effectiveness of our Western way of life.

We of the Western Hemisphere have a leadership responsibility that transcends anything man has heretofore faced. We must meet that responsibility with the faith of Columbus to the end that freedom of spirit and freedom of opportunity may one day be the heritage of all mankind.

It is heartening to note that people everywhere have rallied to the call of the National Citizenship Committee to make Columbus Day a day of rededication to inter-American understanding and inter-American ideals. The response has been magnificent. More than ever before, increasing numbers of Senators, Congressmen, Governors, and mayors are making speeches and issuing proclamations encouraging its celebration, and increasing numbers of communities and schools throughout the Nation are learning to appreciate its significance and importance.

This year, more towns and cities than ever before, in both Americas, will set aside October 12 in recognition of our mutual heritage and mutual goals. More and more people are developing an interest in Latin America and a appreciation of American brotherhood. More and more people, through participation in the friendship programs and educational exchanges which the National Citizenship Committee is sponsoring, are learning to understand each other.

The display of enthusiasm must stir us to further activity. I am hopeful that Congress very quickly will join in the mounting enthusiasm and declare October 12 a national holiday—in honor of Christopher Columbus, the historic discovery of America, the principle of inter-American solidarity, and the historic ideals for which America proudly stands.

Resolutions Adopted by Hadassah, the Women's Zionist Organization of America, Inc.

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HALPERN. Mr. Speaker, recently at St. Louis, Mo., Hadassah, the Women's Zionist Organization of America held its 45th annual convention. Numbering over 315,000 American-Jewish women, Hadassah is a nationwide organization composed of 1,288 chapters and groups in 49 States and Puerto Rico. Founded for the purposes of conducting health work in Palestine, now Israel, fostering Jewish ideals in the American Jewish community, and strengthening the principles of democracy, it carries on educational, civic, and youth activities in the United States and maintains and operates a network of medical institutions and educational programs in Israel.

Its members have made a valuable contribution to the strengthening of American spiritual and moral values through their outstanding leadership in numerous communities across the Nation. They are to be commended for their work in advancing the principles of human rights and the dignity of man, and promoting understanding.

In Israel, Hadassah's medical program of curative medicine, teaching, and research includes five hospitals in Jerusalem and one in Beersheba, child guidance and school hygiene and dental service clinics, the maintenance of 36 health welfare stations, and support of a nurses training school, among other things. In addition to these outstanding activities it maintains vocational education schools and centers and participates in a land reclamation program.

These splendid contributions are financed by voluntary efforts and its planning and programing are done through the volunteer work of its officers and members.

At its convention, this fine group of American citizens adopted numerous resolutions in support of U.S. foreign policy and in respect to items of great significance in international relations today. Mr. Speaker, I include these timely and well-considered expressions, which I highly commend, in the Appendix of the RECORD at the conclusion of my remarks:

HEALTH FOR PEACE

Whereas the U.S. Senate has unanimously endorsed a resolution designed to advance the status of the health sciences in the United States, the health standards of the American people, and those of other countries and peoples, by cooperative endeavors in health research, research planning, and research training with scientists, research workers, technicians, experts, and teachers of other countries; and to that end help mobilize the health sciences in the United States as a force for peace, progress, and good will among the peoples of the world; and

Whereas this resolution proposes to authorize the Surgeon General to encourage, support, promote, to assist in the training for and planning and conduct of research, investigation, experiments, and studies relating to the causes, diagnosis, and control of disease in foreign countries when necessary and in the United States, and to these ends make financial grants to universities, hospitals, laboratories or other public or private institutions or agencies, or to individuals, in foreign countries or in the United States, to cooperate and assist in the planning and conduct of research, research planning, and research training programs and projects by the World Health Organization and other international organizations.

Hadassah, in convention assembled, urges the House of Representatives of the Congress of the United States, to act favorably on these proposals as represented in Joint Senate Resolution 41.

WORLD REFUGEE YEAR

Whereas the General Assembly of the United States on December 5, 1958, adopted a resolution for a World Refugee Year to begin in June 1959, urging members of the United Nations and its specialized agencies to cooperate in promoting a World Refugee Year as a practical means of securing increased assistance for refugees throughout the world; and

Whereas the United States, consistent with its traditional principles of humanity, sympathy, and interest in the welfare of all peoples of the world, cosponsored and supported the resolution for a World Refugee Year; and

Whereas a White House Conference designated members to constitute a U.S. Committee for Refugees to enlist public support for all possible measures to aid said refugees during the World Refugee Year; and

Whereas the World Refugee Year is an opportunity for America to demonstrate democracy in action and to give new hope for constructive life to more than 15 million homeless refugees; and

Whereas the aims of the World Refugee Year are to focus interest on the refugee problem; to encourage additional financial contributions from governments, voluntary agencies, and the general public for solution of the problem.

Hadassah, the Women's Zionist Organization of America, in its convention assembled, gives its full support to the aims and goals as set forth by the U.S. Committee for the World Refugee Year and urges Congress to pass the necessary legislation to implement said aims and goals.

SUPPORT OF UNITED NATIONS

Whereas Hadassah, a nongovernmental organization of the United Nations, is committed to the principle of enabling the United Nations to become a strong instrument for the removal of the causes of war and the maintenance of world peace; and

Whereas the State Department of the United States has stated that disarmament is the concern of the entire world and that bypassing the United Nations would weaken the authority of that body; and

Whereas there has been newly established a 10-nation Disarmament Commission;

We, Hadassah, in convention assembled do endorse the principle that international negotiations on disarmament be kept within the purview of the United Nations so that the United Nations would assume responsibility for the implementation of any international agreements reached by said Commission.

SUEZ CANAL: AN INTERNATIONAL WATERWAY

Hadassah, the Women's Zionist Organization of America, views the recent decision of the United Arab Republic to refuse passage through the Suez Canal to the ships of any nation carrying cargoes to or from Israel, as compounding its continuous violation of international law, as a betrayal of solemn commitments undertaken by the Government of Egypt, and as an intolerable act of defiance and disregard for the regulations governing a legally ordered international society.

As an organization of 300,000 American citizens, Hadassah respectfully calls the attention of the American people to the address of the President of the United States on the issue of the Suez Canal, on February 20, 1957, the action of the United Nations Security Council on September 1, 1951, and repeated on October 13, 1956, as well as the relevant provisions of the Constantinople Convention.

Convinced that unilateral action by any state in disregard of the principles of international law cannot be countenanced by the community of nations, and that specifically, the principle of free and open transit for the peaceful commerce of all nations is essential to the lawful conduct of international affairs; convinced also that the authority and prestige of the United States as well as the economic development and in-

tegrity of the State of Israel are seriously threatened by this new intransigence on the part of the United Arab Republic. Hadassah, the Women's Zionist Organization of America, in convention assembled, respectfully urges the U.S. delegation to the United Nations publicly to condemn this new act of piracy on the part of the United Arab Republic in the Suez Canal, and to exert its influence to the end that the United Nations will exercise the full weight of its moral and legal authority to reverse the illegal, dangerous, and defiant attempts of the Government of the United Arab Republic to restrict free passage through the Suez Canal.

ARAB REFUGEES

Whereas, by resolution of the General Assembly of the United Nations the year June 1959 to June 1960 was designated as World Refugee Year.

Hadassah, the Women's Zionist Organization of America, views with special concern the pitiful plight of the Arab refugees which can be readily solved by a program of resettlement in the countries in which they now live. This view has been overwhelmingly expressed and supported in the United Nations over the past 10 years.

Hadassah expresses the hope that a constructive program will be put into operation so that the Arab refugees may cease to be used as a political pawn by Arab governments and enabled to resume their lives as useful members of society in the lands of their kinsmen.

ARAB DISCRIMINATION AGAINST AMERICAN CITIZENS

Hadassah, the Women's Zionist Organization of America, notes that the Arab League Nations, far from desisting in their economic boycott of Israel and their secondary boycott of business firms doing business with Israel, are intensifying their efforts in this direction, and accordingly, reaffirms the position unanimously taken at its 44th annual convention in 1958, namely that, we call once again upon leaders of American business to resist with every legal means at their command the Arab League's introduction of discrimination into American economic practice, and to stand firm against what has been called Arab international blackmail; and

We urge the U.S. Government to resist all efforts made by other governments to introduce discrimination against American citizens on racial or religious grounds, and to refrain from entering into any treaties or executive agreements which sanction these discriminatory practices.

U.S. AID TO ISRAEL

Hadassah, the Women's Zionist Organization of America:

Expresses its gratification that the generous assistance consistently granted by the United States to Israel through the mutual security program is being continued for the 1960 fiscal year in the same amount as in 1959, namely, $7.5 million; and

Calls attention once again to the facts that the funds which have been made available to the State of Israel under the mutual security program have helped develop its industry, its agricultural potential, and exploited its natural resources for the benefit of all its citizens, thus demonstrating Israel's will and capacity to use American aid effectively and productively; and

That Israel, a democracy in a strategic and restless area of the world, has demonstrated itself to be a valiant ally of Western interests and objectives.

Labor and Foreign Competition

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, it has become increasingly obvious that in the onslaught of low-cost imports upon our home market American labor would be one of the most vulnerable among the elements of our economy to the destructive effects of such competition.

There is every evidence that labor in this country is awakening to the threat. A number of unions have in the past combatted low-wage imports by seeking legislation for the greater protection of their jobs and employment opportunities. Some of them have joined hands with both industry and agriculture in recent years toward preservation of the American market against progressive and, in some instances, fatal invasion by goods manufactured abroad at wage rates and under working conditions that are far below those prevailing in this country.

The evidence is mounting that more labor groups are feeling the impact as the tide of imports rises and our exports begin to fall off. They are becoming aware of the defenseless position of labor as contrasted with that of the larger industries, more and more of which are looking overseas for production facilities, with the idea of holding their export markets and in some cases exporting from their foreign factories to this country.

I have been impressed by an advanced text of an address on this subject to be delivered before the Union Label and Service Trades Department of the AFL–CIO by O. R. Strackbein, who is chairman of the Nationwide Committee on Import-Export Policy, an organization composed of upward of 60 industries, labor organizations, and agricultural associations that have battled to assure a remedy against severe injury from imports whenever it occurs. The occasion was the recent national convention of the AFL–CIO in San Francisco.

It is heartening to observe such cooperation among elements of our economy that in other fields may have a diversity of interests. The address throws light on the position in which the American worker finds himself today as he contemplates the fast-rising flood of imports that laps at the feet of his job. I commend the reading of Mr. Strackbein's remarks to my colleagues:

ADDRESS OF O. R. STRACKBEIN, CHAIRMAN, THE NATIONWIDE COMMITTEE ON IMPORT-EXPORT POLICY, AT ANNUAL CONVENTION OF THE AFL–CIO UNION LABEL AND SERVICE TRADES DEPARTMENT, SAN FRANCISCO, CALIF.

Labor has long had a vital interest in foreign trade, both imports and exports. Its interest is based on the balance of employment resulting from the displacement of jobs by imports, on the one hand, and the addition of jobs by employment in production for export, on the other. It is also concerned over the effect of low-wage import competition on wage levels and wage trends in this country.

Labor, however, has a special concern that sets it apart from some other parts of the economy. It is more vulnerable to the effects of labor-displacing imports than are the larger elements of industry. These have a defense that is not available to labor or, for that matter, to small business and suppliers of materials and parts. The larger companies are able to escape from the domestic scene and to cover themselves by reaching abroad.

During the past two decades labor has generally with notable exceptions approved the lowering of tariffs and trade barriers on the grounds that doing so would lead to trade expansion all around and therefore to increasing employment.

We all know that the United States has lowered its tariffs very drastically through foreign trade agreements. Today our average tariff protection is much lower than it was in 1934 when the tariff cutting program began. It has been reduced approximately 80 percent, part of this decline having been caused by rising prices.

The upshot is that this country has gone a very long way toward freeing our trade. Other countries have also reduced their tariffs; but many of them have substituted other restrictions for the tariff, such as import licenses, exchange controls, barter arrangements and import quotas. These devices are often much more restrictive of trade than tariffs alone. Actually trade barriers throughout the world are not now less restrictive than when we entered the trade agreements system but actually more so—with the exception of ourselves, Canada and perhaps a handful of other countries.

Meantime we have badly exposed ourselves to goods made abroad under low-wage and inferior working conditions. This is something that concerns the union label department.

What I want to talk to you about is just where American labor stands in the world of foreign competition today. I think it finds itself in an almost untenable position. Let me go into a little detail on this point.

There are those who will say immediately that American labor has priced itself out of world markets. Generally there will be the accompanying comment: "Of course there were other contributing factors."

There were indeed; but that is not the point. It is not so much a question of what brought us to our present unhappy competitive position as it is one of asking, What are we going to do about it?

To say that American wages are too high overlooks the obvious fact that foreign wages may be too low. American wages have not priced us out of the home market. They have, on the contrary, provided the purchasing power to absorb the great volume of our industrial output.

Our wages on the other hand, do make for costs that are high in relation to foreign costs in many lines for the simple reason that foreign wages are from less than a tenth to a quarter or a half of ours. Only Canadian wages come within earshot of our own. They are only some 20 or 25 percent below ours.

What could we expect from this kind of a situation?

Time was when the low foreign wages were offset rather effectively by the lower foreign productivity. If our workers received $2 an hour and the foreign workers got only 50 cents, our output per man-hour may have been three or four or five times as high as that of our foreign competitor. The result was that we still came out with lower unit

costs and imports could not hurt us. Of course, there were notable exceptions. Those of our industries that did not enjoy mass production did not have the same higher productivity that was the special advantage of our moving production lines, standardized parts, etc. Our large mass production industries, however, were quite immune to the sting of import competition.

On the contrary, and for the same reason, they were exporters. For that reason they inclined toward freer trade. We need only mention automobiles, steel, electrical appliances and rubber.

In recent times a change has been underway. We are coming more and more to realize that we are living in a changed trade world no less than in a changed and changing scientific and military world.

What are the factors that have produced the changed competitive condition?

We have already noted our drastic tariff reductions of the past 25 years. These would have made us more vulnerable than we had been to low-cost imports without an assist from other factors; but there were others. We have mentioned high wages. It would be better to say high prices and high costs.

How have these come about? They have resulted from conscious policies pursued for some years. We have only to think of price supports for agriculture; minimum-wage laws, social security, the shorter workweek, obligatory collective bargaining, etc. Yet that is not all; nor perhaps more than the half of it. We must not overlook World War II and the resulting high national debt and high taxes. Thereafter came the Korean war, followed by skyrocketing national defense outlays.

Today our annual national budget of nearly $80 billion is three times as high as was our total national debt before 1940. Our interest payment of some $7 billion per year on the national debt alone is higher than was our peacetime total national budget before World War II.

All these costs are added to production costs. The taxes and high Federal outlays do not come free. They have to be paid for. Should we go back to the price level of 1940 we would be sunk under a hopeless burden of debts and taxes. It is bad enough as it is. So it is obvious that wages alone did not create our high prices. They had a great deal of help.

The fact is that we did move, for good or for bad, but as the result of easily distinguishable policies, to a high plateau of prices. The principal trouble today is that other countries have not done for their workers and their farmers what we did in this country.

To be sure, foreign wages have risen; but so have ours, and our upward swing began after the war several years before it got underway in most of the other countries.

The picture, then, shows us economically on a high plateau, surrounded by lower-cost competitive forces on nearly all sides; and our tariff defenses well demolished.

This is not all.

Two really important things that have happened beyond what has already been mentioned have been (1) the introduction of modern machinery and equipment abroad on an unprecedented scale. Since the beginning of the Marshall plan we have shipped abroad over $30 billion worth of machinery. In the past 6 years alone we have shipped $21 billion worth.

The use of this machinery has added greatly to foreign productivity. Even if our prices had stood still the previous competitive situation would have been changed; for introduction of machinery where there was none or a relatively low order of it changed output and costs in a revolutionary way in many a spot.

This would not have had the effect it did if foreign unions were strong and energetic; but in this respect they are far behind our own unions. Foreign producers therefore retain much of their greater productivity resulting from installation of machinery. They can as a result sell at relatively lower prices, as many of our industries have learned in recent years. It has not been unusual to see imports rising from a level of supplying 5 or 10 percent of our home market and going on up the scale to 15 percent, 20 percent, 30 percent, 40 percent, and in some cases over 50 percent in a matter of 4 or 5 years. Some of you here today know something about this and it needs no emphasis from me.

(2) The second important change that looms before us is the changing European attitude toward the mass market. On another occasion I have said, "They have seen our system and they have bought it," or words to that effect. The European Common Market is an example. In a few years' time the tariff wall and other trade restrictions (and there are the more important) that have made tight economic compartments out of the European countries, thus greatly limiting the markets for European industries, will be progressively lowered and in time European industry will have a mass market roughly equal to our own. Then there is the free-trade area of the so-called outer seven countries, about which an agreement was reached only a few weeks ago.

Should we oppose these developments?

I think not. There is every reason to believe that they will improve the economy of the countries involved and that is not something that we would wish to oppose. Should we then be indifferent to it?

That does not follow. Not at all. Whereas the European countries may be able to rip down their internal compartments without fear of exposing their industries to a lethal competition they may be able to do so only because there is not so much difference in cost among them as there is between them and us. Moreover, we already have a vast market. They are striving to achieve what we already enjoy. Therefore the medicine that may be good for their malady might be bad for us. A doctor does not prescribe the same medicine for patients that have different diseases.

Now where does this leave us?

Our costs are much higher in some lines of production than those of other countries. Japan is able to run rings around us; and so can some of the European countries in a number of lines. Our watch industry is about gone because of imports. We are now importing more typewriters than we are exporting for the first time. We have for nearly a year now been importing more steel than we export. In the case of automobiles our imports are running 4 to 1 over our exports whereas in the past we were by far the world's foremost automobile exporters. In the case of textiles we have lost leadership in exports to Japan and India; and our imports have been rising sharply. Japan has imposed a quota limitation on her textile exports to us and that fact alone has at least temporarily stopped a panic. Glassware and pottery and fishery products have long been sufferers from imports. Many other items, new ones, are feeling the keen edge of import competition; machine tools, for example, and sewing machines, petroleum, fisheries, bicycles, and many other items.

Yet they say, any of those who are new to the hurt, tariffs are not the answer, and I will quickly agree that in many cases that is true. We need import quotas or a combination of import quotas and a tariff.

As matters stand on the import and the export front American industry will seek to move to automation as quickly as possible to keep costs down; but of course, other countries are on that course too; and we are helping them. Our manufacturers are looking overseas for production facilities and many have set up plants abroad or bought into going concerns or made licensing arrangements under patents for foreign production. The purpose is to supply those markets from within rather than from this country, and also to export from there to third countries rather than from here. In some cases they even ship back to this country. It is estimated that our foreign investments have created 5 million jobs abroad.

This emigration of capital may rescue many of our manufacturers from losses that they would otherwise suffer; but it certainly does not rescue the workers from anything. Rather it confronts them with a shrinkage in jobs. The same with automation that is too rapid. This, too, may help the companies but it will mean fewer jobs. Those thrown out of work will not so easily find other jobs for three reasons: (1) Imports will be removing some jobs; (2) exports will not be expanding, except in subsidized form; and (3) new workers will be coming on the scene at the rate of some 700,000 a year.

Shall we then stand idly by or shall we do something about preserving a reasonable share of our market for our own industries and workers? Shall we recognize the fact that we are facing something we have not faced before and take some holding action with which to buy time? What can we do to bring up wages abroad so as to narrow the wage gap? This will in any case be slow and we must do something in the meantime or instead of bringing up other countries to meet us we will fall in order to meet them.

The union label stands for American standards and to the extent that we purchase union-made goods we can be sure that we are contributing to and not undermining the American standard of living. The very efforts of the union label department is evidence of the prevalent recognition of the destructive effect of competition that comes from beyond the reach of our domestic legislation such as minimum wages, shorter hours, collective bargaining and so on. For such competition we need special devices to assure us that it will not upset and destroy the domestic standards and attainments that in turn have made us competitively so vulnerable.

We must not be deluded into thinking that our competitive discomfiture is a passing nightmare. In the nature of things, considering all the factors on the horizon, it is an ominous confrontation, not a mirage. Our imports have been breaking records successively this year. Our exports are down 20 percent from their heights and even those that we enjoy are heavily subsidized in important segments. Otherwise they would swing into an import balance.

In our total foreign transactions we are running a heavy deficit, amounting to $3.4 billion last year and estimated to exceed over $4 billion this year. Since January 1958 we have lost $3½ billion in gold.

Let no one persuade you that what we face is but a passing case of indigestion. We face a systemic malady; not a mere peptic upset.

There is no good and sound reason why any industry that is in trouble over imports should not have a remedy that will save its job and safeguard the American standard of living.

This was indeed promised by every President since the trade agreements program began. The assurances of the Presidents were echoed by the successive Secretaries of State, Assistant Secretaries, and other Cabinet members. One quotation from Cordell Hull, who as Secretary of State under Franklin Roosevelt, was known as the father of the

trade agreements program, set the pattern. Said Mr. Hull in testimony before the House Ways and Means Committee, March 1934, page 24:

"But our purpose is to make a beginning by picking out one item very carefully here, another commodity over there very carefully, which, as is said, can be made the basis of an interchange in a mutually profitable way, so that instead of anybody being injured, the American people would be helped."

This same theme has run like a refrain throughout the testimony in the succeeding years; but unfortunately the assurances have been forgotten by the executive branch and that is why so many of our industries are in trouble from imports and why their workers face displacement.

To this we must get an answer.

What Can We Do About Juvenile Delinquency?

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HALPERN. Mr. Speaker, of the numerous statistics on crime which have aroused the country, the most heartbreaking are those on youngsters under 18 years. Since 1952 the population group under 18 years of age has increased 22 percent while arrests of persons under 18 years have increased 55 percent. The arrest of juveniles under 18 rose 8.1 percent in 1958 over 1957. Over 12 percent of all the arrests made in the Nation in 1958 were of young people under 18, as contrasted with 4.2 percent in 1948.

Between 1948 and 1957 juvenile-court cases increased 136 percent. Such figures may include some statistical inflation, but all experts agree that the enormous increase in juvenile crime represents a real social trend that society can ignore only at its peril. Murders, assaults, gang warfare, senseless property destruction, often done with little or no motive and no noticeable sense of guilt, form the pattern.

The baffling situation raises a host of questions: Why do they do it? What are the causes? What can be done? How can society both prevent and cure this terrible condition?

In the August 20 issue of the Reporter magazine there appeared an excellent article by Virginia P. Held entitled "What Can We Do About Juvenile Delinquency?" in which the author discussed the ramifications of the problem and the numerous theories and remedial attempts that have been applied to it thus far.

Of particular importance among the complexities of the problem, the author points out, is the seeming absence among most of the delinquents of any sense of values, of any effort to acknowledge and differentiate between right and wrong. There seems to be a tendency to pass the buck on this very serious factor, a tendency which is disturbing to all who ponder over its national implications.

Mr. Speaker, the article from the Reporter is so well done, that I include excerpts from it in the Appendix at the conclusion of my remarks:

THE FORMLESS YEARS: WHAT CAN WE DO ABOUT JUVENILE DELINQUENCY?

(By Virginia P. Held)

There has probably never been a moment in history when adults were not shocked by what they regarded as an unprecedented wave of bad behavior among children and adolescents. But in our time reports of gang warfare in the streets, teenage muggings, and senseless killings have turned shock to cold fear. Juvenile delinquency, particularly in the United States, has come to be considered one of the most urgent social problems of the day, and the epidemic of arrogance and crime seems to be spreading so fast that it obliterates the best efforts society can make to control it—or even to understand it.

There are two major ways of measuring juvenile delinquency statistically. One is to count the number of cases handled by juvenile courts throughout the country; this is done by the Children's Bureau of the Department of Health, Education, and Welfare. The other is to count the (quite different) number of police arrests of young people; this is done by the Federal Bureau of Investigation.

By either measure, juvenile delinquency is increasing. From 1948 through 1957, the latest year for which complete figures are available, juvenile court cases increased 136 percent while the under-17 population increased only 27 percent. According to the FBI statistics, from 1948 through 1957 recorded arrests of persons under 18 multiplied eight times; there were seven times as many arrests for assaults, four times as many for burglaries, and eight times as many for thefts. And in the last 5 years, juvenile arrests for murder and nonaccidental killings have increased more than two and a half times. In 1948, persons under 18 were held responsible for 4.2 percent of all crimes; in 1957 for 12.3 percent.

Of course, statistics can be misleading. Definitions both of who a juvenile is and of what constitutes delinquency vary widely from State to State and even from court to court.

* * * * *

But even after statistical inflation has been discounted, most experts in the field are convinced that the recent simultaneous increases in court cases and police arrests represent a real social trend that society can ignore only at its own peril. Above all, there is no blinking the fact that serious crimes by juveniles, such as burglary and assault, have increased greatly in the past few years.

What a number of people who deal with juvenile delinquents find even more disturbing than the increase in the number and savagery of the offenses is the fact that more and more of the young people who get into trouble seem to act without understandable motive or provocation, and to feel no noticeable guilt for what they have done. Destruction for the sheer joy of destroying erupts in the most surprising places. In prosperous Maplewood, N.J., a gang of boys broke into the junior high school, wrecked classrooms, poured kerosene over library books, and set the school ablaze, causing $300,000 worth of damage. During a 3-month period there were six less costly but similar outbreaks of vandalism in relatively prosperous New York suburbs.

Many juvenile murders are the result of gang warfare, which has become increasingly vicious as it has become more highly organized. (One expert attributes this to the "technological advance" in the weaponry employed by the gangs.) But the number of children and teenagers who senselessly murder close family members is also increasing.

* * * * *

WHY DO THEY DO IT?

* * * * *

In his widely read book "The Shook-up Generation," New York Times correspondent Harrison Salisbury says we have delinquency not because we don't know how to prevent it, "but because we do not have enough interest or energy to do the things we already know will bring an end to delinquency. We do not lack knowledge. We lack the will."

But in the face of so much senseless brutality, it sometimes seems as if we lack both will and knowledge.

A number of earnest attempts have been made to understand and explain what causes juvenile delinquency. Sometimes a particular theory has been hailed by its enthusiasts as the explanation, but while many specific diagnoses have been helpful, the extent and the virulence of the epidemic still seems as baffling as it is frightening.

One recurring idea is that poverty causes delinquency. And yet several studies were made in the 1940's, notably one by Lowell Carr and another by David Bogan, which showed that delinquency rates decrease in periods of widespread unemployment and increase in periods of prosperity.

Another diagnosis blames overcrowding and bad housing. And yet the middle-class suburbs are certainly not without their share of trouble, and there is ample evidence that many a human slum festers behind the smooth exteriors of the new low-cost housing projects, which often breed their own gangs and have above-average delinquency rates.

Still another theory focuses on bad neighborhoods, considered in terms of inhabitants and mores rather than in terms of bricks and mortar. The map of New York's Youth Board Services reveals that the most troubled areas are those with high concentrations of new immigrants and the poor. But even so, there is no getting around the fact that for every slum child who becomes a delinquent a great many do not; the theory does not help to explain the operation of crucial factors within the individual.

Still another theory, whose validity is accepted with varying degrees of emphasis by most experts in the field, puts the blame on broken homes. But an impressive study made by Harvard's Sheldon and Eleanor Glueck makes it clear that the way a child's parents treat him is more important than the way they treat each other.

At present the most popular theory about juvenile delinquency seems to be that it is caused by psychiatric disturbance. * * * The Gluecks, however, found that among the group they studied, feelings of being unwanted and unloved, and tendencies toward insecurity and anxiety were even more prevalent among the nondelinquents than among the delinquents. There is obviously some value in each of the various specific theories that have been advanced to explain what causes juvenile delinquency, but it seems pretty clear that no one of them provides all the answers.

THE GLUECK STUDY

It is generally agreed that the most comprehensive scientific study of the importance that can be ascribed to various social, psychological, and physical factors in the make-up of juvenile delinquents is that which has been provided in recent years by the Gluecks.

* * * * *

The Gluecks found that the tendency toward delinquency appears remarkably early

in a boy's life: 48 percent of the delinquents started to misbehave persistently when they were 7 years old or less, another 39 percent when 8 to 10 years old.

* * * * *

Useful as the Gluecks' prediction table is, of course it does not explain what causes juvenile delinquency. A number of factors, notably the possession of a muscular physique and a high energy output, were found to be important, and in general the studies the Gluecks have completed so far would seem to indicate that juvenile delinquency is not caused by any single factor in and of itself but results from the interaction of various social processes with the biological and psychological makeup of individuals. During the last few years there has been a good deal less emphasis placed on single cure-alls for juvenile delinquency by the private and public agencies that are concerned with the problem. A more modest pluralism has replaced nearly all vestiges of fanaticism for unequivocal theories, and new approaches are constantly being tried in order to make use of a variety of interdependent techniques.

REACHING THE HOPELESS

One such experiment is pavement-pounding social work. The New York City Youth Board found that about one-quarter of the families producing delinquents were producing about three-quarters of them. These families were often the ones given up as hopeless by most social agencies: they were too far gone to ask an agency for assistance and too unreliable to keep appointments with the social workers in the agency's office. The new approach is to go out and find them, persuade them to accept assistance, and try to help the children before they get into trouble. "Reaching" has become the Youth Board's slogan.

* * * * *

Another avenue of attack by the New York City Youth Board is the Street Club project. Some 90 workers take to the streets to find youthful gangs, hang around with them, gain the confidence of their members, arrange truces between gangs, and redirect their energies. They help the boys find jobs, hold dances, and stay out of trouble. In effect, they are trying to bring these youngsters out of the jungle into 20th century society. Or it might be more accurate to call the goal middle-class respectability.

* * * * *

A veneer of middle-class respectability apparently cannot, however, provide immunity against the spreading epidemic of delinquency. Although most of the more obvious elements of social disintegration are not to be observed along the comfortably tree-lined streets of suburbia, juvenile crime is on the increase there too. Figures are harder to get because there is more covering up: when a suburban boy steals a car, his father rushes to the station house, offers to compensate the man from whom his son borrowed the car, and the incident is forgotten. In the city, a Puerto Rican boy caught doing the same thing would be in major trouble.

* * * * *

WHERE THE NEED IS GREATEST

But even if it could be proved that poverty and slum conditions had nothing whatever to do with juvenile delinquency, it is only natural that society's greatest sympathy and concern should be focused on the unfortunate children who have to grow up in the crowded squalor of our big cities. Twenty-seven percent of the people of Manhattan are in rooming houses, often paying a hundred dollars a month for the privilege of living four, five, or six in a single room, with a toilet in the hall that may or may not be in working order. Little children are left to their own devices out on the streets late at night because their parents are sitting on their beds. Older children have nowhere to study and usually no one to commend them if they manage to get good marks. Instead of being under the watchful eye of a minister or teacher or relative, they are transients in decaying neighborhoods where "I didn't see nothin' " is the one cardinal rule and where racial friction frequently breaks out into violence.

* * * * *

One of the most ambitious programs to help city children make the best of their environment has been planned for New York's lower east side. Called mobilization for youth, its purpose is to saturate the district for 6 years with the best that city and private agencies can offer in social work and recreational facilities as well as psychological, psychiatric, and welfare services. The effectiveness of the program will be carefully evaluated and the results should show pretty clearly whether juvenile delinquency can be controlled to any appreciable degree by merely increasing the kinds of services we have tried in the past—or whether they must be supplemented by some radically new approaches to the problem. Although the sponsors are convinced that programs like mobilization for youth can do a great deal of good for a great many children whose needs are desperate, they are realistic about the difficulties they face:

"Statistics indicate that in New York, on a citywide basis, the rate of juvenile delinquency and youthful crime increased in 2 years nearly 30 percent. * * * In the neighborhood of the Lower East Side, the rate of increase was even greater * * * 75 percent. Thus * * * in spite of vigorous, intelligent, well-meaning efforts on the part of a multiplicity of public and voluntary agencies, including the schools, the churches, the social agencies, the police, the courts, the civic organizations, and other groups, as well as the residents themselves, the neighborhood continues to lose ground in its struggle to control the deviant behavior of its children and youth and in its efforts to promote more constructive, socially acceptable patterns of behavior. This critical situation is, of course, not unique to this neighborhood. Rather, it appears to be the common experience."

IT'S NOT MY FAULT

The roots of juvenile delinquency apparently run very deep, and while conceding that society must do all it can to meet desperate needs through such programs as mobilization for youth, a number of thoughtful people who have worked with juvenile delinquents are coming to feel that society might do well to reexamine some of its basic assumptions about preventing delinquency.

One of the most outspoken among those who would like to see a number of changes take place in current thinking about the needs of children is Dr. Melitta Schmideberg, director of the Association for the Psychiatric Treatment of Offenders.

* * * * *

Dr. Schmideberg emphasizes that each society must expect the crimes that are tolerated or sometimes even encouraged by popular attitudes. Punishing the few individuals who have actually committed an offense has far less effect than the way society in general disapproves of and suppresses the very idea of a particular crime.

In the last year for which the figures are available, there were 133 arrests of children under 18 in the United States for murder and nonaccidental killing. Dr. Schmideberg notes that the comparable figures for European countries are a great deal smaller, and in some civilizations homicide committed by children is practically unheard of. Perhaps, she suggests our delinquency rates are increasing because our society simply does not sufficiently abhor and disapprove of the many acts of violence, brutality, theft, and destruction in which its youth indulges.

* * * * *

In sympathizing with the agony of the young offender, Dr. Schmideberg argues, we fail to realize that a growing number experience no agony at all. The attempt to provide humane treatment and psychiatric therapy for delinquents has sometimes had the unfortunate side effect of leading them to take their offenses lightly.

* * * * *

Many of the youngsters Dr. Schmideberg sees have already been to training schools or to jail. "When I ask them why they were sent there, they tell me the judge didn't like them, or their lawyer was no good, or the jury was rigged. Almost never do they say 'I stole,' or 'I shot a man,' as did the English youngsters I worked with; and almost never do they feel any guilt."

Dr. Schmideberg feels that our society has allowed itself to be dominated by its children to a dangerous degree.

* * * * *

Instead of humoring the child who is preoccupied with his own emotions and problems—as most children are—Dr. Schmideberg claims that it is the job of parents, teachers, and psychiatric workers to modify rather than increase the child's self-centeredness. And instead of concentrating almost entirely on changing the factors that may incline a child toward delinquency—poverty, a father who drinks, aggressive impulses, and so on—we should look a bit more at how he can be brought to overcome and control his tendencies to misbehave.

Dr. Schmideberg finds it impossible, with almost all the young offenders she sees, to appeal to any deterrent short of institutionalization. One cannot appeal to the children's religious beliefs—only a small fraction of them have any—or to their conscience or their concern for their families or neighbors. The only thing one can appeal to in the majority of cases is their dislike of being locked up, and even this is not very effective until they have had a taste of it.

* * * * *

LAYING IT ON THE LINE

Another person whose extensive experience with young delinquents has led him to be concerned about present attitudes toward children and adolescents in this country is Judge Peter T. Farrell. A senior and administrative judge of Queens County Court in New York, Judge Farrell handles what are know as "youthful offenders."

* * * * *

He submits that "there has developed in our society the idea that misconduct is always abnormal, and what the law calls crime is to be explained largely in terms of causes beyond the control of the criminal. The philosophy of responsibility has been replaced by the philosophy of excuse. * * * The philosophy of excuse has for a generation, in my opinion, undermined the moral, the legal, and the social responsibilities upon which the stability of our culture must repose. The linking of misbehavior to the maladjustments and to forces beyond the control of the individual offender may frequently be justified but not so often as to warrant a general philosophy of law which has lost sight of the normal standards of individual responsibility and of person freedom. * * * Responsibility should be the universal norm, and excuse the challenged exception."

* * * * *

Eighty-five percent of the boys Judge Farrell puts on probation have no further trouble with the law, a much higher rate of

success than can be claimed by most programs. A program for psychiatric treatment in three cities was considered successful in being able to keep half of its boys from reverting to crime within 2 years.

THE ERA OF GARBLED FREUD

The rising level of youthful misbehavior in our schools is a matter of deep concern to Emil Tron, president of the New York High School Teachers Association. * * * Mr. Tron makes it clear that he doesn't hope for a return of the whipping post. But he feels that there must be a change from the current situation in which schoolchildren feel immune from punishment and teachers helpless to maintain order. He is convinced that the major change must come in the early grades with the very young children, where habits of attention and courtesy should be established.

* * * * *

A wry saying has been making the rounds in public schools recently to the effect that "The teachers are afraid of the principal, the principal is afraid of the supervisor, the supervisor is afraid of the parents and the PTA, and the parents are afraid of their kids. The kids, they ain't afraid of nobody."

The many misinterpretations of child psychology that affect popular attitudes in this country today are a source of deep concern to Dr. Marjorie Rittwagen, the staff psychiatrist for New York City's children's courts who was mentioned earlier. Dr. Rittwagen considers that there are four main causes of delinquency. About the first two—neglectful, disturbed parents and crowded neighborhoods with shifting populations—there is much awareness, though often a sad lack of facilities for treatment. But about the third and fourth major causes—the schools and the frightening absence of any beliefs and values among so many children—there is not even much awareness.

* * * * *

Dr. Rittwagen also observes that in this era of garbled Freud, parents all too often shirk their responsibilities by supposing that little Johnny is just "expressing himself," even when he clobbers his playmate. Or they imagine that since jealousy of his sister led him to hit his friend, his behavior ought to be excused. They let their children run wild and then foist them on the schools.

THE NEXT LESSON

The tendency not to blame children for their misconduct is apparently matched by an equally pervasive tendency among adults to blame somebody else for not instilling in children, before they get in trouble, the sense of values and civilized behavior they desperately need. The producers of TV programs, comics, movies, and newspaper stories which suggest that violence and brutality are acceptable and ordinary say they are only turning out what the public wants. The social workers and psychiatrists proceed on the assumption that it is not their job to meddle with cultural and ethical values—which they assume the child already possesses. The teachers say they are already overburdened trying to teach reading and arithmetic, and it is up to the churches and parents to take care of manners and morals. But the churches' influence, to whatever extent they actually can teach children how to behave, is limited at best: a priest in an average Manhattan neighborhood estimates that less than a quarter of the children there are even remotely touched by religion. And the parents, even if they are not so overwhelmed by their own problems as not to care, are usually hard pressed to know what values they themselves respect. In sum: almost no one seems willing and able to instill, simply and directly, a basic understanding of the difference between right and wrong.

The irony in all this is that children are obviously quick to learn what anyone takes the trouble to teach them. Over and over in talking with people who work with delinquents, I have been told that all children today are extremely conscious of their rights; they know all about them and they assert and insist on them. Our children have learned at least one lesson quite thoroughly: they know all about what society owes them. Apparently a lesson that hasn't been taught, at least so far, is what they owe society.

Education and the World Community

EXTENSION OF REMARKS
OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BOWLES. Mr. Speaker, as millions of American students return to schools, colleges, and universities across the land, I should like to call to the attention of my colleagues a thoughtful and provocative address on the subject of "Education and the World Community," delivered by the distinguished educator and president of the University of Connecticut, Dr. Albert N. Jorgensen, as his presidential address to the American Association of Land-Grant Colleges and State Universities, here in Washington.

The address follows:

EDUCATION AND THE WORLD COMMUNITY

(Address by Albert N. Jorgensen, president, the University of Connecticut, and president, American Association of Land-Grant Colleges and State Universities)

One of the prerogatives of the president of this association—in fact, the only prerogative which I have been able to discover—is the privilege, indeed the duty, of delivering the annual president's address.

For the benefit of those who have their guards up, let me say forthwith that I am about to give an upbeat speech.

I have no intention of telling anyone that he is a member of a sick society.

I am not going to develop the theme that the crisis in education strikes at the roots of the free world's capacity to meet the challenge of global communism.

I am not even going to intimidate you by mentioning the name of Mr. Nesmayanov, the Soviet scientific czar, how he runs his office; how much he, his staff, and his teachers get paid; what they count for in the Russian social hierarchy; or how many weekly hours of algebra they prescribe for seventh graders.

Now, I hope you are all as pleased by this partial catalog of what I am not going to say as I am. Not that these things are not important. Perhaps at this particular pass in the political and military affairs of the world, it is necessary for the Department of Defense to be able to lay its hands on an ample supply of, let us say, aeronautical engineers. But I like to think that here, in the bosom of my colleagues and among friends who, like myself, chose a life in education for reasons that have nothing to do with the manufacture of weapons or the competition of nations—I like to think that here we can free a discussion of education from the numbers game we've been playing with the Russians recently.

EDUCATE FOR DIVERSITY

I also like to think that, as modern educators and university graduates, we can address ourselves to the substantial task of fitting human beings for life in a world which has, quite suddenly, crystallized into a single community.

Our task, in short, is to educate for diversity—for living usefully on a planet where people have histories and ideas different from our own.

I want to suggest that that ideal of education which has stirred the hearts of most of us here is just the ideal which is needed for the health of this diversified world community. And I hope to make the further, smaller point that this same ideal of education possesses even a third face; and it is the ideal of a democratic republic like our own United States.

NEW CHALLENGES

If this seems like a lot of talk about government for what purports to be a speech on education, I would like to remind you that this university which we all love and sister institutions in all other States of our Nation implies a special relationship to government—the Government would help with the education of the masses, and the masses would then be better fitted to help with the Government.

But our mutual obligations have not been discharged by complete success. In the next generation the Government of the United States faces a host of brandnew challenges, and, as always, it is up to us to fit ourselves and our students to meet them.

EDUCATION IS A MOOD

Before I can hold up these challenges, I must bow to the academic inevitable and define my terms. Minimally defined, I suppose that for me education is the establishment of a mood, the functioning process by which society seeks to recreate itself, not as it is, but as it desires to be.

EDUCATION-SOCIETY GAP

Usually, the gap between a society's aspirations and its performance is so large that valid doubts arise that education—which, among other things, is the seedbed of aspirations—relates at all to social reality. When the split between education and society progresses far enough, the educated man is declared by a large part of society to be good for nothing. It is said he doesn't know how to do anything; and, insofar as he is tolerated at all, he is taken for a sort of Druid, who has spent years in the forests conning ancient towers and communing with the spirits; a dangerous magician; a man in league with dark powers, prone to unpredictable seizures of nerves. Enough of this image persists that, today, if a Ph. D. wants a part-time job as a gas station attendant he is well advised to keep his academic honors to himself.

FEARS DICTATE VALUES

But sometimes the reality of society is brought into harmony with its needs and its insights, and in these cases education becomes the principal means to protect that harmony from the slings and arrows of an outrageous fortune. Consider the Spartans, a master race, outnumbered by the backward farmers on whose labor they survived. It was a state with a strong boundary psychology; and, like all people behind fences, the Spartans let their fears dictate their values. The highest premiums were put on seamless unity, on absolute loyalty to buddy and city-state, on obedience, courage, and dash in battle—all the normal features of a historical trap, where but a handful of faultlessly disciplined young males stand between empire and extinction.

For a few generations Sparta's educational system brilliantly met the state's peculiar needs, and with such esthetic cleanness of line, that an immortal impression was created in the minds of political theorists and would-be social engineers.

SPARTANS UNARMED

And so the ideal of employing education as the shaper of youth into willing tools for the designs of the rulers of the state has survived in one form or another. But it is only fair to add that time has revealed at least three major flaws in the Spartan system. First, it was not geared for subtle trials of conscience: Outside their own city, Spartan officials were notoriously the most corrupt and easily bribed of all the Greeks. Second, the Spartan system was a rigid system; Spartan power was destroyed by the new tactics of Epaminondas, not tactics of devilish ingenuity, but unconventional enough to confuse and defeat the Spartan array. Third, although the pure simplicity of the Spartan system has been admired, and yearned after, by disciplinarians in state and school for thousands of years, it was not a lovable system. No one, save the Spartans themselves, ever regretted the decision of the Battle of Leuctra. I do not think it unfair to say that these flaws, in one shape or another, have dogged every historical attempt to imitate the Spartan way of life.

If our hypothesis that a nation's educational system is a reflection of a nation's image of itself is correct, we should expect to find that the American educational system reflects in large part the spirit of the basic documents of the American Republic: The Constitution, Declaration of Independence, the writings of the Founding Fathers.

THE SMALL FLAME

The American philosophy—that the personality of the community resides in its individuals, not in a state-idol—did not spring out of the air, but on the contrary can exhibit a history going back to a small flame lit in sixth century Athens. Though the light was dimmed for a thousand years after the fall of Rome, it was rekindled in western Europe at the Renaissance, and finally won its present dominion over a good part of the world as one legacy of the scientific and political revolutions of the 18th century.

THE HUMAN ANIMAL

What the American Founding Fathers gleaned from this tradition was a sophisticated philosophy of the nature of the human animal. This philosophy starts, not with the conspicuous fact that every man is full of conceits, faults, and delusions, but that he is a living collection of natural rights and a prospective harvest of reasonable deeds and indeed virtue which it is the privilege of the teacher to discover and develop. We are always hard put to give this miscellaneous premise a sound name. But the hypothesis inevitably rests on the twin pillars of a central doubt and a central faith.

ULTIMATE DECENCY

The doubt is a doubt of the power of the human soul and mind. No man, and no group of men, we believe, will ever be so good, so wise, so disinterested that we can afford to submit passively to their total judgments, to give blind obedience to their programs, their values, their decisions.

Parallel to this doubt is the central faith; faith in the ultimate decency and potentiality of man. The average man, we say, has strong reasons to want to be happy and to want to be good; and the average man knows that to achieve happiness and goodness he must in some degree exercise his intelligence and control his passions. Therefore, we have no choice but to confide the fortunes of society and the state, and the accumulated treasuries of man's knowledge and experience, to the freeman. Education for freedom thus becomes more than a matter of philosophical preference. It becomes part of the total survival mechanism of a democratic society.

THE TERRIBLE RISKS

What has always struck partisans or quasi-partisans of the perfectly trained man as perilous and intolerable about the democratic ideal are the terrible risks it runs. It is so neat to have a Lycurgus or a Richelieu to write down once for all the basic law of the community, to suppress dissent, to train up each member of the group in the same duties and beliefs his father and grandfather were trained in, to predetermine his exact place within the great mass.

NO GREATER RISK

It is only fair to note that a good many of these risks are real. A democratic educational system does run the same kinds of risk that a democratic political system does—risks are built into both. Indeed, we believe as a matter of doctrine that there is no greater risk than the attempt to eliminate risk. In a minor way we have to run the risk that a well-born sophomore will leave Harvard and spend the next 2 years in a pool hall, or he may persuade his father that he can acquire more know-how on a roulette table in Majorca or Sicily than in the laboratories of Cambridge or New Haven. He might even end up as a member of the beat generation reading his immortal poetry in a night club in San Francisco. Is this education? Well, the boy may turn out to be a minor poet. Or he may turn out to be a public nuisance. Either way, there is no way of taking the gamble out of education.

WE TAKE THE CHANCE

There is another major risk in democratic education. This is the American practice of exposing our students to experience—exposing them, if you will, to thieves, anarchists, Fascists, Communists, suicides, and hypocrites (to characterize only a sample of the world's great poets) as well as exposing them to men like Abraham Lincoln and Albert Schweitzer. We run the risk—often a grave one—of imparting appetites which for one reason or another our citizens should never, or will never, be able to indulge. We are even now producing a crowd whose capacities fall so short of their fancies that a sort of mass schizophrenia infects a whole generation.

THE MALCONTENTS

To the antagonistic observer of the democratic system it sometimes appears that we American educators almost set out deliberately to rear up beat generations, or malcontents, alcoholics, and radicals. Of course, this is nonsense. But what we do have to keep fresh in our minds is that the American Constitution specifically protects the individual's right to be an alcoholic or a radical, if he does not menace the same rights of others, and that so long as these rights are protected there will always be a small number of our youth who openly want to practice them.

THE MODERN SPARTANS

Not for a moment do I recommend complacency over this prospect. These people, many of them, are the failures of our educational system: We should do what we can to ferret out the causes of these failures and, if possible, make repairs. But we should not set as our goal the framing of a system where failure is inconceivable. Infallibility is not among the qualities with which an omnipotent Creator endowed the human race; and those present-day incarnations of Sparta which pride themselves on monolithic victories over the frailties of the human spirit have failed far more profoundly, in their own way, than ever we have.

Today, as always, democratic education is challenged by modern Spartans, and this challenge has taken two forms, nationalism and specialism.

FREEDOM OF ERASMUS

As everyone knows, nationalism began to play the lion's role in Europe around the year 1500. By a freak the generation of Martin Luther and Henry VIII also gave birth to the most articulate and attractive scholar of the order now in its death throes, the famous translator and philosopher, Erasmus of Rotterdam.

Erasmus started out life in the Middle Ages, when a man might criticise the wrongs and abuses that he saw around him—if he cared to look—without being held for a traitor or a heretic. But the comparatively generous Middle Ages passed on before Erasmus did. He lived to see his best friend, Thomas More, killed by that overwhelming specimen of new monarchy, King Henry VIII, for refusing to concede that Henry was Pope of England; and if Erasmus had lived a little longer he would have seen his own works placed on the prohibited list. Erasmus never could understand, never could forgive, the motives of the men who were bringing these changes to pass. He had a very acute sense of what Europe was losing; the giant, loose-hinged community, from Sweden to Italy, from Austria to Ireland, which a man like himself might traverse from end to end and never be more than a few hours away from a familiar college or monastery and a shared faith and tongue.

Erasmus always believed—what I suppose we all believe—that if people only knew more, would occupy themselves more with study and contemplation, then this faction, anger and acid, this greed and hate and bitterness would be swallowed up in the sweet delights of understanding.

It is interesting that most of the humanists of the 16th and 17th centuries detested the germs of nationalism and the germs of science, which came along at the same time. When, in 1550, the humanist movement won a not-too-temporary victory at Oxford, all the mathematical books were thrown out of the college libraries along with the scholastics.

THE SCIENTIST CARRIES US

In our time not only have we learned to trust science, but we lean heavily upon it and—I hope you agree with me—a bit too undiscriminatingly. I am not going to attack science for science is only the given name of the most powerful and profitable intellectual adventures of the past 300 or 400 years. Pontiacs, polymers, and penicillin are the fringe benefits of this adventure. What really counts, however, are the insights into the structure of the universe which Aristotle, for one, would have given his whole crab collection for, along with his metaphysics. But on the way to apotheosis the scientist has tended to become something more, and something less, than a potent philosopher. By concentrating his range of study, by progressively refining the methodology of which he is so proud, the scientist has advanced from philosophy to social revolutions, one after the other—which make those of Caesar and Robespierre, Rousseau, and Marx, look like dumbshows. With each deeper level of specialization he discovers newer, greater powers, and so he is tempted further and further and further. And because of the unprecedented dynamism of his work he has carried a good part of the academic community along with him.

MAN'S DUTY

At this point we educators have the right to intervene. For it is our conviction—and on this ground we shake hands with a mighty host from Socrates and St. Augustine to Erasmus and the Founding Fathers—it is our conviction that a man's duty to life is not exhausted when he has mastered his craft, his business, or his science.

Especially in a republic, a man is a citizen in addition to whatever else he is. Neither indifference nor impatience vetoes that commitment.

THE RUPTURED TIES

Just as nationalism ruptured the bonds which held together men of different regions, so specialization has ruptured the ties which once held together men of different disciplines. The academic community has become like a group of glandular cells scattered through the tissues of a huge body, each secreting its own hormone independently, not realizing that it is the sum of all these hormones, reacting together, which motors the whole. Among other things, it is common to find scholars who have no feeling that it is part of their duty to shepherd their mental offspring. Look for example, what happened during the thirties, when a team of German rocket engineers descended from Herman Oberth placed themselves and their apparatus at the service of a homicidal lunatic. Nor did these men appear to have objected to this exploitation; whether the V2s blasted a practice target in the North Sea wastes or an ancient, lovely town in England was a matter of indifference to them. Now, of course, some of them are working for our own Department of Defense, on the weapons we want. I hope they and we are happier than when they worked for Hitler and Himmler.

IN THE AMERICAN MODE

Meanwhile, there are those who feel that the inroads to science are too important to be harnessed to the cause of human extinction. At least a few of our most prominent scientists refuse to have anything whatever to do with ultimate power used against people. We can understand this position even if we do not agree with it. Another influential party within the scientists exists who remain almost morbidly conscious of the incalculable forces which they are unleashing and of the social responsibility, which they—as the pioneers—must bear. This is a very good attitude, in my opinion, for the scientist is without question the most vigorous of our educated men in his social effects, and it is vital that he conduct himself as an educated man in the American, rather than the Spartan mode.

WHAT DO WE SEE?

At this point I hope that some of the diabolical logic I tried to muster for these remarks is creeping out from between the digressions and cementing them together.

And now the time has come: What is the kind of world community we want, and expect? When we look around us, trying to find a few universals on which to start the long climb toward sanity, trying to forecast the form of a mankind at some measure of peace with itself, what do we see?

DEAR AIR OF FREEDOM

What the world community must be, what we must do our best to help it become, is a place safe for its differences, a place which protects the natural right of the individual to grow and to smell the dear air of freedom if he wants it and deserves it. Most certainly, the world community must not be an arena for world anarchy or lawlessness. It must be made reasonably safe and fit for human life. The unity of the world community must not be based on a dogma, but on a mood, a humanistic mood, a mood of patience, wisdom, tolerance, zest for the progress and triumphs of the human animal; the love of ideas, the love of initiative, and the love of life.

ERASMUS' IDEAL

This call for a return to Erasmus' ideal of fellowship of intelligence is also a call for a return to the ideals of the Founding Fathers of the American Republic, who dreamed of a state where definite limits constrained the degree of commitment to the distinctions of religion, race, and class. No man must kill or even injure a fellow countryman, because he is rich, because he is an atheist or a zealot or because he is alien. It is now the human duty of Americans to embrace as members of their community not just fellow Americans but human beings around the globe.

This enormous expansion of the American ideal will not harm it; it will transfigure it. It is the natural fulfillment for which innumerable great men of the past gave their lives—the natural inflowing, like that of three tributaries to a great river, of three traditions into one which carries on the traffic of the future; the political beliefs and spiritual strength of the Founding Fathers, the ethical presumptions of the humanists, and our own democratic philosophy of education. These streams are not only compatible one with the other, and with the shape of the world to come. They are indissolubly associated.

Our present determination is to build ourselves into a position of scientific and military parity with Russia, and personally I share the conviction that as of this moment this is important. But what will we do when we get there?

No marvels of technology—no great bases carved out of Greenland glaciers, no new models of bombs or tables of organization of the joint chiefs or crewless submarines that automatically fire wingless rockets at unseen targets—none of these things, wonderful as they are, compares with the wise self-command which prevents the same bombs from falling on the tender skin of our own green earth. This, I submit, is the legitimate aim of education in the modern world. These days, it may not always be easy for us to make the big and necessary commitments. For in today's unfamiliar historical terrain, government does not always move straight toward those objectives we've been outlining here; indeed, government sometimes thinks we educators should follow its lead instead of correcting its lead. But our post is not in the rear; that is not where we do the most good; it is our fate to stick our necks way out and keep them out.

THE DIVINE SPARK

It is not our business, I think, to produce happy people or people who believe in big families, or even, in the end, people who believe that the U.S. Constitution is the last word in political theory, or give pat answers to any of life's real problems. It is education's business to shape a decisively influential community of people, around the world, who can and do talk to each other, who have enough sense to see the other fellow's sense, enough knowledge to acknowledge their own ignorance, and who guard the continuity of history and the divine spark in man from the dark legions of chaos.

Education and the Space Age

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. RABAUT. Mr. Speaker, I should like to address myself to a crisis that exists in this country. The crisis is in the field of education. I need not dwell on the role of a good, sound educational system in assuring the future of any nation. It is vitally important. History bears out the fact that this importance has long been recognized and taken into acount in the formulation of national policies. Nations that have achieved greatness in the world scene have looked closely to their educational process and have drawn heavily on it to maintain that greatness. This is the lesson of history. We must heed this lesson. So it must be with our Nation.

Yet, as we play our present part on the stage of history, I fear we are not heeding history's lesson. We have reached greatness. What remains, then, is to maintain this hard-earned status. Only since the turn of this century has the United States been reckoned as a great world power. Yet today—a scant half-century later—we are facing a test of not merely whether we can continue to be a great nation but whether we shall continue to exist at all. In the face of this test we are not accepting the friendly, free advice of history—and of commonsense—that it is on the solid education of our young that we shall stand or fall.

Recently those of us who are on the Appropriations Committee had the privilege of hearing testimony on this subject by Adm. Hyman Rickover. Admiral Rickover has devoted a great deal of time to the study of this problem. In his testimony before our committee he gave ample demonstration that he is an extremely well versed and astute observer of the educational systems and trends in the world today.

What Admiral Rickover had to say about our educational system as compared with that of the Soviet Union was both startling and alarming. Most of us have for a long time been inclined to believe without serious question the popular allegation that our schools are the best in the world. It is only natural that we should do this. It is compatible with our national pride to believe it. However, after Admiral Rickover concluded his report it was apparent, at least to me, that the simple truth is that our educational system has room and considerable need for improvement. In this age—the space age—this is a serious thing to have to say. Yet it is true. We must accept this fact and alert ourselves to the danger it holds for the future of our Nation.

Awareness is the first step in the necessary direction. How many of us knew that at the time when Russia was spending over 10 percent of her national income on education, we were spending but 3 percent? I certainly did not. How many in this country were aware that while some 10 million Russians are studying English, a scant several thousand Americans are studying Russian? Admiral Rickover says that in 1957 the Russians had 1,475,000 scientific and professional people—we had 1,330,000. This is about a 10-percent imbalance in favor of the Soviets. But how many of us know about the comparative rates of progress in the field of education? First, the graduate of the Russian secondary school is the educational equivalent of

our student entering junior year of college; second, in education, their rate of progress is increasing at 6 to 7 percent a year; ours at 3 to 4 percent. Consequently we are not only behind in levels of achievement but we are losing ground. We are, in short, being smartly outstripped. This could cost us our very existence.

I could go on at great, great length on this subject. I shall not do so. What I would like to do, by way of concluding, is to leave for due consideration a few pertinent thoughts. In doing this I quote Admiral Rickover:

> We must not permit anyone else to have a higher rate of education than we. It could lead to great national danger. Russia has a standard of living about one-third that of ours. Yet in terms of their national product they devote more than twice what we do to education. So, all factors considered, the support they give to education represents a national effort several times as great as ours.
>
> We ought, first of all, to disabuse ourselves of the quaint notion that we were ahead of all the world in providing public education.
>
> The paradox is that the more educated we are, the better does our system of government function, yet we are not doing all that is possible to become educated. On the other hand, the more educated the Russians are, the more the present regime is internally subjected to criticism, no matter how strong it may become externally; yet the Russians are doing all they can.

I do not say these things as a doom prophet. I say them in the hope that we may alert ourselves as a nation and rise to meet the problem with a solid, constructive front. I say to all my countrymen: "Ponder these things well, America. Ponder them and move forward with dispatch and with the firm resolution and undeniable determination that only a free people united in purpose can achieve."

Our effort to stay on top in education should be concentrated in three major fields.

(a) Give adequate financial support for both school construction and teachers' salaries.

(b) Strive for increased excellence in both science and the humanities. We cannot survive the struggle by abandoning the ideas and principles which have made us great.

(c) Take positive and effective means to support and maintain the private educational system of the country alongside the public system. Private education is essential to progress in providing some measure of competition in teaching excellence and some measure of building cost analysis.

Private education is a natural heritage that gave this country a noble start. Examples such as Yale and Harvard and others bear this out. Private education is a right enjoyed by our citizenry. It should not be a right that can only be exercised at considerable cost and hardship. It is my firm belief that in conjunction with an aid to education bill—we make specific provision to assist the private educational institution in this, her hour of need. She has provided so much with so little.

Report to the People of the Sixth District of Michigan

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. CHAMBERLAIN. Mr. Speaker, each year I send to the people of Michigan's Sixth District a summary of the major legislative actions taken or not taken during the congressional session.

Under leave to extend my remarks in the RECORD, I include my report on the 1st session of the 86th Congress, which follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., September 1959.

As in a football game, this is now the half-time for the 86th Congress, a breather to review what's happened to date, as well as to look ahead.

The first session has been primarily occupied with labor reform legislation and budget problems. In both, final action was controlled by the outspoken demands of American citizens, evidence of the responsiveness of our Government to the will of its people. For your convenience I have summarized major legislative activity as concisely as possible in this final report.

For the third year, I plan to take my mobile office throughout our district and expect to be in your area. My schedule will be published in your local paper. If you have a problem or would like to discuss legislative matters, I hope you'll drop by. No appointment is necessary and everyone is welcome.

With my best wishes, I am,

Sincerely yours,

CHARLES E. CHAMBERLAIN.

LABOR REFORM

No single issue created as much controversy and public response as labor reform legislation.

In the closing rush of the 85th Congress last year, a weak reform bill was brought before the House under a parliamentary maneuver permitting no amendments and limiting debate to only 40 minutes. The bill was defeated in the hope that more effective legislation could be enacted by the next Congress.

After months of indecision, Congress was at last prodded into action by the American people. With days for debate—rather than 40 minutes—the House voted 229 to 201 to substitute the Landrum-Griffin bill for the milder version brought to the floor by the Labor Committee. Support grew and by time for final rollcall the bill won approval by the decisive majority of 303 to 125. In one of the longest conferences in legislative history the conferees worked to reconcile the differences between the Senate and House bills. The bill they reported was hammered out in the strong image of the Landrum-Griffin measure. The conference report was accepted by overwhelming votes—in the Senate, 95–2; in the House 352–52—and signed into law September 14.

Its major provisions:

A bill of rights for union members to help them control their own unions and keep racketeers out. This includes secret ballot, periodic elections, right to speak up against policy, inspection of union contracts, financial reports to members, fair disciplinary procedures and court protection of rights.

Requires unions to file detailed reports with the Secretary of Labor on all financial transactions (including loans) and the workings of union constitutions and bylaws.

Requires reports on trusteeships.

Closes the "no man's land" gap between Federal and State jurisdiction by giving States authority over small business labor disputes now rejected by the National Labor Relations Board.

Deals effectively with "hot cargo" agreements.

Closes loopholes on secondary boycotts.

Prohibits "blackmail" type of organizational picketing.

THE 1960 BUDGET

Last January the President submitted a budget calling for expenditures of just over $77 billion, with expected revenues of $77.1 billion—a surplus of $70 million for fiscal 1960.

The intervening conflict over fiscal policy persisted until the daylight hours (6:22 a.m.) of September 15, when Congress adjourned. The President's demand for fiscal integrity repeatedly clashed head-on with the many spending programs advocated by the majority leadership. The deep concern of the American people over Government spending—as expressed by thousands and thousands of letters—strengthened the drive for a balanced budget. The real key to the President's generally acknowledged success, however, was his bold use of his veto power.

Twice he returned housing bills, resulting finally in passage of a third and acceptable measure. His first veto of the public works appropriation bill was upheld by a single vote, but, for the first time, Congress overrode his veto of a second bill which retained the 67 unbudgeted projects to which he objected.

Public sentiment and the imminence of further vetoes combined as an influence for economy. The result was a victory for financial responsibility.

OTHER MAJOR LEGISLATION

Hawaiian statehood: Early action to make Hawaii our 50th State.

Excise taxes: Again extended wartime tax rates on autos, corporations, liquor, and tobacco; scheduled repeal of local telephone tax and 50-percent reduction in passenger travel tax for next July 1. House (but not Senate) passed bill to cut the cabaret tax from 20 percent to 10 percent.

Highway construction: To finance program without drastic curtailment, gas tax was raised 1 cent a gallon until June 1961; for 3 years thereafter one-half of the 10-percent auto excise tax was earmarked for highways.

Draft: Because of continued cold war pressures, the Universal Military Training Act was extended another 4 years, until 1963.

Veterans' pensions: New formula for determining pensions of veterans with non-service-connected disabilities and their widows and children. Substitutes a different and more equitable principle, based upon need; current pensions not adversely affected.

Mutual security: Program of military and economic aid to our allies was continued after the President's requests were reduced by $700 million.

Small business: Increased the revolving fund for loan to small businesses by $75 million.

Housing: After two vetoes, a more limited bill was presented and passed. Among other provisions, this action continued FHA authority to make housing loans.

National debt: Again, the debt ceiling had to be raised * * * to $285 billion permanently, $295 billion temporarily.

Debt financing: To avoid inflationary pressures of short-term financing, the President requested authority to increase interest on savings and long-term bonds. Congress raised rates on savings bonds only.

TVA: The Tennessee Valley Authority was authorized to issue $750 million worth of

bonds for expansion and improvement of its power-producing facilities. Because of subsidy and tax advantage, TVA continues to attract industry to its area.

UNFINISHED BUSINESS

Despite one of the longest sessions for several years, many important issues remain unresolved. Here are a few:

Wheat surpluses: Another version of higher price supports and controls which led to wheat overproduction was passed, and vetoed. Congress acted neither to override nor to present an alternative bill. The vetoed measure would have increased price supports from 75 to 90 percent of parity and reduced wheat acreage by 25 percent. In his veto message, the President pointed out that from 1954 to 1958 acreage was reduced 25 percent but yield per acre increased 30 percent because the poorest land is retired and better production methods are concentrated on the remainder. In the absence of new and better legislation, the old program—ceiling on long-term Government bonds as effect.

Debt financing: Failed to lift the interest ceiling on long-term Government bonds as urged by the President. Request is sure to come again next year.

Civil rights: A rider extending the Civil Rights Commission for 2 years, was attached to the mutual security bill, but the real showdown was put off until next year.

Depressed areas: The Senate-passed bill reported by House Committee and awaits action.

Federal aid to education: A House bill was approved by committee but not acted upon.

Tax reform. A study of the Federal income tax structure starts this fall with the possibility that legislation will be presented next year.

Obscene mail: A bill to aid in enforcement of postal laws against this growing threat was passed by the House, no action by Senate.

PUBLIC PROJECTS

Included in the military construction appropriation bill was $551,000 for an Army Reserve Center in Flint. Other progress this year: working plans are being drawn up for the major remodeling and expansion of the Lansing Federal building, new postal facilities have been or will be built in Lansing (East Michigan Avenue branch), Brighton, Swarts Creek, and Webberville.

COMMITTEE WORK

While floor action is often colorful, the real spade work is done by the various committees. Dealing with the vital problems of keeping our Nation militarily strong, my new assignment on the Armed Services Committee has been stimulating and rewarding. Some 50 bills considered by the Committee were passed by the House and either enacted into law or await Senate action when Congress reconvenes. Included among them were the draft extension, authorization for military construction, reserve matters, and many others essential to the giant task of keeping the United States strong enough to deter aggression and to resist it if ever necessary.

To gain background for this complex job, I have inspected many facets of our defense system. Most important was a tour of Western Europe and Berlin during Easter recess at the height of the Berlin crisis. I have cruised underwater aboard the atomic submarine *Skate* (not under the polar cap), flown in our military jets, and also visited our own Michigan bases as my schedule would permit.

Next session, as a member of the special Great White Fleet Subcommittee, I shall study the bold peace plan to use a part of our "mothball" Navy—financed by public subscription—to send help and supplies to needy or disaster-stricken areas of the world.

In addition to Armed Services, I was appointed to the House Administration Committee, which does the housekeeping for the House of Representatives.

SOME RANDOM NOTES

Voting record: During this session I had a voting record of 98 percent. Votes missed were excused because of official business.

Congress itself: With the entry of Alaska and Hawaii into the Union, the 86th Congress has a full House of 437 seats with one vacancy.

The Democrats have a heavy majority:

Senate:	
Democrats	65
Republicans	35
House:	
Democrats	283
Republicans	153

Following the 1960 census there will be a reapportionment. Thirteen States are expected to lose seats and seven, including Michigan, to gain. Population growth will probably give us 2 more seats in the 1962 election, making a total of 20 for Michigan.

Some statistics: A total of 13,837 measures were introduced in the House and Senate, of which 385 were enacted into Public Law. Those not acted upon may be considered next session. To report the debate and proceedings of the session, the CONGRESSIONAL RECORD, including the Appendix, contained 26,444 pages, some 40 million words.

Visitors: Since January over 600 visitors from home stopped by our Washington office. You're always welcome.

Khrushchev's Brand of Coexistence

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, Premier Khrushchev constantly uses the word "coexistence." He talks about peaceful coexistence. If I read the history of the last 15 years correctly, the Communist doctrine of coexistence is a one-sided doctrine which permits the Communists to take over eastern European countries, to launch a war in Korea, and to put the screws on in Berlin. This one-sided doctrine of coexistence criticizes the United States for maintaining troops in Berlin, for helping the South Koreans to defend themselves, and for participating in the North Atlantic Treaty Organization.

One of the most thoughtful statements that has come to my attention recently on the subject of Communist coexistence is a memorandum prepared by Dr. Michael J. Deutch, a distinguished consulting engineer whose office is here in Washington. Mr. President, I ask unanimous consent that the memorandum "Observations on the Peaceful Coexistence Offensive," written by Dr. Deutch be inserted in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

OBSERVATIONS ON THE PEACEFUL COEXISTENCE OFFENSIVE

(By Michael J. Deutch)

While stating that peaceful coexistence is inevitable, Khrushchev's article points up a new struggle for which we are ill equipped: Peaceful competition between two worlds in a precarious balance of power.

I

K's coexistence presupposes "an obligation on the part of both sides to desist from violating each other's territorial integrity and sovereignty under any pretext whatsoever, * * * particularly not with the object of altering their system of government."

The Soviets are happy with their Socialist satellite system, and they have inside means of gaining predominance in other people's territories—by subversion (even to the extent of bypassing the local Communist parties) that needs to capitalize only on discontent. In those newly independent states—which are founded on a doubtful economic base—and of uncertain economic progress, there is bound to be growing discontent among the hungry and idle masses. "Peaceful competition does not at all demand abandonment of the ideological conflict," warns Khrushchev, and if he succeeds in inspiring some admiration for the economic development progress in the Soviet orbit, spontaneous revolutions can blossom out freely.

II

"The main thing is to keep to the position of ideological principles without resorting to arms in order to prove that one is right." He obviously intends to keep in a state of constant ideological ferment the unstable fringes of the Western World, until spontaneous ideological combustion throws them into his camp.

On page 5 he says that: "We believe that ultimately that system will be victorious which will offer the nations greater opportunities for improving their material and spiritual life. It is precisely socialism that creates unprecedently great prospects for the inexhaustible creative enthusiasm of the masses, for a genuine flourishing of science and culture, for the realization of man's dream of a happy life, a life without destitute and unemployed people, of a happy childhood, and tranquil old age, of the realization of the most audacious and ambitious human projects, of man's right to create in a truly free manner in the interests of the people."

This is an aspiration that cannot be talked down in Asia, Africa, the Middle East, maybe not even in Latin America. A continuation of our policy to preserve the status quo and advocate "gradual progress through sound capital formation" is bound to leave cracks that the Communists could penetrate. This may also prove for the United States a challenge even more costly than the defense program of the last decade. To the United States, committed to a sound budget and convinced that the fight against communism may bleed us white any return to give-away programs is impossible. The failure of our foreign aid program and the repeated reassurances to public opinion as to our good defense posture makes it very difficult for the administration to sell an aggressive world-wide program to our people.

III

"The new alinement of international forces which has developed since World War II makes a new world war no longer inevitable for the Soviet Union," says Mr. K. Obviously, he counts on the newly independent states of Asia and Africa to be used as a shield for the Soviet Union; he makes clear that he will go to war over any attempt to

roll back communism or liberate his satellites.

While K insists that a choice of systems "will be decided (peacefully) only by the people of each country," he can continue to disrupt the balance, from time to time, by careful exhibition of the progress realized in the Soviet orbit. It is quite certain that the Soviet Union is going to increase its ideological and economic penetration in the "vacuum areas" of the most underdeveloped areas. With a very small expenditure in money and in primitive technology, the Soviets can achieve a spectacular impact on the masses, after the West fails to fulfill their expectations, and the local rulers lose face or prove to be rulers as unbearable as the colonial powers, or become unable to safeguard the independence of these shaky states.

The predicament we are faced with is both economic and technological:

Only a slower rate of economic growth and constant budget reduction at home can achieve the administration's objective of a rollback in the wage and price spiral. On the other hand, only in times of accelerated growth, in a climate of prosperous business and full employment, is there any hope of making the American people accept the sacrifice of a long-term worldwide, dynamic economic offensive. An administration elected on a conservative, status-quo platform cannot preach the people to adopt novel, overexpansionist policies which may result in redistribution of wealth at home.

The technological difficulty we are faced with is that our American investments abroad, our engineering skills, and the scale of our production know-how is geared to the conditions of industrially developed markets, and not always suited to the needs created by the revolution of rising expectations in Asia and Africa. I doubt that Harrison & Abramovitz, or Webb & Knapp, are competent to design, build, and operate a low-cost housing project made of thatched huts. Nor do General Electric or Baldwin-Lima have the know-how to set up small cottage industries in Zamboanga—and do this without overhead, with only minute capital investment, no labor-saving devices—and at the same time train local population in skills that have been taken for granted already among the first settlers in America. In Kaboul or Muscat, kerosene plants of an 1895 Soviet design may be as impressive as huge petroleum refineries of the latest American design. Are we institutionally equipped for this new challenge in no time?

IV

K reveals that it is the successful intelligence and propaganda activities in West Berlin that are really worrying him. He wants a foothold in West Berlin, but is not ready to go to war; we have no concrete program stated as yet.

V

K stresses that the United States should understand the irrevocable fact that the historical processes in the Soviet Union and in Red China are irreversible. That the objectives of Soviet policy have not changed with the death of Stalin is obvious here, even though the timing and tactics may now have changed. The party line now stresses that the cold war has cost both sides up to now $90 billion; that this money is needed for economic progress in the underdeveloped countries, and that this outlay has made him unable to raise the standard of living of his own people, etc. But, the ultimate ideological struggle will continue unabated. There has been no evidence of change in the basic beliefs or the iron will of the Soviet Union or Red China.

VI

K even reveals the price tag on the time concession he offers to the West:

"The policy of peaceful coexistence should receive a firm foundation only with increase of intensive and absolutely unrestricted international trade. All barriers in international trade must be removed."

He needs this time himself, to satisfy at least part of the growing clamor for consumer goods behind the Iron Curtain. His advances in weaponry, the prestige that he is gaining with the parasummit visits, and the prospect of stimulating Russia's and Red China's growth through "free international trade" make him willing to sell—and buy—some time.

Free trade is apt to create problems. The U.S. economy already suffering from overcapacity—is bound to grow slower from now on. There will be more unemployment, more dislocations in some of our old-line industries, and the ECM and Latin American industrialization gather steam. There are but very few raw materials that the Soviet orbit has to offer. On the other hand, the plants and equipment they wish to buy here will serve to accelerate balanced development in the U.S.S.R. and China. In the rest of the free world and particularly in the poorest areas, unrestricted trade with the Red bloc is bound to bring with it serious political jockeying.

VII

As for the social system in some state of southeast Asia or other, that is the domestic affair of the people of each country. This might—with time—be decided in his favor from within each country (not even by visible subversion) if time brings discontent to unstable areas and makes his system look good to the poorest people of the world in a competition for which we are not as yet well equipped, and which may be vital in the areas where the balance of power will be ultimately decided.

Last but not least, Communist propaganda will benefit from Krushchev's visit and his coexistence offensive (1) in the uncommitted areas, and (2) wherever Communists can run openly for office.

Where does this leave us? Are we institutionally equipped to meet this challenge? The answer will be given by the adaptability, the enthusiasm, and the imagination of our technicians.

1. This challenge cannot be met by an economic containment program. This would be too slow and costly. Nor is it feasible to increase across the board our spending for mutual security or foreign aid at a time when the United States is beginning to encounter balance of payments difficulties and some lingering doubts as to the outlook for a stable dollar. Money alone will not supply the answer to the challenge of the future or relieve the pressure of the revolution of rising expectations.

2. There is considerable doubt and confusion here and abroad about foreign assistance. A score of studies of our aid programs, survey committees, and articles (pro and con) underscore the confusion in the public's mind. There is, unfortunately, less and less support among the American people for increased expenditures in foreign aid. Too numerous have been the past mistakes swept under the rug of secrecy. Too great the budgetary confusion. However lavish the public relations shows and the banqueting in favor of international development and increased appropriations, the public will not accept a rehash of pleadings "pro domo suo" as convincing proof that sacrifices are imperative. For instance:

(a) We have never computed how much additional aid would be required to achieve successful economic growth abroad, nor what it will take in terms of manpower resources and technological changes to achieve it.

(b) The present intermingling of military and economic assistance, while it may have been sound budget strategy before an appropriations committee, has created misunderstanding at home and suspicions abroad. The increased confusion between military and economic aid has brought about the paradoxical situation where most Asians now regard U.S. foreign aid as prompted by selfish defense interests, trying to place them on the firing line.

(c) Mutual security must be supplemented openly and explicitly by positive programs for economic and social cohesiveness, not only by support activities.

(d) Widespread concern is voiced over our inability to come forth with any new creative and dramatic programs. The cumbersome machinery by which foreign aid is implemented and executed (the endless coordination and duplication of agencies inhibits the performance) does not lend itself to swift and decisive performance. It is evidence that the composition and administration of our foreign aid program has to be revised.

(e) Basic changes in the administration of our mutual security and foreign aid organization have been recommended by the Draper Committee to correct the inefficiency and the duplication of effort growing out of scattered responsibilities. These very sound recommendations on administrative reorganization will take time to implement. The new agency suggested by the Draper Committee will be only as good as the judgment of the men it can secure. Unfortunately, the task is too pressing to await the reorganization of our Government operations, the coming into being of new lending agencies and further budgetary review. This is clearly no time for complacency. What is required is an attitude of sustained and informed determination to do the job. This cannot be accomplished without a major effort and without cost, although money is not the conditioning difficulty here.

(f) In spite of all its mistakes and disappointments, due to conflicting policies, overstaffing, multiplicity of operating missions and lending agencies, insufficient planning and indecisions, the foreign aid program will be continued for years to come. There are great problems of economic and humanitarian advancement in many countries in the solution of which the United States should take part independently and above the motive of mutual security.

3. The free world must strengthen and re-equip its forces now. Rapidly changing military technology, the increasing loss of popular support for mutual security programs in many parts of the world, combine to make the job extremely difficult. Primary attention should now be focused on Asia and Africa, and the growing problems of nationalism, rapid industrialization and neutralism. To face these problems, we must prove our motives, our moral fiber, our tenacity and capacity of performance, and particularly our boldness. Otherwise, we will not be able to regain the leadership that may already have been lost. We must persuade Asia and Africa that we have a national will to win this peaceful competition. We must also convince their people that when we win the competitive struggle our systems will mean for them not a status quo and dissertations on patience and savings for a better future, but rewards in prosperity and political stability. We cannot continue serving them an academic rehash on balance of payments difficulties and the deficiency of their capital formation. Nor can we give them idle advice and let them struggle and muddle in the implementation of what we have recommended. We have

to show that our technology and our professional men can adapt our way of doing things to the needs and small resources of Africa and Asia. Maybe then we might even win the adherence of the neutral nations to our cause.

4. No aspect of American foreign policy problems presents a deeper challenge than the problem of the underdeveloped areas. Our concern with the economic progress of the underdeveloped countries is in keeping with our own moral traditions and our spiritual faiths. Only by developing the talents and resources of the poorest people in the world can we insure the existence of an international community of peace, progress, and culture, where we would enjoy a free and expanding market for our goods and an outlet for our inventions. The difficulties are great, not only because the technical problems are so complex, but because our approach to the problem is based on the erroneous assumption that our scale of doing things and our engineering and management methods can be easily adapted to these other areas. In reality, concepts, and technology of the past no longer fit the political climate, in which the world-wide clamor for a higher standard of living is voiced. We must adapt our engineering and our construction standards to small-scale, quick turnover small investment, no labor-saved types of manufactures.

Our superior industrial base and production know-how may do the job only if we have a clear sense of direction, ratified by national will and adapted to unfamiliar geography and traditional backgrounds. Some of our allies in the Asian-African arc are not strong at all; nor are they all receptive to help because of their suspicious nationalism.

5. With the complexity of the task, the importance of a highly competent professional force has never been greater. Mutual security and foreign aid outposts are usually staffed with personnel released from other military duties, or from predecessor agencies. Skilled professional men necessary to an effective economic development program abroad are not easily available from present domestic operations. They must have unusual backgrounds and skills-not very common in our organizational elite—not easy to train in a hurry.

(a) We should make more use of the people "out of channels" who have been successful in gaining the respect and confidence of the people of Asia, who have been able to develop a genuine sympathy for these people, who understand foreign lands and foreign cultures and their problems.

(b) Our economic aid would be more efficiently implemented if we have succeeded in persuading the recipient countries to improve their investment climate both for domestic and foreign capital of a private nature. Foreign and private capital should play a major role in the development of Asia and Africa—not only because there is not enough foreign aid available, but because private foreign investment is the best source of financial analysis, engineering planning and efficient managemet, which are the main shortages today. Even where social overhead projects are indispensable, sound management could be entrusted to private capital even if it has to be underwritten by the lending agencies. Aggressive assistance should be given by the U.S. Government to those segments of U.S. investments that can achieve performance abroad.

(c) We cannot stimulate private foreign investment only through tax rebates. We have to stimulate it aggressively, but not before making sure that its brand of know-how and managerial techniques, so essential to the underdeveloped areas, is not going to end in political disaster. Where private investment proves too selfish or inept, it will have to be withdrawn in the end. Where local rable rousers are so rabid as to block economic development rather than accept foreign know-how, we may have to withdraw altogether before being committed in a tragic fiasco.

(d) The splendid work of Foreign Service educational foundations and the Council's seminars for U.S. business executives abroad should be expanded in width and depth.

(e) Solid benefits have resulted from the splendid long-range work of the foundations, which should be expanded.

6. Where our missions cannot voice criticism or where there is too much nationalism and prejudice already for objective aid to balance economical development, it may be that a constructive plan for a specific country might be presented via the U.N., and that constructive criticism from experts sponsored by the U.N. would be more acceptable.

The U.N. remains the greatest symbol of man's hope for peace and the most comprehensive organization working toward it. It has proved its ability to act in a number of situations from Korea to Suez. It is an independent forum for expressing the hopes for humanity and an effective institution for pursuing agreed ends. The United States must, therefore, make an effort together with its allies to develop and implement economic plans which meet the requirements of all partners. We must pool with our allies the technological and managerial skills that are necessary to provide other members of the U.N. with the know-how to meet this challenge.

7. To the maximum degree possible, both the types and the levels of our future economic activity abroad—both Government and private investments—should be adapted to the particular requirements of the recipient countries. We must establish a measure of harmony between the somewhat immature economic development programs of our friends and our own know-how and judgment. We must not proceed on the assumption of our own superiority, nor that our civilization is as good for the people of Asia. In addition to performance along material and scientific lines, we must also make a contribution to intellectual and spiritual leadership.

8. The cost of such a program may be more than we can carry alone. It seems to me that the time has come when some of our European allies should shoulder the financial burden with us and the better endowed countries of this hemisphere. As grants are replaced with self-liquidating loans, and these in turn by a flow of private investments, it may be hoped that clear-cut policies, better organization, and sound engineering judgment will lessen the cost of this vast challenge. There is need of more balance and more efficiency, as well as more capital in these areas.

9. Henry L. Stimson once said that if we can make freedom and prosperity real in the present world, communism is no threat and that in a very large degree the future of our civilization depends on how soon our Nation will fully understand the science and nature of its present machine.

Accomplishments of the Senate Committee on Interstate and Foreign Commerce

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. MAGNUSON. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a report on the accomplishments of the Senate Committee on Interstate and Foreign Commerce of which I am chairman.

There being no objection, the report was ordered to be printed in the RECORD as follows:

The Committee on Interstate and Foreign Commerce, of which I am chairman, had a busier year in the 1st session of the 86th Congress than we did in the 1st session of the 85th Congress. There was more legislation referred to us, more reported to you, more bills were passed by the Senate, and more of our bills signed by the President than in the session 2 years ago.

The Senate, through resolutions, instructed us this year to make a thorough study of the world trade situation and of the Nation's transportation system. These studies are underway and will be carried on during the recess of Congress. Interim reports will be ready when the second session convenes next January.

We also recommended, and the Senate approved (S. Res. 136), a major expansion of ocean research. We are lagging behind in this very important field. We need modern ships, laboratories, and more trained oceanographic scientists. Legislation to implement this recommendation has been introduced and there will be extensive hearings next year.

During the congressional session just ended your committee had referred to it a total of 241 bills and resolutions, compared to 199 in the 1st session of the 85th Congress. Of that number we reported to the Senate a total of 71 bills as compared with 54 2 years ago. The Senate passed 66 of these bills as compared with 52 in 1957.

At the end of the session this year 24 Senate bills were pending in House committees as compared to 16 2 years ago, and 13 Senate bills were reported by House committees as compared with 10 in 1957.

A total of 19 Senate bills were passed by the House, the same number as it passed in the 1st session of the 85th Congress.

The President signed 33 of our bills as compared with 30 2 years ago. During the session we acted upon 778 nominations of which 19 were to major posts in the Government while 2 years ago we acted upon 520.

During the year the full committee and our subcommittees held 34 executive meetings as compared with 30 2 years ago. The full committee devoted 49 days to hearings and the subcommittees held hearings on 64 days.

Four hundred and forty-five witnesses appeared before the various hearings.

Number of bills (Senate and House) and resolutions referred to committee	241
Number of bills reported by committee	71
Number of bills passed by Senate	66
Number of Senate bills pending in House committees	24
Number of Senate bills reported by House committees	13
Number of Senate bills passed House	19
Number of conference reports filed in House	4
Number of meetings of conference committees	8
Number of bills signed by President	33
Number of bills vetoed by President	1
Number of routine nominations referred to committee and acted upon	759
Number of major nominations referred to committee and acted upon	19
Number of executive meetings of full committee and subcommittees	34
Number of days of hearings conducted by full committee	49
Number of days of hearings conducted by subcommittees	64

Number of bills, nominations, and miscellaneous legislation on which hearings were held 117
Number of witness appearances before the committee 445

I want to express my deep appreciation for the friendship and hearty cooperation which all members of our committee have given me in expediting the work of the committee and for the long hours they have so willingly devoted to our work. It has been a pleasure to work with each of them and I especially wish to commend the new members who plunged into the stacks of work with the same enthusiasm that has been shown by the oldtimers in our group. I want them to know I deeply appreciate it.

Our committee staff worked long hours, cheerfully and with complete cooperation, and I speak for the full committee when I thank them for it.

Legislative proposals affecting practically every important phase of the Nation's maritime and fishing industry were among the 77 bills acted upon or given initial consideration by our Merchant Marine and Fisheries Subcommittee. Of these, 35 were reported by your committee and 34 received Senate approval. Twenty-five were sent to the President for signature. One measure was vetoed by the President.

With the shipping industry embarked on a vessel replacement program involving overall expenditures of $3 billion to $4 billion vessel financing was among the more urgent matters considered. Two measures of special significance enacted into law in this field were S. 1434, to authorize Federal ship mortgage insurance for vessels after construction and S. 2148, to permit issuance of public bonds to finance vessels while under construction as well as when actually in service. Both were designed to reduce the interest charges to the companies on their long-term financing. Another bill, S. 1671, to permit a flexible rate of interest instead of the statutory 3½ percent, where construction is financed by the Government, was held for further consideration.

Other spurs to vessel construction enacted were H.R. 6888 (S. 2473) to redefine the term "citizens of the United States" as it appears in the shipping and vessel documentation statutes in order to resolve conflict in interpretation by the Government agencies involved; and S. 2013, to permit additional time for commitment of funds for construction of vessels for the sadly depleted coastwise trades. H.R. 6888 permits a "citizen" corporation to have a minority representation among its managing directors, and makes possible free participation in construction and financing of vessels by certain large corporations formerly unable to participate freely.

The urgent need for increased scientific knowledge and data concerning the Nation's shorelines and offshore waters, in the interest of national security, was recognized by committee introduction and favorable action on two bills, S. 2483 and S. 2482, to provide greater flexibility in the performance of the functions of the Coast and Geodetic Survey.

The shipping companies using the Panama Canal were aided by enactment of H.R. 4328, which relieves the Panama Canal Company of annual interest payments approximating $250,000 on an emergency fund never used, thus reducing the base amount of the Government's canal investment on which toll payments are based.

Other major matters given consideration by the subcommittee, but held over for further study and action in 1960 were:

Pilotage on the Great Lakes.

Nuclear icebreaker for the Coast Guard, as well as development of nuclear propulsion for commercial vessels.

Amendment of the Merchant Marine Act with regard to foreign holdings of operators receiving or applying for operating differential subsidy.

Licensing of ocean freight forwarders.

Authorizing increased construction subsidies.

Exchange of older vessels for more modern vessels from the reserve fleet.

Status of faculty and staff of the U.S. Merchant Marine Academy.

The subcommittee also gave thorough attention to the meeting at the State Department in June of foreign government representatives complaining of this Government's maritime policies in aid of shipping. Prior to the meeting, a committee member and staff representative visited England for talks on the matter, and the committee staff participated actively in meetings with State Department people to prepare the U.S. position. It is felt that the meeting with the foreign representatives was helpful toward resolving at least some of the foreign misunderstanding of our shipping policies.

The President vetoed H.R. 8728 (S. 2598). The Federal Boating Act of 1958 set up a numbering system for boats of more than 10 horsepower, with authorization to the States to have their own numbering system—subject to Federal approval for the sake of uniformity. Under the act, such State systems had to be in effect April 1, 1960. Your committee was informed some States could not meet that deadline, so the legislation that was vetoed was introduced and passed. It would have extended the date to April 1, 1961.

This subcommittee, with respect to its jurisdiction over fisheries and wildlife, held hearings in Alaska, Seattle, Wash., and in the District of Columbia. During the recess, additional hearings are scheduled in Alaska, Oregon, and Idaho.

S. 1391, to amend and clarify the Black Bass Act, and S. 1575, to continue research on the effects on wildlife of the use of insecticides, were reported, passed by the Congress and signed by the President.

S. 1262, to inaugurate a research program to increase game and sport fishing in reservoirs and dams; S. 1576, to establish a salt water research laboratory; S. 2053, to authorize the Fish and Wildlife Service to accept a fish hatchery from the State of South Carolina; S. 2578 (H.R. 5421) to provide $5 million per year for 3 years to assist in modernizing our fishing fleet; and S. 2632, to assist Delaware and New Jersey to develop a strain of disease-resistant oysters, were all reported to, and passed by, the Senate.

S. 2086, to establish a National Wildlife Disease Laboratory, was reported to the Senate, but no action was taken before the end of the session.

Our Communications Subcommittee, chaired by Senator JOHN O. PASTORE, held extensive hearings on more than 20 bills and 3 resolutions, involving various phases of the communicaitons industry, ranging from a bill that would permit the merger of international telegraph and marine carriers to expediting and accelerating the development of educational television.

Two of the bills were enacted into law. First, S. 2424, amends the Communications Act so as to exempt from section 315 of the Communications Act, the so-called equal opportunity provision involving legally qualified candidates for public office, bona fide newscasts, news interviews, news documentaries and on-the-spot coverage of news; the second was Senate Joint Resolution 47, that authorized certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee, held in the United States in April 1959.

S. 1735, to repeal the section of the Communications Act which permits the Comsioners to receive an honorarium for making speeches or writing materials for publication; S. 1736, to eliminate the requirement of an oath or affirmation on certain documents filed with the FCC; S. 1737, to authorize the imposition of fines for certain violations of the rules and regulations of the FCC in the common carrier safety and special service fields; S. 1738, to amend section 5(c) of the Communications Act so as to redefine the duties and functions of the Commission's review staff; S. 1740, to amend section 202(b) of the Communications Act so as to give the FCC legislative authority to regulate charges and services of common carriers for the use of microwave and other point-to-point circuits, along with the use of wires in chain broadcasting or incidental to radio communication of any kind (the FCC's present authority in this respect is now limited to the use of wires under section 202(b)); and S. 1898, to amend section 309(c), the so-called protest provision of the Communications Act, which permits a party to protest a grant that is made without a hearing (the proposed amendment would provide a pregrant hearing procedure in order to eliminate the present hearing procedures that result only after a grant is made without a hearing), were all reported to, and passed by the Senate.

S. 1734 would amend the Communications Act so as to prohibit any person, as well as the staff of the General Counsel, Office of the Chief Engineer, and those who participate in a case of adjudication designated for hearing by the Commission, from directly or indirectly making any presentation respecting such case to the Commission, or any member thereof, any hearing examiner, any assistant to a Commissioner or any member of the review staff, unless all parties to the case were duly notified and given a chance to participate. This bill was reported to the Senate, but remained on the calendar at the end of the session.

Extensive hearings were held by the subcommittee on the community antenna television and booster problem, which resulted in two bills. S. 1886, which was limited to the so-called booster problem, passed the Senate and is now awaiting action in the House. S. 2653, a bill which would place the community antenna television systems under the jurisdiction of the FCC is presently pending on the Senate calendar. These bills are the final result of the hearings held by the committee last session with regard to the problem of bringing television to small communities.

Your committee held hearings on S. 12, cosponsored by Senators MAGNUSON and SCHOEPPEL, which would expedite the utilization of television in our public schools and colleges. This bill was unanimously reported and passed by the Senate early in the session. The House Interstate and Foreign Commerce Committee after holding hearings on the bill voted to conduct a field study during the recess period.

Your committee has received two interim reports from the FCC with regard to its progress in the so-called television allocations problem. We have been following this subject for some time, hoping that the FCC would submit some final recommendations. For one reason or another, such as awaiting the report of the Technical Allocations Study Organization, created by the Commission, and its negotiations with the Military Establishment, final recommendations have not been made. The committee hopes to hold further open hearings on this subject with the purpose of resolving the difficult UHF-VHF allocations as quickly as possible.

Extensive hearings were held on proposed legislation which would permit the merger of international telegraph and marine carriers. Many suggestions for amendments were made during these hearings and a

second committee print has been prepared incorporating some of these suggestions. This print has been submitted to the Government agencies and interested parties for comments. The committee proposes to act on this legislation one way or another as soon after the second session convenes as is possible.

Last year our Aviation Subcommittee headed by Senator A. S. MIKE MONRONEY, completely rewrote the laws governing civil aviation. The result was a new, unified Federal Aviation Agency headed by a civilian administrator with complete control over our airspace and air traffic. The act was approved August 23, 1958, with most of its provisions becoming effective 60 days later.

Many amendments to this act were suggested during the 1st session of the 86th Congress, but your committee took the position that a longer look at this new law should be taken before changes were made. We have done just that, and plan hearings and resulting action during the second session.

S. 1, a bill to extend the Federal Airport Act, as passed by the Senate, would have increased the amount of matching funds available to the States for airport construction. The House decreased the amount of authorized funds, and with a deadlocked conference, the old act was merely extended 2 years. Your committee is convinced of the inadequacy of existing law, but is now of the opinion that no real improvement can be made until the next Congress.

S. 1368, a bill to facilitate the financing of new jet and turboprop aircraft was reported, and became law. Under existing law, mortgages on separate propellers could not be registered. Today a modern propeller can cost as much as $25,000. With an estimated expenditure of $4 billion for fleet modernization in the next 3 years, this additional protection for holders of security interests will aid in the financing of the new air fleet. Further, this bill exempted from liability arising out of the operations of aircraft, those persons whose sole interest in the aircraft or its parts was a mortgage or security interest.

Legislation authorizing interstate compacts for the development and operation of airports, use of certified mail by the Federal Aviation Agency, and the transfer of certain historic buildings on the Chantilly Airport site to the Fairfax County Park Authority of Virginia was recommended, and became law. The Congress also enacted legislation to make eligible our two new States, Alaska and Hawaii, to receive allocations from the discretionary fund provided for in the Federal Airport Act.

Various other matters were considered in open committee hearings, and the Subcommittee on Aviation is continuing its careful appraisal of the impact of Military Air Transport Service on our commercial carriers.

During the 85th Congress our Surface Transportation Subcommittee, under the leadership of Senator GEORGE A. SMATHERS, recommended, and the Congress enacted, the first major amendments to the Interstate Commerce Act since 1940 (Transportation Act of 1958). The effectiveness of the new act has been under continued study, with hearings at which representatives of both the carriers and the agencies testified. Hearings were also held on many proposed amendments, the most important of which follow:

BILLS INVOLVING COMMON OWNERSHIP OF VARIOUS FORMS OF TRANSPORTATION

S. 452 would forbid common ownership between various forms of transportation, and would make it unlawful for groups of employees in one segment of the transportation industry to participate with, or support activities of, groups of employees in separate segment of transportation industry to interrupt normal operation of separate segment.

Diametrically opposed to S. 452, as far as common ownership of transportation agencies is concerned, are the following:

S. 1358 would allow ownership of motor carriers under part II of the Interstate Commerce Act by other forms of transportation;

S. 1354 would amend the Federal Aviation Act to remove restrictions against carriers other than air carriers engaging in the business of an air carrier;

S. 1355 would allow ownership of water carriers under part III of the Interstate Commerce Act by other forms of transportation; and

S. 2189 would allow freight forwarders to acquire control of common carriers subject to parts I, II, and III of the Interstate Commerce Act.

BILLS INVOLVING AMENDMENTS OF THE TRAIN DISCONTINUANCE PROVISIONS CONTAINED IN SECTION 13a OF THE INTERSTATE COMMERCE ACT

S. 1331, under the present law where States have jurisdiction, trains and ferries operating across State lines may be discontinued by filing a 30-day notice by a railroad, unless the Interstate Commerce Commission orders an investigation, in which case ICC may direct continuance of trains involved for as much as 4 months. After completion of hearing, in which burden of proof is on those wanting trains continued, and upon making necessary findings, the Commission may order the trains continued for a period of up to 1 year. (Trains and ferries operating intrastate are within jurisdiction of the State regulatory body but the railroad may file a petition with the Interstate Commerce Commission if discontinuance is refused by a State body or is not acted upon within 120 days.)

S. 1331 would, on trains or ferries crossing State lines:

1. Require obtaining certificate of public convenience and necessity from either a State body or ICC, thus eliminating jurisdictional "no man's land" caused by giving ICC jurisdiction over passenger trains only where States exercise it.

2. Make hearing mandatory; hearing now discretionary with ICC.

3. Shift burden of proof to carrier; now on those wishing train continued.

4. Give ICC authority to continue train for unlimited time while investigation is conducted, to replace present limit of 4 months.

5. Eliminate 1-year limit on ICC orders of continuance after investigation completed.

6. Allow ICC to impose conditions in connection with discontinuance of service which includes conditions to protect employment of railroad workers whose jobs are adversely affected by discontinuance of trains.

S. 1450, a bill to modify section 13a(1) of the Interstate Commerce Act to require institution of an investigation by ICC of each notice of proposed discontinuance of train or ferry and would eliminate the 4-month limitation on the period the train can be ordered continued while the investigation is being conducted.

BILLS THAT WOULD GIVE THE INTERSTATE COMMERCE COMMISSION ADDITIONAL AUTHORITY TO ESTABLISH COMPENSATION TO BE PAID FOR THE USE OF FREIGHT CARS

S. 1789, S. 1811, and S. 1812. These bills would give the Interstate Commerce Commission additional authority to take into account elements other than the bare costs of ownership of a freight car in establishing per diem rates for freight car use. The purpose is to overcome the decision of *Palmer v. U.S.* (75 F. Supp. 63 (1947)) in which a three judge Federal court held use of word "compensation" in section 1(14)(a) of Interstate Commerce Act precludes the Interstate Commerce Commission from establishing per diem charges in excess of the bare cost of car ownership to owning railroads. Senator SCHOEPPEL held field hearings on this legislation, and S. 1789 was reported favorably by the committee. It is now pending on the Senate Calendar.

BILLS INVOLVING ALASKA TRANSPORTATION

S. 1507, to make Interstate Commerce Act applicable to for hire water carriers operating between ports of Alaska and ports of other States.

S. 2451, to establish a joint board (composed of members of the Interstate Commerce Commission, Federal Maritime Board, and Civil Aeronautics Board) and to require mandatory through routes and joint rates for carriers serving Alaska, Hawaii, and other States.

S. 2452, is the same as S. 2451 except it would make permissive rather than mandatory the filing of through rates and joint rates.

S. 1508, to provide for Interstate Commerce Commission regulation of the Alaska Railroad.

S. 1509, to provide "grandfather" rights for motor carriers and freight forwarders operating within Alaska and between Alaska and other States and for water carriers operating within Alaska. This bill was passed by the Senate and is now pending in the House.

S. 2514, to make the Alaska Railroad a Government corporation.

BILLS INVOLVING TRANSPORTATION SAFETY

S. 1806, to amend the Transportation of Explosives Act, would (1) bring radioactive materials and etiologic agents (live viruses such as polio vaccine) under the act; (2) bring contract and private carriers under the act—make them subject to maximum penalty of $10,000 and 10 years imprisonment rather than the maximum penalty of $500 provided under section 222(a) of the Interstate Commerce Act; (3) tighten up packing requirements for shippers submitting material covered by the act to carriers for transportation; (4) redefine "knowingly" in the act to mean violations by anyone "knowing" that the ICC has outstanding a set of regulations for the transportation of explosives. (The Federal courts have held that "knowingly" at present means "knowingly" violating the Commission's safety regulations.)

S. 1806 was approved by the Senate and is pending in the House.

S. 1964, to amend the Accident Reports Act to require that all injuries on railroads shall be reported; this standard would replace the present ICC standard that a reportable accident is one that causes workers to be absent from their jobs for 72 hours; would require that accidents be reported in all departments of railroads rather than injuries limited to actual operation of the trains as presently required by ICC regulation.

S. 1425, to give the ICC authority over rules and regulations for operation of railroad track motor cars.

In addition, hearings were held on S. 2417, a bill that would repeal the future application of the second proviso of section 206(a)(1) of the Interstate Commerce Act that now allows obtaining the right to participate in interstate and foreign commerce by an intrastate carrier upon registration of a State certificate with ICC; present rights of carriers now operating would be protected; but in the future intrastate carriers wishing to participate in interstate and foreign commerce would be required to obtain certificates of public convenience and necessity from the ICC.

For some time I have been deeply concerned over our lag in studies of the oceans. Such studies, I believe, are vital to our defense, to the operations of our fisheries, to our commerce and navigation, and to our knowledge of factors affecting our weather and climate. Accordingly, I introduced Sen-

ate Resolution 136, which recommends a major expansion of ocean research and surveys; construction of scientific ships and laboratories to replace old and obsolete existing vessels, and Federal encouragement in the training of oceanographic scientists. This resolution was cosponsored by all members of your committee and by Senator JACKSON, and was adopted without dissent by the Senate on July 15, 1959.

To carry out the recommendations of Senate Resolution 136, on September 11, 1959, I introduced S. 2692, which would establish a comprehensive 10-year program of ocean research and surveys, aid the national defense, and authorize the construction of research and survey ships and facilities. Your committee has held informal hearings, at which five members of the Committee on Oceanography of the National Academy of Sciences—National Resource Council testified. The bill was cosponsored by Senators SCHOEPPEL, BARTLETT, YARBOROUGH, CASE, ENGLE, SCOTT, MCGEE, and BUTLER, all members of the committee, and by Senators HART, SMITH, and CLARK. In addition to the purposes I have mentioned, the bill proposes systematic studies of effects of radioactive materials in marine environments and would authorize appropriations. The appropriations to be authorized by the bill, which is entitled "Marine Sciences and Research Act of 1959," would be in addition to all other appropriations provided for the various departments, agencies, bureaus, and offices engaged in similar or identical functions.

This is very important legislation, and we hope to bring it to the floor during the second session of this Congress.

Your committee held hearings on six bills to amend the Federal Power Act, of which S. 2263 and S. 2264 were reported to and passed by the Senate.

S. 2263 would exempt hydroelectric projects under 2,000 horsepower from certain licensing provisions of the Federal Power Act. The bill actually raises this limitation from 100 horsepower. S. 2264 would prohibit the abandonment or curtailment of interstate electric power sale or transmission without approval of the Federal Power Commission. This bill would bring the Federal Power Act in line with the Natural Gas Act.

Of the other bills, the most important are S. 1762 and S. 2262. This legislation is designed to enable the comprehensive use of an entire river basin to the advantage of all hydroelectric power users and producers. It is claimed that in the Columbia River Basin alone this type of operation would yield over 500,000 kilowatts of additional firm capacity. Senator ENGLE conducted the hearings, and the committee has asked for additional facts and statistics that may require additional hearings.

Senator HARTKE conducted hearings for your committee on S. 1283, a bill to regulate the interstate distribution and sale of packages of hazardous substances intended or suitable for household use. The evidence produced at the hearing was, to say the least, shocking. We were told that yearly deaths from the substances this bill would regulate amount to approximately 5,000 more than all of the so-called dread diseases such as scarlet fever, meningitis, polio, and diphtheria combined.

I have long been interested in this problem, and am happy to report that, as a result of our hearings, industry and government are now in substantial agreement on this legislation. I anticipate the committee will report a clean bill next session.

We also held hearings on S. 1787, a bill to protect the consumer by requiring the labeling of any decorative hardwood product. This bill, with respect to certain hardwood products, is along the lines of the Wool Products Labeling Act, the Fur Products Labeling Act, and the Textile Labeling Act. More work is necessary on this legislation before further action can be taken.

In keeping with its general responsibility for matters pertaining to foreign as well as domestic commerce, your committee initiated a comprehensive study of the foreign trade of the United States. At the close of the session, a staff of specialists had been assembled, and the study was well underway. An interim report is expected to be ready for presentation to the Congress shortly after the opening of the next session.

The aim of the study is to identify and examine the trends and forces affecting our commercial relations with other countries of the world and to evaluate the significance of current changes in terms of the long-range interests of the United States. In its first phase the study will concentrate on U.S. exports with an exploration of the competitive position of U.S. products in world markets. Subsequently, it will turn to the question of imports in relation both to the domestic economy and to the possible expansion of export markets; the effect of common markets and free trade zones of American foreign commerce; the significance of U.S. investment in foreign production; implications of the Sino-Soviet trade expansion program and related questions.

In light of the fact that foreign trade presently accounts for some 8 percent of the gross national product of the United States and that its continued expansion is regarded as essential to the continuing prosperity of our domestic economy, the committee attaches more than ordinary importance to this study. An intensive look at the total picture of changing world trade patterns since the war may reveal opportunities to strengthen the American position without detriment to the position of our world trade partners whose economic welfare in the long run is vital to our own.

The study of transportation authorized by Senate Resolution 29 and expanded by Senate Resolution 151 has been started, and an initial study group has been assembled. It has been recognized for several years that an overall look at transportation in the light of current and projected conditions was imperative. This was again emphasized during the hearings which preceded the Transportation Act of 1958. Transportation—second only to agriculture in the Nation's industry—is too vital to our economy and our defense to permit its ability to serve the Nation to deteriorate.

In its first phase, the study will explore and evaluate what has been done in this field. Information is being accumulated from all available sources including industry and the various Government departments. Subsequently, the study will explore the actual implementation of the national transportation policy vis-a-vis the intent contained therein and the inconsistencies that may exist between the policy and specific examples of legislation and/or regulation.

We must keep before us at all times the thought that each mode of transportation should develop according to its inherent advantages—present or potential. It must be our aim that regulation and Federal aid be administered equitably toward the best good of our entire Nation. We must maintain a flexibility that will facilitate adjustment to the constantly changing economic and technological situation.

Toward these objectives the following study concept was developed. It will be expanded or restricted as the study progresses.

I. Background analysis: The examination of basic considerations in such areas as public interest, social investment, competition, monopoly, and the question of more or less public participation in regulation and aid.

II. Studies in areas and methods of regulation: Regulation by independent commissions, evaluation of administrative policy, possible areas of reduced, extended, or clarified control.

III. Studies in the area of public aid: Public investment and coordination of aid programs.

IV. Studies in equity and transportation policy: Various proposals dealing with allocation and recoupment of costs of public facilities used by commercial interests.

V. Special problems: Examination of specific areas such as rail passenger deficit, commuter and rural service, defense requirements.

Studies are also in process at the Department of Commerce, and they will be examined prior to our proceeding so as to avoid areas of duplication. The Secretary of Commerce has promised complete cooperation.

Your committee anticipates a busy session in 1960.

Statement by Senator Humphrey on S. 950, the So-Called Jukebox Bill

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on S. 950, the so-called jukebox bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I have recently been in receipt of communications from residents of my State expressing their views on S. 950, the so-called jukebox bill, introduced by the able senior Senator from Wyoming [Mr. O'MAHONEY], and a group of his colleagues, including myself. Perhaps it may be of assistance to the Members of this body if I comment on the status of this proposed legislation.

Last year, a similar bill, after approval by the appropriate Federal agencies including the Department of State and the Register of Copyrights, was favorably reported by the Senate Judiciary Committee. The committee report—No. 2414, 85th Congress, 2d session—fully set forth the background of this measure, together with the arguments of both proponents and opponents.

In the past few weeks, under the leadership of the chairman of the House Judiciary Committee [Mr. CELLER], sponsor of a similar measure in the House, meetings have been held between the proponents and opponents of the bill—that is, between representatives of the owners of the musical property and representatives of the jukebox operators and manufacturers. At these meetings, attempts have been made to work out not only the matter of suitable compensation to composers and other copyright owners for the use of their musical property in jukeboxes, but also technical details, including procedures for surveying use of music used in jukeboxes, collecting royalty fees, and the like.

The able chairman of the Senate Judiciary Subcommittee on Copyrights [Mr. O'MAHONEY] recently expressed his hope that in the improved climate now existing, "means may be found whereby the composers who give the Nation its songs may receive the just rewards of their genius and efforts."

I join in the Senator's hopeful outlook, so characteristic of his courage and opti-

mism. The meetings which have been held and which are to continue may soon result in a meeting of minds between the users of music used in jukeboxes and the owners of that music.

The principal legal authorities of the country, as well as the Federal agencies concerned, have made it clear that as a matter of simple justice and equity, the composers are entitled to a reasonable fee for the commercial use of their music in jukeboxes—which for 50 years have been exempt from payment under the antiquated copyright law of 1909. After the careful study made last session by the Senate Judiciary Committee, and the hearings held both in the Senate and the House, the question is no longer whether jukeboxes, alone among all commercial users in the Nation, should continue uniquely to benefit from an exemption which in effect accords them a special privilege. Clearly, jukeboxes should be treated exactly like all other commercial users.

The question, as I say, resolves itself not down to "whether," but merely down to "how" and "how much." As I have said, it is my hope that discussions between the interested parties will shortly clarify the matter of rates and procedures. At all events, I firmly believe that the Senate should remove the jukebox exemption, especially as today's large and modern jukebox industry does not seem to me to merit in any way the special privilege accorded it almost accidentally by a law enacted 50 years ago, intended to apply to conditions of that era, and not to electronic mass users of musical property today.

Significant Small-Business Legislation Passed by the 86th Congress, 1st Session

---

EXTENSION OF REMARKS
OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks by me concerning small-business legislation passed by the 86th Congress, 1st session.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Only a few years ago Mark Twain's well-known comment about the weather was often paraphrased to express the thought that "everyone talks about small business, but no one ever does anything about it."

That observation is now seldom heard because it is no longer in accord with fact. In recent years, the Congress has demonstrated its awareness of the peculiar problems of small business and has acted through noteworthy legislation to assist small firms.

At the conclusion of the 85th Congress, it was my pleasure to insert in the RECORD a summary of laws enacted by that Congress, the primary purpose of which was to help our nationwide community of over 4 million small-business firms remain as competitive factors within our free enterprise system.

The most important enactments of the 85th Congress in behalf of small business, it will be recalled, were passage of the Small Business Tax Adjustment Act, the Small Business Investment Act of 1958, and various statutes which, taken together, were calculated to increase the share of small concerns in Government purchases. Had none of these laws been passed, however, the action of the 85th Congress in making the Small Business Administration a permanent agency of the Government would, of itself, have marked a significant milestone in the growing acknowledgment of small business as a vital element of our national economy.

This good work was carried forward during the 1st session of the 86th Congress.

For example, the Congress responded with sympathetic understanding and quick action to complaints from many small businessmen that two U.S. Supreme Court decisions handed down in February would increase their liability to multistate taxation of that portion of their business carried on in interstate commerce. What alarmed thousands upon thousands of small businessmen, and especially those who merely send traveling salesmen into neighboring States or who conduct mail order businesses across State lines, was the not-ungrounded apprehension that the 36 States and some 8 cities already taxing interstate commerce would intensify their efforts to collect revenue from out-of-State concerns. Added to this was the fear, subsequently justified, that additional States would be encouraged to tax the income of foreign companies.

In a dissenting opinion, Justice Frankfurter summed up the feelings of the business community when he stated: "It will not, I believe, be gainsaid that there are thousands of relatively small or moderate size corporations doing exclusively interstate business spread over several States. To subject these corporations to a separate income tax in each of these States means that they will have to keep books, make returns, store records, and engage local counsel, all to meet the divers and variegated tax laws of 49 States, with their different times for filing returns, different tax structure, different modes of determining 'net income' and different, often conflicting formulas of apportionment."

Justice Frankfurter went on to say that "this will involve large increases in bookkeeping, accounting, and legal paraphernalia to meet these new demands. The cost of such a farflung scheme for complying with the taxing requirements of the different States may well exceed the burden of the taxes themselves, especially in the case of small companies doing a small volume of business in several States."

On April 8 the Senate Small Business Committee held public hearings on this problem. A second hearing was held on May 1, in Boston. In all, the opinions of more than 80 businessmen, trade association representatives, accountants, and tax experts were received by the committee.

On June 25, 15 members of the committee cosponsored a joint resolution I introduced on June 25 designed to bring about more uniformity in the application of State statutes dealing with the taxation of out-of-State corporations.

In its essential particulars, Senate Joint Resolution 113 was similar to Public Law 86-272, which was approved on September 14, 1959.

Public Law 86-272 limits the power of States to tax certain income derived from interstate commerce by granting tax immunity where the only business activity in a State by an out-of-State company is solicitation of sales. To secure such immunity, the orders resulting from sales solicitation must be sent out of the taxing jurisdiction for approval or rejection and shipment of the goods so ordered must be made from outside of the taxing State. This covers traveling salesmen, who merely solicit orders in interstate commerce, mail-order houses, and also independent contractors such as brokers, who may solicit orders for several out-of-State firms.

By this last provision, when an independent contractor maintains an office within a State, an out-of-State concern selling through that contractor is not subject to an income tax at the point of solicitation.

Title II of Public Law 86-272 also calls for a broad study of taxation of interstate commerce by the Senate Finance Committee and the House Judiciary Committee. The committees will report to Congress with proposals for such additional legislation as may be indicated by July 1, 1962.

The passage of this particular legislation illustrates how sensitive and responsive the Congress has become to the needs of our Nation's small businessmen. It does not, as we know, stand alone as an example of how the 1st session of the 86th Congress demonstrated its alert interest in the problems of small business.

In Public Law 86-376, Congress took steps to make its 1958 small business tax concessions more useful. Section 2 of this act, an amendment to the Internal Revenue Code, provides, with specific application to community property States, that in determining the number of shareholders of a small business, a husband and wife owning stock jointly shall be counted as one shareholder. The reason for this amendment was that under the Small Business Tax Adjustment Act of 1958, a corporation with 10 or fewer stockholders may elect to be taxed as a partnership. Formerly, many owners of small firms in community property States were excluded from taking advantage of this option.

Public Law 86-376 also contains an amendment to the Small Business Investment Act which exempts small business investment companies from the personal holding company surtax. This will make it possible for investment companies providing long-term and equity capital for small firms to be formed by family interests and other small groups of investors.

A significant reform of a long time inequity in the field of taxation was another accomplishment of the 1st session of the 86th Congress. Under present excise tax laws, independent wholesalers, distributors, and jobbers have been put at a serious financial disadvantage compared with their larger integrated competitors. This has arisen, since many excise tax payments become due when the first sale is made; therefore, independents have become liable for excises when they purchase their supplies from the refiner or manufacturer, while the integrated producer often pays no taxes until he sells his product to the ultimate consumer. Under a provision of Public Law 86-342, the Federal-Aid Highway Act of 1959, jobbers and other independent distributors of gasoline are given the same treatment as refiners and are not liable for taxation on their stocks until sold. This not only frees a large monetary investment previously tied up in taxes, but it also prevents the distributors from being taxed on gasoline spilled or lost through evaporation. In summary, this new law brings a much greater degree of equity between the independent wholesaler and the major oil company which is both his supplier and his competitor. During the coming year, I shall press for legislation bringing this same degree of rationality and fairness to other segments of our economy, such as independent tire dealers, which are also burdened by these Federal excise taxes.

In the antitrust field, headway was made with the passage of a bill I introduced, S. 726, which became Public Law 86-144. This law was designed to end the cumbersome and time-consuming procedures which had been necessary to achieve enforcement of cease-and-desist orders issued by the Federal Trade Commission and other regulatory agencies under section 11 of the Clayton Act. In brief, this law provides that such orders

become effective within 60 days, unless the orders are appealed to the courts.

In addition, amendments to the Small Business Act of 1958 provided authorization for an additional $75 million to the Small Business Administration's lending authority and make it possible for that agency's appropriations to be used, beyond 1960, for management aid programs.

Taken all in all, the session of Congress just ended continued to build upon the groundwork of small business legislation which was laid by the 85th Congress. This is not to say, however, that every needed legislative aim was achieved. Much remains to be done to lessen the impact of taxes on small firms and to sharpen the tools of antitrust enforcement.

I feel confident that the second session of the 86th Congress will address itself with determination to carry forward the good work so well begun.

Appropriate legislative committees and the Small Business Committees of the Senate and House have accomplished substantial preliminary work in the form of hearings and reports on measures calculated to improve the competitive position of small firms. Many such bills have already started on their legislative journey and will carry over into the second session. For that reason, I am hopeful that final congressional action on these bills may be taken early in 1960.

Special Citation to the United States Lines

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GARMATZ. Mr. Speaker, the maintenance of highest standards of sanitation is an attainment of greatest importance to the general public, especially to that segment of our people who utilize seagoing transportation. For this reason, I bring to the attention of the Congress the exceptional record of the United States Lines, which has just resulted in the award of a special citation of the U.S. Department of Health, Education, and Welfare.

This citation has been presented for the third year following inspections showing an earned rating of 95 or better upon official Public Health Service inspections of each of the 58 vessels of this company.

Gen. John M. Franklin is president of United States Lines, and his creditable record of service encompasses notable performance not only in overall direction of this company's operations but also in important assignments accepted at the request of the President and Cabinet officers. He is acknowledged as one of the foremost executives of the maritime industry of the world.

Remarkable is the achievement earning this year's special attainment because it followed the most careful inspections of 166 separate items of sanitary construction and maintenance. Previous citations to this company were awarded in January 1957 and 1958.

The successful operations of United States Lines ships involved cover calls at ports in Europe, the Far East, and Australia, and at all east coast and gulf ports in the United States.

Statue of Liberty Feted at Birthday Celebration

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GALLAGHER. Mr. Speaker, I would like to commend my good friend, Conrad Vuocolo, on the excellent job he is doing in his capacity as director of the tenant relations program of the Jersey City, N.J., Housing Authority, as well as to call attention to a special activity he conducted.

Part of the authority's tenant relations program is to provide summer activities of worthwhile interests for the youngsters housed in the project. These activities are designed to inculcate the principles of American democracy. Accordingly, a trip to the Statue of Liberty was arranged for August 5, 1959, the 75th anniversary of the laying of the pedestal for the statue. The statue was actually completed in Paris on July 4, 1884, and the pedestal was laid here in America on August 5 of that year.

In order to provide an incentive, the authority sponsored a name-the-States-and-their-capitals contest. When the children were being taken to the statue, they insisted on bringing the lady a birthday present and chipped in with their pennies to purchase a 5-carat "diamond" ring at Woolworth's. This emulated contributions of French children 60 years ago who chipped in and helped pay for the statue.

Following is an account of the incident as related in the Jersey Journal of Jersey City, N.J., of August 6. 1959:

MISS LIBERTY NOT FORGOTTEN BY JERSEY CITY KIDS

Ninety-six youngsters from Jersey City's nine housing projects threw a birthday party yesterday for a 75-year-old lady, whose birthday everyone else forgot.

They presented the lady, the Statue of Liberty, with a 5-carat "diamond" ring, paid for with pennies they had contributed.

The diamond was the only thing artificial about the ceremonies conducted at the national monument on Liberty Island.

John Cupo, 9, of 332 Duncan Avenue, presented the ring to Newell H. Foster, superintendent, and Thomas M. Pitkin, supervising park historian.

Cupo represented the 96 children, chosen from the projects' 10,000 kids on a name-the-States-and-their-capitals contest.

Their heads bristling with State capitals, and all dressed in their Sunday best, the children heard Park Superintendent Foster say he was "most elated that the children * * * saw fit to emulate the contributions of French children 80 years ago who chipped in and helped pay for the statue."

Pitkin congratulated Conrad J. Vuocolo, director of tenant relations for the housing agency, and indicated that the Jersey City group was the only group to honor the lady on her 75th birthday.

The Jersey City Housing Authority is to be congratulated on its active sponsorship and participation in the many worthwhile projects for its tenants.

The Veterans of Foreign Wars Endorse the Cold War GI Bill—Comdr. Louis G. Feldmann and All the Members Are Due Congratulations for This Service to Country

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. YARBOROUGH. Mr. President, the Veterans of Foreign Wars is the oldest of our great national veterans' organizations. Composed of those who have carried our country's wars to the enemy shores, it is nevertheless gratifying to see that their aims and ideals are not solely to glorify their past heroism, but to work for a better future for all. At their recent 1959 national convention in Los Angeles, the Veterans of Foreign Wars passed a resolution supporting S. 1138, the bill that would allow cold war veterans many of the readjustment benefits received by the veterans of World War II and Korea. The Veterans of Foreign Wars has wisely recognized that the young men presently entering service during our continuation of the compulsory draft laws are in great need of assistance for continuing their education and buying homes upon their return from service. This helping them to help themselves is the wisest and soundest form of veterans' program yet proposed.

The Veterans of Foreign Wars is due congratulations for their recognition and endorsement; it is the type of recognition of the Nation's No. 1 domestic problem—adequate education—that is winning for the Veterans of Foreign Wars an increasing awareness of its great role in building a stronger America. I am proud of my comrades in the Veterans of Foreign Wars; I am proud of my membership.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution to which I have referred.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 242

Resolution to support S. 1138, to provide readjustment assistance to veterans who served in the Armed Forces between January 31, 1955 and July 1, 1963

Whereas the needs of national defense and of the cold war have required the continued existence of the compulsory military service law; and

Whereas young men and women entering the Armed Forces after January 31, 1955, are not under existing law entitled to any readjustment assistance at the end of their tours of military service; and

Whereas the U.S. Senate (86th Cong., 1st sess.) passed the bill S. 1138 to provide a

program of readjustment assistance for persons entering the Armed Forces after January 31, 1955, which bill is now pending before the Committee on Veterans' Affairs in the House of Representatives; and

Whereas the bill S. 1138 provides educational assistance, vocational rehabilitation training for veterans with service connected disabilities, and home and farm loan assistance for persons entering the Armed Forces after January 31, 1955; and

Whereas the bill S. 1138 makes appropriate distinctions between wartime service and today's service by providing that (1) more than 180 days must be served on active duty in order to qualify for assistance under the bill, in contrast to the 90-day service period provided in the Korean GI bill; (2) a veteran with a service connected disability of less than 30 percent must clearly show that such disability has caused a "pronounced employment handicap" in order to qualify for vocational rehabilitation training; (3) a loan guarantee fee of one-half of 1 percent of the loan amount will be charged on home and farm loan transactions, and placed in a special fund to cover losses that might arise on loans: Now, therefore, be it

Resolved by the 60th National Convention of the Veterans of Foreign Wars of the United States, That we wholeheartedly endorse and strongly urge the early enactment of S. 1138 by the Congress of the United States; and be it further

Resolved, That our national legislative service be instructed and empowered vigorously to support the bill S. 1138, and to take such action as may be necessary to secure its early passage by the Congress of the United States, and have its provisions made a part of our public laws; and be it further.

Resolved, That our national legislative service be given discretion to oppose the loan feature of the educational program of S. 1138, if after due consideration and staff study it determines that adherence to the principles of Public Law 550 would be in the best interest of veterans and of the Nation.

Report on 1st Session, 86th Congress

EXTENSION OF REMARKS
OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MACHROWICZ. Mr. Speaker, as the 1st session of the 86th Congress comes to an end, I would like to review, for the benefit of my constituents, some of its accomplishments.

It has been a long and hard-working session. It has been a session which encountered the problems that are bound to arise when a government is divided with one party in control of the executive department and the other party in control of Congress.

But the length and the work and the difficulties are only incidental to the really important fact so far as the American people are concerned. The basic reality is that, though in some instances Congress has not stood sufficiently firm in meeting the Presidential veto or threat of veto of good and needed legislation, particularly in the housing, labor, area redevelopment, and social security fields, nevertheless this has been, in my opinion, a productive session in terms of national needs.

LABOR-MANAGEMENT REFORM LEGISLATION

The most controversial and heated piece of legislation to reach the floor of the House in years was the labor-management reform bill. Pressure was brought to bear upon the whole Congress, and was accentuated through mass media by the President, the Senate Rackets Committee and prolabor and antilabor forces. As a result, Congress was beseiged by carloads of mail and the Capitol was crowded with hundreds of lobbyists and pressure groups. Labor-management reform was supported almost unanimously by Congress, but how to effect remedial legislation that would clear corrupt elements out of unions without imposing punitive measures on all unions caused much heated disputation on the bills.

The Senate passed the Kennedy-Ervin labor-management reform bill on August 25, 1959, by a vote of 90 to 1. When the legislation reached the floor of the House, the committee bill was sidetracked, and the Landrum-Griffin bill was substituted.

I opposed the Landrum-Griffin bill in the House because, in addition to containing some good and needed provisions for ridding labor unions of racketeers and protecting the rank and file workers from abuses, it also contained amendments to the Taft-Hartley law and other provisions, which would clearly injure the legitimate union movement and make it more difficult and almost impossible for the unions to organize in areas where labor was not yet organized. It is my belief that this fact is the reason many of the southern Democrats supported the Landrum-Griffin bill in the belief that with cheap unorganized labor in the South, the chances of inducing industry to move from States like Michigan, in the North, would increase.

I supported the moderate and effective committee bill, which was defeated in the House, but when the House and Senate conferees agreed on a modified version of the House bill, with at least some of the objectionable features removed, together with the rest of my Michigan Democratic colleagues, I voted in favor of the conference report, knowing that this was the last opportunity to get any kind of a labor-management reform bill out of Congress. It is my belief that failure of Congress to carry out this responsibility might well have touched off a wave of anti-labor sentiment that could have set back the cause of unionism.

HOUSING LEGISLATION

The last week of Congress was highlighted by the drive for adjournment. Congress, for the third time this session, passed an omnibus housing bill. The President vetoed the first two, and as we adjourned, has not acted upon the third bill. It is my hope that the President signs this bill or many Federal housing projects, including urban renewal, will be eliminated or drastically curtailed for lack of funds. As Congressman RAINS, chairman of the Subcommittee on Housing, said on the floor of the House, the first housing bill was the best bill; the second was a good one; and the third compromise legislation was a fair one.

It was indeed sad to see neither the first nor the second bill receive the President's signature when they were pared down by congressional leaders in order to fit the needs of the country without overtaxing the economy. Representative government is based on the art of compromise, and I feel Congress performed its obligation by reconciling its original request in this field to gain the approval of the administration. In turn, it is my belief that the President failed to meet the Congress halfway, by failing to approve a fair housing bill.

NATIONAL DEFENSE

We live in an age of pushbutton warfare and we are one of the great powers on earth. Another great power, Soviet Russia, through her leaders, has said on numerous occasions that it has the thermonuclear power to destroy the United States within half a day.

Members of Congress, even before this session, have made every effort to determine whether this Nation is adequately prepared to deter Soviet aggression.

The Gaither report, which was kept secret longer than it should have been, said in part:

> The United States is moving in a frightening course to the status of a second-class power.

The Rockefeller report said:

> Unless present trends are reversed, the world balance of power will shift in favor of the Soviet bloc. If that should happen we are not likely to be given another chance to remedy our failings.

Adm. Hyman G. Rickover stated:

> I think it is almost too late. This is what I worry about. * * * Some of my money for fiscal 1958 which was appropriated by Congress several months ago has not yet been made available to me.

Secretary of Defense McElroy said:

> By 1962 the Russians may lead the United States in guided missiles by as much as 3 to 1.

Gen. Thomas Power, Air Force Strategic Commander, stated:

> I think you are just risking the whole country. That is how important I feel it is. The force which is now programed is not adequate because it is not coming fast enough.

Faced with these grim facts, the Congress approved a measure to create a new National Aeronautics and Space Administration with nearly $500 million to spend; extended the draft to 4 years; extended the Renegotiation Act under which the Government recovers excessive profits on defense contracts, and in general did its best to overcome the administration's avowed intention of lagging behind the Soviet Union in long-range missiles and other thermonuclear instruments of war.

National defense is a continuing struggle between those who would economize to a point of national risk and those who recognize the need for a first-class defense even if it means tightening belts.

In January Members of Congress once more will examine the Nation's defense structure with an eye toward further improvements.

CIVIL WORKS

The President vetoed two civil works appropriation bills, but the Congress overrode his second veto.

Civil works measures long have been termed "pork barrel" by cynics of Government. Actually, civil works provides money for flood control and reclamation projects.

There is nothing "pork barrel" about a flood. More than 1,000 urban communities in the United States have been classified as flood-endangered areas. The flood threat is increasing with the expansion of suburban areas.

During the tragic floods of 1955 damage in the United States was estimated at $1 billion, or approximately the total amount of the civil works measure which was approved over the President's veto.

TAXES

Congress extended for 1 year the Korean war corporation taxes and certain excise taxes. The transportation and local telephone taxes were reduced.

New levies were imposed on life insurance companies which will return the Government another estimated $215 million annually.

HIGHWAY PROGRAM

It looked for awhile as if the Federal highway program would be faced with a financial roadblock. As a final resort, Congress increased the Federal gas tax from 3 to 4 cents. This tax becomes effective October 1, 1959, and continues for 21 months.

RAILROAD WORKERS

The Congress approved a measure increasing pension and jobless benefits under the Railroad Retirement and Unemployment Acts.

VETERANS

Congress provided $100 million for direct housing loans to veterans. Readjusted non-service-connected disability pensions and provided new pensions for widows.

AGRICULTURE

Congress extended the surplus farm products law. Introduced a Federal food stamp plan for needy families in a few trial areas of the country. I regret that Secretary of Agriculture Benson has indicated that he will not put the plan into effect despite the action of Congress.

POSTAL AND BOND INTEREST RATES

Congress declined to increase postage rates or interest rates on long-term Government bonds but did increase rates on E and H series savings bonds to a maximum interest of 4¼ percent.

AIRPORT PROGRAM

A $63 million matching Federal aid to States was approved this session for airport improvements for the fiscal years of 1960 and 1961.

INTERNATIONAL AFFAIRS

In this continuing struggle between the free world and the Communist bloc it is necessary for the United States to bolster the economic and military strength of our Allies.

This Congress established a new Inter-American Development Bank to finance projects in Latin America. Congress also boosted U.S. subscription to the World Bank.

A foreign aid measure was approved which included $2.1 billion in military assistance and another approximately $1 billion in economic assistance.

THE NATIONAL DEBT

Congress, at the request of President Eisenhower, raised the legal limit of the national debt to $295 billion. The national debt in 1952, when President Eisenhower assumed office, was $265 billion, or roughly $30 billion less than the present amount.

HAWAII STATEHOOD

A 50th State was born this session of Congress with the admission of Hawaii. The borders of the United States now extend northward to within a few miles of Soviet Siberia and into the strategic Pacific.

These are, I believe, the major accomplishments of the 1st session of the 86th Congress. There were, of course, some fields where Congress should have acted, but did not. I shall attempt to discuss them later.

The National Neurological Research Foundation

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, the Government Operations Subcommittee on Reorganization of International Organizations is conducting an international health study. As chairman of the subcommittee I have been impressed again and again with the need for basic medical research, both in the United States and abroad.

In my conversation with Premier Khrushchev last December my proposal for Soviet-American cooperation on new international medical research efforts struck a responsive chord in the Russian leader.

Basic and coordinated medical research is the key to the prevention and the amelioration of many diseases that plague mankind. What sustained research has done for polio, I believe it can do for other dread diseases.

This point was made in an editorial, "Let's Speed Cancer's Defeat," which appeared in the Life magazine on June 6, 1959. The editorial points out the need for both Government and private investment in medical research, noting that "the administration which last year proposed a $10 million cut on all medical research, this year has proposed another cut in cancer research, to hold it to $75 million."

In this field of nongovernmental research, the Life editorial says:

All medical research is obviously interrelated. * * * Diseases themselves may be interrelated. There is an obvious need for the many voluntary agencies to pool their drives for a single fund for medical research alone, letting other drives, such as the United Funds, provide for patient care, therapy, and rehabilitation.

Mr. President, I applaud Life for this emphasis on basic and coordinated research. In this connection I have learned recently of a new voluntary and nonendowed foundation which embodies this very principle. The National Neurological Research Foundation is devoted entirely to coordinated research on the diseases of the central nervous system—multiple sclerosis, muscular dystrophy, Parkinson's syndrome, cerebral palsy, epilepsy, and over 300 other interrelated disorders. Established 3 years ago by Mrs. Rodgers Denckla, the National Neurological Research Foundation stimulates fundamental research by providing 5-year postdoctoral fellowships to selected scientists.

The foundation, with headquarters at 3255 N Street NW., Washington 7, D.C., is operated under the direction of an advisory committee of distinguished medical and lay leaders in the neurological world.

In this vast country of ours we need a variety of fund-raising organizations, but I believe there is great merit in Life's suggestion for correcting the present "bewildering series of drives." Life is also right in focusing attention on the neglected area of basic medical research.

Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the Life editorial referred to above.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Life, June 6, 1959]

LET'S SPEED CANCER'S DEFEAT

The men closest to cancer research have now found enough leads to make them think that wholly new means for cancer cure and prevention are possible. They talk of finding a vaccine which may prevent cancer or a chemical which may cure. Since they have already found a number of such things which work on animals—but not on humans—they are tantalized by their progress.

In view of this one might think that a nation—which proved, with the atomic bomb, that it could solve the supposedly "impossible"—would be stepping up its cancer research on all fronts, especially after the tragic end of John Foster Dulles. Yet the administration, which last year proposed a $10 million cut in all medical research, this year has proposed another cut in cancer research, to hold it to $75 million.

By contrast with this sum, we taxpayers this years are spending $155 million on agricultural research, in effect putting the health of the barnyard ahead of the conquest of cancer. No comparison with the $40 billion going into defense to prevent a nuclear war is justified in logic, but the statistical fact that 40 million Americans now living will have cancer, unless it is conquered, does represent a national disaster comparable to the more sudden devastation of a nuclear war.

Fortunately, the House has already increased the cancer appropriation to $83 million. The Senate committee, which now has the bill, is talking of raising it to $110 million, the minimum which experts regard as indispensable. Here are some of the vital needs:

To improve the procedures and methods of the intensive work now going on in chemotherapy. This has already yielded some 20 compounds which temporarily inhibit various forms of cancer, e.g., the lives of leukemic children can now be prolonged for a year or more.

To increase the study of viruses, which are now a chief suspect in cancer. A single virus has already been found which can cause 26 different types of cancer in animals. Since one virus can cause so many, it raises the hope that a single vaccine could prevent them. A Salk-type vaccine has already been found which makes mice immune to a virus causing leukemia.

To broaden the study of hormones, the internal glandular secretions which control growth, reproduction, digestion, and the functioning of all the organs. Evidence links steroid harmones with the cause and progress of cancer. "Imitation" hormones may be able to block the harmful effects of real hormones.

To increase the supply of trained researchers, clinics, research centers, new medical school facilities. Experience has proved that where Federal matching funds are offered, private funds will quickly flow to fill the gap.

Something besides increased Federal aid also is needed. At present most medical research is dependent on the voluntary agencies which, month after month, stage a bewildering series of drives, now for heart disease, now for cancer, now for polio, now mental health, cerebral palsy, or muscular dystrophy.

There are so many of these drives that the housewives who must do most of the door-to-door fund raising are beginning to revolt and so are the donors themselves. Furthermore, because so much of the funds raised is spent on fund raising (in some cases as much as 25 percent or more), on patient care, and on administration, a relatively small amount actually goes into the medical research which might render all these other expenditures unnecessary. For example, the National Foundation for Infantile Paralysis, most successful in history, spent most of $500 million on patients, only $34 million on research. Yet the payoff on the latter will soon save the huge former sum.

All medical research is obviously interrelated (Enders' work on growing polio virus in live tissue led to Salk's polio breakthrough; Salk's technique is being used in cancer). Diseases themselves may be interrelated. There is an obvious need for the many voluntary agencies to pool their drives for a single fund for medical research alone, letting other drives, such as the United Funds, provide for patient care, therapy, and rehabilitation. The need is not to stifle the American genius for voluntary organization which De Tocqueville celebrated; the real need is to organize it better. The sooner this is done, and the sooner the full national responsibility for adequate medical research is recognized, the sooner the great breakthroughs may come, in cancer and elsewhere.

One-Hundredth Anniversary of Superior Court of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution sponsored by Senator William X. Wall, of Lawrence, Mass.:

SENATE RESOLUTION 593

Resolutions extending the greetings of the general court upon the 100th anniversary of the Superior Court of Massachusetts

Whereas it is a primary obligation of the Commonwealth to provide tribunals whereby every man shall be afforded a remedy for all wrongs or injuries to his person, property, or good name and an opportunity for a fair and impartial hearing so that he may obtain justice freely and without delay; and

Whereas the general court in 1859 created the superior court more effectively to accomplish these objectives; and

Whereas by increased jurisdiction and power the superior court has become the great trial court of Massachusetts and advancing with the ever-changing conditions of our society which has made substance and not form the basis of our jurisprudence: Therefore, be it

Resolved, That the General Court of Massachusetts on the occasion of the centennial of the superior court of the Commonwealth extend its sincere greetings and felicitations to the chief justice and the associate justices of the superior court and express the appreciation of the people of Massachusetts for a century of devotion to the best traditions of equal justice under law; and be it further

Resolved, That the secretary of the Commonwealth transmit forthwith copies of these resolutions to the honorable the Justices of the Superior Court of Massachusetts.

Interim Report of the Committee on Government Operations, House of Representatives, for the 1st Session, 86th Congress

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. KEE. Mr. Speaker, I am pleased to present the following interim report on the activities of the Committee on Government Operations in the first 9 months of the 86th Congress:

INTERIM REPORT OF THE COMMITTEE ON GOVERNMENT OPERATIONS, HOUSE OF REPRESENTATIVES, FOR THE 1ST SESSION, 86TH CONGRESS

Jurisdiction

The jurisdiction and duties of the Committee on Government Operations are set forth in rule XI(8) of the House of Representatives as follows:

All proposed legislation, messages, petitions, memorials, and other matters relating to * * * (a) budget and accounting measures, other than appropriations, and (b) reorganisations in the executive branch of the Government shall be referred to the Committee on Government Operations.

The Committee on Government Operations shall have the duty of (1) receiving and examining reports of the Comptroller General of the United States and of submitting such recommendations to the House as it deems necessary or desirable in connection with the subject matter of such reports; (2) studying the operation of Government activities at all levels with a view to determining its economy and efficiency; (3) evaluating the effects of laws enacted to reorganize the legislative and executive branches of the Government; (4) studying intergovernmental relationships between the United States and the States and municipalities and between the United States and international organizations of which the United States is a member.

Organization

In order to perform its functions and to carry out its duties as fully and as effectively as possible, the committee, under the leadership of its chairman, the Honorable WILLIAM L. DAWSON, of Illinois, at the beginning of the 86th Congress, established five regular subcommittees, which among them cover the entire field of executive expenditures. The names and chairmen of these subcommittees are as follows:

Executive and Legislative Reorganization Subcommittee, Hon. WILLIAM L. DAWSON, chairman.

Military Operations Subcommittee, Hon. CHET HOLIFIELD, chairman.

Government Activities Subcommittee, Hon. JACK BROOKS, chairman.

Intergovernmental Relations Subcommittee, Hon. L. H. FOUNTAIN, chairman.

Foreign Operations and Monetary Affairs Subcommittee, Hon. PORTER HARDY, JR., chairman.

In addition, two special subcommittees were organized to handle special problems. The first two listed are continuing their studies, and the last completed its work early in the session.

Special Donable Property Subcommittee, Hon. JOHN W. MCCORMACK, chairman.

Special Government Information Subcommittee, Hon. JOHN E. MOSS, chairman.

Special Subcommittee on the Reno Interstate Highway, Hon. JOHN A. BLATNIK, chairman.

Investigative reports

During the 1st session of the 86th Congress the Committee on Government Operations approved and submitted to the Congress 12 reports of an investigative nature. In addition, one committee print consisting of a staff study was published. At the close of the first session a considerable number of reports and investigations were under preparation. These will be considered by the subcommittees and the full committee early in the second session. A number of hearings have been programed for the recess between sessions.

For convenience, the published reports and the committee prints are listed here with the name of the originating subcommittee. A more detailed discussion of the material will be found below in the breakdown of the committee's activities by subcommittee:

First report (H. Rept. No. 228): "Results From Recommendations Made During 85th Congress in Reports of Committee on Government Operations." (Full committee, Congressman WILLIAM L. DAWSON, chairman.) (Minority views.)

Second report (H. Rept. No. 234): "Availability of Information From Federal Departments and Agencies (Air Force Refusal to the General Accounting Office)." (Special Government Information Subcommittee, Congressman JOHN E. MOSS, chairman.) (Minority views.)

Third report (H. Rept. No. 292): "Reno-Sparks-Verdi Interstate Highway (Bureau of Public Roads, Department of Commerce)." (Special Subcommittee on the Reno Interstate Highway, Congressman JOHN A. BLATNIK, chairman.)

Fourth report (H. Rept. No. 293): "Whether Reservoir Lands Should Be Acquired by Exchange of Timber Lands." (Executive and Legislative Reorganization Subcommittee, Congressman WILLIAM L. DAWSON, chairman.)

Fifth report (H. Rept. No. 300): "Civil Defense in Western Europe and the Soviet

Union." (Military Operations Subcommittee, Congressman CHET HOLIFIELD, chairman.)

Sixth report (H. Rept. No. 525): "Kings Mills Ordnance Plant (Party Line Fence)." (Executive and Legislative Reorganization Subcommittee, Congressman WILLIAM L. DAWSON, chairman.)

Seventh report (H. Rept. No. 546: "U.S. Aid Operation in Laos." (Foreign Operations and Monetary Affairs Subcommittee, Congressman PORTER HARDY, JR., chairman.)

Eighth report (H. Rept. No. 674): "Military Supply Management (Single Manager Agencies)." (Military Operations Subcommittee, Congressman CHET HOLIFIELD, chairman.)

Ninth report (H. Rept. No. 684): "Disposal Problems of Government-Owned Nickel Plant at Nicaro, Cuba." (Government Activities Subcommittee, Congressman JACK BROOKS, chairman.) (Minority views.)

Tenth report (H. Rept. No. 1112): "Military Air Transportation (Executive Action in Response to Committee Recommendations)." (Military Operations Subcommittee, Congressman CHET HOLIFIELD, chairman.)

Eleventh report (H. Rept. No. 1121): "Organization and Management of Missile Programs." (Military Operations Subcommittee, Congressman CHET HOLIFIELD, chairman.)

Twelfth report (H. Rept. No. 1137): "Availability of Information from Federal Departments and Agencies (Progress of Study, Aug. 1958–July 1959)." (Special Government Information Subcommittee, Congressman JOHN E. MOSS, chairman.) (Minority views.)

Committee print

Notes on the Jurisdiction of the House Committee on Government Operations.

Legislation

The legislative jurisdiction of the Committee on Government Operations encompasses a wide range of very important governmental operation. It includes all matters relating to budgeting and accounting measures other than appropriations and all matters relating to reorganizations in the executive branch of the Government. In addition, property disposals and matters relating to Federal property and administrative services are referred to the committee. The committe studied a large number of legislative proposals and reported 14 favorably to the House. These are discussed more fully under the subcommittee breakdown below, but those reported are listed here for convenience, with the name of the subcommittee which intially considered them:

H.R. 766, to amend section 5 of the act of July 16, 1914, relating to penalties for the use of Government-owned vehicles for other than official purposes. (Executive and Legislative Reorganization Subcommittee.)

H.R. 1321, to amend Reorganization Plan No. 2 of 1953. (Executive and Legislative Reorganization Subcommittee.) (Passed House as S. 144 and was vetoed by the President. House failed to override veto.)

H.R. 2386, to direct the Administrator of General Services to convey to the city of Mobile, Ala., all the right, title, and interest of the United States in and to certain land. (Government Activities Subcommittee.)

H.R. 3722, to amend the Federal Property and Administrative Services Act of 1949 to permit donations of surplus property to volunteer firefighting organizations, and for other purposes. (Special Donable Property Subcommittee.)

H.R. 5140, to further amend the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time in conformity with the provisions of the act. (Executive and Legislative Reorganization Subcommittee.)

H.R. 5196, to increase the maximum rates of per diem allowance for employees of the Government traveling on official business, and for other purposes. (Executive and Legislative Reorganization Subcommittee.)

H.R. 6263, to amend the Employment Act of 1946 to provide for its more effective administration, and to bring to bear an informed public opinion upon price and wage increases which threaten economic stability. (Executive and Legislative Reorganization Subcommittee.)

H.R. 6904, to establish an Advisory Commission on Intergovernmental Relations. (Intergovernmental Relations Subcommittee.)

H.R. 7062, to provide for payment of annuities to widows and dependent children of Comptrollers General. (Special Donable Property Subcommittee.) (Public Law 86–87.)

H.R. 7465, for the establishment of a Commission on Metropolitan Problems and Urban Development. (Executive and Legislative Reorganization Subcommittee.)

H.R. 7681, to enact the provisions of Reorganization Plan No. 1 of 1959 with certain amendments. (Executive and Legislative Reorganization Subcommittee.)

House Resolution 295, to disapprove Reorganization Plan No. 1 of 1959. (Executive and Legislative Reorganization Subcommittee.) (Adopted July 7, 1959.)

S. 900, to amend section 204(b) of the Federal Property and Administrative Services Act of 1949 to extend the authority of the Administrator of General Services to pay direct expenses in connection with the utilization of excess real property and related personalty, and for other purposes. (Government Activities Subcommittee.) (Public Law 86–215.)

S. 902, to provide for the receipt and disbursement of funds, and for continuation of accounts when there is a vacancy in the office of the disbursing officer for the Government Printing Office, and for other purposes. (Government Activities Subcommittee.) (Public Law 86–31.)

Reorganization plan

Only one reorganization plan was transmitted to the 86th Congress by the President during the 1st session. This, Reorganization Plan No. 1 of 1959, was designed to transfer certain functions in connection with forest exchanges and with mineral materials in national forest land from the Secretary of the Interior to the Secretary of Agriculture. The committee held a hearing on the plan and reported favorably a resolution of disapproval (H. Res. 295) which was adopted by the House on July 7, 1959. The basic objection to the plan was that it did not afford adequate protection to the public's interest in the minerals situated on forest lands to be disposed of in the exchanges by the United States. In place of the plan the committee reported favorably H.R. 7681 which will accomplish most of the objectives desired by the President but at the same time preserve the responsibilities of the Secretary of the Interior with respect to minerals in the forest lands. This bill was passed by the House on September 2, 1959, and is now before the Senate.

Committee action on reports of the Comptroller General

Rule XI, clause 8(c)(1) of the rules of the House, imposes the duty upon this committee to receive and examine reports of the Comptroller General referred to it and to make such recommendations to the House as it deems necessary or desirable in connection with the subject matter of the reports.

In discharging this responsibility all reports of the Comptroller General received by the committee are studied and analyzed by the staff and referred to the subcommittee of this committee to which has been assigned general jurisdiction over the subject matter involved.

During the first session a total of 111 reports of the Comptroller General have been received by this committee. After preliminary staff study, these reports were referred to subcommittees of this committee, as follows:

Military Operations Subcommittee	49
Government Activities Subcommittee	28
Foreign Operations and Monetary Affairs Subcommittee	15
Inter-Governmental Relations Subcommittee	11
Executive and Legislative Reorganization Subcommittee	8

Periodic reports are received from the subcommittees on the action taken with respect to individual reports, and monthly reports are made to the chairman on the status of all reports received. During the session, the subcommittees used the reports to further specific investigations and reviews. In some case, additional information concerning the findings and recommendations of the Comptroller General was requested and received from the administrative agency involved, as well as from the General Accounting Office. In another section of the committee's annual report dealing with the activities of the various subcommittees more specific information on the action taken on these reports is included.

The committee maintains complete files of all the Comptroller General's reports received, and a record is kept showing the subcommittee to which referred, the date of referral and the action taken. All the reports received during the session will be reviewed by the committee in the light of additional information obtained and action taken by the subcommittees and determination will be made whether specific recommendations to the House are necessary or desirable under rule XI.

Subcommittee breakdown

Following is a more detailed description of the committee's activities arranged according to the subcommittees primarily interested in the subject matter involved. At the chairman's request, the subcommittee reports were prepared in accordance with the following outline:

Outline for Annual Subcommittee Reports

I. Investigations:

(a) List investigative reports issued with name of reports, date issued and a summary of each.

(b) List and describe other investigations not resulting in a formal report.

(c) Give money savings or recoveries as a result of any investigations, together with the estimated dollar amount of each.

(d) List and describe any other remedial measures taken and any nonmonetary benefits attained as a result of investigation.

(e) The number of days hearings were held.

II. Legislation:

(a) Total number of measures referred to the subcommittee.

(b) Reports issued with title, date, and summary of each, and description of subsequent legislative action on reported measures.

(c) Number of days of hearings held.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislation:

(a) Number of each received.

(b) Wherever action has been taken, name the report acted on, hearings held, if any, describe the action taken, and the resulting monetary and nonmonetary benefits.

IV. Prior activities of the subcommittee of current or continuing interest:

(a) The cumulative money savings or recoveries from such prior activities, naming them.

(b) Other action, executive or otherwise, taken on such prior activities resulting in some affirmative benefit.

V. Projected program for the remainder of the 86th Congress.

EXECUTIVE AND LEGISLATIVE REORGANIZATION SUBCOMMITTEE, HON. WILLIAM L. DAWSON, CHAIRMAN

I. Investigations

(a) Reports issued:

1. "Whether Reservoir Lands Should be Acquired By Exchange Of Timberlands." House Report No. 293. Issued April 23, 1959.

This report stemmed from hearings conducted in the 85th Congress concerning the reservoir land acquisition policies of the Corps of Engineers and the Department of the Army. One of the questions raised during the hearings concerned efforts of the lumber industry to have Government forest lands conveyed to private companies in exchange for their private forest lands acquired by the Government for reservoir projects. The committee concluded, on the basis of reports from the Departments of the Army, Interior, and Agriculture opposing such exchanges, and on the basis of the committee's own studies, that such exchanges would be contrary to the public interest and overall economy and efficiency, and that the payment of money compensation should continue as the method of acquiring private timber lands for reservoir projects, as is the case in acquisition of other types of land.

It is not feasible to estimate the monetary savings resulting from this report. However, the conclusions of this report will greatly benefit the Nation in protecting the watersheds and the resources of the public lands and national forests against depredation and exploitation of America's timber, minerals, grazing, wildlife, and recreation resources, as well as the sustained yield forest industries that are now dependent upon the Federal forest lands.

2. "Kings Mill Ordnance Plant (Party Line Fence)." House Report No. 525. Issued June 10, 1959.

This report presented the frustrating efforts on the part of a small farmer in Ohio to replace a broken-down woven wire fence between his property and that of the adjoining ordnance plants, and the alleged failure of the Ordnance Department to cooperate by bearing its share of the cost. The Ordnance Department's principal reason for not constructing the fence was that the property was being declared excess and it was no longer responsible for the care and maintenance of the property. Investigation disclosed that the holding agency still retains custody and accountability for excess and surplus real property and is expected to perform the physical care, handling, protection, maintenance and repair, pending transfer to Federal agency or disposal.

The Ordnance Department confirmed the inequity and remedied the situation by erecting its portion of the party fence.

3. "Federal Real and Personal Property Inventory Report (civilian and military) of the U.S. Government Covering Its Properties Located in Continental United States, in the Territories, and Overseas as of June 30, 1958."

"The Federal Real and Personal Property Inventory Report as of June 30, 1958," was issued in December of 1958 as a committee print. It presented the committee's annual compilation of real and personal assets of the Federal Government.

(b) Investigations not resulting in a formal report:

1. Importation of foreign excess property: An investigation was begun and hearings were held on the new regulations issued by the Department of Commerce on the importation of foreign excess property. A number of complaints had been received by the subcommittee that small businessmen in the importing field were not being treated fairly. The investigation is continuing and further hearings may be held.

2. Water resources development—Columbia River Basin: Hearings were begun concerning complaints by many organizations in the Pacific Northwest that the report of the Corps of Engineers on the Columbia River Basin disregarded requirements of law to provide plans for comprehensive and coordinated development of the Columbia River Basin. The hearing began on August 13, 1959, and preliminary information was obtained. The hearing was recessed but has not been concluded.

3. Budget and accounting procedures of the Federal Government: The subcommittee is making a continuing investigation and study of the budget and accounting procedures of the Federal Government, including the joint program to improve accounting in the Federal Government.

4. Administrative organization, procedure, and practice: The study of administrative organization, procedure, and practice is continuing with an analysis being made of replies from agencies to the committee's questionnaire.

(c) Monetary savings or recoveries as a result of investigation. Undetermined.

(d) Other remedial measures taken and nonmonetary benefits. Included in I(a) above.

(e) Days of hearings held. Three days of formal hearings were held during this session.

II. Legislation

(a) Number of measures referred to the subcommittee: Eighty-four legislative measures were referred to the subcommittee.

(b) Reports issued:

1. House Report No. 235, H.R. 1321, amending Reorganization Plan No. 2 of 1953, March 20, 1959: The report indicated that the bill would restore to the Administrator of the Rural Electrification Administration the authority to approve or disapprove loans, without the supervision or direction of or any other control by the Secretary of Agriculture; and to reestablish in the REA the functions vested in the agency by the 1936 act. The committee based its approval on the fact that "legislation is now required to attain the nonpolitical independence with which Congress intended the Administrator to act, and to reinstate the powers which Congress intended the Administrator to exercise."

The bill was passed by the House and Senate and vetoed by the President. The veto was sustained.

2. House Report No. 367, H.R. 5140, further amending Reorganization Act of 1949, May 18, 1959: The report indicated that the bill would amend the Reorganization Act of 1949 to extend the authority granted the President to transmit reorganization plans to the Congress for 2 more years. The committee stated that "although very few reorganization plans under the act have been proposed by the President in recent years, the act has, when utilized, proved to be a useful tool in effecting reorganizations in the executive departments and agencies."

The bill was passed by the House, but no action was taken by the Senate.

3. House Report No. 539, H.R. 6263, amending the Employment Act of 1946, June 12, 1959: The report indicated that the bill would amend the Employment Act in two major respects: (a) By declaring it to be the sense of Congress that the President should give due effect to certain provisions of the act which are referred to and in some cases made more precise; and (b) by requiring the President or any agency he designates to hold public hearings on certain price and wage increases, impending or in effect. The committee felt that in carrying out the policies of the Employment Act the President and the Council of Economic Advisers had not been giving sufficient attention to all of its provisions. The committee believed also that the Federal Government should take appropriate steps to discourage price increases which would affect national economic stability. The public hearings proposed would be a practical approach to a serious problem. They would assist in mobilizing public opinion against unjustified price increases and thereby help prevent or reduce them.

The bill was reported to the House and referred to the Committee on Rules. No further action has been taken to date.

4. House Report No. 586, House Resolution 295, disapproving Reorganization Plan No. 1 of 1959, June 26, 1959: Reorganization Plan No. 1 of 1959 was transmitted by the President to Congress on May 12, 1959. Under the Reorganization Act of 1949, there is no provision whereby Congress can modify the plan except by legislation, and the plan would become automatically effective unless within 60 days either House of Congress disapproved the plan.

The plan would have transferred to the Agriculture Department all the functions of the Secretary of the Interior in making exchanges of public national forest lands for private lands, as well as sales of such lands, and also certain mineral materials in acquired national forest lands. As a result of hearings on the plan, the committee recommended, and the House adopted, House Resolution 295 to disapprove the plan because it failed to provide for the protection and conservation of valuable minerals owned by the United States; because it would create confusion in adjudicating the validity of mining claims on national forest land; because the language of the plan was ambiguous as to what mineral materials would be involved in dispositions from acquired national forest lands; and because it vested unlimited discretion in the Secretary of Agriculture to delegate authority without safeguards concerning public notice and opportunity for public comment as previously required by Congress.

5. House Report No. 633, H.R. 7681, enacting provisions of Reorganization Plan No. 1. of 1959, with certain amendments, July 3, 1959: Since some features of the Reorganization Plan would achieve several useful purposes, the Committee, on July 3, 1959, issued House Report No. 633, recommending adoption of H.R. 7681 which would enact the beneficial features of the plan, together with several amendments designed to safeguard the public interest by insuring that the Secretary of the Interior would continue to exercise functions with respect to minerals on the national forest lands; that the Secretary of Agriculture would not assume the function of determining or adjudicating the validity of mining claims which conflict with forest exchange or sale applications; that the Secretary of Agriculture would not under the Materials Act dispose of minerals subject to the mineral leasing or mining laws; and that would omit the unlimited power of delegation found objectionable in the plan as submitted.

H.R. 7681 passed the House on September 2, 1959, but no action was taken by the Senate.

6. House Report No. 683, H.R. 5196, increasing per diem travel allowances, July 16, 1959: The report pointed out that the bill would amend the Travel Expense Act of 1949 to increase the maximum per diem allowance from the present $12 to $15 per day; increase the mileage rate for motorcycles from 6 to 7 cents per mile and for autos and aircraft from 10 to 12 cents per mile; and provide reimbursement for park-

ing fees. The committee concluded from the evidence before it that there had been a sufficient increase in cost of travel since the act was last amended in 1955 to warrant the higher ceilings proposed.

The bill passed the House but no action was taken in the Senate.

7. House Report No. 889, H.R. 766, penalty for use of Government vehicles, August 12, 1959: The report stated that the bill would modify the existing fixed statutory penalty for the unauthorized use of Government-owned vehicles to give discretion to the heads of departments and agencies in fixing the disciplinary action in any given case. The committee stated: "It is sound administrative practice to handle such cases on their merits and to permit the department head or his representative to give consideration to all such factors as the length and quality of service of the officer or employee involved before fixing the penalty.

The bill was placed on the consent calendar but passed over without prejudice until the next session.

8. House Report No. 940, H.R. 7465, creating a Commission on Metropolitan Problems and Urban Development, August 18, 1959: The purpose of the legislation is to create a commission to "study and investigate the problems of municipalities and metropolitan expansion, with special reference to the need, in terms of adequate governmental structures, to establish sound revenue policies as related to State and National revenue policies, and to determine the services which such governmental structures should provide. It shall also study existing and developing efforts to cope with municipal and metropolitan problems including Federal policies and programs and any need for improved coordination thereof." The committee was convinced "that the problems of the Nation's cities and metropolitan areas have grown to such magnitude that a temporary Federal Commission to make a comprehensive study and propose solutions is mandatory."

The bill was reported but no action was taken by the House.

(c) Days of hearings: Thirteen days of hearings were held.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislation

(a) Number of each received:

Eight reports on audits and reviews made by the General Accounting Office were received by the subcommittee. All these reports were reviewed and analyzed by the staff, and specific actions taken on the findings reported are shown below:

(b) Action taken.

1. Audit of the Alexander Hamilton Bicentennial Commission: This report was found to contain no findings which require consideration by the Congress, and no further subcommittee action will be taken thereon.

2. Audit of the Federal prison industries: This report was found to contain no findings which require consideration by the Congress, and no further subcommittee action will be taken thereon.

3. Audit of revolving fund operations, Corps of Engineers: The staff ascertained that GAO recommendations calling for agency action have been adopted. While the other recommendations are not such that would require specific committee action, the entire report will be studied further for possible relevancy to other operations of the Corps of Engineers which are under current review by the subcommittee.

4. Audit of Rural Electrification Administration: The findings and disclosures in this report were reviewed in the light of previous work of this committee in the rural electrification area, and in the light of legislation which was then pending. No further action of the committee was considered necessary or desirable in connection with the specific matters reported.

5. Review of management controls of the District of Columbia government: Conferences were held between committee staff and officials of the District of Columbia government to ascertain progress of corrective actions to deficiencies reported by GAO. In most cases the corrective action entails conversion from existing accounting system to a cost or accrual basis, and considerable time will be involved in effecting the change. Status reports have been received and the work appears to be progressing satisfactorily. Staff followup will be undertaken periodically.

6. Short form report on audit of Columbia River power system: This report was reviewed by the staff in relation to similar problems disclosed in the audit report on Central Valley Basin program submitted during the 85th Congress. The Secretary of the Interior was requested to advise on any progress in correcting the deficiencies reported. Conferences were held with GAO officials on the overall progress being made. Information was received that GAO is now conducting a current review of the program, and that report thereon will be submitted soon. Further committee action is deferred pending receipt of the current report.

7. Audit of the Tennessee Valley Authority for fiscal year 1958: The findings and recommendations were reviewed in the light of the provisions of H.R. 3560, and TVA was also requested to comment on GAO findings and to inform the committee of progress being made to resolve difficulties encountered in connection with defective turbogenerators purchased from Westinghouse. The reply has been studied in the light of the report and the new legislation. Staff followup will continue in connection with the reported deficiencies, but further specific action is deferred pending receipt of GAO's report for the current year's operations of TVA.

8. Review of spoil disposal activities, Corps of Engineers (civil functions): The Department of Defense has been requested to comment on the findings of GAO in this report. Further committee action will be held in abeyance pending receipt of reply to the committee request.

IV. Prior activities of the Subcommittee of Current or Continuing Interest

No items.

V. Projected program for the remainder of the 86th Congress

(a) Bills not yet acted upon are being processed for hearings in the second session including major legislation involving amendments to the Government Corporations Control Act; payments in lieu of taxes; budget and accounting procedures; creation of new departments, and others.

(b) The investigation into the importation of foreign excess property is continuing, with the probability that further hearings will be held and new legislation developed.

(c) The study of the Corps of Engineers report on the Columbia River Basin is continuing and preparations are being made for further hearings.

(d) The study of administrative organization, procedure, and practice is continuing and a report is being prepared for approval by the subcommittee.

(e) The compilation of the annual inventory has begun and the report should be issued in December of 1959.

(f) The audit reports referred to the subcommittee are being studied and recommendations for further action are being prepared.

(g) The analysis of Hoover Commission recommendations is being continued for possible recommendations of savings to the departments.

(h) A review of actions taken by the departments on recommendations in current or prior reports will be continued and followed.

MILITARY OPERATIONS SUBCOMMITTEE, HON. CHET HOLIFIELD, CHAIRMAN

I. Investigations

(a) Reports issued:

1. "Organization and Management of Missile Programs," 11th report by the Committee on Government Operations, House Report No. 1121, September 2, 1959 (156 pages).

This report presents for the first time in a public document a comprehensive and systematic account of the major missile programs in the United States. It examines the Department of Defense agencies and organizations for top-level direction of the missile programs, the field agencies and operations of the three military departments in this area, and procurement and management methods.

The report gives particular attention to the background of the Air Force ballistic missile programs and the role of the Ramo-Wooldridge Corp. and Space Technology Laboratories, Inc., as technical managers of these programs for the Air Force.

Other matters considered are missile costs and reliability, air defense problems, military-civilian space relationships, and military service roles and missions.

The subcommittee concludes that the Army and Air Force have no uniquely different role in regard to strategic missiles, and that for efficient and economical weapon development, production and deployment in the future, that the two military services should be merged. The President is asked to direct the appropriate authorities to undertake preparatory studies. In the case of the Ramo-Wooldridge and Space Technology Laboratories enterprises, the report recommends that if the Air Force is to retain a private corporation for technical management functions, the company should be converted into a nonprofit institution.

2. "Military Air Transportation (Executive Action in Response to Committee Recommendations)," 10th report by the Committee on Government Operations, House Report No. 1112, September 1, 1959 (29 pages).

This is the second report of the Military Operations Subcommittee on military air transportation and related civilian reserve support. It gives an account of recent developments in this field and action taken in response to the committee recommendations contained in the first report (H. Rept. No. 2011, 85th Cong., 2d sess.).

This report points out that during the year since these recommendations were drafted there have been encouraging signs of responsive action in the Department of Defense, the interested civil agencies, and the Congress. Further, the subcommittee's investigations, hearings, and report have had a healthy influence in clearing up many misconceptions about the Military Air Transport Service (MATS) and have helped lay a solid foundation of fact and judgment for a national reappraisal of military-civil roles and relationships in air transportation.

Except for the observations made in the course of this report, the subcommittee presents no new recommendations. It believes that the recommendations made in the first report still are basically valid.

3. "Military Supply Management (Single Manager Agencies)," eighth report by the Committee on Government Operations, House Report No. 674, July 15, 1959 (49 pages).

The report contains the first systematic account of the single manager program established in 1956 in the Department of Defense and the progress made under the plan, which makes a single agency in one military department responsible for the procurement, inventory management, stock fund maintenance, warehousing, and distribution

functions for all military departments in a given commodity area. The agency is established by the "single manager," who is the Secretary of the military department with the predominant interest in the commodity area.

The report presents recommendations with the objective of deriving the greatest possible savings from the single manager program as it exists and as it can be strengthened. The Department of Defense is asked to explore new ideas along similar lines, or by the addition of new policies, including the use of the General Services Administration in procurement and distribution of common supply items.

4. "Civil Defense in Western Europe and the Soviet Union," fifth report by the Committee on Government Operations, House Report No. 300, April 27, 1959 (109 pages).

This is the fifth civil defense report prepared by the subcommittee in the course of its continuing study and investigation of civil defense matters during the past 4 years. It brings together for the first time in a public document a systematic account of civil defense activities of eight NATO allies (Great Britain, France, Germany, Denmark, Norway, the Netherlands, Belgium, and Italy), two neutrals (Sweden and Switzerland), and the Soviet Union as a great contending power.

The report also discusses the strategic implications of civil defense, including questions of deterrent capabilities, survival after attack, and the considerable effect of the civil defense measures which have been undertaken in the Soviet Union.

(b) Investigations not resulting in a formal report:

1. Wasteful operation of test aircraft by the Air Force: The staff investigated the use of engine-test YC-121F aircraft, on which tests were completed, for administrative aircraft purposes by the Air Materiel Command, when allegations were made that this use entailed grossly excessive maintenance and operating costs.

The Air Force decided to withdraw these costly aircraft from inventory following the staff inquiry. The estimated money savings are listed in I.c.1. below.

2. Surplus property disposal: The staff has continuously scrutinized military surplus disposal actions, investigating more closely those which indicated dissipation of valuable Government resources. From time to time the field agencies of the General Accounting Office are utilized to assist in checking disposal actions. A report was received from the General Accounting Office on disposal of a large quantity of common supply items at the Naval Supply Center, Oakland, Calif.

3. Military clothing procurement: Following its investigations and reports in this area, the subcommittee staff has received and investigated, from time to time, complaints of irregularities in contract awards. In accord with a recommendation in House Report No. 1168 (85th Cong., 1st sess.), the General Accounting Office was requested to review the operations of the Military Clothing & Textile Supply Agency. This report finally was completed and incorporated into the larger scope of the Military Supply Management investigation (see I(a)3 above).

4. Petroleum storage contract award: The staff investigated the award of a long-term construction and storage contract by the Military Petroleum Supply Agency. The question of the validity and propriety of an award on the basis of a bid for a 20-year period was presented to the Comptroller General, who decided in favor of the successful bidder. The subcommittee reported on this matter in House Report No. 674, "Military Supply Management," and also brought it to the attention of the chairman of the House Armed Services Committee, which is responsible for the authorizing legislation for long-term contracts of this kind.

Two Members of Congress who were interested in this matter received oral and written information from the staff.

5. Military-civil programs for airflight safety: The staff has reviewed developments in air traffic control, following the establishment of the new Federal Aviation Agency, with respect to military-civil relationships and cooperation in this area. In view of the complex administrative problems involved and the importance of efficient air traffic management, this inquiry will be continued (see part V below).

6. Air Force procurement in Alaska: The staff investigated several complaints alleging irregularities in contract awards or alleged lack of competition due to sole-source procurement by the Air Force. The Members expressing interest in these matters were duly advised of the results of the investigations.

7. Withdrawal of request for proposal after negotiation with initial low bidder by Ordnance Tank Automotive Command: The staff investigated a complaint alleging irregularities, which wase submitted by a Member of Congress through Chairman DAWSON. The results of the inquiry were transmitted to the Member under dates of March 31 and April 29, 1959.

8. Alleged favoritism and preferential treatment in licensing import of excess military property: The staff investigated allegations concerning the actions of officials in the Office of Foreign Excess Property, Department of Commerce. The complaint was received directly from an unsuccessful applicant for a license to import Army surplus tires bought in Italy and from a Member of the Senate. The office named was the subject of investigation by Chairman DAWSON's subcommittee, as reflected in House Report No. 2601, 85th Congress, 2d session.

The Senator and the complainant were furnished a report of the staff inquiry.

9. Effect of labor difficulties on military procurement of custodial services: The staff investigated complaints received from building maintenance union officials in California about certain military contract awards to companies lacking union organization and allegedly engaging in wage-cutting, which practices led to faulty performance. Military and General Services Administration practices and procedures in relation to custodial services were studied, and note was taken of recent General Services Administration instructions to contracting officers to take into account the influence of labor relations on capability to perform service contracts of this nature. Copies of the report were sent to interested Members of Congress and the complaining parties.

10. Award of contract for Capehart housing: The staff investigated a complaint submitted by a Member, alleging an irregularity in an award for Capehart housing in a certain area to a firm other than the low bidder. The inquiry entailed examination of the structure of bid invitations for Capehart housing. A report of the staff inquiry was submitted to the Member.

11. Alleged lack of competition in fresh milk procurement at certain military installations: Several allegations have been received of an unhealthy condition in procurement practices of this nature. The matter was brought up with the Military Subsistence Supply Agency at the military supply management hearings, which indicated that the responsible officials at higher levels may have insufficient information and control in this area. Further inquiries will be undertaken at selected installations.

12. Employment of retired military officers in defense industry: The staff examined existing statutory provisions relating to this subject and prepared draft legislation proposing one of several alternative approaches to remedial action.

13. Alleged refusal of certain military bases to utilize private contractors for performance of base services: This complaint was investigated, and the staff report on current military policy and practice and planning for future procurement of these services was submitted to the member who first brought the matter to the attention of the subcommittee.

14. Allegation that certain Air Force specifications for liquid penetrant inspection materials are unnecessarily restrictive: Several Members of Congress have expressed an interest in this allegation. The complaint is currently being investigated by the General Accounting Office. The subcommittee staff is following the course of the investigation to determine whether there is any need for further congressional action.

15. Alleged unjustifiable placement of defense contracts with Canadian manufacturers: A report on current practice and policy in this area was submitted to the member who put the matter before the subcommittee.

16. Planned move of a portion of the Navy Purchasing Office from Washington, D.C., to General Stores Supply Office, Philadelphia: The staff investigated complaints received from various manufacturers of hand tools. Several Members of the House and Senate also expressed interest in the matter. The Secretary of Defense was asked to present a justification of this proposed move in terms of economy and efficiency.

17. Problem of effecting settlement between the Navy Department and a small contractor for work previously performed: A report of the full history of the contract and contractor's performance, and a statement as to the Navy's position in the matter were furnished to the member who presented this case to the subcommittee.

18. Alleged bidder collusion on certain hardware bids on military procurement: This complaint is currently under investigation by the staff.

19. Problem of recovery of an overpayment made to a military enlisted man: A verbal report was given to the member who presented the matter to the subcommittee, and a solution was proposed by the staff.

(c) Monetary savings or recoveries as a result of investigation:

1. The savings estimated to have resulted from the investigation into the improper use of engine-test aircraft for administrative purposes by the Air Materiel Command (see I(b)1 above) are $610,500 annually.

2. As ascertained in House Report No. 1112, "Military Air Transportation (Executive Action in Response to Committee Recommendations)" (see I(a)2 above), the Air Force has acted to stabilize procurement of commercial airlift services. Prior practice allowed MATS to procure airlift largely on a 30-day "call" basis, with a highly disruptive effect on the industry. The committee proposed that firm contracts be awarded for 12-month periods, and that more carriers be brought under the firm-contract program. As a result of the Air Force action under this recommendation, testimony was that the aggregate of bid prices was $13.6 million less than the original estimate based on experience under the short-term contracts.

In addition, dollar savings which cannot be estimated will result from procedural reduction in bidding, evaluation, negotiation, and award of contracts under the new system.

3. As ascertained in House Report No. 674, "Military Supply Management (Single Manager Agencies)" (see I(a)3 above), the Department of Defense estimated conservatively the following dollar savings resulting from the establishment of the single manager program:

a. Reduction of 600 personnel at an estimated annual payroll reduction of $3 million.

b. Concentration of stocks in fewer storage locations and reduction of 4 million square feet of storage space.

c. Net savings of $2.3 million from consolidation of inspection and test facilities.

d. A one-time saving of $87 million resulting from drawdown of existing stock to fill current needs, reducing procurement by that amount and creating cash in stock funds for use in other areas.

e. Even greater savings resulting from the elimination of duplicating transportation and storage systems, which cannot be estimated, but which are believed to be the greatest benefit of the program.

While the subcommittee does not claim that this year's investigations produced these savings, the report makes clear the role of this subcommittee and predecessor subcommittees in the formulation and establishment of the single-manager concept and program. Some part of these savings may, therefore, be the direct result of the subcommittee's previous efforts, and more important, they tend to illustrate what the subcommittee hopes to achieve by further studies in the supply management field.

(d) Other remedial measures taken and nonmonetary benefits:

1. "Organization and Management of Missile Programs," House Report No. 1121 (see I(a)1 above).

Although large direct money savings will result from an Army-Air Force merger, as recommended in this report, many nonmonetary benefits also would be realized.

As summarized at page 156 of the subcommittee report:

"With a single military service to develop, build, and deploy ballistic missiles, obvious advantages would seem to accrue:

"The talents and resources of both services can be unified, preserving the best in each system, and eliminating enormous overhead in manpower and facilities.

"Technical capabilities of the Army and the Air Force will be teamed with a diversified missile industry to produce future weapons efficiently at lower cost. The difficult situation confronting the Air Force in respect to Ramo-Wooldridge (STL) will be automatically eliminated.

"The bitter controversy over air defense missions will be ended. Great savings in money will be realized. Service morale and prestige will be heightened. Air defense will get needed emphasis in military planning and budget allocations.

"The military role and interest in space will become clarified. The need for ARPA as intervenor for advanced research in weaponry and space will be eliminated. ARPA functions can be redistributed between NASA and the unified military service, reducing civilian-military competition and duplication in space.

"The interservice conflicts over airlift, tactical support aviation and other matters will be ended, and integrated planning for limited war as well as strategic missions can be effected.

"Problems between the unified military service and the Navy would remain, but these would be of vastly lesser dimension; and ultimately, if weapon logic dictates, a single service in place of three could be organized."

The subcommittee will report future developments at a later date.

2. "Military Air Transportation (Executive Action in Response to Committee Recommendations)," House Report No. 1112 (see I(a)2 above).

The following nonmonetary benefits were achieved in the field of military air transportation:

a. Positive action was taken by the Appropriations Committees of the House and Senate consistent with subcommittee recommendations. For several years there had been a running controversy between the Appropriations Committees and the Department of Defense about the meaning and effect of language in the appropriation bills regarding the procurement of commercial airlift by MATS. The subcommittee pointed out that the intent of Congress could be more clearly manifested, and fruitless controversy avoided, by earmarking specific dollar amounts in the yearly appropriation bills for MATS commercial augmentation.

This step was taken for the first time in the fiscal year 1959 Defense Appropriations Act, which provided that $80 million of the MATS funds for airlift could be spent only by contracting with commercial air carriers.

In the 1960 Defense Appropriations Act, this sum was increased to $85 million. The designation of specific dollar amounts for MATS' commercial augmentation does not represent an added appropriation to MATS, but an allocation of funds within MATS' budget structure.

b. The subcommittee proposed that if the Department of Defense did not develop an effective program for expanding the use of commercial air services, the Congress should adopt appropriate legislation toward this end. Two types of legislative proposals have been made for increasing the civil airline's share of military airlift. One, sponsored by the Civil Aeronautics Board and introduced as S. 1548, would establish a congressional declaration of policy that civil aircraft facilities be used to the maximum extent, subject to considerations of economy and defense. The other, adopting a statutory formula previously applied to the maritime trade and introduced as H.R. 5265, H.R. 5451, and H.R. 5715, would require at least 50 percent of the Government's air transportation requirements to be performed by commercial air carriers.

c. Following the subcommittee's investigations and hearings in military air transportation, the General Accounting Office decided to institute a long-range audit program of MATS, including a review and evaluation of management and operations under the industrial fund concept recently applied to MATS air transport operations.

d. The subcommittee endorsed a basic reevaluation of civil air policy, to put into better perspective the competing roles of military and civil air carriers and to establish guidelines for long-range policy. The last such study was made in 1954 by the Air Coordinating Committee.

Several studies now are planned or underway in this field:

(1) The President has directed the Secretary of Defense to prepare a study of MATS' peacetime and wartime roles.

(2) Apart from the study mentioned in No. (1) above, the Department of Defense initiated a transportation study to examine the effectiveness of MATS and the other single manager transportation agencies, as part of a broad management survey.

(3) The subcommittee has been advised that the President's Air Coordinating Committee is undertaking to update its 1954 study. This study will be made under the auspices of the Department of Commerce with OCDM lending its full support.

(4) The Federal Aviation Agency is reviewing the 1954 report of the Air Coordinating Committee and considers as one of the new agency's major tasks the giving of serious attention to the establishment of national aviation policy.

e. The subcommittee recommended that MATS modernize its air fleet and concentrate on serving specialized military requirements rather than operating an airline competitive with the civil airlines. The Department of Defense has agreed to stabilize the MATS capability for future operations.

f. The subcommittee made several recommendations directed toward strengthening the Civil Reserve Air Fleet program. As a result, the Department of Defense has directed the Air Force to complete approved programs for purchasing and placement of CRAF spares and equipment at the earliest practicable time and to take positive action on standby contracts with the civil air carriers taking part in the CRAF program. The subcommittee has been advised that the job of moving material to all sites for the 1960 CRAF fleet was expected to be finished this year. In addition, a new draft of the proposed standby contracts was submitted to CRAF carriers, a majority of whom accepted it, and negotiations have been planned with 19 individual carriers. Negotiations have been completed with at least one carrier.

g. As a result of the subcommittee's recommendation that MATS change its contracting methods, MATS contracts for airlift by the commercial carriers are now let on a 12-month basis, resulting in some degree, at least, of stabilization of commercial airlift services rendered to MATS.

3. "Military Supply Management (Single Manager Agencies)," House Report No. 674 (see I(a)3 above).

This report provided the first systematic survey of the single manager concept for military supply management for the Congress and the public. It was learned that there has been considerable opposition and competition in carrying the plan into effect, and various recommendations were made which should put more attention on the failures of certain service elements to support Department of Defense policy and work for the most efficient supply systems possible. It was recommended that the single manager plan be given a further and more emphatic trial and strengthening to attempt to gain all possible economies, and that other management plans and modifications or extensions of the single manager plan also be attempted in order to achieve even greater economies. Moreover, the investigations and hearings that were the basis of this report opened up many new questions and problem areas that will undoubtedly be of value to this and other committees in searching for new means of achieving greater economy and efficiency.

The subcommittee believes that renewed consideration is being given to an increased role for the General Services Administration, which could eliminate some existing duplication, and that other steps that will be explored in supply systems consolidation will contribute to true unification of unprofitably duplicating and competing systems among the military services.

4. "Civil Defense in Western Europe and the Soviet Union," House Report No. 800 (see I(a)4 above).

This report provided the Congress and the American people with the first survey of civil defense measures abroad which affect both U.S. planning and global military strategy. This and the other civil defense reports of the subcommittee have been called basic to the study of civil defense by many of the foremost civil defense planners and national and State consulting and policy groups.

(c) Days of hearings held.

A total of 14 days of public hearings were held by the subcommittee. A breakdown of these hearings, as well as other briefings and executive sessions, is as follows:

1. Organization and management of missile programs: February 4, 5, and 6, March 2, 3, 5, 13, and 20, 1959. In addition, briefings and field investigations and executive sessions amounted to 18 days as follows:

November 29, December 5, 1958; January 8–11 and March 21–28, 1959.

2. Military supply management (single manager agencies): May 25 and 26, 1959; executive sessions and briefings, 1.

3. Military Air Transportation (executive action in response to committee recommendations): May 11, 12, 13, and 14, 1959.

II. Legislation

No legislative measures were referred to the subcommittee during the session under review.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislation

(a) Number of each received: 56 reports from the Comptroller General were referred to the subcommittee by Chairman DAWSON.

(b) Action taken:

A report on "Review of Procurement Practices Covering the Award and Administration of Advertised Contracts by the Military Clothing and Textile Supply Agency" (Executive Committee No. 1023) was submitted by the Comptroller General in response to a recommendation in House Report No. 1168, 85th Congress, 1st session. Matters contained in this report were considered in the subcommittee's hearings on Military Supply Management.

Additionally, the following General Accounting Office reports were examined and analyzed by the staff for possible future investigations:

1. Aeronautical spare parts management:

a. Executive Committee No. 120 of January 7, 1959, a report on procurement of Hi-Value aircraft spare parts at the Sacramento Air Material Area.

b. Executive Committee No. 121 of January 7, 1959, report on a review of selected activities of the aviation segment of the Navy supply system.

c. Executive Committee No. 205, a report on a review of activities of the supply department, Naval Air Station, Alameda, Calif.

d. Executive Committee No. 519 of February 5, 1959, a report on review of the aircraft engine overhaul pipeline in the Department of the Navy.

e. Executive Committee No. 1127 of June 23, 1959, a report on review of Air Force requirements and orders for aeronautical spare parts at San Antonio Air Materiel Area.

f. Executive Committee No. 1139 of June 26, 1959, a report on followup review of aeronautical spare parts at Oklahoma City Air Material Area.

2. Ship parts supply:

a. Executive Committee No. 132 of January 7, 1959, a report on review of selected activities of the Ship Parts Control Center, Mechanicsburg, Pa.

b. Executive Committee No. 622 of February 25, 1959, a report on feasibility of consolidating the Submarine Supply Office with the Ship Parts Control Center.

3. Ship repair:

a. Executive Committee No. 134 of January 7, 1959, a report on review of the settlement of shipbuilders' requests for price increases for damages arising from Government delays in furnishing plans and materials (Bureau of Ships).

b. Executive Committee No. 1081 of June 9, 1959, a report on review of ship overhaul contracting activities by the Industrial Managers (Bureau of Ships).

c. Executive Committee No. 1167 of July 6, 1959, a report on review of supply management and production control activities of selected U.S. naval shipyards (Bureau of Ships).

IV. Prior activities of the subcommittee of current or continuing interest

Due to the nature of the investigations undertaken by this subcommittee, all reports are of continuing interest. As indicated above, prior reports contributed to current hearings and reports, and continuous notice is taken of subjects relating to past reports and investigations.

As mentioned above, the earlier reports of the subcommittee in the civil defense area have continued to be basic texts for everyone interested in the field.

The committee's report on Rocket Launcher Procurement (H. Rept. No. 2660, 85th Cong., 2d sess.) has resulted in many improvements in the Armed Services Procurement Regulation. The subcommittee intends to issue a special report on this matter.

Several earlier reports assisted in laying the foundation for the single manager program in the Department of Defense, described (at I(a)3 above) in the military supply management hearings.

The committee's report on U.S. military aid and supply programs in Western Europe (H. Rept. No. 1371, 85th Cong., 2d sess.) also remains a basic text in this field, and the committee will continue to examine military aid programs that are subject to deficiencies similar to those found in this report.

V. Projected program for the remainder of the 86th Congress

The projected program of the subcommittee will include the following subjects:

1. Organization and management of missile programs—followup investigations and collateral inquiries.

2. Special problems in military procurement and supply management.

3. U.S. military aid programs in South America.

4. Surplus property disposal—examination of management program, including centralized surplus information center and disposal offices, administration of program, and new techniques, including closed-circuit TV auctions.

5. Automatic data processing system planning and management—introduction to the problems which have arisen in the installation and use of ADPS. This program is planned for procurement and services of $350 million for the next fiscal year.

6. Military-civilian relationships in air traffic management.

7. Other investigations which appear worthy of special effort.

GOVERNMENT ACTIVITIES SUBCOMMITTEE, HON. JACK BROOKS, CHAIRMAN

I. Investigations

(a) Reports issued:

1. "Disposal problems of Government-owned nickel plant at Nicaro, Cuba" (House Rept. No. 684, 86th Cong., 1st sess., July 17, 1959).

Summary: This report is based on public hearings held April 23 and 24, 1958, and subsequent study in connection with operational and disposal problems of the Government's $85 million nickel plant at Nicaro, Cuba.

The report emphasizes that ore royalties charged the Government by the Freeport Sulphur Co. for ore utilized at the plant are excessive; details the beneficent role of the Government in Freeport's acquisition of the ore bodies; points out that a grossly misleading comparative cost analysis was supplied by General Services Administration officials to the GSA Administrator in connection with Freeport ores and those owned in the same area by the Bethlehem Steel Co., and presents the facts showing that the Freeport firm ordered a private investigation into the personal life of a high GSA official with whom the firm was attempting to negotiate an estimated $50 million contract in connection with the Government's nickel plant.

Appended to the report is a letter dated March 20, 1959, from the GSA Administrator pointing out that, as a direct result of testimony in the subcommittee hearings, GSA made a downward adjustment in the amount of Freeport-owned ore taken for the Nicaro plant. The Administrator said this resulted in a saving for the first 7 months of the 1958–59 fiscal year of $740,540 and added that the saving to the operation and the Government over the remaining 9 years of the ore contract term will be over $2 million a year if the royalty ore requirements are held to this adjusted level and normal operating conditions ensue.

Attention of the Department of Justice was called to appropriate findings and recommendations in the report, those dealing with the Freeport Sulphur Co.'s private investigation into the GSA official's personal life. The specific recommendations read: "2. That the Department of Justice study the transcript of the subcommittee hearings and pertinent supporting matter to determine whether charges of conspiracy to prevent Ira D. Beynon from discharging his duties as an officer of the United States should be initiated against the Freeport Sulphur Co., and its responsible personnel (18 U.S.C. 372)." The Justice Department, in a letter dated August 27, 1959, said it had studied the transcript of the hearings and "concluded that violations of Federal criminal statutes cannot be developed" and that the file is being closed. The Justice Department failed to contact the subcommittee to secure the pertinent supplementary material cited in the recommendation.

Attention of the Internal Revenue Service was called to the following recommendation:

"3. That the Internal Revenue Service consider the reported admission that the Freeport Sulphur Co. deducted as a 'business expense' the cost of its investigation into the private life of Ira D. Beynon, a U.S. Government official with whom it was doing business, and determine whether this was a legitimate deduction."

The U.S. Treasury Department, in a letter dated September 9, 1959, reported that the matter "will be given careful consideration upon examination of the 1957 return (Freeport's)." Earlier years' returns are now being examined and the agency said that until the 1957 return is examined "and the taxpayer has exhausted his rights of appeal, we are unable to give you the information required."

General Services Administration, in a letter dated September 15, 1959, advised the subcommittee that it is "inviting responsible private interests to submit offers for the purchase of the nickel plant at Nicaro, Cuba." The GSA thus is instituting compliance with recommendation No. 7, which reads: "That the Administrator of General Services proceed without undue delay in the efforts to dispose of the nickel plant, but that no offer be accepted which would not assure a reasonable return to the taxpayers."

Additional views were filed.

(b) Investigations not resulting in a formal report:

1. The subcommittee's investigation of the Government's $248 million nickel-cobalt contract obligations at Moa Bay, Cuba, and Braithwaite, La., begun during the 85th Congress, resulted in public hearings May 11 and 12, 1959, and subsequent study. Printed transcripts have been distributed and it is anticipated that a report on this investigation, with appropriate findings and recommendations, will be prepared for presentation early in the next session.

A preliminary review of the facts brought out in the hearings and the subcommittee's continuing study indicates that the Government's contract No. DMP 134 with the Freeport Sulphur Co. is one which needlessly exposes the Government to an unnecessary expenditure of some $200 million for nickel and $48 million for cobalt.

Facts introduced in the hearings point out that the Nation's taxpayers apparently

have a quarter-billion dollar obligation for nickel and cobalt they didn't need when the contract was made and don't need now. Authoritative testimony stressed that the so-called nickel shortage, which brought on the expansion of the stockpile goal and this contract, was not a real one. Accurate evidence shows that the Government, itself, both created the shortage and solved it by simply reducing the amount of nickel diverted to the stockpile, bringing supply and demand for nickel into balance soon after the contract with Freeport was signed in March 1957.

Cobalt was not in short supply when the contract was signed, as decisively shown in the hearings, and the market price, soon after the contract took effect, dropped to $1.75 per pound from the $2 per pound contract price—already indicating a loss of nearly $6 million on cobalt purchases alone. Under the contract with Freeport, which calls for the Government to purchase nickel at the highest market price in the past 28 years—74 cents a pound—evidence shows that each 1-cent drop in the price of nickel would mean an inventory loss of $2,700,000 to the American people.

The hearings reviewed in detail the circumstances under which the Government awarded the contract to Freeport, despite recommendation by qualified Government experts that it accept an offer by a Bethlehem Steel Co. subsidiary, which gave the Government access to the same nickel capacity, and greater reserves, but without the obligation to purchase any nickel or cobalt—and to purchase such nickel as it needed at 10 percent under the market price. Bethlehem desired an Import-Export Bank loan at 4½ percent interest to finance its proposed program, while Freeport, with 80 percent accellerated amortization and a guaranteed market with the Government, planned to finance privately. The Office of Defense Mobilization ruled out Government loans as an incentive, thus eliminating the Bethlehem offer.

Among the other points brought out in the hearings was that the Government built and operated a pilot plant at Braithwaite, La., to test and perfect the Freeport nickel extraction process at a cost of nearly $6 million, placing Freeport in a position to develop its ores at Moa Bay, Cuba. The Braithwaite plant then, virtually intact, was sold to Freeport for approximately $214,000. Many other facets of both DMP 134, the nickel-cobalt contract, and DMP 105, under which the Government built and operated the experimental plant in Louisiana, were examined in the hearings and continue under study.

2. The subcommittee, after an investigation by staff members and a study made at subcommittee request by the General Accounting Office, held a public hearing on August 18, 1959, concerning the conversion of dwelling accommodations to office space in the Arlington Towers project (Fourth Arlington Towers Corp., FHA project No. 000-00085).

Apparent violation of Federal Housing Administration regulations by the Fourth Arlington Towers Corp., the insured mortgagor, was the principal subject of the hearing. Printed transcripts of the hearing will be distributed upon receipt from the Public Printer and it is anticipated that a report, with appropriate findings and recommendations, will be prepared for presentation early in the next session.

Testimony by responsible witnesses and facts presented for the record showed that no authority was granted by the authorized agency, FHA, for the conversion to commercial use of 26 residential units involving approximately 20,000 square feet of space located in the Jefferson Building, Arlington Towers, Arlington, Va., and the subsequent leasing of this space by the General Services Administration for use by the Foreign Service Institute of the Department of State. Satisfactory evidence of disposition of the furniture and equipment formerly in the converted dwelling space was not presented when the subcommittee raised the question at the hearing.

Two violations of the Fourth Arlington Towers Corp. charter were shown unmistakably at the hearing:

(a) The conversion to office space was made without the permission of the FHA.

(b) The GSA entered into a 10-year lease of the space when the charter specifically limits the lease period to 3 years.

The hearing also brought out that FHA had taken no action to correct the cited violations until they were called to agency attention by the subcommittee, although it was shown that the agency already possessed knowledge that the conversion was taking place, contrary to regulations. Conflict appeared in testimony between officials of the GSA and FHA as to whether verbal approval had been given to GSA by FHA to proceed with the lease. Written approval was not granted, according to evidence presented at the hearing.

The FHA, in a letter dated August 24, 1959, supplied supplementary information requested by the subcommittee during the hearing. The agency indicated that it will reach a decision in the matter, in the light of the points brought out in the subcommittee hearing, as expeditiously as possible and will keep the subcommittee informed of its progress.

3. The subcommittee pursued the investigation begun in the 85th Congress by the then authorized subcommittee which had called the attention of the Secretary of the Interior to the fact that its regulations in regard to the adult vocational training of Indians was inconsistent with the law as passed by the Congress. As a result of the followup on the initial investigation, the Department of the Interior sponsored legislation to assist the agency in this program. The legislation (S. 1565) passed the Senate and is pending in the House Committee on Interior and Insular Affairs.

4. Investigated circumstances connected with GSA invitation to bid NY-DOPA 122 (87,000 square feet for designated center city office and storage space in Philadelphia, Pa.), all bids for same having been rejected by GSA on February 2, 1959. The GSA, at subcommittee request, explained in detail the basis for this action and furnished information concerning the bids received and a copy of the invitation for subcommittee evaluation. GSA received bids on the new invitation July 20, 1959, but award date of the contract has been extended indefinitely, with reported bidder assent, in order to permit completion of a GSA study to determine if presently leased space in Philadelphia can accommodate this need. The matter continues under study by the subcommittee.

5. Having reviewed many proposed sales of surplus property resulting from the Veterans' Administration practice of declaring portions of VA hospital grounds excess, the subcommittee made an overall study of such sales and held conferences with VA officials on the matter. The VA reports it has completed its program of screening its facilities for excess property and does not anticipate further reducing its standards for hospital land areas.

6. Investigated circumstances surrounding leasing of 146,000 square feet in the new Universal Building in Washington, D.C., by GSA for occupancy by the Civil Aeronautics Board. Study indicated the lease was handled according to regulations and that the space leased was most suited to the need and that GSA had secured a 30-cent per square foot reduction from the amount bid. GSA officials pointed out that the successful bidder (Cafritz) is one of the few builders in the area who will complete an office building without requiring that space be leased in advance of completion. The officials pointed out that GSA, in its normal function of meeting space requirements, has to provide space on a fiscal year basis and has no authority to contract for lease space 2 years in advance of completion, which puts the agency in the position of having to take space available when the need arises. GSA officers said when requirements are known sufficiently in advance and an agency is willing to wait, GSA will draw up specifications to meet the agency's particular need and give consideration to new construction.

7. Investigated operation of the GSA's Board of Review, with emphasis on the Board's workload and length of time required to render a decision on cases heard. The problem originally came to subcommittee attention in investigation of the case of a single individual, who did not receive a decision until more than a year after his case was heard by the Board. The subcommittee requested a full report from GSA on the Board's workload and other cases on which decisions were long delayed. The GSA Administrator furnished the subcommittee a detailed report, indicating numerous delayed decisions, and said steps were being taken immediately to remedy the situation by assigning additional personnel to the Board. The matter has continued under subcommittee study, and consideration is being given to preparation of an appropriate report for presentation early in the next session.

8. Investigated contract between the Government and Union Oil Co. and Ohio Oil Co. for oil-gas development in the Knik Arm area of Alaska, determining that the contract qualifies under law for exemption from the Department of the Interior's customary maximum oil-gas lease acreage limitations. No exclusive rights are granted by a development contract and various commitments represent guarantees of the contractor's intent to actually explore and drill on the area covered by the contract. In the course of the investigation, Interior officials said that, in effect, the contractor aids the Government, which now owns about 99 percent of the vast land surface in Alaska, in adding to the still limited information available on the new State's geology.

9. As part of continuing evaluation of air safety procedures and air traffic control under the Federal Aviation Agency, the subcommittee inquired into the agency's investigation of the two Capital Airlines accidents which occurred May 12. Held conferences with FAA investigators and attended CAB hearings in Baltimore, Md., on July 8, 9, and 10. Will evaluate Board's findings upon their release.

10. Investigated contract awards by General Services Administration for leasing of Air Route Traffic Control Centers to be constructed at Hampton, Ga., and Oberlin, Ohio, in connection with protests against the awards made by McCloskey & Co. and J. H. Pomeroy & Co., Inc. The Comptroller General was requested to comment and, after his review of an administrative report by the GSA, he explained in detail why there was no proper basis for action in the matter.

11. Investigated practices of the Civil Service Commission in connection with exceptions made in use of the Federal Register for hearing examiners. Studied opinions submitted at subcommittee request by concerned legal groups and a report submitted by the Commission, and prepared new inquiries with the objective of a possible public hearing on the matter when the investigation is completed.

12. Investigated Housing and Home Finance Agency, particularly the Public Housing Administration and the local authorities with respect to economy and effi-

ciency of operation in the Government interest.

13. Investigated reported employee morale problems in GSA's Transportation and Public Utilities Service and studied details of the proposed personnel changes in the planned reorganization of the service. The reorganization plan is being put into effect, and the matter continues under subcommittee study.

14. Investigated rejection by GSA of bids for approximately 100,000 square feet of space in Detroit, Mich., including clinical space, to be occupied by the Veterans' Administration. Apparent cause for the high bids was the request for clinical space in the same building where other offices were located, GSA officials explained. Clinical space requires special wiring, equipment, plumbing, etc., they pointed out. GSA received permission to readvertise, splitting the clinical space into a separate offering. Bids were opened July 22, 1959, and GSA has not completed its evaluation of them. The subcommittee is continuing its investigation.

15. Investigated organization of the new Office of Saline Water, Department of the Interior, evaluating personnel assignments and plans to carry out provisions of the legislation passed in the 85th Congress.

16. Electrical power deficiencies in St. Thomas, V.I., were brought to subcommittee attention. Subsequent investigation brought assurance from the Department of the Interior that immediate steps were being taken to relieve the power situation on St. Thomas by installation of a new 2,000-kilowatt generator and rebuilt 500-kilowatt emergency generator. The Department said when these facilities are put in use it will not be necessary to operate the older equipment as much as in the past, and service outages should be almost eliminated.

(c) Monetary savings or recoveries as a result of investigation:

1. Appended to the subcommittee's report, ninth report of the Committee on Government Operations, titled "Disposal Problems of Government-owned Nickel Plant at Nicaro, Cuba" (H. Rept. No. 684, 86th Cong., 1st sess., July 17, 1959), is a letter dated March 20, 1959, from the Administrator of General Services pointing out that, as a direct result of testimony in the subcommittee hearings, GSA has made a money-saving downward adjustment in the amount of privately owned ore taken for the Nicaro plant. The hearings were part of an extended investigation of the matter.

The GSA Administrator said the result was a saving for the first 7 months of the 1958–59 fiscal year of $740,540 and added that the saving to the operation and the Government over the remaining 9 years of the ore contract will be over $2 million a year if the royalty ore requirements are held to this adjusted level and normal operating conditions ensue.

(NOTE.—Other money savings appear in sec. III and in sec. IV.)

(d) Other remedial measures taken and nonmonetary benefits:

1. The subcommittee established conformity of various agencies, including the Department of the Army, in submission of explanatory statements in connection with proposed negotiated sales of surplus property, thus enhancing the efficiency of administration of recently enacted provisions in the Federal Property and Administrative Services Act of 1949, as amended.

2. Additional personnel were assigned to the GSA Board of Review, as a result of subcommittee study, to lighten the Board's workload and enable it to render decisions in a shorter time than in the recent past.

3. A new generator and a rebuilt generator were to be put into immediate use in St. Thomas, V.I., by the Department of the Interior, following a subcommittee investigation, to eliminate excessive electrical service outages.

4. The Department of the Interior sponsored legislation (S. 1565) to correct inconsistencies in its regulations with regard to the adult vocational training of Indians, following subcommittee investigation.

(e) Days of hearings held:

Three days.

II. Legislation

(a) Number of measures referred to the subcommittee:

During this session of Congress the subcommittee has had a total of 31 measures referred to it for consideration. These measures include 28 House bills and 3 Senate bills.

(b) Reports issued:

Reports of the 86th Congress, 1st session, which accompanied proposed legislation reported from the subcommittee are as follows:

1. Report No. 368, dated June 1, 1959 to accompany S. 900 reported in lieu of H.R. 3152.

Summary: The purpose of the bill was to amend section 204 (b) of the Federal Property and Administrative Services Act of 1949 to extend the authority of the Administrator of General Services to pay direct expenses in connection with the utilization of excess real property and related personalty, and for other purposes.

S. 900 passed the House with amendments on June 1, 1959, and the Senate agreed to House amendments August 20. Approved September 1, 1959, as Public Law 86–215.

2. Report No. 290, dated April 23, 1959, to accompany H.R. 3153. (S. 902 substituted).

Summary: The purpose of the bill was to provide for the receipt and disbursement of funds, and for continuation of accounts when there is a vacancy in the office of the disbursing officer for the Government Printing Office, and for other purposes.

S. 902 passed the Senate April 10, 1959, and was referred to Government Operations and reported out April 23, as a substitute for H.R. 3153. Passed the House May 18 and became Public Law 86–31 on May 26, 1959.

3. Report No. 890, dated August 12, 1959, to accompany H.R. 2386 (S. 47).

Summary: The purpose of the bill is to direct the Administrator of General Services to convey to the city of Mobile, Ala., all the right, title, and interest of the United States in and to certain land.

Bill passed the House August 31, 1959 and passed Senate September 9, 1959.

In addition to above, staff study was made of a number of bills, including H.R. 5993, H.R. 6011, and H.R. 6669. These bills all had the same purpose, i.e., to permit certain real property heretofore conveyed to the board of supervisors of Louisiana State University and Agricultural and Mechanical College to be used for general educational purposes. It was concluded the wording in H.R. 6669 was preferable, and this bill was passed out by another committee and became law.

Study was made of H.R. 5456, the purpose of which was to provide for the relocation of the National Training School for Boys, and for other purposes. While its purpose was commendable, the bill as drafted cut across jurisdictional lines of three committees, and it was recommended to the Justice Department that they redraft the bill to avoid this conflict. No action was taken in the subcommittee on the original bill and the redraft had not reached it when Congress adjourned.

(c) Days of hearings:

Hearings were held on legislative matters on 5 separate days.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters which are not legislation

(a) Number of each received:

1. The subcommittee has received a total of 68 explanatory statements of proposed negotiated disposals of Government surplus property for consideration during the 1st session of the 86th Congress. The statements are submitted to the committee in accordance with provisions of section 203(e)(6) of the Federal Property and Administrative Services Act of 1949, as amended, and each has been thoroughly reviewed. The original acquisition cost of the property proposed for sale amounted to $34,629,944 and had a current appraised value of $7,087,713, while the proposed disposal price was $6,895,090. Two of the explanatory statements concerned leasing of Government property at a rental of $12,960 for a 1-year period prior to sale.

Fifty-eight explanatory statements pertained to the disposal of real property having an original acquisition cost of $32,685,707. This same real property had a current appraised value of $6,400,381 and the proposed disposal price was $6,240,471.

Eight of the proposed sales were of personal property which had an acquisition cost of $1,944,237, and a current appraised value of $687,332. This property was being sold for $654,619.

2. GAO audit reports, 32.

(b) Action taken:

A. Negotiated sales:

1. In 26 instances of the 68 explanatory statements, more information was felt necessary to evaluate the proposal, and the responsible Government officials accordingly were interviewed. The disposal agency's files also were examined in those cases, and particular attention was given to a study of the appraisal upon which the sales price was based. In five cases it was determined there was sufficient cause to warrant a personal inspection of the property being sold to properly evaluate the material made available to the committee. In those cases an investigation of the circumstances surrounding the negotiation was undertaken which included interviewing of the prospective purchaser and other interested parties, as well as a study of the real estate market in the locale of the subject property. Consultation with local real estate appraisers and review of real estate sales in local land title and abstract companies was necessarily included. These five cases were:

(a) Proposed sale of the former Marine Corps warehouse in Philadelphia, Pa., by the Department of the Navy, to the city of Philadelphia. The building had been appraised at $625,000 in 1957 and at $390,000 in 1958, and was to be sold for $100,000. The property was inspected and Navy and city officials interviewed. The warehouse had been constructed on city-owned land which was leased to the Government. There was no alternative to sell other than to the city, as the 10-year, nonrenewable lease had expired prior to submission of the disposal plan to Congress. The Government's rights were limited to removal and off-site use or demolition and salvage of resultant material which would have been for less than the $100,000 offer from the city. Efforts made by the subcommittee to encourage continued Government use of the warehouse were to no avail, and the city considered its offer of $100,000 the maximum it would pay.

(b) Proposed sale of the Naval Industrial Reserve Ordnance Plant, DOD No. 361, located at Nicetown (Philadelphia), Pa., by the Department of the Navy to Midvale-Heppenstall Co., Inc. The facilities, constructed on company-owned land, had an acquisition cost of $10,867,661 in 1941, and were appraised at $443,000. The proposed sale price was $389,500, plus a release of the Government's contract obligation to remove the facilities and restore the premises at Government expense, the cost of which was estimated to be $434,000. After personal inspection of the property and interviews with company officials, the Administrator of GSA was asked to make a technical study of the appraisal and the proposed terms of the sale

and furnish the subcommittee with a report of his findings. The Administrator's report concluded that the findings in the appraisal were considered sound and that "in light of the contractural relationship, it is our view that the offer of Midvale is fair and reasonable and should be accepted." The subcommittee, therefore, advised the Department of the Navy that it would have no further recommendations regarding the proposed sale and they could proceed with disposal plans.

(c) Proposed negotiated sale by GSA of a portion of the Soldiers' Home Reservation in the District of Columbia to the National Shrine of the Immaculate Conception for $85,000. The property was inspected and terms of the negotiation and the appraisal upon which the price was based were thoroughly reviewed. It was concluded, that because of the restricted use to which the property could be placed, the sale should be consummated.

(d) Proposed sale by the GSA of a portion of the Camp Adair Military Reservation in Benton County, Oreg., to the Plywood Products Corp. The property to be sold consisted of 123 acres improved with several frame buildings considered to have only salvage value. A recent appraisal listed the value of the improvements at $7,000, and the land at $23,400 for a total value of $30,400. GSA proposed to sell the property for $35,000.

GSA central and regional office files were reviewed and the appraisal thoroughly studied. Local real estate appraisers were consulted, and tenants occupying certain of the buildings were interviewed with respect to their future interest in the property, and conferences were held with the prospective purchaser. It was concluded that the sales price was less than its fair value and would return a greater amount to the Government if exposed for sale through competitive bidding. It was recognized, however, that in the interest of equity and a moral obligation on the Government's behalf, that that portion under lease to the Plywood Products Corp., and on which they have made substantial improvements, should be sold by negotiation. The value of that portion was determined to be $35,000. The remaining portion was believed to have a value of $15,000.

It was, therefore, recommended to the Administrator of GSA that the negotiated sale should not be consummated for less than $50,000, and that if the entire portion of 123 acres should be sold by negotiation, then provision be made for Plywood Products to continue the leases with other tenants on the same terms as presently included in the Government lease. This latter provision is satisfactory to the other tenants. The net savings to the Government in this instance will be $15,000.

(e) The proposed sale of the Naval Supply Depot, Spokane (Velox), Wash., by the GSA to the D–J Co. of Seattle, Wash., for $2,100,000. The personnel of the central and regional offices of GSA were interviewed and a personal inspection made of the property. Information was developed relating to the possibility of a higher offer for the property than the one accepted by GSA. The subcommittee, therefore, recommended to GSA on September 21, 1959, that consummation of the sale to the D–J Co. be rejected and that a new offer be considered which will result in savings of approximately $450,000. The new offer now has been received by the GSA.

B. GAO audit reports:

1. Review of financing and construction of post office and courthouse public building project at Rock Island, Ill., under the lease-purchase program, GSA, June 1958. Upon recommendation of the subcommittee and with the cooperation of the Appropriations Committee, an authorization to use funds from savings on new construction projects was made to enable GSA to pay off the Government's lease-purchase obligation on this project. This action will eliminate the necessity of the payment of interest and real estate taxes, with a resulting saving to the Government of approximately $1,800,000.

2. Audit of Washington National Airport, CAA, Department of Commerce (succeeded by FAA), 1956–58. FAA queried by letter as to corrective action taken. Agency reply shows substantial compliance with GAO recommendations.

3. Audit of abaca fiber program, GSA, 1958. In replying to subcommittee letter, agency states that it is now complying with GAO recommendations.

4. Audit of General Supply Fund, GSA, 1958. Agency has been requested to notify subcommittee of corrective action it is taking in compliance with GAO recommendations.

5. Audit of Reconstruction Finance Corporation Liquidation Fund, GSA, 1958. Agency reply to subcommittee inquiry shows that the corrective action taken is satisfactory.

6. Review of selected activities of the government of the Virgin Islands, 1958. Agency concurs and states that it will comply with GAO recommendations.

7. The following, containing similar findings and recommendations, are under consideration as a group and the Housing and Home Finance Agency has been requested to report corrective action taken in each instance in accordance with GAO recommendations:

(a) Municipal Housing Authority of Buffalo, N.Y., 1959.

(b) Housing Authority of New Orleans, La., 1959.

(c) Housing Authority of Philadelphia, Pa., 1959.

(d) Housing Authority of St. Louis, Mo., 1957.

8. The reports below, are similar in nature, and inquiry has been made concerning the corrective action taken in each case:

(a) Audit of District of Columbia Redevelopment Land Agency, 1957 and 1958. Agency reply shows compliance with GAO recommendations.

(b) Audit of National Capital Housing Authority, 1954–58. No comments have been received thus far from the agency.

(c) Review of Puerto Rico Insuring Office, FHA, 1958. Agency reply is under subcommittee study to determine the need for possible further corrective action by the agency.

(d) Audit of Federal Housing Administration, 1954–57. Corrective legislation recommended in the GAO audit is under study in the Housing Subcommittee, House Banking and Currency Committee.

(e) Audit of Public Housing Administration, 1957. Examining need for legislation recommended by GAO.

(f) Review of Home Mortgage Section, Mortgage Insurance Division, FHA, 1958. Awaiting agency reply to subcommittee query.

(g) Review of slum clearance and urban renewal activities in Puerto Rico, HHFA, 1958. Detailed agency reply is under further study.

9. The following reports are under staff study:

(a) Norfolk Redevelopment and Housing Authority, Norfolk, Va., 1959.

(b) Housing Authority of the City and County of San Francisco, Calif., 1959.

(c) Audit of Federal National Mortgage Association, 1958.

(d) Audit of Bureau of Public Roads, Department of Commerce, 1957 and 1958.

10. After detailed analysis and review, no action was deemed necessary on the following GAO reports:

(a) Review of loan guarantee program, CAB, 1958.

(b) Audit of Government Printing Office, 1956.

(c) Audit of Federal Housing Administration, 1958.

(d) Audit of Public Housing Administration, 1958.

(e) Housing Authority of Boston, Mass., 1959.

(f) Detroit Housing Commission, Detroit, Mich., 1959.

(g) Louisville Municipal Housing Commission, Louisville, Ky., 1959.

(h) Alaska International Rail and Highway Commission, from July 30, 1957, to June 30, 1959.

(i) Audit of Virgin Islands Corporation, 1956.

(j) Audit of Veterans Canteen Service, VA, 1958.

(k) Investigation of alleged procurement procedures, St. Elizabeths Hospital, HEW, 1958. (Referred from the Intergovernmental Relations Subcommittee.)

IV. Prior activities of the subcommittee of current or continuing interest

(a) Cumulative money savings or recoveries:

1. The subcommittee's investigation and hearings in 1958, resulting in its report of July 17, 1959, titled "Disposal Problems of Government-Owned Nickel Plant at Nicaro, Cuba" (H. Rept. No. 684, 86th Cong., 1st sess.), have resulted in direct savings in operation of the plant. Based on authoritative figures, a total of approximately $2,500,000 should be saved on ore costs for the nickel plant for the 1958–59 calendar year. The downward adjustment in the amount of privately owned ore taken for the Nicaro plant was made as a direct result of testimony in the subcommittee hearings, resulting in the large savings.

2. The subcommittee, during the 85th Congress, blocked the proposed negotiated sale of the Naval Industrial Reserve Shipyard at Newport News, Va., because the price of $3,510,000 appeared grossly out of proportion to the true fair market value of the $20,391,000 facility. GSA, at the subcommittee request, withdrew its delegation of authority to the Secretary of Defense to dispose of the facility and made a new appraisal. The new appraisal has been evaluated by GSA during the 1st session, 86th Congress, and the subcommittee has continued liaison with the agency as negotiations to sell the plant at the new price were initiated. As a result of the subcommittee's insistence on the true fair market value, it is now estimated that the shipyard will be sold for a price at least $2 million more than the one originally proposed, and may exceed that estimation by a considerable amount.

3. The subcommittee initiated study during the 85th Congress of a GAO review of financing and construction of post office and courthouse public building project at Rock Island, Ill., under the lease-purchase program. After study upon recommendation of the subcommittee and with the cooperation of the Appropriations Committee, authorization was made in the 1st session, 86th Congress, for GSA to use funds from savings on new construction projects to pay off the Government's lease-purchase obligation on this project. This action will eliminate the necessity of paying interest and real estate taxes over the canceled period, resulting in a direct saving to the Government of approximately $1,800,000.

4. On August 18, 1958, the subcommittee received an explanatory statement from the GSA proposing to sell a surplus 309-acre portion of the Veterans' Administration Hospital Reservation in St. Cloud, Minn., to the city of St. Cloud for $24,000. The city was to retain a portion of this 209-acre tract for park purposes and turn the balance over to St. Cloud Opportunities, Inc., a quasi-public

organization designed to improve employment opportunities in St. Cloud. This organization was financing the purchase through negotiation and intended to use the property for industrial purposes.

The subcommittee, after a review of the appraisal and contacts with individuals, concluded in a letter to GSA, "Since the city of St. Cloud plans to convey most of the acreage for the purpose of commercial development, it is recommended that its sale be by advertised, competitive bidding rather than by negotiation. It is understood that the portion of the acreage with use restrictions was intended for park and recreational purposes; that portion can still be acquired by the city for 50 percent of its fair market value."

The St. Cloud Opportunities, Inc., was not prohibited from bidding competitively by its charter.

The GSA transferred 27.4 acres of the property to the city for park and recreation purposes for $932.50, which represented 50 percent of its value. The remaining 182.31 acres which under terms of the proposed negotiated sale would have returned $22,135 was disposed of in accordance with the subcommittee's recomendation. On August 27, 1959, the 182.31 acres were offered at public auction and a high bid of $36,463 was received from the St. Cloud Opportunities, Inc., an increase of more than 50 percent and a cash return of more than $13,000 above the terms proposed in the negotiated sale.

(b) Other affirmative benefits:

1. The Veterans' Administration reported the adoption of changes in its burial procedures, recommended by the subcommitee, designed to expedite arrangements for interment in national cemeteries. The changes urged by the subcommitee were adopted and in Circular 10–240, December 17, 1958, the Veterans' Administration set forth the revised agrement reached with the Quartermaster General, which is now in effect. The new procedure is correcting situations, such as the subcommittee pointed out to the VA, in which interment was delayed 5 days over a holiday period because of failure to use commercial telegraph or telephone communications, working a hardship on the family of the deceased.

V. Projected program for the remainder of the 86th Congress

1. Examination of all negotiated sales and leases of Government property referred to the subcommittee.

2. Examine and take necessary action on all GAO reports referred to the subcommittee.

3. Study developments in the operation and proposed disposal of the Government's nickel plant at Nicaro, Cuba. Continue study of production figures and resulting savings. Observe negotiations to sell the plant under the invitation to bid announced September 15, 1959, by the GSA Administrator, and prepare to review final terms.

4. Study transcript of public hearings of May 11 and 12 and supplementary material with the objective of preparing a report to be submitted early in the next session on the nickel-cobalt obligations of the U.S. Government.

5. Study transcript of public hearings of August 18, 1959, and supplementary material with the objective of preparing a report to be submitted early in the next session on the unauthorized conversion of dwelling accommodations to office space in the Arlington Towers project (Fourth Arlington Towers Corp., FHA project No. 000-00085). Maintain liaison with Federal Housing Administration in regard to corrective action to be taken as a result of facts established in the hearing. Distribute printed transcripts of hearing upon receipt from Public Printer.

6. Study developments in connection with the proposed sale of communications facilities at the Newport (R.I.) Naval Base and similar Department of Defense proposals.

7. Study negotiations of the General Services Administration to sell, under a new appraisal price requested by the subcommittee, the $20 million Naval Industrial Reserve Shipyard at Newport News, Va.

8. Take action on inquiries and complaints within jurisdiction which are filed with the subcommittee.

9. Develop study of GAO reports concerning FHA sale of residential housing in Richland, Wash., and Oak Ridge, Tenn.

10. Observe action taken by General Services Administration to utilize the funds from savings on new construction projects, recommended by the subcommitee and authorized with the cooperation of the Appropriations Committee, to pay off the Government's lease-purchase obligation on the post office and courthouse public building project at Rock Island, Ill., in order to save the Government approximately $1,800,000 by eliminating the payment of interest and real estate taxes for the cancelled period.

11. Continue study of activities of the Housing and Home Finance Agency, particularly the Public Housing Administration and the local authorities, with respect to the economy and efficiency of their operation in the national interest.

12. Further examine steps taken by the General Services Administration to alleviate the heavy workload of its Board of Review, which had caused many decisions to be delayed excessively. Review details with the objective of preparing a report on the matter to be submitted early in the next session.

13. Examine results of study being made by General Services Administration to determine if presently leased space in Philadelphia, Pa., will accommodate the need outlined originally in GSA invitation to bid No. NY–DOPA 122, all bids for the same having been rejected by GSA on February 2, 1959. Award of the contract on a new invitation of July 20, 1959, has been extended by GSA to permit completion of the study. Review details of contract awarded.

14. Develop further material and continue study of report by Civil Service Commission in connection with subcommittee query regarding exceptions made in use of the Federal Register for hearing examiners. Evaluate material developed with the prospect of conducting a public hearing in the matter.

15. Continue study of Federal Aviation Agency problems in connection with air safety procedures and air traffic control. Evaluate CAB findings in connection with two crashes which occurred May 12.

16. Continue study relating to the operation and reorganization plans being put into practice in the GSA's Transportation and Public Utilities Service.

17. Continue examination of proposed lease of office space, including clinical space, for the Veterans' Administration in Detroit, Mich. Evaluate report to be submitted by GSA regional office.

18. Review negotiated sales of surplus property, considered by the subcommittee in recent sessions, which involved sale of "scrambled" facilities or of Government plants built upon property belonging to another party, with a view to preparing a special study of the overall situation and its heavy cost to the taxpayers.

INTERGOVERNMENTAL RELATIONS SUBCOMMITTEE, HON. L. H. FOUNTAIN, CHAIRMAN

I. Investigations

(a) Reports issued: No formal investigative reports were issued during 1959. In a letter sent to the Department of Agriculture on September 12, the subcommittee made a number of informal recommendations concerning policies and procedures of the Department in financing sales of surplus agricultural commodities for foreign currencies. Information disclosed by subcommittee investigations was also called to the attention of appropriate officials of the Departments or agencies concerned in a number of other instances.

(b) Investigations not resulting in a formal report:

Activities of the Commodity Credit Corporation

The subcommittee's major investigative effort has been devoted to a comprehensive inquiry into activities of the Commodity Credit Corporation. Particular subjects being examined by the subcommittee include the following:

Resale to U.S. military forces of agricultural commodities sold or subsidized by CCC.

Sales for foreign currency of surplus agricultural commodities sold or subsidized by CCC. Some foreign currency sales have been financed by CCC; others by the International Cooperation Administration. Particular attention is being given to the possibility of cotton sold by CCC being financed for export by CCC on the basis of a higher quality.

Storage of CCC-owned commodities, particularly where such commodities are stored in present or former Government facilities.

Commuter Transportation in Metropolitan Areas, With Particular Reference to the New York-New Jersey Area

The staff made a preliminary study to determine the appropriateness of subcommittee hearings and further investigation of this problem. This study was undertaken because of increasing concern for the ability of existing mass transportation facilities to serve the needs of commuters in our large metropolitan areas and the further deterioration of commuter rail and ferry service, especially in the New York metropolitan area, due to the enactment by the Congress of the Transportation Act of 1958.

Health Research Activities of the National Institutes of Health, U.S. Public Health Service

Considerable staff time has been devoted this year to a study of the economy and efficiency of the numerous extramural health research programs administered by the National Institutes of Health. With larger amounts being appropriated each year by the Congress for an expanded medical research effort to conquer the major killing and disabling diseases. It becomes increasingly important to review the administration of these programs. Attention is being given to the NIH grant and contract arrangements for health research.

Investigation of Conflict of Interests in Department of Health, Education, and Welfare

The staff has investigated a possible conflict of interests on the part of an official of the Department of Health, Education, and Welfare. Further information has been requested from the Department to provide a basis for subcommittee action.

(c) Monetary savings or recoveries as a result of investigation:

Foreign Currency Transactions

Both the Department of Agriculture and the International Cooperation Administration are studying a number of foreign currency transactions in order to determine whether claims should be filed. The ICA has already filed a claim for approximately $100,000 as a result of one transaction brought to its attention by the subcommittee. The subcommittee is currently studying a number of CCC financed cotton transactions in order to ascertain whether excessive payments have been made and, if so, whether such payments can be recovered.

Resale of CCC Commodities to U.S. Armed Forces

As a result of disclosures at subcommittee hearings, the Army obtained new contracts

for furnishing of recombined milk for troops in Japan, Okinawa, and Guam which are expected to save about a million dollars annually.

Approximately $50,000 was refunded to the Department of Agriculture by a dairy firm which had purchased a substantial quantity of nonfat dry milk from CCC for less than 10 cents per pound and resold it to the U.S. Armed Forces for more than 30 cents per pound.

(d) Other remedial measures taken and nonmonetary benefits:

The armed services and the Department of Agriculture have taken steps to coordinate their activities with a view to preventing windfall profits through resale to the Armed Forces of agricultural commodities sold or subsidized by the Commodity Credit Corporation.

The Department of Agriculture and the International Cooperation Administration have taken or are taking certain steps to strengthen their policies and procedures with respect to financing sales of agricultural commodities for foreign currencies.

(e) Days of hearings held: 7 days of investigative hearings were held during the 1st session of the 86th Congress.

II. Legislation

(a) Number of measures referred to the subcommittee: Four bills were referred to the subcommittee: H.R. 656, H.R. 6904, H.R. 6905, and H.R. 8478.

(b) Reports issued:

Report No. 742, "Establishing an Advisory Commission on Intergovernmental Relations," was issued by the committee on July 31, 1959. This report summarizes the purpose and background of the legislation and the testimony presented in hearings to substantiate the need for an advisory commission. It also outlines the committee's concept of the nature of the Commission, the cooperation expected from the States, and the several amendments adopted by the committee.

H.R. 6904 was passed by the House under suspension of the rules on August 17, 1959. The bill passed the Senate, amended, on September 10. The conference report was agreed to by both House and Senate on September 12, and the bill was signed by the President on September 24.

(c) Days of hearings: Four days of hearings were held jointly with the Senate Committee on Government Operations on the identical bills H.R. 6904, H.R. 6905, and S. 2026.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislation

Eleven formal reports to the Congress by the General Accounting Office were referred to the subcommittee during the first session of the 86th Congress and have been or are being studied. In addition, the subcommittee has requested and received from the GAO a number of reports made to executive agencies as well as special studies made for the subcommittee and detailed workpapers on which some of the reports to Congress are based. These documents have been or are being studied by the subcommittee.

IV. Prior activities of the subcommittee of current or continuing interest

(a) Cumulative money savings or recoveries.

Purchase Resale Transactions

As a result of the subcommittee' investigation of cheese and butter purchase-resale transactions, the Government has now recovered more than $2 million, and it appears likely that further recoveries will be made.

Polio Vaccine

The five manufacturers of polio vaccine were indicted for price fixing after a subcommittee investigation. It is expected that trial of these cases will begin on October 13 in Trenton, N.J. The Justice Department is also considering the possibility of civil suits to recover damages for overcharges on Government vaccine purchases.

School Lunch Program

The Justice Department is presently considering income tax cases involving possible civil and criminal liability in connection with transactions related to distribution of surplus commodities to schools and institutions in Illinois.

Transportation of Household Effects

At the subcommittee's request, the Bureau of the Budget conducted a study of transportation of household effects of Government employees. This study indicated a possibility of substantial savings through contracting for movement of household effects on a competitive basis, rather than reimbursing each individual employee at a standard rate. The Budget Bureau is encouraging executive agencies to take advantage of such savings wherever possible.

(b) Other affirmative benefits: No items.

V. Projected program for remainder of the 86th Congress

During the remainder of the 86th Congress, the subcommittee will continue its surveillance of the operations of departments and agencies under its jurisdiction. Particular attention will be given to:

Continuation of the subcommittee's investigation of the Commodity Credit Corporation, including preparation of a comprehensive report setting forth the subcommittee's findings and recommendations.

Continuing and intensifying the subcommittee's examination of the various health research programs being administered by the National Institutes of Health with view to encouraging the maximum possible economy and efficiency in this important field.

Studying operations of the Bureau of Public Roads.

Observing activities of the Advisory Commission on Intergovernmental Relations with a view to recommending any legislative changes needed to make this body more effective.

FOREIGN OPERATIONS AND MONETARY AFFAIRS SUBCOMMITTEE, HON. PORTER HARDY, JR., CHAIRMAN

I. Investigations

(a) Reports issued:

1. House Report No. 546, 86th Congress, "U.S. Aid Operations in Laos," issued June 15, 1959.

This report resulted from a comprehensive study of the U.S. aid program in the southeast Asian kingdom of Laos. The purposes of the study were to determine:

a. How and by whom the decision was made as to the number and type of military forces (i.e., "force objectives") the United States would support in Laos;

b. The relationship between the force objectives and the level of aid (i.e., the overall dollar amounts) set for Laos; and

c. Whether the U.S. aid program in Laos was being administered efficiently, economically, and according to law.

The report concluded principally that:

a. In the case of Laos, the determination of force objectives was a political decision made by the Department of State, despite contrary recommendations by the Joint Chiefs of Staff;

b. The high level of economic aid necessary to support such a force had been beyond the capacity of Laos' meager economy to absorb. Inflation and profiteering followed and hampered the objectives of the mutual security program;

c. The administration of the U.S. aid program in Laos was inadequate in effectiveness, scope, and supervision; in fact, in a number of demonstrated instances it was tainted with corruption;

d. ICA and the Department of State have sought to excuse deficiencies and maladministration in the aid program in Laos with the assertion that our aid program, however poorly administered, has saved Laos from going Communist; and

e. On the evidence, a lesser sum of money more efficiently administered would probably have been more effective in achieving economic and political stability in Laos and in increasing its capacity to reject Communist military aggression or political subversion.

The committee recommended, inter alia, that:

a. The Congress should be advised fully as to the extent to which the Department of State participates in determinations (such as those concerning force objectives) which are generally regarded as military in nature;

b. The use of cash grants to provide mutual security assistance should be minimized in favor of aid in kind;

c. Levels of aid should not be set so high that they exceed the absorptive capacity of the local economy.

d. ICA should improve its control mechanisms so that its procedures and standards are complied with, and opportunities for corruption are minimized;

e. State, Defense and ICA should reexamine their roles with respect to Laos in the light of the basic objectives of the mutual security program and the needs of the country; and

f. Congress should amend the Mutual Security Act to improve procedures and control mechanisms in the mutual security program and to provide Congress with better information respecting the determination of individual country levels of aid.

(b) Investigations not resulting in a formal report:

1. Federal agencies having international lending functions: The Export-Import Bank, the Development Loan Fund, and the International Cooperation Administration provide loans and loan guarantees for the financing of economic enterprises located in foreign countries. With respect to such functions, each agency has somewhat different purposes, authorities and methods of operation. In addition to these U.S. agencies, there are a number of international agencies having similar financing functions, such as the International Bank for Reconstruction and Development (World Bank), the International Finance Corporation, and the recently established Inter-American Development Bank, in which U.S. participation was authorized by the act of August 7, 1959.

As part of a more general study of the U.S. agencies, including their relationships to one another and to the international agencies, the subcommittee has begun preliminary studies of the operations of the Development Loan Fund and the Export-Import Bank of Washington.

a. Development Loan Fund: The subcommittee held a series of hearings to discuss with DLF officials procedures and practices in the conduct of DLF's operations.

The subcommittee staff has undertaken preliminary studies of the operations of the Development Loan Fund, including extensive examination of certain DLF files. In connection with a number of specific issues revealed or confirmed by documents, the staff prepared eight narrative reports for the purpose of briefing the subcommittee members prior to the conduct of hearings on these questions while abroad.

Much time and effort of the subcommittee and its staff were devoted to clearing (in major part successfully) obstacles placed in the path of the subcommittee's access to documents in DFL's official files. These obstacles had been raised both in the name of the executive privilege doctrine currently

being invoked by the executive branch and in the name of the so-called third-agency rule (whereby a document originating with ICA, for example, would be released by DLF only on ICA's specific approval).

b. Export-Import Bank of Washington: The subcommittee held a hearing in the nature of an economic briefing. Officials from the Export-Import Bank and the State Department testified.

The staff made a preliminary study of the operations of the Export-Import Bank, including the matter of the terms of the Bank's sale to outside investors of obligations held in its investment portfolios. In addition, summaries of certain Export-Import Bank loans were prepared for the use of the subcommittee in connection with its current inspection and study trip to Europe and the Near East.

2. Federal Reserve System: The subcommittee held an introductory hearing at which the Chairman of the Board of Governors, Federal Reserve System, and a number of aids, provided details about the duties and activities of the Board.

The subcommittee conducted preliminary analyses relating to (1) the question of outside audit of operations of the Federal Reserve; and (2) areas of the Board of Governors' operations which might warrant further subcommittee inquiry.

3. Office of Evaluation, International Cooperation Administration. In order to begin a study of ICA's Office of Evaluation, the subcommittee chairman, on February 26, 1959, requested the acting director of ICA to provide full information and documents relating to the activities of the Office of Evaluation. ICA declined to furnish, on the grounds of executive privilege, an important category of documents, namely, copies of all reports, memoranda, and other evaluation documents prepared by the Office of Evaluation.

Moved by this and similarly based frustrations of the subcommittee's work, the chairman successfully sponsored amendments to the Mutual Security Act of 1959 and to the Mutual Security Appropriations Act, 1960, designed to assert the intent and the right of Congress to have full access to information needed for its effective consideration of legislation and appropriations for the mutual security program.

4. St. Lawrence Seaway Development Corporation: The subcommittee is making some inquiries concerning regulations of the St. Lawrence Seaway Development Corporation which bar small pleasure craft from parts of the seaway. Matters discussed in the Corporation's latest response are now under study.

5. U.S. Information Agency: The subcommittee had concluded hearings at the end of the 85th Congress into the operations of the Persian Service of the Voice of America. This inquiry was concerned primarily with allegations relative to the lack of proper and effective monitoring and control of the content of oversea broadcasts. During the current year, officials of USIA have examined into particular, detailed allegations. The results of this inquiry were embodied in a report to the chairman from the Director of USIA, dated July 21, 1959. In the subcommittee's view, several key elements of the allegations were not fully disposed of. Further consultation is planned between the subcommittee and the Agency.

(c) Monetary savings or recoveries as a result of investigation:

Manifestly, no accurate quantitative measurement can be made of the dollar savings resulting from improved procedures and performance on the part of ICA which have been stimulated by the subcommittee's investigations. Moreover, in the case of the mutual security program, conservation of funds through more effective planning and more efficient practice ordinarily will mean a saving in the sense of giving more real foreign aid for the funds available.

Because of the magnitude of foreign aid funds and the nature of their use, even small improvements in procedure and practice may result in very large money savings indeed. The minimization of cash grants recommended by the committee, which now appears to be the trend in ICA, could, in Laos alone, mean at least a 10 percent improvement in the effectiveness of U.S. aid funds. On the basis of the level of cash grants in 1957, this would represent more than $3 million worth of aid.

Exposure by the subcommittee investigation in Laos of unlawful or unreported gain on the part of certain persons employed by ICA will probably result in tax recoveries, with penalties, aggregating several thousand dollars.

The Department of State has advised that the U.S. attorney's office now has under review the possibility of prosecuting legal violations by the Universal Construction Co. The U.S. operations mission to Laos has been instructed to file a claim of $4,311.39 as the result of the substandard construction of 14 houses. The general counsel of the International Cooperation Administration is reviewing the legal steps possible to secure additional recoveries.

(d) Other remedial measures taken and nonmonetary benefits:

1. Legislative measures: As a result of obstacles to the obtaining of essential information encountered by the subcommittee in its investigations of the mutual security program, the subcommittee chairman sponsored several legislative amendments which the 86th Congress enacted as parts of the Mutual Security Act of 1959, and the Mutual Security Appropriations Act, 1960. The action thus taken represents a substantial fulfillment of the ninth recommendation of the committee's Laos report; viz.

"That the Congress give serious consideration to amendments proposed in this year's mutual security bill by the House Committee on Foreign Affairs, intended to improve programing procedures and control mechanisms in the mutual security program and to provide the Congress with more detailed and significant information respecting the determination of individual country levels of aid than has heretofore been available."

Subsection 537(f) of the Mutual Security Act was amended to require greater specificity in the request for authorizations and appropriations with respect to (1) how the proposed level of aid for a given country is arrived at; and (2) how a particular level of forces for a given country is determined.

Subsection 533A(d) of the Mutual Security Act of 1959, which deals with the Office of Inspector General and Comptroller (a new office in the Department of State with responsibilities relating to the mutual security program), requires that all documents and other material relating to the activities of that Office shall, on request, be furnished to the GAO and to appropriate committees or subcommittees of Congress.

Subsection 534(b) of the Mutual Security Act of 1959 requires that on request of the GAO or appropriate committees and subcommittees of Congress, ICA shall furnish all documents and other material relating to its activities.

Section 108(d) of the Mutual Security Appropriations Act, 1960, provides a conditional limitation on ICA expenditures under the act. The limitation, which will operate against the use of funds for a given country, project, or activity, will become effective whenever 35 days after a written request, ICA has not furnished to the GAO or an appropriate committee or subcommittee of Congress any document or other material relating to ICA administration with respect to a given country, project, or activity. However, the limitation will not operate if, during the 35-day period, there is furnished a certification by the President that he has forbidden the material to be furnished and stating his reasons for doing so.

The need for this limitation on expenditures arose when ICA, acting on policy direction from the President and notwithstanding the enactment of subsections 533A(d) and 534(b) of the Mutual Security Act, persisted in its refusal to the subcommittee of the evaluation documents which the Chairman had requested on February 26, 1959.

2. Other measures: The Department of Justice, the Department of State, and ICA are actively studying factual and legal aspects of the Government's civil and criminal recourse against U.S. citizens who, as the committee's Laos investigation has revealed, appear to have violated Federal law.

(e) Days of hearings held:

1. Laos investigation, 19 days.
2. Development Loan Fund, 3 days.
3. Federal Reserve Board, 1 day.
4. Export-Import Bank of Washington, 1 day.

Total, 24 days.

II. Legislation

(a) Number of measures referred to the subcommittee:

H.R. 8302, 86th Congress, by Congressman PATMAN, to provide for a GAO audit of the Federal Reserve System from 1913 through 1958.

H.R. 6605, 86th Congress, by Congressman HARDY, to amend Reorganization Plan No. 7 of 1953.

(b) Reports issued: None.

(c) Days of hearings: None. (But, see item (b)2, under part I above.)

III. Reports received such a notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislation

(a) Number of each received: The subcommittee has received 15 reports to the Congress by the Comptroller General of the United States.

(b) Action taken:

1. Audit of St. Lawrence Seaway Development Corporation, fiscal year 1958.

Report examined and analyzed. No action taken.

2. Audit of Federal Deposit Insurance Corporation, fiscal year 1958.

Report examined and analyzed. No action taken.

3. Audit of Export-Import Bank of Washington, fiscal year 1958.

Report examined and analyzed. Being used in connection with curent study.

4. Audit of Federal Home Loan Bank Board, fiscal year 1958.

Report examined and analyzed. No action taken.

5. Audit of Federal home loan banks, fiscal year 1958.

Report examined and analyzed. No action taken. Comptroller General's chief recommendation re evasive practice of Federal savings and loan associations which reorganize into State companies is under consideration by legislative committees of Congress.

6. Audit of Custodianship Functions, Office of the Treasurer of the United States, fiscal year 1957.

Report examined and analyzed. Comptroller General stated that Treasury did not agree with GAO on the need for a joint study of U.S. tax and loan accounts in commercial banks.

The subcommittee chairman corresponded and conferred with Treasury officials, and on June 12, the Secretary of the Treasury advised the Comptroller General that a study would be initiated by Treasury in about 90 days. GAO will have a significant part in the study either initially or on review. The Treasury has been asked to keep the subcommittee currently informed.

Collaterally, the subcommittee staff prepared a legislative history study of the provisions of law prohibiting payment of interest on demand deposits in banks which are members of the Federal Reserve.

7. Examination of Economic and Technical Assistance Program for Pakistan, ICA-Department of State, fiscal years 1955–57.

Report examined and analyzed. Being used in connection with current study.

8. Audit of Office of Defense Lending, Treasury Department, fiscal year 1958.

Report examined and analyzed. No action taken.

9. Audit of Bureau of Engraving and Printing, Treasury Department, fiscal year 1958.

Report examined and analyzed. No action taken.

10. Audit of Bureau of Customs, Treasury Department, December 1958.

Report examined and analyzed. No action taken.

11. Audit of Proposed Economic Assistance Program for China (Taiwan), Korea, and Vietnam for fiscal year 1959.

Report examined and analyzed. Being used in connection with current study.

12. Audit of Bureau of the Mint, Treasury Department, fiscal years 1956–58.

Report now under study.

13. Followup review of Economic and Technical Assistance program for Laos.

Report examined and analyzed. No action taken.

14. Audit of Development Loan Fund, fiscal year 1958.

Report under review in connection with current study.

15. Examination of Economic and Technical Assistance program for India, fiscal years 1955–58.

Report now under study.

IV. Prior activities of the subcommittee of current or continuing interest

(a) Cumulative money savings or recoveries:

The following paragraph is quoted from this subcommittee's annual report of last year:

"Because of its very nature, the work of the subcommittee has an impact, in varying degrees, on all phases of our foreign aid program. Recommendations for improvement of operations and procedures in ICA/Washington can result in savings in our foreign operations. And exposing slipshod work and wasteful spending in Cambodia will, to the extent corrective measures are taken based on our recommendations, have a chain reaction and inevitably bring about more efficient and economical operations in Pakistan and Vietnam. Although the amount of money saved in this way is undoubtedly large, there is no way it can be estimated with a degree of accuracy sufficient for the purposes of this report. However, firm figures can be arrived at in certain cases which, even without projection, demonstrate that the work of the subcommittee during the past year has resulted in significant money savings and possible money recoveries. It is estimated that these savings and recoveries will amount to at least $1,500,000."

There followed a listing of the specific activities from which it was believed these savings would be developed. Final determination of amounts in each case waits either upon completion of a particular project (and determination of its final total cost) or upon legal action by the Department of Justice or the Internal Revenue Service, not yet accomplished. The estimate of savings remains valid but cannot be further refined at this time.

(b) Other affirmative benefits:

The general nature of this subcommittee's operations is such that it is not always feasible to analyze it in terms of the specific, discrete "activities," each completed at a given point and time. The bulk of the subcommittee's effort is devoted to continuing examination of the foreign-aid program, and it is in this field that major benefits, monetary and otherwise, have resulted. Some of its work, however, such as the effort to obtain for the Congress clear, accurate, and complete information on the program's operation, must, in the nature of our Government, be continuing, even though the objectives will probably never be fully accomplished. It is not always possible to say that a particular remedial action arose from a particular prior activity. In the case of this subcommittee's oversight of the foreign-aid program, remedial action seems to be a continuing step-by-step process. Several of the general lines of improvement are, however, listed here:

1. The clarity, accuracy, completeness, and usefulness of the annual mutual security budget presentation to the Congress have been improved each year for the past several years; in large part, this reflects executive branch reaction to specific recommendations of this subcommittee.

2. This and other committees and subcommittees of Congress have long been plagued with the problem of obtaining adequate information from the executive branch concerning operations conducted with the funds that the Congress appropriates. In the case of the mutual security program, the intent of the Congress to obtain such information, and the power to do so, have both been clarified by the Hardy amendments to this year's mutual security authorization and appropriations acts.

3. The several related reports of this subcommittee on the operations of different facets of the mutual security program provide, taken together, a handy primer to the program, useful to the Congress and the public alike.

4. The continuing scrutiny by the subcommittee of ICA contractual procedures, and operations thereunder, has resulted in a demonstrable improvement in the quality thereof.

5. In the opinion of the Comptroller General, there is evidence that more weight and substance are being given to GAO audits of foreign-aid operations as a result of this subcommittee's followthrough activities on ICA operating deficiencies disclosed by GAO.

V. Projected program for the remainder of the 86th Congress

1. Continuation of a detailed study of certain U.S. lending agencies, including their relationships to one another and to the international lending agencies; these U.S. agencies would include the ICA, the Development Loan Fund, and the Ex-port-Import Bank, as well as the coordinating body, the National Advisory Council on International Monetary Problems.

2. A subsequent inquiry into the acquisition of foreign currencies, especially under Public Law 480, and lending policies and practices in conjunction with such currencies.

3. An inquiry into the effectiveness of ICA's Office of Evaluation and its successor, the Office of the Inspection General and Comptroller (created by the Mutual Security Act of 1959).

4. Continuation of a study of the operations of the Board of Governors, Federal Reserve System.

SPECIAL SUBCOMMITTEE ON DONABLE PROPERTY, HON. JOHN W. M'CORMACK, CHAIRMAN

I. Investigations

(a) Reports issued: No formal investigative reports.

(b) Investigations not resulting in a formal report:

The subcommittee has kept in constant contact with the donable surplus property program and the Federal and State agencies responsible for its operation, namely, Department of Health, Education, and Welfare; General Services Administration; Office of Civil and Defense Mobilization; Department of Defense; and the National Association of State Agencies for Surplus Property. State agency operations visited during the session were Virginia, Maryland, Pennsylvania, Michigan, Minnesota, South Dakota, Montana, and Washington. Two State regional meetings were attended and the annual meeting of the National Association of State Agencies for Surplus Property.

As a result of the constant informal investigation of the program and the problems which arose, a number of bottlenecks were eliminated and the program continued to grow as will be indicated by the following table:

Fiscal year	Property allocations		
	Personal	Real	Total
1954	$107,042,941	$10,750,698	$117,793,639
1955	132,174,248	16,088,495	148,262,743
1956	204,497,417	14,375,151	218,872,568
1957	234,862,274	7,303,250	242,165,524
1958	302,458,448	9,478,715	311,937,163
1959	363,329,562	21,179,482	384,509,044

(c) Monetary savings or recoveries as a result of investigation:

The eligible donees received surplus property with acquisition cost of $361 million during the fiscal year 1959 and during the months of July 1959 it amounted to $32,800,593. The use of this property for purposes of education, health, and civil defense, instead of selling it for a few cents on the dollar, indicates a large saving to the taxpayer at a time when our institutions sorely need this help.

In addition, the military agencies now state that they prefer to donate the property rather than employ other disposal methods since time is saved by this method and this means money savings as it costs one-half of 1 percent of the cost value of the property per year to hold it.

II. Legislation

(a) Number of measures referred to the subcommittee: 38 bills were referred to the subcommittee during the session.

(b) Reports issued:

1. Pensions for Comptroller General's dependents (H.R. 7062). This bill was reported from the Government Operations Committee June 12, 1959; Report No. 540. It passed the House June 15, 1959. Reported in the Senate June 18, 1959; Senate Report No. 403 and passed the Senate July 6, 1959 (Public Law 86–87).

2. Surplus property for firefighting organizations. Reported from Government Operations Committee August 12, 1959; Report No. 891, passed the House August 31, 1959. (H.R. 3722 pending in the Senate Government Operations Committee.)

3. Foreign excess property bill (H.R. 8398). Subcommittee reported to full committee but action not completed.

(c) Days of hearings: 2 days of formal hearings.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislative

No reports received.

IV. Prior activities of the subcommittee of current or continuing interest

(a) Cumulative money savings or recoveries:

The subcommittee report of August 15, 1958, detailed in some length the action taken with respect to the curtailment of cost of telephone services for the SAGE project. As Congressman VINSON stated, "The in-

vestigation of SAGE had reduced the estimate of the telephone services from $240 million per annum to $157 million per annum. This is a saving of $83 million per year or a saving of $830 million over the 10-year period."

It has not been considered necessary to attempt to determine in detail the savings from this continuing project or investigation applicable to the current year. However, on a straight line projection the saving would be $83 million as Congressman VINSON stated on the House floor on April 12, 1956. Further, the cumulative savings for the 4-year period, 1956–59, would be $332 million.

A second prior activity of considerable current interest involves the work of the GSA in appearing before the FCC as a representative of the Government as a user of utility services in order to obtain fair and equitable rates for the SAGE project.

Authority for the GSA stems from section 303, Public Law 968, 84th Congress, 2d session, which was developed by the subcommittee and the House Armed Services Committee following the investigation of SAGE by the subcommittee in 1955. Upon passage of Public Law 968 the subcommittee chairman wrote to the White House asking that steps be taken to implement the law so that GSA would have the resources requisite to appearing before the regulatory agencies concerned. Fifty thousand dollars was made available from the President's emergency fund for the purpose and GSA intervened in hearings before the FCC. Later it became necessary on several occasions to assist GSA in obtaining additional funds to continue the work.

The GSA work has been highly successful. As stated in the July 1959 report of the subcommittee:

"The Civil Service Commission recently considered savings claimed by GSA personnel who petitioned the FCC for lower rates for the Federal Government as a user of utility services.

"After investigation, the Civil Service Commission awarded $10,000 to the personnel involved in handling this matter before the FCC on the basis that $15,385,000 would be saved annually by the Government over a contemplated 10-year period.

"It was estimated that a 15 percent saving on rates applied to SAGE alone or $10 million annually and for civilian agencies other than SAGE $4,600,000 reduction on telephone total of $14,600,000 reduction on telephone rates.

"In addition, a reduction of 18.9 percent was effected in Western Union rates for certain services or $785,000 per year. The total annual savings for all classes is estimated at $15,385,000."

A third prior activity of great potential is the so-called McCormack amendment to the Department of Defense Reorganization Act of 1958. The purpose of the amendment was covered in detail in last year's report. The amendment reads:

"Whenever the Secretary of Defense determines it will be advantageous to the Government in terms of effectiveness, economy, or efficiency, he shall provide for the carrying out of any supply or service activity common to more than one military department by a single agency or such other organizational entities as he deems appropriate. For the purposes of this paragraph, any supply or service activity common to more than one military department shall not be considered a 'major combatant function' within the meaning of paragraph (1) hereof."

The potential importance of this amendment caused a number of Senators and Representatives to write to the Secretary of Defense requesting information as to what actions had been taken or were contemplated with respect to its implementation. Attached hereto is a letter from the Assistant Secretary of Defense (S. & L.) responsive to the inquiries.

V. Projected program for the remainder of the 86th Congress

The subcommittee has pending 29 bills to expand the donable program to various groups. The administration opposes the expansion of the program but at the same time has not adequately staffed and organized the Department of Health, Education, and Welfare to enable it to screen and allocate all existing surplus property which is useful and needed for the purposes of education, health, and civil defense agencies which are now eligible donees. As a result, much useful and needed surplus property is not being taken but is sold for a few cents on the dollar of acquisition cost.

The subcommittee plans hearings on pending bills and hopes to develop information as to total availability of surplus property and executive agency plans to further improve the existing program.

The Department of Defense has announced that it has $26.7 billion of surpluses marked for disposal and it is expected that the annual rate of disposal will be near $10 billion for several years. The Congress through the current Department of Defense Appropriation Act, Public Law 86–166, section 611, has permitted the Department of Defense to use all receipts from sales in order to accelerate the disposal program. This means a speedup in the disposal program and the eligible donees for surplus property must be geared to a higher speed than heretofore or more good property will be sold.

It is evident that the donable program will continue at a high rate for some time to come and also that more and more bills will be introduced to make surplus property available for meritorious purposes so long as the defense program continues at such a high level and State, county, municipal, and other activities are deprived of much-needed funds.

As stated above, in July the donable program amounted to over $32 million and it is expected that the volume for the current year will exceed last year's total of $361 million by a considerable amount. It seems that the program for the remainder of the 86th Congress will be more active than ever.

"[From the Washington Post, Sept. 11, 1959]

"Schools Buy U.S. Surplus Equipment for Classes as Little as Cent a Pound

"(By Jean White)

"For as little as a cent a pound, schools and colleges carted off $280 million worth of Government surplus property last fiscal year, Arthur S. Flemming, Secretary of Health, Education, and Welfare, announced yesterday.

"District public schools took advantage of the bargain bulk rates to buy two 10-ton truckloads of surplus material at $100 a load. In the loads, science teachers have found items like permanent magnets and oscilloscopes worth $60 each on the regular market, Keith Johnson, supervising science director in the public schools, said.

"Most of the surplus equipment, he added, is stripped down for parts for demonstrations and student projects. The mixed assortments include items like tubes, condensers, resistors, transformers, vacuum pumps, meters, and motors.

"The district has been dealing with the area warehouse at Blue Plains for surplus equipment.

"Yesterday at a press conference, Flemming described a supermarket operation now set up at military installations at Oakland, Calif., and Norfolk, Va. Science teachers can shop in person, pick out the equipment they want, pay a cent or two handling charge, and take the equipment away with them that day on a cash-and-carry basis.

"At Norfolk so far, Flemming said, nearly half a million dollars worth of property has been distributed to 55 schools for industrial arts, physics, engineering, science, and technical courses.

"Surplus property is now one of the biggest single sources of Federal aid to education, he added, and is also allocated for health and civil defense uses. Last year the District got $1,348,981 in movable surplus items."

SPECIAL SUBCOMMITTEE ON GOVERNMENT INFORMATION, HON. JOHN E. MOSS, CHAIRMAN

1. Investigations

(a) Reports issued:

1. "Availability of Information From Federal Departments and Agencies (Air Force Refusal to the General Accounting Office)," second report by the Committee on Government Operations; House Report No. 234, March 19, 1959.

This report resulted from the subcommittee's hearing with the Comptroller General, the Secretary of the Air Force, and other witnesses on November 12 and 13, 1958, relative to the refusal of the Air Force to make available to the Comptroller General a report entitled "Survey of Management of the Ballistic Missile Program." This hearing was held at the specific direction of Chairman WILLIAM L. DAWSON. The report stated that the Secretary of Defense had issued a directive granting the Secretaries of the services authority to refuse information to the Comptroller General. The report concluded that the DOD directive was issued without statutory authority, and that it modified and contravened the Budget and Accounting Acts of 1921 and 1950. The report also concluded that the sole basis on which the Secretary of the Air Force refused access to the information in question was a claim of executive privilege, based upon the Attorney General's memorandum attached to the May 17, 1954, letter from the President to the Secretary of Defense.

2. "Availability of Information From Federal Departments and Agencies (Progress of Study, August 1958–July 1959)," 12th report by the Committee on Government Operations; House Report No. 1137, September 3, 1959.

This report covered general investigative work of the Special Subcommittee on Government Information. It presented details on 35 specific cases or general areas of restrictions on information from the Federal departments and agencies. It also detailed the refusal, by a subordinate official of the Navy Department, of an unclassified study of the Naval Gun Factory requested by a member of the House Armed Services Committee. The Naval Gun Factory case was the subject of hearings by the Special Subcommittee on Government Information on April 20 and 23, 1959, and the refusal was again based on a claim of executive privilege. The report concludes that, notwithstanding a specific directive by the Secretary of Defense, an Assistant Secretary of the Navy took it upon himself to refuse the information to a Member of Congress on the basis that he was "the alter ego" of the Secretary of the Navy.

The report also covers the followup action by the subcommittee on the effect of Public Law 85–619, the amendment to the "housekeeping" statute (5 U.S.C. 22), which was enacted by the 85th Congress. Other matters documented in the report include:

a. The Defense Department shrouded the Atlas-Score talking satellite project in deep secrecy and, when the event was publicized, created the false impression that the satellite was more than twice as big as the largest comparable Russian satellite.

b. The Defense Department repeatedly used the claim of military security to refuse information about the use of monkeys in

scientific research, then lifted the restrictions to publicize successful research efforts.

c. The Defense Department refused to release pictures of the outside of the Titan missile even though the outside configuration had been declassified and the missile stood in full public view, but pictures were released of the President viewing the completed missile just before the November 1958 elections.

d. The Defense Department reorganized information activities to give the Department's public relations office greater control over the release of information by the military experts.

e. Executive agencies used the excuse of security censorship to delete nonsecurity information from congressional testimony.

f. The Federal Aviation Agency refused to make public reports on malfunctions of new-type altimeters installed in commercial jet airplanes after restricting use of the altimeters, claiming the public might misinterpret the facts.

g. The Federal Power Commission refused to make public a Commission staff report on a proposed power exchange contract, claiming the staff would not comment freely on controversial matters if the information were available to the public.

h. The Labor Department claimed Federal-State cooperation would be weakened by public access to Bureau of Employment Security analyses of administration of State unemployment insurance laws.

i. The Bureau of Prisons denied public access to studies of conditions in local jails for fear of controversy, claiming an executive privilege for the restriction.

j. The Housing and Home Finance Agency refused to make public audit reports of local housing authorities financed with Federal funds, claiming employees would not comment freely if the information were made public and asserting an executive privilege to restrict the reports.

k. The Civil Service Commission claimed an executive privilege to hide the result of an investigation of irregularities in a Virginia rural mail carrier examination.

l. The White House refused a congressional request for information on Operations Coordinating Board guidelines directing Defense Department information policies, claiming an executive privilege to withhold the information.

m. The Housing and Home Finance Agency claimed an executive privilege to refuse information on an investigation of the Los Angeles City Housing Authority to the California State Legislature, the attorney general of California, and to the Congress.

n. The General Accounting Office reported the citation of "executive privilege" for numerous refusals by executive agencies to make available information which the agencies are required by law to provide the GAO.

o. The Civil Service Commission reversed its earlier policy of making public the names of retiring Federal employees, contending that the information should be restricted because there was no law authorizing the release even though no law prohibited it.

p. The Electronic Production Resources Agency in the Defense Department reversed the policy of making available to the public nonsecurity statistics after the Department of Commerce protested release of the information.

q. The Department of Justice continued restrictions on access to information about Federal prisoners.

(b) Investigations not resulting in a formal report:

1. The following investigations by the Special Subcommittee on Government Information have not yet resulted in formal reports:

a. Hearings were held on April 20, 21, and 23, 1959, with representatives of the General Accounting Office and the Department of the Navy on the Navy's refusal to make available to the GAO a copy of a report on procurement activities of the Military Sea Transportation Service.

b. The National Aeronautics and Space Administration reversed its decision to withhold the names of firms which had submitted bids on the space capsule project, but the subcommittee's investigation is continuing into charges that details of the negotiated bids are not made available to Congress.

c. The subcommittee, after investigating the availability of the records of public courts-martial, is drafting statutory language to correct the restriction.

d. The proposed discontinuance of an annual report by the Interior Department on investment and expenditures of the Colorado River Dam fund was investigated and proposed amendatory language has been submitted to the Executive and Legislative Reorganization Subcommittee which is considering the legislation in question, S. 899.

e. The subcommittee asked the Post Office Department to justify restrictions on photographs of postal employees in the process of screening objectionable material sent through the mail.

f. Following a subcommittee investigation of restrictions on photographers and newspapermen seeking information about the St. Lawrence Seaway, the St. Lawrence Seaway Development Corporation made arrangements to improve access for photographs and news coverage.

g. The subcommittee, at the request of a Member of Congress, investigated the availability of a Federal Aviation Agency medical file concerning a disqualified pilot.

h. An investigation of the refusal of the Department of State to furnish a Member of Congress blank visa forms revealed that the visa forms are serially numbered and controlled, but arrangements were made to make sample forms available to any Member of Congress.

i. The availability of information about Mercury Astronauts has been discussed with officials of the National Aeronautics and Space Administration who agreed that no public information will be withheld under an exclusive contract for the Astronauts' personal stories.

j. The Department of State, following a subcommittee investigation, made available a copy of a letter the Department sent to the New York Commission Against Discrimination.

k. The subcommittee is investigating the Defense Department's ban of a proposed book by Gen. Thomas S. Power, Commander in Chief of the Strategic Air Command.

l. At the request of a Member of Congress the subcommittee studied the legal aspects of a Defense Department prohibition against dissemination of a report on water contamination.

m. A Pennsylvania contractor was permitted to talk to a Navy technical expert to whom he had been denied access after the subcommittee looked into the matter at the request of a Member of Congress.

n. A Department of Defense agency, following a subcommittee inquiry, took steps to remove restrictions on British technical documents which already had been declassified by the British Government.

o. The subcommittee is continuing an investigation of restrictions on statistics of sales at Army and Air Force post exchanges.

2. The subcommittee provided assistance in obtaining information from Federal executive departments and agencies to the following Members of Congress: FRANK M. COFFIN, EMILIO Q. DADDARIO, DANIEL J. FLOOD, HARLAN HAGEN, BURR P. HARRISON, BYRON L. JOHNSON, RICHARD E. LANEFORD, MORGAN MOULDER, GEORGE MCGOVERN, DON MAGNUSON, CHARLES O. PORTER, GEORGE M. RHODES, PAUL G. ROGERS, JAMES ROOSEVELT, J. T. RUTHERFORD, JOHN BELL WILLIAMS, Senators FRANK CHURCH, STUART SYMINGTON and WILLIAM PROXMIRE.

3. The subcommittee also provided assistance to numerous historians, scientists, researchers and students of government by providing material on Federal freedom of information problems and suggesting sources for additional detailed material.

4. Subcommittee Chairman Moss and Majority Member FASCELL led discussions of specific freedom of information problems at meetings of a number of major organizations.

(c) Monetary savings or recoveries as a result of investigation:

Actual money savings from improvement in the information practices and policies of the Federal Government often are impossible to estimate. A free flow of information in a democratic system, however, results in a responsible—and thus efficient—government.

(d) Other remedial measures taken and nonmonetary benefits:

Improvements in information practices of the executive branch range from the assignment to the President, himself, of the responsibility for refusing information to Congress about the foreign aid program to the removal of restrictions on Bureau of Public Roads statistics about the Nation's highway needs. Following are some of the benefits:

1. At the direction of Chairman WILLIAM L. DAWSON, the subcommittee assisted Congressman PORTER HARDY, Jr., of Virginia, Chairman of the Foreign Operations and Monetary Affairs Subcommittee, in drafting amendments to the Mutual Security Act of 1959 and the Mutual Security Appropriations Act of 1960. The purpose of the Hardy amendments was to curtail the use of executive privilege as a claim of authority to deny information to the General Accounting Office and committees of Congress, and the ultimate effect of the amendments as finally adopted will be to require the President, himself, to justify any refusals of information.

2. The Budget Bureau clarified restrictions on testimony by Defense Department witnesses before congressional appropriations committees, after contending that military experts are not completely free to express personal views at variance with budget requests.

3. The Comptroller of the Currency initially refused to make public the blank forms filled out by persons applying for national bank charters, contending that only legitimate requests for the blank forms should be honored, but later made the blank forms available when asked to cite statutory authority for the refusal.

4. The Federal Aviation Agency made available a previously restricted engineering report on the materials to be used in paving the new Washington International Airport.

5. The Agriculture Department clarified regulations which had been misused to restrict public access to crop allotment records, particularly in California.

6. The Interior Department made available previously restricted information on leases of public lands and took steps to revise information practices in Bureau of Land Management offices.

7. The Navy provided reports of tests of an arctic cargo sled to the designer of the sled who had been trying to get the information for 10 years.

8. The Army disclosed information on medical payments after a private citizen had tried for 8 years to obtain the information.

9. The Bureau of Public Roads removed restrictions on the availability of nationwide highway statistics, making the information available to local government officials who needed it for tax-planning purposes.

(e) Days of hearings held:

Three days hearings with 13 witnesses were held so far by the Special Government Information Subcommittee during 1959.

II. Legislation

No legislative measures were referred to the subcommittee.

III. Reports received such as notice of negotiated sales, General Accounting Office audit reports, and similar matters considered which are not legislation

No such reports were referred to the subcommittee.

IV. Prior activities of the subcommittee of current or continuing interest

(a) Cumulative money savings or recoveries:

1. Estimated savings of approximately $400,000 a year result from Defense Department adoption of recommendations that unnecessary restrictions be removed from "historical" military documents. Following subcommittee hearings and recommendations adopted by the House Government Operations Committee, the Defense Department in September 1958 issued a directive declassifying nearly all Defense Department documents originated before January 1946. The immediate saving in storage costs alone is estimated at $400,000 each year, based upon the volume of stored documents which no longer require the expensive protection given to highly classified material. Additional savings in shipping costs are realized each year.

2. Annual savings of more than $100,000 continue to accrue from the abolition of the Office of Strategic Information in the Department of Commerce—an agency for which appropriations were deleted following subcommittee hearings and full committee recommendations.

(b) Other affirmative benefits:

The Treasury Department adopted regulations providing for public access to applications for tax exemptions filed by nonprofit organizations. The regulations were based upon a law passed during the 85th Congress, following subcommittee hearings and full committee recommendations on the tax exemption information question.

V. Projected program for the remainder of the 86th Congress

1. The subcommittee will complete work on a report, to be filed in the 2d session of the 86th Congress, covering a cooperative research project with the Library of Congress into all laws authorizing Federal restrictions on information.

2. The subcommittee is working with the House Interstate and Foreign Commerce Committee on possible legislation as a result of the investigation of the Federal Aviation Agency concerning the availability of reports on malfunctions in aircraft.

3. Possible legislative solutions to the abuses of executive privilege are being developed. Possible legislation includes appropriation limitations to prevent excessive use of executive privilege, and legislative action to permit a court test of the executive privilege claim.

4. A report on the Navy's restrictions on a report of the Military Sea Transportation Service's procurement practices will be completed.

5. Current investigative work which will be continued includes:

a. Improvements in the Department of Defense declassification policies.

b. Defense Department restrictions on nonmilitary information about missile and satellite programs.

c. Department of Commerce involvement in restrictions on statistics about post exchange sales.

d. The legal status of Government employees who contract to sell "personal" information which is valuable only through virtue of their Government employment.

e. The Defense Department policy restricting bylined articles or book by military leaders.

f. Air Force restrictions on information about contracts.

g. Availability of statistical export information from the Bureau of Customs.

h. Possible amendments to the public information section of the Administrative Procedure Act.

i. Department of Agriculture restrictions on information about cattle grazing permits.

j. Department of Agriculture restrictions on information setting the policy for storage of surplus farm products.

k. Restrictions on historical documents filed in the National Archives.

l. Preparations for censorship in the event of a national emergency.

m. Depense Department policy banning the publication of books, magazine articles, etc., by military policy experts.

SPECIAL SUBCOMMITTEE ON RENO HIGHWAYS, HON. JOHN A. BLATNIK, CHAIRMAN

This subcommittee was created for the purpose of investigating and reporting on complaints received by the committee concerning the interstate highway being built through Reno, Nev. The subcommittee held 3 days of hearings in Reno and thereafter submitted a report entitled, "Reno-Sparks-Verdi Interstate Highway (Bureau of Public Roads, Department of Commerce)" which was approved by the full committee and issued on April 23, 1959, as the third report by the Committee on Government Operations (H. Rept. No. 292, 86th Cong., 1st sess.)

The report contained four conclusions and recommendations as follows:

A. The record does not support charges that Federal participation in financing the construction of a downtown interstate highway through Reno would be a wasteful expenditure of Federal moneys.

B. Although there was technical compliance by State officials with Federal statutory requirements on public hearings, the Reno controversy stems from the inadequacy of communication from the State on justification for the proposed route to local officials and citizens and indicates the need to amend directives of the Bureau of Public Roads affecting public hearings.

C. Guidelines with respect to consideration of economic effects of route location should be contained in Bureau of Public Roads directive.

D. The investigative function of the Bureau of Public Roads must be strengthened.

Jews in the Soviet Union

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me concerning an article in the New Leader.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I should like to call to the attention of my colleagues in the Senate and to the American public a remarkable journalistic effort. I refer to a special report prepared by the editors of the New Leader on "Jews in the Soviet Union," which appeared on September 14, 1959.

The New Leader is a distinguished and highly respected periodical dealing with international and domestic issues. In this special issue devoted to the important subject of the Jewish minority in the Soviet Union it has rendered a valuable service to the American people and to the cause of freedom everywhere. The editors believe that this study, which took an entire year to complete, is valuable primarily because it consists almost entirely of documents from Soviet and non-Soviet Communist sources. They point out that this is the first time these documents from various parts of the world have been brought together and printed systematically within one coherent historical and political framework.

I commend this exceptionally fine job of political reporting to all persons interested in Soviet affairs and in the rights of minorities throughout the world.

A Report to the Citizens of the 13th Congressional District of New Jersey

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. GALLAGHER. Mr. Speaker, following is my end of session report to my constituents whom I have had the privilege and pleasure of serving in this session of Congress:

A REPORT TO THE CITIZENS OF THE 13TH CONGRESSIONAL DISTRICT—THE CHALLENGE IN GOVERNMENT

Nearly a year has passed since the voters of New Jersey's 13th Congressional District elected me to the U.S. House of Representatives to serve in the 86th Congress. While the press has been most generous and most fair in reporting for you the positions I have taken on the various issues before this Congress and the general activities of my office, I feel it is appropriate to file with you an end-of-session report on the year's work. I have listed in these pages a summary of my actions on the major issues before the Congress, and other activities in which I have engaged on behalf of the people I am privileged to represent.

In this column I would like to discuss briefly some of the many problems of Government and especially what, in my mind, is a fundamental issue we are facing in Government today.

With the exception of periods when the country was actually at war, no Congress has been faced with problems of such magnitude and complexity as those which confront the 86th. We have before us matters which range from the orbits of outer space to the corridors of the United Nations. Some of these may seem, at times, to be beyond solution, and, indeed, it requires great courage to face up to the challenge of our times.

We have been witness in the past 10 years to a tremendous increase in the population of our own country, and of the whole world. We have marveled at the unbelievable advancements in science. We have followed, not without some trepidation, the coming of age of world communism and the emergence of the Soviet Union as a giant among nations. In the East we have watched China, with its massive population, awaken like a restless dragon.

Suddenly, in the last year of the decade, the full impact of this great population

growth, the advancements in military science and the shifting of power in world politics has come to bear with world-shaking consequence on modern civilization.

Generally, the many problems with which the Congress struggles fall into two categories, domestic problems which most intimately and immediately affect our own citizens and those of greater scope which affect not only our own people, but people the world over.

We are, of course, most conscious of those problems that have come about mainly as the result of our own rapidly increasing population. There continues to be a demand for adequate housing for the growing young families that are the real strength of our Nation and a pressing need for aid to education, not only to the extent of providing sufficient classroom space and a decent standard of pay for the teachers into whose hands we entrust the intellectual and character development of our children, but for the advanced study of young men and women upon whom will depend the future well-being and development of our country.

All of this adds up to a tremendous challenge not alone to the Congress, but to the people of America.

There has been throughout this legislative year, as you know, marked differences of opinion between the heavily Democratic Congress and the Republican administration. As I have studied the positions established and the actions taken on the various major legislative matters, it became quite clear to me that the really fundamental issue is whether the Federal Government will face up to the challenge of this dynamic age by meeting the demands of a growing Nation and its rapidly expanding population, to include such things as a strong defense force, full educational opportunities, adequate housing, care of the aged and mentally ill, public transportation, adequate sanitary systems and water supply; or whether it will compromise this challenge through unrealistic and ultraconservative fiscal policies.

I am as conscious as any citizen of the dangers of inflation, and I have strongly opposed reckless spending projects in Government. But the threat of inflation must not be used by the advocates of the tight dollar to thwart the progress of this country and to deny any of our citizens a decent standard of living and equal opportunities in every field.

The record of service in my first year in the Congress, as you will see in reading this report, favors generally those programs that attempt to provide the needs of a growing Nation. I am convinced that if America is to remain strong and free it must meet realistically the challenge of this period in our history. In this I feel that I reflect generally the feelings of the citizens of the 13th district.

CORNELIUS E. GALLAGHER,
Member of Congress, 13th District, New Jersey.

THE STRENGTH OF OUR ALLIANCE

We are living in an age in which the United States is filling the role of leader of the free nations. The security of any one of them is dependent on the strength of the alliance.

Our day-to-day dealings with the governments of these free nations and with the governments of the Communist nations constitute a major activity of our Government. A great deal of time in the Congress is devoted to a continuing study of this particular function of Government.

Every Member of Congress is assigned to one or more committees, and a good deal of time is spent in committee work. I am assigned to the Foreign Affairs Committee and the Subcommittee of Foreign Economic Policy and Europe. It is a rare privilege for a new member to receive such an important assignment and I am grateful to the House leadership for the confidence they have shown in me.

MISSION TO BERLIN

As a member of the committee, I was afforded an opportunity to observe closely political activity in the European nations and relationships that exist between these nations. The committee had before it as witnesses not only ranking members of our State and Defense Departments but prominent leaders of European countries.

Work on the Foreign Affairs Committee led to my selection to head a special study mission to Berlin during the crises in that German city last spring. Following our return a good deal of time was devoted to writing the Berlin Report, a document which served as a guide for the Foreign Affairs Committee in its deliberation on the Berlin matter.

A recommendation which I made in the report calling for the United States to serve notice that it was prepared to fire the first shot or drop the first bomb, if there should be conclusive evidence that an enemy was preparing to wage war on this country, brought outraged Communists to their feet to denounce me. These denounciations were printed in Pravda and in the Communist newspapers of Red China.

FOREIGN AID

Many weeks of the committee's time were devoted to hearings on the mutual security and foreign aid bills. The last public act of the late Secretary of State John Foster Dulles was his appearance before our committee. I had occasion to note at the time that it was evident that he was in intense pain, unafraid of death and drew the strength to testify in this important hearing from his keen sense of duty.

There is no denying that some abuses exist in the foreign aid program, but there is overwhelming evidence that this program is vital and effective in our efforts to stem the spread of communism throughout the world. Not only did I vote for the foreign aid bill, but I was assigned to assist in assuring its passage when it came to the floor for a vote.

KHRUSHCHEV VISIT

I can report that among the members of the House Foreign Affairs Committee there was concern over the President's invitation to the Soviet Premier, Mr. Khrushchev, to visit the United States. My particular concern was for the tremendous propaganda effect of such a visit in nations throughout the world, particularly in the captive nations. While I had serious reservations about the visit, I pointed out at the time that the ultimate responsibility for the conduct of our foreign affairs rests with the President and once he had made his decision it was our duty to support him, regardless of our personal feelings.

COMMON MARKET STUDY

Following adjournment of the first session, I was selected to be a member of a special study mission which is going to Europe to observe the operation of the European Common Market and the development of integration programs in Western Europe. As an adjunct to the mission, I was assigned to make a study of economic development in Poland and trade relations between that country and the Soviet Union. This aspect of the work will require my visiting Moscow and Warsaw where I will confer with economic advisers of the U.S. Embassies and other trade officials.

UNEMPLOYMENT COMPENSATION

There is obvious need for improvement in our unemployment compensation laws. The present law, passed some years ago, is wholly inadequate to meet the problems of the large number of unemployed throughout the country, particularly in labor distressed areas. Hudson County, which is included in the Newark labor market area, is considered, by virtue of continued unemployment of 6 percent of its total labor force, to be a distressed labor area.

I cosponsored in the House a bill which was similar to one introduced in the Senate by Senator KENNEDY of Massachusetts. My bill, H.R. 3563, was designed, among other things, to do the following:

Establish benefits equal to not less than 50 percent of weekly wages, but not more than two-thirds of the average weekly wage in the State.

Establish a uniform payment period of 39 weeks. (It is now 26 weeks).

Passage of this bill would bring an end to the patchwork approach to the serious problems of the existing program which pays too little in benefits for too short a period of time.

Early in the session the Congress voted a temporary extension of authority to pay unemployment benefits for a period of 39 weeks. The extension is to October 31, 1959. Although I voted for this, I protested at the time that this was merely an expedient and not the real solution to the unemployment compensation program.

The Congress failed to enact legislation, such as Senator KENNEDY and I proposed, however this legislation should be given a top priority in the next session.

In my efforts to get action on this legislation during the session, I appeared before the House Ways and Means Committee and urged that an effective bill be brought to the floor.

CAVEN POINT

The economy of our area suffered as the result of the decision by the Department of the Army to abandon overseas shipping through its terminal at Caven Point. I devoted a great deal of time in an effort to force a reversal of this decision, carrying my protest as high as the Secretary of Defense, for, in my opinion, the abandonment of its splendid facilities at Caven Point not only was harmful to local economy and added to the problems of our already economically distressed area, but it was a ridiculous move that in no way benefited national economy. The Army may one day regret that it gave up a major deep water channel, direct highway access, ocean terminal. From a standpoint of military preparedness it was certainly an ill-considered move. It has never been explained to my satisfaction why the Army permitted the spending of more than $2 million in public funds to build new facilities at Caven Point which were abandoned without ever being used. Already these brand-new structures are showing signs of the rapid deterioration that hits deserted buildings.

I consider the abandonnment of the Caven Point facilities to be the most wasteful and thoughtless decision by a Government agency that I encountered in my first year in Washington.

CIVIL RIGHTS

The final act of the Congress was to pass a foreign aid bill to which was attached a rider providing for extension of the life of the Civil Rights Commission.

It is most regrettable that the Congress, its efforts in this important field blocked by a strong group of southern legislators, failed to vote a comprehensive civil rights program.

It was impossible to force a bill out of either the Senate or the House Judiciary Committees, the Chairmanship of both being held by members from Southern States.

There is agreement between Democratic and Republican leaders that a comprehensive civil rights bill will be an early order of business in the second session, and it is hoped that some action will take place no later than next February.

When it appeared that the will of the southerners would prevail in the civil rights

matter, I wrote the President urging that he make a nationwide television appeal for public demand for civil rights action, similar to his appeal for a labor reform bill. I felt that the civil rights matter was of equal importance.

In the House many Members signed a discharge petition seeking to force floor action on a civil rights bill despite the failure of the committee to report on a bill. I was one of the signers of the petition. It failed to gain sufficient signatures in the closing days of the session.

A bill aimed at restricting action of the U.S. Supreme Court in civil rights matters was introduced in the House and passed despite strong protests of many Members. I took a determined position against passage of the bill (H.R. 3) and urged its defeat in a speech on the floor of the House. The bill failed to come up for a vote in the Senate.

HOUSING PROGRAM

Probably no matter before the 86th Congress in its 1st session was given as much attention as public housing. The great majority of the Members, both Democratic and Republican, of both the Senate and House favored continuing a sound and constructive public housing program.

The Congress passed three separate housing bills. Two of these were vetoed by the President who favored a drastically reduced housing program. Following the first veto, the Congress passed a second housing bill which was a compromise, an effort to meet the President halfway. The second bill, while it reduced, authorized Federal funding, still retained authority that would have permitted continuing the program at an adequate level.

The third housing bill, while it contained authorization for construction of 37,000 units of low cost housing for families displaced as the result of slum clearance projects, a $50 million authorization for loans for housing for elderly persons, and funds for urban renewal, was only a bit higher than the cost of the administration bill. The final bill provided for an expenditure of about $1 billion over a 2-year period.

I favored a more liberal housing bill than that which was finally passed and was particularly distressed when President Eisenhower vetoed the second housing bill.

Early in the session I introduced a bill calling for a lowering of limits from 65 to 62 years as the age at which individuals might apply for public housing under the elderly persons provisions. I took this action because a large percentage of persons at age 62 are incapacitated or able to work only part time and are frequently forced to live on reduced incomes.

WAR ON INFLATION

My mail is heavy with letters from constituents who are concerned with the continuing threat of inflation. I share this concern and I am conscious that big government spending is a contributing factor. However, some of the economic practices of business are likewise contributing factors. Inflation will be effectively blocked only through cooperation of government, business and the consumer public. While I advocate wise and prudent spending by our government agencies, as I said in another column of this report, ultraconservative fiscal policies and too tight a pinch on dollars can block the full development of the country's resources, slow down our scientific and engineering programs, compromise our national defense and deny our citizens many of the government services to which they are entitled. A proper balance in economy with sensible restraint on government spending would check inflation if business and the consumer public does its part.

The staggering amount of interest which the Federal Government is required to pay on borrowed money is a matter of increasing concern. This is a matter of serious concern and I am certain that the Congress next year will undertake a study of this problem.

IS CONGRESS THE BIG SPENDER?

The public likes to pin the big spending tag on Congress. This is a year when we would do well to follow Al Smith's advice and take a look at the record in this regard.

A. The President's budget for fiscal year 1960 called for $74 billion.

B. The Congress appropriated $72,977,598,352, cutting the President's budget requests by about $1.8 billion.

The Congress trimmed the President's budget requests for the operation of nearly every Federal agency except the Department of Health, Education, and Welfare. It increased that budget by $25 million, principally for medical research.

Congress cut the President's request for supplemental appropriations by $376 million.

It also cut backdoor spending, which was approved by the President, by several hundred million dollars.

LABOR BILL

One of the most bitter fights during the 1st session of the 86th Congress was over a so-called labor reform bill. Senator KENNEDY, of Massachusetts, had introduced legislation in the Senate which attempted to correct some of the abuses in some labor unions. There were some members of the Congress and the administration who felt that a stronger and more drastic bill was needed than that proposed by Senator KENNEDY and considered favorably by the House Labor Committee, with certain amendments. The result was the Landrum-Griffin bill which was passed by the House. I favored the bill supported by the House Labor Committee and voted against the Landrum-Griffin bill because I felt that in attempting to stamp out abuses which are known to exist in a few labor unions, it restricted legitimate union activities and may prove to be harmful to the honest and upright unions. A Senate and House conference committee, headed by Senator KENNEDY, brought forth a compromise bill which finally was passed by both Houses by large majorities. I voted for the bill as approved by the conference committee.

NONRESIDENT TAX

For many years residents of New Jersey working in New York have been required to pay a tax on income derived from their New York employment. This is not so in the case of New York residents employed in New Jersey. It is grossly unfair to our New Jersey residents and I am deeply concerned for the several thousand citizens of the 13th Congressional District who commute to work in New York and are forced to pay New York State income tax. Early in the session, I was cosponsor of H.R. 4198, a bill that would permit compacts between States to grant uniform tax treatment to nonresident workers. The bill was referred to the Judiciary Committee. During the committee hearings on this bill I appeared as a witness and urged favorable action by the committee. The legislation never reached the House floor for consideration. However, Governor Rockefeller, of New York, has assured me that he will continue to give attention to this problem and there is every indication that the unfair burden imposed by New York State will be eased. I am hopeful that this will be so in the near future.

MEADOWLAND DEVELOPMENT

Important to the economy of Hudson County is the eventual development of its vast meadowlands. Studies are being made by a number of communities and the State of New Jersey who have banned together in a joint effort. During the first session I appeared before the Appropriations Committee and urged that Federal funds be made available in order that the Army engineers might undertake preliminary studies for eventual development of the meadowlands.

GASOLINE TAX

Although I had reservations about increasing Federal taxes on gasoline, I voted in favor of a bill authorizing the increase after having been assured that this was the only means of continuing the Federal highway construction program. Cancellation or postponement of highway construction in New Jersey would not only be harmful to local economy and mean the loss of work by many highway employees, but would delay completion of very badly needed additional expansion of our road nets.

CAN WE BE OF SERVICE?

Very early in my first year in Congress, I learned the importance of maintaining a close relationship with the citizens whom I represent. The interest of the citizens of our district in their Government is evidenced by the large volume of mail which is received in my office in Washington, and by the great many residents of the district who visit in my congressional office in Bayonne.

This interest of citizens in their Government has proven to be of great assistance to me. For I benefit by the views expressed and my actions are guided by the interest of my constituents. I gained a great deal of personal satisfaction in being of assistance to residents of the district whom I have been able to help.

Besides my congressional office at 783 Broadway where I hold office hours each Friday evening starting at 7 p.m., and where my resident secretary, Joseph Topoleski, may be contacted, I also maintain a congressional office in the Main Post Office Building at Warren and Montgomery Streets in Jersey City where my resident secretary for Jersey City, Donald Monahan, and my congressional aid, Mrs. Marcella West, may be contacted.

World Affairs Study Guide

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement concerning the 1959–60 World Affairs Study Guide prepared by the Minneapolis Star.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

I have just received a copy of the 1959–60 World Affairs Study Guide, prepared by the Minneapolis Star. This guide was edited by Mr. William C. Rogers, Director, Minnesota World Affairs Center, and Mr. Herm Sittard, educational reporter of the Minneapolis Star.

The World Affairs Study Guide is an excellent job in every respect and I commend it to communities throughout the United States. Let me indicate the four main subdivisions of the Guide:

I. Our role in world affairs.

II. Our European and Latin American allies.

III. The Communist world flexes its muscles.

IV. The uncommitted world.

There are a total of 26 different topics, each of which is introduced by basic book-

lets, usually paperback, which are available for serious adult educational purposes. Any American who would follow through this study guide reading a substantial portion of the basic booklets recommended would become very well informed on the contemporary problems of international politics as well as the issues of U.S. foreign policy.

I am deeply impressed by the fairness which characterizes this guide, as well as by its readability and attractiveness for the intelligent reader. I earnestly hope that many local communities will follow the good example set by Minneapolis. This World Affairs Study Guide merits the attention of national organizations seriously concerned with education in the field of foreign affairs.

I congratulate Mr. Rogers and Mr. Sittard, as well as their associates, who went beyond the line of duty in preparing this excellent educational material.

State Department Dining Room Area

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. BOLTON. Mr. Speaker, earlier in the year when the State Department appropriation was before the House, inadequate explanation was given of the item covering the state dining room in the new State Department Building, and considerable misunderstanding arose. It seems appropriate to clarify the matter before the 1st session of this 86th Congress adjourns.

It has been growing increasingly clear that the lack of a state dining facility large enough to handle the formal functions involved in receiving heads of foreign governments and other prominent officials has become a vital need of government. With the ever growing number of official visitors, it becomes increasingly important to maintain ample facilities for their reception. The new state dining room, which is designed to seat a maximum of 126 people, will be the only Government-owned facility outside the White House adequate for handling formal state functions.

In the recent supplemental appropriations bill for 1960, funds were provided to complete the extension and remodeling of the State Department Building, including $263,000 for furnishing the entire eighth floor. Developed in what would have otherwise been unused roof space the area includes the state dining room, covering 5,455 square feet; a reception room where guests may be received, measuring 1,870 square feet; and a drawing room where guests may gather before and after dinner, covering 2,325 square feet. The remainder of the floor, 7,925 square feet, takes advantage of the less expensive construction cost to locate the normal dining facilities for secretarial rank personnel.

Comprising some 17,575 square feet, this entire area is to be decorated and furnished for $263,000, in accordance with the $15 per square foot standard established by the General Services Administration.

It is planned that the part of the floor where important foreign guests will be officially entertained should be fully representative of the American people and their historical, cultural, and industrial progress. Therefore, decorations and furnishing as planned will be early American, while exclusively American woods, marble, woven fabrics, and reproductions of early furniture styles will be used.

As a member of the State Department Subcommittee of the Committee on Foreign Affairs, I would like to compliment the Department on the development of these much-needed facilities. Certainly their availability will make it easier for our Government to return appropriately the hospitality extended to American officials visiting foreign countries.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 135, p. 1942).

Appendix

Report of the Majority Leader on the 1st Session of the 86th Congress

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. McCORMACK. Mr. Speaker, when this session of the 86th Congress convened on January 7, the United States and its allies had just rejected Soviet Premier Khrushchev's threat against Berlin as a "public repudiation of solemn engagements"—and the U.S.S.R. had launched its first moon rocket.

Today, as we move toward adjournment, the visit of Mr. Khrushchev to this country conicides with new Communist aggressions against small nations of the Far East, and indeed, even against India.

Thus our going forth, as with our coming in, is is the shadow of historic events.

It is against this background of a momentous era, fraught with the fate of mankind's future and extending beyond this world to the outermost realms of space, that the ultimate record of the 86th Congress must be written.

This has been an active and arduous session, and at this point I want to congratulate the membership of the House of Representatives for a task well done. Members on both sides of the aisle are to be commended for their industry and their devotion to duty, requiring many long hours of work in committee, and frequent protracted sessions on the floor.

As majority leader of a Democratic Congress—the third successively elected by the people during two terms of a Republican President—I may say frankly there were occasions and issues on which the administration could have been more amenable and cooperate with and to the constructive aims of the majority party in the Congress.

Our differences, however, did not extend in any great degreee to the broad front of international relations which, after all, under the Constitution, are within the foreign policy jurisdiction of the President. For example, President Eisenhower invited Mr. Khrushchev to our country. He assumed this responsibility under powers possessed by the President under the Constitution.

I do not know how far in advance other Democratic leaders were informed, but my first information was 15 minutes before the President's press conference, at which the invitation was announced. There was, so far as I have been able to find out, no bipartisan efforts made to ascertain whether or not this invitation should be extended.

After the invitation was extended, Democratic leaders and Members showed their bipartisan understanding—after the fact—by making no public criticism, and showing a restraint of a statesmanlike nature.

This raises an interesting hypothetical question. "Would Republicans have evidenced the same restraint if a Democratic President had issued the invitation?"

It will be interesting and watched closely, and from the angle, if analyzed correctly, to observe during the months ahead, "the law of natural and probable consequences" operating as a result of the visit of Mr. Khrushchev.

In this field, as in national defense, the 86th Congress has written a record of full support of America's leadership of the free world in the struggle against totalitarian forces seeking world domination by godless communism.

As a matter of fact, the great majority of the Democratic majority of the Democratic Members stand for firmer foreign policy, and stronger national defense than does the President, and a substantial percentage of his party.

In other words, the Democratic Party supports the President, plus.

If, for example, the Democratic Party had its way—our Army and Marine Corps would be stronger and larger, as well, as with our Navy and Air Force, modernized.

In 1958, Congress appropriated funds to maintain an Army at a strength of 900,000 officers and enlisted men, and the U.S. Marine Corps at 200,000 but the President ordered a "freeze" on the extra money appropriated for these purposes, and proceeded with reducing our Army below 900,000 and our Marine Corps below 200,000.

Congress can appropriate but cannot force or compel the President to spend.

This year, instead of appropriating enough money for a 900,000 Army, because the President, as he did last year, would freeze and not spend the money to keep our Army at the above strength, the Democratic-controlled Congress appropriated over $400 million toward modernizing our Army—furnishing it with up-to-date instruments of warfare. This is only the first step, as a large percentage of our military equipment and weapons are still of the World War II kind.

Let us hope the President will not freeze this extra money to be used for such an important purpose.

In the field of international affairs, America's policies and programs in this struggle for freedom have evolved over more than a decade of the postwar since President Harry S. Truman first took his courageous stand in saving Greece from Red action, turned aside Communist infiltration of France and Italy, and thwarted threats against Iran and Turkey. The Marshall plan, the Atlantic Pact, and the programs of economic assistance and military aid not only revived and rehabilitated once wartorn and stricken Western Europe, but also helped restore their prosperity so that today they are contributing an increasing share of their own resources to defense of all the Western allies.

For our own part this year the Congress, in the authorization act for the mutual security program, provided that hereafter military aid will become a part of the national defense budget. The emphasis in economic assistance is shifting from outright grants to repayable loans.

Also, the stream of aid is being directed more and more toward the Far East, the Middle East, and Africa, in recognition of the need of new and free countries swept into being on the tide of revolutionary aspirations. We must help them gain the economic strength to fight disease, poverty, and illiteracy which are the breeding grounds of communism, and to take their rightful place in the democratic world.

To this end mutual security appropriation bill provides for $3.2 billion plus for the fiscal year of 1960, with increased appropriations for the Development and Loan Fund for the present fiscal year, and a larger amount for fiscal year 1961. The appropriation bill also provides for military assistance for defense support, for technical cooperation, for special assistance, and also for the President's contingency fund. There is a backlog of several billions of dollars. This program is vitally important in the defense of the free world, and in the national interest of our country.

There are some persons in our country who honestly oppose this program. An examination of what would result in their views were carried out is the best evidence of the weakness of their position. Such persons honestly believe in what is called the fortress America concept. With no mutual security program, this would be the probable ultimate result. Fortunately, this concept is rejected by the great majority of Americans of all political groupings. It would result in America being alone in the world.

However, the administration should administer this program so that the maximum results are obtained for the American taxpayer, and for the countries and their people's benefiting, that the end result sought, of containing and rolling back international communism, is substantially contributed to by this great program.

In view of the recommendation of the President's own Draper Committee that this whole program for survival be

established on a long-range basis, there are many who find it regrettable that the President saw fit to scuttle a congressional plan for 5-year financing of the Development Loan Fund directly through the Treasury instead of on an annual appropriation basis.

By applying the political shibboleth of back-door financing to the proposal, President Eisenhower personally lent encouragement to opponents to make serious inroads upon the entire mutual security program—and then attempt to put the blame on Congress. Yet the President has employed this method of financing on frequent occasions when it suited his purpose.

The Congress authorized increased U.S. subscription to the World Bank whose financial and technical resources used primarily in development of electric power, transportation, communications, agriculture, forestry, and industrial expansion of underdeveloped countries. Likewise our quota of support for the International Monetary Fund was increased, as have the quotas of other nations, to aid it in facilitating the expansion of foreign trade, eliminating exchange barriers, and stabilizing currencies.

To help strengthen the economy of our good neighbors to the south, the Congress provided for establishment of and participation in the Inter-American Development Bank. This legislation fills a need long felt by the Latin American Republics for an institution to meet its particular problems of expansion and growth by development of its resources.

The new bank will have a capital of $1 billion, with an investment of $450 million by the United States, and $550 million by 20 Latin American Republics to supply credit, technical and organizational assistance in the development of specific projects.

The House of Representatives has passed a bill renewing for 3 years the President's authority to implement the terms of the International Wheat Agreement, which the Senate ratified along with the International Sugar Agreement.

One of the great reserve assets the free world has is the 100 million and more persons in Communist-dominated countries who despise Communists and their Kremlin dictators, and who are hoping and praying for an early deliverance from the yoke of communism. In their prayers and hopes they look to America for leadership.

In the last Congress the House and Senate passed the Captive Nations Week resolution, which electrified those people and caused pain and consternation among Soviet leaders, particularly Mr. Khrushchev.

This resolution at this time in the world's history was an outstanding achievement of the recent session.

Under no conditions should any agreement be made with the Soviet Union by the President, or representatives of our country, that will result in selling the people of these countries, so to speak, down the river.

Such action will be a violation of our country's solemn promise. It would not be in the national interest of our country. In the passage of this resolution, the Congress recognized these facts. Any such agreement would be contrary to the intent and the will of Congress.

In the world of today and tomorrow, the State Department must think soundly and function efficiently and effectively. The Congress has given it the means to do so, and if further legislation is necessary, will quickly pass the same.

In this respect a bill passed in the recent session to strengthen and improve the organization of the State Department is important.

In the field of national defense a major achievement of this Congress was the enactment of a Defense Department appropriation, if administered effectively, that reasonably assures the United States of Armed Forces of such great strength and so well equipped as to give pause to the possible intentions of any would-be aggressor.

The Democratic Members, in the main, felt that world conditions called for greater national defense, and would have strongly supported the President if he had requested additional funds, as well as additional taxes for national defense. It is the feeling of the great majority of Democratic Members—and in fairness, there are Republican Members—who feel that in the present world emergency, that if we are to err, it is better to err on the side of strength than on the side of weakness. However, the Congress, as hereinbefore stated in several important aspects, strengthened the overall defenses of our country. As I have said, it is hoped the President will not use his freezing policy of last year. If anyone thinks the Kremlin has changed its intent of world domination on existing evidence, they are living in a dream world.

It is natural, even in the world of today, to hope for the best, if accompanied by the logical thought of preparing for the worst.

This appropriation bill improves overall the defensive and the attack capabilities of each branch of our services—a result attained, I may say, Mr. Speaker, only after many months of controversy in which the Congress resolved differences between the Executive and his own Chiefs of Staff by exercise of its constitutional powers and responsibility.

Staying within the figure requested by the President, yet refusing to sacrifice national security on the altar of false economy, the House and the Senate enacted a measure which in several important respects revised the administration's program.

The budget request for the Department of Defense, not including military construction was $39,248,200,000. The final version of the bill provided $39,228,239,000, or $19,961,000 less than the budget request.

In approving the Defense Appropriation Act, 1960, the committee and the Congress took several major steps making significant changes in the defense program of the Nation. Reductions in the dollar estimates were made where they could be made safely, and a number of substantial increases in certain programs were directed.

As already mentioned, substantial amounts were provided to modernize the equipment of our Army. Four hundred and seventy-five million dollars was made available for this purpose, above the budget estimate, including $100 million in directed reprograming from previously available funds. This increase also provides $137 million for accelerating development of the Nike-Zeus, the only missile we have for defense against ICBM's.

Provision was made to assure survival of a larger part of our retaliatory bomber force, in case of surprise attack, by giving the President discretionary authority in the use of funds to order the immediate imposition of an airborne alert. Such an alert would put a number of our Strategic Air Command bombers in the air 24 hours a day every day, where they would be safe from surprise attack, should the tensions of the world at any particular time require it.

Substantial sums were saved, both in this fiscal year and over future years, by compelling the administration, through action on the appropriation requests, to conduct a thorough review of the entire concept of defense against air attack. As a result of that restudy, the amount to be applied over a period of about 12 years to defense against enemy aircraft will be reduced to a figure substantially below the $49 billion that had been estimated as the total accumulative cost by 1963.

For a strong defense against any future attack, the Congress readopted the time-tested formula of a good offense being the best defense, and provided funds for accelerating the Atlas and Minuteman intercontinental ballistic missiles. For fiscal year 1960, $172 million has been added above the budget to these programs by the Congress. In addition, provision was made giving the Secretary of Defense authority to transfer up to $150 million more for acceleration of such missile programs from lower priority items should such action seem advisable at a later date.

In another area, the Congress paid heed to the statement of Adm. Arleigh Burke, Chief of Naval Operations, who said:

> We need to improve our capability to combat submarines. Since World War II, the submarine has progressed faster than the antisubmarine warfare capability to combat it.

Faced with the imminent threat of nuclear-powered missile launching submarines in the Soviet fleet, the Congress provided funds in the amount of $137 million above the budget for antisubmarine warfare, including an atomic antisubmarine submarine.

As was the case last year, the Congress has again provided funds for maintaining the Marine Corps, the Army National Guard, and the Army Reserve at 200,000, 400,000, and 300,000, respectively, which strengths represent increases of 25,000, 40,000, and 30,000 above the budget estimates.

In summary, congressional action on defense appropriations for fiscal year 1960 results in a good law, provides greater military strengths in several key

areas than had been budgeted for, does not weaken essential defenses in any area, and all within a figure of $20 million below the budgeted total of $39,248,200,000.

Internal administration conflicts and uncertainty over missile priorities, interservice rivalries, and alleged influence efforts by competing manufacturers, brought action by this Congress for a closer check by the Armed Forces committees on procurement and construction programs.

Amendments written into the Military Construction Authorization Act provide for a modification of the continental air defense plan involving Bomarc and Nike missile sites pending a review of the program by the Secretary of Defense to be submitted to Congress no later than September 15 of this year.

In addition, the broad authority now given the Executive in procurement of aircraft missiles for naval vessels has been restricted to require specific authorization acts by the Congress before appropriations are made.

In other defense actions, the Congress enacted measures authorizing:

Extension of the Universal Military Training and Service Act.

A $110 million construction program of modern naval vessels for 1960.

Funds for the Atomic Energy Commission construction projects for 1960 including those for peaceful uses of the atom.

Reorganization of the Bureaus of Aeronautics and Ordnance in the Department of the Navy into a new Bureau of Naval Weapons to meet the streamlined needs of a modern Navy.

Involuntary retirement of Regular officers of the various branches of the armed services to facilitate promotions and strengthen control over the quality of personnel.

Reserve Officers Career Incentive Act.

Military Construction Act for fiscal year 1960.

Readjustment pay for warrant officers.

Various inquiries and investigations to improve and strengthen the Defense Department, such as (a) adequacy of transportation for mobilization, (b) utilization of military manpower, (c) influence and favoritism in obtaining contracts, (d) acquisition of Wherry housing.

Extension of the Renegotiation Act for 3 years to aid in recovery of excessive profits on defense contracts, and launching of an intensive study of the whole range of procurement and renegotiation policies.

For peaceful purposes and results, nearly a half billion dollars has been appropriated for research and satellite launching activities of the National Aeronautics and Space Administration. This agency was established by law as a result of close and understanding bipartisan action. It is intended and hoped that those administering this agency will give leadership in this very important field that will bring great benefits to our country and to mankind.

In the field of internal security, to protect the Nation from conspiratorial subversion by Communist agents, the House of Representatives has passed and sent to the Senate, bills to—

Amend the Criminal Code to permit prosecutions for espionage directed at, but committed outside, the United States.

Clarify the term "organize" as used in the Smith Act to apply to continuing Communist activities.

Expedite procedures for review and execution of deportation orders against undesirable aliens who now misuse the law as an instrument of delay.

Broaden provisions of the Foreign Agents Registration Act.

Give authority to the Secretary of State to deny passports to persons furthering the international Communist cause or whose presence abroad would endanger our security.

Make final orders of the Subversive Activities Board against Communist organizations applicable to their successor groups.

An act creating a single, separate, statutory form of judicial review of administrative orders for the deportation and exclusion of aliens from the United States.

Mr. Speaker, a new chapter in U.S. history was written in the 86th Congress with the granting of admission of Hawaii to the Union as the 50th State. This new star in our flag symbolizes the spirit of true democracy. For Hawaii is peopled by many races and creeds, loyal Americans, who have demonstrated that in diversity there can be unity and that all can live together in peace and harmony.

This example is further attested by the composition of its first delegation in Congress which includes Americans of Japanese and Chinese descent as a native of the United States.

As Hawaii follows Alaska into the Union, we hail this bright new jewel in Liberty's crown.

Various laws affecting natural resources, transportation, and other areas of Government interest has been enacted to fully integrate the new States into the Federal system.

The House has voted to extend the authority of the President, under the Reorganization Act of 1949, to propose plans to Congress for changes in the structure or functions of Government departments or agencies.

Establishment of a permanent Advisory Committee to Intergovernmental Relations has been enacted into law. Such an agency, it is felt, can be of great assistance in the solution of mutual problems growing out of conflicting and overlapping functions.

By amending the Communications Act to exempt news-type programs from the equal time requirement for political candidates on radio and television, the Congress has clarified somewhat a situation that threatened to confuse the public and impose burdens on the networks.

In the field of national economy, during the past session a controversial labor reform bill was enacted into law.

There was no marked differences of opinion on the protection of trust funds, of eliminating racketeering actions, and of protecting the election rights of union members. The three bills considered in the House of Representatives adequately covered these reforms. Labor practically unanimously favored such provisions.

It was in connection with certain provisions of the substitute bill adopted in the House that there was sharp division, with close to one-half of the membership of the House feeling that certain provisions of the substitute bill invaded and impaired the legitimate field of union activities.

The result of the House and Senate conferees, who worked hard and long, and without regard to still existing differences of opinions, worked constructively, was a recognition that some provisions of the substitute bill went too far in this respect, and the conferees recommended relief that both bodies accepted.

Time will tell if there are still provisions in the bill enacted into law that invade and impair legitimate union activities. If so, no one would want such provisions to remain as a part of our law.

It is wrong under the guise of reform to invade or impair the legitimate field of business, industry, or finance.

It is equally wrong in the case of labor.

If the operation of the law just enacted discloses that some of its provisions invade or impair the legitimate field of union activities, the Congress can and should quickly repeal such provisions.

The blanket indictment of all of labor and all labor leaders by some persons and groups is not only unjustified, but inconsistent with the truth. Leaders in the ranks of labor, like those in business, industry, and finance are at least 98 percent honorable and trustworthy.

It is wrong to indict 100 percent of any group of Americans for the wrongdoing of 1 or 2 percent.

Furthermore, in the recent visit of Mr. Khrushchev to our country, the leaders of labor conveyed to the recent visitor, in a firm and definite manner, their love of America, and what our country stands for. There was no subservience on the part of such Americans—leaders of labor.

Mr. Khrushchev left our shores with the definite impression that labor in America stands for "a Government of law, and not of men," and that American labor, organized and unorganized, is vigorously opposed to international communism and its objectives and purposes.

In the field of fiscal affairs the last session made a marked contribution, reducing by well over $1.5 billion the budget estimates submitted by the President to the Congress. In the last 5 years of Democratic control, the Congress has reduced President Eisenhower's budget estimates by over $12 billion. On the question of spenders the record shows the President recommended the spending, during the past 5 years, of $12 billion more than authorized by the Congress.

Upon the recommendation of President Eisenhower, extended to July 1, 1960, the 52 percent corporate rate tax, and the existing schedule of certain excise taxes.

Reduced from 10 to 5 the present tax on transportation of persons, and re-

pealed tax on local telephone calls, effective June 30, 1960.

Despite the Republican promise in 1952 and in 1956 to reduce the national debt, it has sharply increased during the present administration.

President Eisenhower recommended another increase in the recent session.

Recognizing the necessity, the Congress responded and raised the national debt limit by $2 billion to $285 billion, and a further temporary $10 billion increase to $295 billion to June 30, 1960.

The President recommended that the ceiling of 4½ percent on long-term Government bonds be lifted, and also on E and H savings bonds.

The Congress passed a bill relating to E and H savings bonds, increasing the ceiling to 4¼ percent. The necessary orders have been issued to increase the interest on these bonds to 3¾ percent. This will (a) benefit millions of present holders of these bonds, (b) prompt them to hold them, rather than cash them in, (c) increase future purchase of these bonds.

The other request, relating to the lifting of the 4¼-percent ceiling on long-term bonds was not granted, in whole or in part, during the past session.

The responsibility for the present situation of high interest and tight money rests upon the shoulders of the Republican administration and the Federal Reserve System. These policies have already increased in less than 7 years the interest paid yearly on our national debt by close to $4 billions. In addition, private borrowers, and of State, city, and county governments, are paying several billions of dollars more now each year in interest than they did in 1952.

Only a few years back the Treasury Department could have made long-term refinancing at less than 3 percent, but instead of following this sound policy, the administration resorted to short-term borrowings of 5 years or less.

As a result of the administration's failures in abdicating its proper responsibilities to the Federal Reserve System, the country is faced with even higher interest rates.

It is also to be noted that no long-term bonds become due until well in 1960.

The Congress, in the interest of our people, used good judgment in not acting on this recommendation until next year. We will then have an opportunity to evaluate the situation better.

To make the record clear and correct, I call attention to an understanding arrived at between the Secretary of the Treasury and the Ways and Means Committee—a majority of whom were in agreement—to lift the ceiling on long-term bonds, and including a sense of Congress provision, in substance, calling upon the Federal Reserve System to cooperate in keeping interest rates from rising too high and too sharply.

This was a reasonable request in the best interest of our people.

The agreement was no sooner made public than it received the open opposition of the Chairman of the Federal Reserve Board, and a few days later, the opposition of President Eisenhower.

These facts clearly show that the responsibility does not rest on the shoulders of the Congress.

If the situation next year, due to policies the Democrats have had no control over, calls for legislation increasing or lifting the ceiling on long-term bonds, it is hoped the President and the Administration will show a more understanding and cooperative spirit.

At the request of the President, for the fifth time in 5 years, the Congress has passed legislation raising the limit of the national debt, either on a temporary or a statutory basis.

In 1953, the year President Eisenhower assumed office, the national debt was $258.5 billion. Today, having risen more than $31 billion since that time, it stands at the highest peacetime figure in history—$289.7 billion, and this, despite the Republican promise in 1952 to reduce the national debt.

The legislation enacted by this 1st session of the 86th Congress lifts the statutory limit by $2 billion to $285, and provides for a temporary $10 billion increase to $295 until the end of the current fiscal year, June 30, 1960.

There is some substance to the administration claims that rising defense costs and flexibility of management of the debt require this action. Still it comes with ill grace from an administration which has achieved this sad record after close to 7 years in office to label the Democrats as "spenders" and to pose as the only true apostles of economy and guardians of the dollar value.

The 52-percent corporate income tax rate and the existing schedule of excise rates on alcoholic beverages, cigarettes, automobiles, parts and accessories were extended to July 1 of next year, but the transportation tax for persons was reduced by half—from 10 to 5 percent—and the tax on local telephone calls repealed, both effective in the next fiscal year.

To meet the rising costs of the interstate highway program, President Eisenhower recommended an increase—temporary—of 1½ cents in the Federal tax on gasoline and diesel fuels. The Congress enacted a temporary 1-cent-per-gallon increase in the present 3 cents a gallon Federal tax in gasoline and diesel fuels with a saving to those affected of one-half cent per gallon. The increase, effective October 1 for a period of 21 months, will make possible a continuance of Federal allotments to the States on a sound basis, and prevent any interruption of the construction of schedules of the States where contract commitments had already been made.

In addition to the revenue from the gas tax boost, the act provides for a future transfer to the highway trust fund of portions of the automobile and parts excise taxes for a limited period.

This is a matter of great importance to our country, and to business and employment. This is one of the outstanding accomplishments of the past session.

For the first time in 10 years the rates of income tax on the earnings of life insurance companies was established on a permanent basis. This problem, the more complex by reason of the varying types of companies, corporate and mutual, was solved with fairness to the companies, to the policyholders and to the stockholders, and with a substantial increase in revenue to the Government. This is a difficult and delicate task well done.

The increasing growth in air traffic and inception of the jet age spurred a continuance of the Federal Airport Act. The Congress extended its provisions to June 30, 1961, and authorized $126 million in grants to the States on a 50–50 matching basis, with funds for terminal facilities limited to essential items.

The Democratic-controlled Congress recognized that larger appropriations should be made in this important field. However, we were faced with a Presidential veto. While we authorized more effective operation of this program during the next 2 years that the President recommended, in the interest of as much advancement as possible, we passed a bill that might not meet a veto. This is what happened. With a divided Government, rather than no legislation in this field being enacted into law, the Democratic Party took the constructive course of making as much progress as possible.

The lending authority of the Small Business Administration was increased by $75 million until next fiscal year. Mounting demands upon its business loan program required this step and have justified congressional recognition of its necessity and value to this segment of our economy.

The efforts of small business to compete against their larger competitors have suffered because of gaps in the law making it difficult for the Federal Trade Commission to enforce the provisions of the Robinson-Patman amendment to the Clayton Act. Before this Congress acted, a company could grant illegal price discriminations three times before effective penalties could be applied. This Congress has amended the law so as to provide that the cease and desist orders issued by the Commission enjoining discriminatory prices become enforcibe within 60 days.

Of importance is a bill that will assist the small business wholesalers of gasoline. Previously gasoline jobbers were required to pay the excise tax when they received the gasoline from the refiner. There was a measure of unfairness in this situation because there was considerable gallonage lost by the wholesalers due to evaporation, shrinkage, and other similar losses. The bill that has passed the Congress permits these wholesalers to pay the tax on the quantities of gasoline sold and thereby remedies the situation prevailing previously wherein these wholesalers were paying an excise tax on gasoline that had been lost due to shrinkage and evaporation.

Other actions were taken during the past session of advantage to small business in being able to more successfully complete with big business, which is

highly favored by the present Republican administration.

The Democratic Party has shown by its actions that it is the real friend of small and independent businesses.

Amendments to the Clayton Antitrust Act enacted by this Congress will strengthen the hand of the Federal Trade Commission in protection of consumers' interests. This legislation by reducing redtape, will expedite procedures for the enforcement of cease-and-desist orders by the Commission against firms engaging in misleading advertising and deceptive sales methods.

The laws governing national banks have been revised to expand both their lending and borrowing powers and by clarification and elimination of ambiguities.

Lowering of the reserve requirements of member banks of the Federal Reserve is authorized, and holding company control of savings and loan associations is limited in other measures approved in this field.

One of the recommendations of President Eisenhower was to increase postal rates, particularly first-class mail, from 4 to 5 cents. It was only last year that postal rates were increased, the first-class mail—the only paying and profit-making part of our postal rates—was increased from 3 cents to 4 cents.

The Democratic Party takes the position a further increase in first-class mail is unjustified, placing an unnecessary and unfair burden upon the vast users of this mail—furthermore, postal rates were only increased last year.

The Democratic Party finds it difficult to understand why the President recommended this increase.

The President in a recent statement criticized the Congress for not increasing the postal rates. This is an indication on his part that the Republican Party will make this a political issue.

If so, the Democratic Party accepts the issue, with the Republican Party standing for an increase of 25 percent in first-class mail, following a 33⅓-percent increase only last year, and the Democratic Party at this time and for the forseeable future, is opposed to the increase from 4 to 5 cents recommended by President Eisenhower.

This Congress has met its obligation to men who served their country in time of war by enactment of a law revising pensions for veterans with non-service-connected disabilities, and for widows and dependent survivors.

The scale of payments is readjusted to eliminate present inequities under which some veterans are receiving pensions who should not, while others are denied benefits who should receive same.

Under the new act, it is estimated 65 to 70 percent of the 805,000 veterans and 450,000 widows now on the rolls will receive increased pensions. None presently on the rolls will be removed.

At the same time, this legislation equalizes the status of World War II and Korean war widows with those of World War I. Beginning next July, they will be eligible for benefits regardless of whether their husbands' disabilities were service connected or not.

The Congress has bolstered the program for direct housing loans to veterans by enacting an increase of $100 million in authorization of this Veterans' Administration fund.

The program is especially designed to assist veterans living in smaller communities and rural areas to whom private types of financing is not available, as it is to those in metropolitan areas. The new authorization, together with funds to become available in 1960 under existing law, should go far toward reducing the waiting list of more than 40,000 veterans seeking direct housing loans.

The Congress has added additional legislation as follows:

An act to permit payments of benefits to veterans who were inducted as aliens—largely during World War I—and who were subsequently discharged without application or solicitation on their part.

An act providing for veterans of the Korean conflict, receiving education or training under the Korean GI bill, a change from the pursuit of one program to the pursuit of another will not be considered a change of program if the first program is prerequisite to, or generally required for, entrance into pursuit of the second. As an example, where a veteran may have declared his educational objective to be the attainment of a master's degree and he later decided that he wishes to attain a doctor's degree, this change of objective would not be considered a change of program.

An act that makes applicable to a competent veteran who disappears the provisions of existing law which provide that where an incompetent veteran who is receiving compensation for service-connected disability disappears, the Veterans' Administration may pay his wife, children, and parents the compensation otherwise payable to such veteran, amounts payable to each not to exceed the amount payable if the veteran had died from a service-connected disability; also

An act that increases the presumptive period for service connected for the disease of multiple sclerosis from the present 2-year period to 3 years; also

An act that provides that Hansen's disease—leprosy—developing to a degree of 10 percent within 3 years from the date of a veteran's separation from the service shall be considered to be service connected; also

An act that includes as a child for purposes of laws administered by the Veterans' Administration—except those relating to insurance and the disposition of personal property of a decedent left upon the premises of a VA facility—one who was a member of the veteran's household at the time of his death, and who was adopted by the veteran's spouse within 2 years after the death, unless at the time of the veteran's death the child was receiving regular contributions toward his support from some individual other than the veteran or his spouse, or from any public or private welfare organization furnishing services or assistance to children.

Also passed by the House are these other bills to—

Provide incentives for Reserve officers to continue on duty beyond their obligated service period through increase of readjustment pay;

Amend the Reserve Officer Personnel Act to equalize promotion opportunity in various branches of the armed services;

Extend the period during which families of veterans have preference for admission to public housing projects;

Provide $100 a month pensions for holders of Congressional Medals of Honor.

The program, popularly known as Public Law 480, for disposal of surplus farm commodities, was strengthened and again extended—this time for 2 years.

Under this Agricultural Trade Development and Assistance Act, sales, barter for strategic materials for our defense stockpiles, and donations of millions of tons of the Commodity Credit Corporation's vast stores of surplus are either sold in private transactions, provided for the peoples of other countries in exchange for foreign currencies, or put to humanitarian use for relief of suffering and want in famine, flood, and other emergencies abroad.

An amendment in this year's bill permits the Secretary of Agriculture to establish a food stamp plan for distribution—from groceries up to $250 million worth of food—to certified needy families in this country. This plan, which is not mandatory, would be put into effect experimentally in trial areas and would terminate for study and final decision January 31, 1962. This plan was opposed by Secretary Benson; why, it is hard to understand. Secretary Benson should carry out the intent of Congress.

The language of the new act places increased emphasis upon the efforts to develop further means for expansion of the foreign markets for American agricultural products. To this purpose, at least 5 percent of the foreign currency counterpart funds are to be devoted. It also authorizes long-term loans by the United States to finance sales of surplus to other nations for dollars.

Amendments were added adjusting the limitation on soil conservation rental payments and the marketing quota for 1960 extra long staple cotton.

However laudable this important measure, it will not solve the problem of surpluses.

Every effort by this Congress to tackle the basic issues of falling farm income and overproduction have been rebuffed by the Eisenhower administration. He stands by the Benson theory of lower prices as the means of cutting production and reducing surpluses.

In the meantime, while the cost of the things the farmer buys has been rising, he is getting less and less for his own products. Farm income has been dropping. In the last 4 years, net income of farms has averaged only $11.9 billion as compared to $15.3 billion in 1952.

And farm population—which was 24.2 million persons living on 5.4 million farms in 1952—was down to 20.8 million on 4.7 million farms in 1958.

An increase of over $4 million was provided over the budget to strengthen the research and control work of the Department, much of which results from the in-

creasing threats of insect pests and diseases to the crops of our country.

The budget estimates for the soil conservation program were increased by $7 million over the 1960 budget request to provide technicians to assure adequate assistance to the 2,861 districts expected to be in existence by June 30, 1960, and to meet the needs in watershed and flood prevention work.

Restored was the full $250 million for the agricultural conservation program for 1960, for which the budget proposed a reduction of $100 million. This is the fourth time since 1953 that a substantial cut of this nature has been proposed by the budget.

For the school-lunch program for fiscal year 1960, there was provided an appropriation of $100 million plus a transfer of $43,657,248 from section 32 funds for food purchases. This total of $143,657,248 is compared with $135 million provided for fiscal year 1959 and a budget estimate of $100 million for 1960.

There have been provided sufficient funds for the lending programs of the Rural Electrification Administration and the Farmers Home Administration to assure farmers sufficient credit to meet the difficult economic problems facing them. The budget request for REA appeared to be adequate. A total of $33 million had to be added to the budget request for the Farmers Home Administration to accomplish this.

In early January, the administration through Secretary Benson, promised to submit to the Congress in time to be considered, a broad legislative program.

Despite efforts to have Secretary Benson submit his program with accompanying legislation, he failed to do so before Congress adjourned.

The vetoes of the wheat bill and the tobacco bill were not only unnecessary, but unjustified.

Congress did everything possible to harmonize its views with those of the administration, but the administration did not cooperate as evidenced by the Presidential vetoes of the wheat and tobacco bills. As a result of the vetoes by the President, important segments of our farming community continue to suffer.

It is evident that the great accumulation of wheat surpluses is a No. 1 farm problem. The administration made no recommendations on this or any other agricultural product.

The Congress acted. It passed a good bill reducing the wheat acreage in 1960 by 25 percent below 1959. This would have brought wheat plantings down to 41 million acres and would have reduced production substantially. This would have been less than half the 84 million acres our farmers seeded to wheat 10 years ago. This legislation represented a willingness of our farmers to assume great sacrifices to bring down the wheat surplus.

The President vetoed this bill.

He did so because it included price supports, but overlooked the fact that such price supports were necessary to pervent great hardships to wheat farmers while they were reducing their crops so drastically.

The tobacco bill, also vetoed by the President, was a good bill, the effect of which was to prevent increases in the support prices of tobacco, so that our tobacco might continue to compete pricewise in the world markets.

All interests in tobacco, producer and industry, supported this legislation.

The vetoes of these two bills, undoubtedly upon the recommendations of Secretary Benson, are contrary to the best interests of these important segments of American agriculture, and of our national economy.

The plight of the dairy farmers, also our chicken farmers, particularly in egg and butter products, is another striking illustration of the lack of leadership of the administration. When the administration acted, and then only when public opinion demanded action, it was too late and too litttle.

Other agricultural bills were enacted by the Congress which permit extension of the crop insurance program into additional counties; authorizes leasing of cotton acreage allotments during crop years 1959 through 1961; provides for sale of feed for livestock in emergency areas; authorizes refinancing of loans on family-size farms under the Bankhead-Jones Farm Tenant Act.

The House Committee on Agriculture sent 118 bills that had been introduced to Secretary Benson for a report of the Department's position thereon. This is the procedure all committees follow with reference to departments and agencies that bills filed relate to.

Of the 118 bills sent to Secretary Benson to determine his position on them, he approved only 8 of them, and most of them were of a minor nature. He disapproved proposed changes, or did not report at all, with respect to all the others. Secretary Benson opposed all legislation providing fundamental improvements in the operation of farm laws to increase the income of farm families.

For example, Secretary Benson opposed legislation to balance the price supports of small grains to their feed value relationship with corn.

He opposed an additional authorization of $3 million for the special school milk program.

He opposed legislation based on a report of a commission to increase research in industrial uses of products of our farms.

He opposed the food stamp plan—food for the needy.

With the price disaster earlier this year in the poultry industry, Secretary Benson opposed legislation relating to the situation, and to long-range problems of this industry.

His efforts to change policy of REA contrary to existing law and to the intent of Congress, are well known to interested farmers and their organizations.

The failure to meet the crisis in the farmer price for hogs is another striking illustration of the administration's disregard for the farmer. Last July prices for hogs dropped to the lowest level in 15 years. The committee reported a bill, which is opposed by Secretary Benson and the administration.

I could mention a number of other bills that were blindly opposed by Secretary Benson and the administration.

At present writing, Secretary Benson is visiting countries abroad, both inside the Iron Curtain and outside. With the failure of his leadership to the farmers of America, it is difficult to see how he can give good advice to the farmers of other countries.

After two vetoes by the President, the Congress passed and sent to the President for his signature a housing bill substantially the same as two he previously vetoed during this session, and one he also rejected in 1958. The President signed the third bill. This is due to the firmness of Democratic leadership.

This is a bill designed to meet the needs of an expanding population, the problems created by migration to the suburbs, the necessity for restoration of slum areas, and large-scale redevelopment of our urban centers. The measure passed by overwhelming vote.

Increases by $8 billion the authority of the FHA to insure construction loans;

Provides $650 million for loans and grants to communities for urban renewal, with $350 million becoming immediately available and the balance July 1, 1960;

Makes available funds for loans to provide residential housing for elderly families, as well as for financing construction of nursing homes for the aged;

Authorizes the construction of 37,000 additional public housing units;

Reduces downpayments on new homes constructions with FHA insured loans.

Provides $300 million to help finance construction of college dormitories.

While the bill passed by Congress does not carry out the feelings of the great majority of the Democratic Members, the bill represents progress in the best interests of our people. The Democratic Party did not take the position of "all or nothing." Giving practical consideration to a divided government, and having in mind the theory of the best progress possible, the Democratic majority acted constructively, and in the highest traditions of statesmanship.

In addition, the Congress in separate legislation, renewed the voluntary home mortgage credit program which is a help to home buyers in smaller communities in finding financing not normally available to those outside of large cities.

Everyone recognizes the importance of medical research and the part the Federal Government can play in this important field.

The Congress made a large increase in this field over the President's budget estimate. The increased appropriation was nearly $106 million. For example, it is estimated that 16 million of our people suffer in some degree from mental disorders; almost as many are partially or totally disabled by diseases of the heart and the circulatory system, including cerebral vascular diseases. There are 11 million of our people suffering from arthritis and rheumatic diseases, and cancer afflicts 700,000 and annually takes in death 250,000 persons.

Certainly, finding the answers to these and other diseases means more to our people and to humanity than it would ever be possible to measure in dollars and cents.

Wonderful progress has been made in past years in the field of medical science. For example, 1 cancer patient out of 3 can now be saved, as compared to 1 out of 4 as recently as 1938; approximately 80 percent of all persons with epilepsy are capable of regular, productive employment. The major cause of blindness among infants has been practically eliminated. With new drugs and methods of treatment, it is possible to prevent crippling in 70 percent of patients suffering from rheumatic disease, as well as marked advances in other diseases, and conditions of human suffering.

And in this progress, appropriations made by the Congress have played a most important part.

In addition, the Hill-Burton hospital construction program—a matching grant program—was increased from the budget estimate of $101,200,000 to $186 million. This program meets the enthusiastic support of our people.

The construction of health research facilities—on a matching basis—authorizes an appropriation of $30 million each year. This act was passed in 1956. The President, for fiscal year 1960, recommended $20 million. The Congress appropriated the full amount—$130 million.

The pollution of our streams has become a national disgrace. The existing law authorizes an annual appropriation on a matching basis of $50 million annually. For fiscal year 1960, the President recommended $20 million. The Congress considered this amount to be inadequate, increasing it to $50 million for this fiscal year—1960.

These are outstanding achievements on the part of Congress, of inestimable value to our people.

In the health field, substantial increases in appropriations were made for medical research by the National Institutes of Health and other institutions, and extended for 5 years programs for training of public health personnel.

In providing for the continuance of the air pollution control program, the Congress authorizes funds to continue research projects and technical assistance for local health authorities.

The special school milk program which has benefited millions of children throughout the land was given an increased limitation for expenditures to $85 million for 1960 and to $90 million for 1961.

Legislation was enacted to give various States additional time to bring nonprofessional employees of school districts under the Social Security Act.

We have provided increased benefits under the Railroad Retirement and Unemployment Compensation Acts. This is a measure of major importance to the several hundred thousands of railroad employees and their families.

Of major importance to Federal employees and their families, which was under consideration for several years and supported by all organizations of Federal employees, is the bill establishing a Government-wide Federal employees health benefit program. This bill is one of the significant acts of this session.

A bill of great importance to our people is one that provided for strengthening the authority of the Post Office Department in curbing the use of mails for the distribution of obscene and fraudulent matter. This bill, which passed the House, when enacted into law, will improve the procedures and criteria for the prevention of obscene material going through the mail.

The House also passed a bill establishing a licensing and control system over the manufacture of narcotic drugs in pursuance of international agreements with other nations to cut down their illicit trade.

Also passed by the House is a bill allowing tax deductions for professional self-employed who set aside income for voluntary plan. This is meritorious legislation and should be enacted into law next year.

By margins in excess of the two-thirds majority necessary, both the House and the Senate overrode the President's veto of a second public works appropriation bill.

The measure provides $1.3 billion for flood control, waterpower, river and harbor improvement, and anti-beach-erosion projects throughout the country.

President Eisenhower's veto message of the original disclosed two things:

First, that he was misinformed as to the status of many of the projects which he classified as "new starts." Actually, they had not only been authorized and budgeted but construction was already underway on some of them.

Second, that he showed a lack of sympathy and understanding with the fundamental policy of conservation of our natural resources. He took the short-sighted position of viewing only the dollars spent on such projects, rather than that they are an investment which returns manifold dividends to our country, as well as protection to our people.

This appropriation bill will bring benefits to millions of persons in various parts of the country. The President took an adamant position of all or nothing on his recommended projects. The Congress included projects of long standing and of great merit. The appropriations provide for an orderly development of our natural resources and represents an investment in America which will bring back manifold returns. Every project has been considered by Congress and authorized by law. The people of the areas of the country who will benefit from this bill are indebted to the Democratic Members of the Congress for the final action.

The Democratic Party is proud of its part in the passage of this bill.

The important problem of public works projects on our rivers and harbors, in the improvement of navigation, and of flood control, was recognized by the passage of an authorization bill, that will permit appropriations in excess of $600 million in the years ahead. Such legislation, and later appropriations, are an investment in America.

One of the greatest examples of Federal public works projects, the Tennessee Valley Authority, for the first time was put on a self-financing basis by the Congress. The new law gives TVA authority to issue up to $750 million in revenue bonds to finance additional facilities. It was due to Democratic insistence that this bill became law.

The problem of pollution of our streams, with its consequent dangers to health and water supplies, was effectively met by the House with passage of a bill increasing from $50 million to $80 million a year the sum which may be appropriated.

These funds are to be used as grants to local governments to help pay the cost of construction of sewage-treatment works.

The Federal allocations represent 30 percent of the cost of the projects as against 70 percent provided by the community.

During the closing days of the session, the Senate passed a bill providing for further increases. The differences between the two branches will be adjusted next year.

In the field of reclamation and development of the Nation's water resources, and in the field of flood protection, bills of import to various parts of our country were passed, and some others were reported out of committee for action next year.

Also, in the field of public lands, many bills were enacted into law.

In the field of Indian affairs, a number of bills of import to our Indian tribes were enacted into law.

The interstate compact for conservation of oil and gas, which was established by oil-producing States with the consent of Congress, was authorized to be extended for another 4 years by legislation enacted into public law.

In the field of immigration and naturalization, important legislation was passed of a progressive and humane nature; among which was a bill enabling the reuniting here of many thousands of families of law-abiding aliens now permanently residenced in the United States. This bill is a decided step in the right direction which many interested persons and groups hope will be followed by future legislation extending its humane benefits.

A measure of great import to the several States relates to State taxation of income derived from interstate commerce. The Congress had to act quickly on this matter during the recent session. While the bill is a step in the right direction, the passage of this bill is not intended to be a final or comprehensive solution of all the problems of State taxation of income derived from interstate commerce. A study by appropriate committees will be carried on to determine what further legislation, if any, is required.

The extension of the Civil Rights Commission should and will be followed in the next session by the passage of legislation that will extend existing law in the protection of the constitutional rights of all persons.

In the next session, legislation increasing the minimum wage, and extending

coverage under this law will be acted upon.

Much has been written about the vetoes of President Eisenhower, and that only 1 out of 146 vetoes has been overridden by the Congress. The fact is that most vetoes are on minor bills, and no Congress undertakes to override such a veto.

It must be borne in mind that overriding a veto requires a two-thirds vote of those present and voting thereon. This vote is difficult to obtain, even on legislation—suspension of the rules—requiring such a vote where there is strong opposition. The record shows that where an attempt was made to override a veto, and it failed, that the overwhelming majority of the Democratic numbers followed their leadership. Where a majority vote was required to pass a bill, a clear majority was obtained.

It is significant to note that on the three widely publicized vetoes that the President finally accepted practically the same housing bill as he vetoed on two occasions; that the Congress overrode the second veto of the public works appropriation bill, which is practically the same bill that the President vetoed, and the Rural Electrification Administration bill failed in the House by only four votes in obtaining the necessary two-thirds vote.

An unfortunate pocket veto of the President is the bill establishing for a limited period of time a Research Commission for the Coal Industry.

There is no segment of American industry more adversely affected economically than the coal industry, with resultant widespread unemployment.

Through this Commission that the bill established might have been discovered new uses of coal, bringing new life to the industry, and hope of future employment to the unemployed coalworkers and their families. This measure was not only sound, but humane.

To say the least, it is most unfortunate that the President pocket-vetoed this bill which would cost so little, but could bring so much good.

There is no person in the entire country who more enjoys the confidence and respect of the people of the country—North, East, South, and West—than does Speaker SAM RAYBURN. Everyone knows that, while he is a strong Democrat, above all he is a dedicated American.

With his 47 consecutive years of service in the Congress, Speaker RAYBURN'S long experience enables him as a top expert in appraising a Congress or one of its sessions.

At the end of the 1st session of the 86th Congress, Speaker RAYBURN said:

> I have never known a group of men and women assembled in this Chamber who I thought were more dedicated to the job they were trying to do here than the Members of the 86th Congress.
>
> We have done, in my opinion, a tremendous and outstanding job.

While the record of the 86th Congress remains to be completed at the termination of its 2d session, the Speaker's appraisal of the past session—the 1st session of the 86th Congress—is correct, and, I might add, in spite of the difficulties raised by Presidential vetoes.

In a government of party division between the executive and the legislative, it is imperative that political policy should not hamper either in their respective duties. This Congress has striven to meet the President more than halfway. We have leaned over backwards showing a willingness to compromise to obtain agreement on legislation necessary to the welfare of the country. We did not sacrifice principle in doing so, but, on the other hand, neither did we take an all-or-nothing attitude.

It is sincerely to be hoped that with our return for the second session in January, the President will be of like spirit.

Pornography: The New Black Plague

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Pornography: The New Black Plague," from the National Parent-Teacher, the PTA magazine, September 1959 issue.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORNOGRAPHY: THE NEW BLACK PLAGUE

Are you one of the growing number of parents who have felt the shock of seeing among their child's possessions some of the filth that is being sent to young people through the mails? Even if you aren't, you can imagine the horror and heartache that such a discovery has brought to other parents. Mailed pornography knows no boundaries. It infiltrates every part of the country, reaching children and youth on farms and in cities, in suburbs and slums, in stern homes and trustingly permissive ones. No child is safe from this most ruthless of all rackets—the distribution of pornography by mail.

The material comes in a plain envelope, bearing your child's name. The pictures inside defy description. They are not just nudes. They picture the naked bodies of men and women, often boys and girls, singly and together, in every imaginable position of lewdness, intimacy, and perversion. Some of them masquerade as "art photographs." Others are portraits to be hung in a youth's room as a reminder of "how joyous life can be if one is modern." Some are enclosed in small, attractive gift cases that a boy can give to his girl or boastfully display to his friends. Other pictures are on the backs of playing cards—samples of complete decks that the recipient is urged to order and resell to his friends, card by card, at a commission that sounds fabulous to a youngster.

Where does the torrent of smut come from? How does it get mailed to your home? Who is responsible?

The child who receives the degrading stuff may be innocent of wrongdoing. As a young art student, he may have answered a magazine advertisement for art materials. Or he may have sent a dime or a quarter for a train or a model airplane offered at a bargain as a come-on. Such innocent actions can put his name on a "sucker list" for commercialized smut.

Or he may have done nothing at all to bring on the deluge. His name may have been taken from a high school yearbook, the membership list of a youth club, or a newspaper story about school activities. The Post Office Department estimates that between 700,000 and a million children will receive unsolicited obscene and pornographic materials through the mails this year. No one can be certain that his child will not be a victim of the mail traffickers in smut and slime.

How does an obscene picture affect a child or youth who sees it? Children are by nature curious, daring, breathlessly eager for new sensations. Yet on some guileless minds such a picture may barely register. On others the imprint may quickly blur and dissolve. But on mind after mind the impression is likely to be powerful and lasting. The U.S. Senate Subcommittee To Investigate Juvenile Delinquency believes pornography may be most damaging to the child who has had little or no sex education.

Pictures of obscenity and perversion may excite children, giving them a feeling of being grown up. Or they may make all intimacy seem foul and disgusting. Testifying before the subcommittee, Dr. Benjamin Karpman, chief psychotherapist at St. Elizabeths Hospital in Washington, D.C., said, "You can take perfectly healthy boys or girls and by exposing them to abnormalities you can virtually crystallize their habits for the rest of their lives."

Arthur E. Summerfield, U.S. Postmaster General, charges the purveyors of pornography with contributing to the alarming increase in juvenile delinquency. "Sex criminals and sex murderers," he says, "almost always have a long record of addiction to pornographic and sadistic material." We had better heed the implications of this statement; children who have never been exposed to such material may become the victims of sex criminals who have been exposed to it. It is to the interest of all parents, therefore, that not only their own children but all children be protected from this immoral sewage.

We cannot risk delay. The indecent traffic is growing heavier every day. Mail-order pornography is big business. Every year the "large, defiant barons of obscenity," as Mr. Summerfield calls them, sell some $700 million worth of filth. Complaints about this depraved merchandising flood the Post Office Department at the rate of at least 50,000 annually. They come from clergymen, high school principals, college presidents, newspaper editors, PTA members, and other alarmed citizens.

Why doesn't the Post Office Department do something about the wholesale promotion and distribution of filth through the mails? Over the years the Department has diligently tried to keep the mails clear of indecent matter. But it has met powerful opposition from the people who stand to profit by the corruption of children. Occasionally resistance has come from others—from people dedicated to freedom of the press. Confusing liberty with license, these people unwittingly assist the purveyors of pornography.

Last year the Post Office Department conducted 4,000 investigations of obscene mailings and caused the arrest of 293 persons—an increase of 45 percent over the figure for the previous year and the highest number on record. Nevertheless, as the figures indicate, the quantity of filth in the mails is increasing every day. This is partly because the smut sellers, knowing that tremendous profits can be realized from a small investment, are willing to risk a small fine or a light prison sentence. It is partly because certain courts, notably those in Los Angeles and New York, where most of the mail-order business in pornography originates, have been extremely cautious in their decisions on obscenity. Their liberal rulings have

established virtual sanctuaries in which dealers in obscenity operate with impunity.

In 1958, as a result of persistent urging by the Post Office Department, an important forward step was taken: The obscenity statute was amended. Previously distributors of pornography could be prosecuted only in the district in which the obscene material was mailed. The amended law makes it possible to prosecute the merchants of filth at intermediate offices and at the point of delivery, where the actual damage is done. And it authorizes fines up to $10,000 for second offenders and imprisonment for 10 years. We now have a powerful means of stamping out a vile racket.

But success depends on the cooperation of a concerned citizenry, the people into whose homes the obscene materials are sent. Parents can do more than anyone else to help apprehend the mailers of filth. The Post Office Department, therefore, urges all parents to take two simple steps:

Save all materials received, including the envelopes and enclosures.

Report the matter immediately to the Postmaster General or to the local postmaster and turn the materials over to him.

In appealing to the Nation to defeat commercialized pornography, it was natural that the Post Office Department should ask the help the national congress. At the annual convention last May a message was presented by W. D. Brewer, regional director of the Denver region of the U.S. Post Office Department. Mr. Brewer read a telegram from Deputy Postmaster General Edson O. Sessions addressed to the delegates. "Postmaster General Summerfield," he told them, "is waging an all-out effort at all levels, but most importantly he needs the help of parents and educators if the campaign to erase smut and filth is to be effective. In a recent report to Congress the Postmaster General said, 'It is clear there must be a greater, expanded awareness of the seriousness and the demoralizing results of the wholesale distribution of filth to the children of this country. * * * It is my opinion that the greatest single need today is widespread and concerted public support of this program.'"

The national congress was already acutely aware of the problem. For several months its action committee on comics, motion pictures, radio, and television, headed by J. C. Moffitt, second vice president, had been studying the problem of pornography and its impact upon American children and youth. When the message from the Post Office Department was delivered, the action committee was ready with its recommendations.

The committee urged that State congresses, councils, and local units form action committees and invite all other interested groups to cooperate in the analysis and solution of the problem. Councils and local units were urged to cooperate with distributors of publications and with law-enforcement agents to end the distribution of obscene materials. The committee recommended that each State congress, with professional legal assistance, compile a summary and interpretation of its State laws on obscenity and distribute copies to all PTA's in the State. Through national congress publications the action committee itself proposes to disseminate similar information on Federal laws for the assistance of State and local organizations.

Unanimously the convention approved the recommendations of the action committee and voted to support the Postmaster General's plan for combating the distribution of pornographic materials.

But now a word of clarification: At this moment the national congress is concentrating its forces on just one problem, the most urgent and alarming of all—the filth that crowds home mailboxes and reaches children. The congress has not set out to clean up newsstands, greatly as some may stand in need of a powerful scrub brush and a strong detergent. It is not girding itself to attack the magazines that exploit curiosity about sex and cater to prurient taste. However grave these menaces may be, they are not so immediately urgent as mail pornography.

Nor is the congress unaware of the fact that some adults buy obscene material and bring it home, where it falls into the hands of children. We deplore this. It should be as unthinkable for any parent to bring such poison into his home as it would be to bring heroin or marihuana. But the problem is one of adult enlightenment and thus of adult education.

Still less is the national congress setting itself up as a censor of literature and art or as an agent for the restriction of freedom of expression. We realize that there are differences of taste and judgment about literature and art. But in the matter of mail-order obscenity there are no differences of opinion. The thousands of urgent protests to the Post Office Department prove beyond doubt that most Americans have no difficulty distinguishing between filth and art. No one could look at the slimy stuff that is going through the mails, literally by the ton, and have the slightest doubt that it is filth.

The national congress agrees with the Post Office Department that simple nudity, scanty clothing, or revealing garments, though we may disapprove of them, do not constitute obscenity. But lewd poses, shameless exhibitionism, erotic posturing, and portrayals of unnatural sex behavior are unquestionably obscene. By no stretch of the imagination could any person, any mentally healthy person, deny that these things are pornographic and perverted.

The National Parent-Teacher calls the attention of its readers to the urgency of this problem and to the action that is being taken by the national congress. From time to time the magazine will bring you progress reports from the congress action committee. It will also bring you the views and counsel of psychiatrists, sociologists, law enforcement officers, and other experts.

What can you do right now? Carry out the Postmaster General's instructions and take to your postmaster any indecent material that comes into your home through the mails. Urge your PTA to establish and support a local action committee.

The barons of obscenity exploit the innocence of children for profit. They grow rich by robbing youth of its happiness and its physical and mental health. If we parents, teachers, and other concerned citizens back up the Post Office Department, if we insist on vigorous prosecutions and maximum penalties for the guilty, we can defeat the vicious purveyors of pornography. The job will take perseverance, impatience, and pluck. The stakes are high: Either we wipe out this new black plague or the pernicious infection will spread throughout our society.

Accomplishments of the House Committee on Interior and Insular Affairs During 1st Session, 86th Congress

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. ASPINALL. Mr. Speaker, at this midpoint in the 86th Congress I would like to present a brief report on the accomplishments of the House Interior and Insular Affairs Committee during this first session. It has been a great honor and experience to have assumed the chairmanship of this committee, and, before making my report, I would like to express my sincere appreciation and thanks to all members of the committee and to the committee staff for their cooperation and assistance and for their conscientious, diligent attention to the committee's work and activities. Only through such cooperation and diligence were the achievements of the committee during this first session made possible.

I especially want to recognize the leadership of the subcommittee chairmen—Hon. LEO W. O'BRIEN, chairman of the Subcommittee on Territorial and Insular Affairs; Hon. WALTER ROGERS, chairman of the Subcommittee on Irrigation and Reclamation; Hon. GRACIE PFOST, chairman of the Subcommittee on Public Lands; Hon. JAMES A. HALEY, chairman of the Subcommittee on Indian Affairs; and Hon. ADAM C. POWELL, chairman of the Subcommittee on Mines and Mining.

I want also to express my sincere appreciation to Hon. JOHN P. SAYLOR, ranking minority Member, for the fine cooperation he has given me. I am particularly pleased, too, with the work of the committee's professional and clerical staff, the members of which have set a high standard of performance in committee activities and service to committee members.

STATISTICAL ASPECTS

In this report, I will comment first on the statistical aspects of the committee's work and then on the legislative activity of the committee. Of course, the bare statistics with respect to the committee's workload and performance do not tell the whole story of the committee's accomplishments, but they do help to show in convenient form the quantity of work that was assigned to the committee, the immense amount of time the committee and its members spent on these matters, and the results to date.

First, a bit of history to give us some perspective. The number of bills and resolutions referred to the committee during the first session was greater than ever, and the number of bills that become law was larger than it has been during any first session since the 81st Congress. I present herewith a little table showing the number of bills referred to the committee, the number reported by it, the number which passed the House, and the number which became law during the 1st sessions of the 82d, 83d, 84th, 85th, and 86th Congresses:

	Referred	Reported	Passed House	Enacted
82d	368	83	67	29
83d	421	105	94	58
84th	486	103	97	68
85th	572	79	78	55
86th	641	87	84	71

It will be noted that two other first sessions produced more reports and more bills which passed the House, but none produced as many bills that passed both Houses and were signed by the President.

I want, in this connection, to note that this result reflects the excellent cooperation and understanding that we have had with our counterpart committee in the other body.

Next, and in more detail, the figures for the session that has just ended. During the 141 legislative days of the 1st session of the 86th Congress, the Committee on Interior and Insular Affairs convened a total of 158 separate meetings, made up of 121 subcommittee meetings and 37 full committee meetings. Of the 641 bills and resolutions referred to the committee, 381 have been disposed of during this first session and 260 are still pending in the committee. A total of 87 bills or resolutions were approved by the committee and reported to the House, of which 71 passed the House and Senate and were enacted, 1 concurrent resolution was approved by both bodies, 2 bills passed the House and Senate and were vetoed, 10 passed the House and are pending in the Senate, and 3 are awaiting House floor action. Twenty-six of the bills that were enacted carried Senate numbers; 45 carried House numbers.

With respect to subcommittee responsibilities, 13 of the 87 bills and resolutions which received committee approval came from the Subcommittee on Irrigation and Reclamation, 6 from the Subcommittee on Territorial and Insular Affairs, 30 from the Subcommittee on Public Lands, 27 from the Subcommittee on Indian Affairs, and 8 from the Subcommittee on Mines and Mining. Three were handled by the full committee. Of the 260 bills pending before the committee at the end of this first session, 24 were Senate-passed bills.

LEGISLATIVE ACTIVITY

The jurisdiction of the Interior and Insular Affairs Committee covers a wide range. The committee is responsible for legislation relating generally to Puerto Rico, Guam, the Virgin Islands, American Samoa, Antarctica, the Trust Territory of the Pacific, and the insular possessions of the United States. In the field of irrigation and reclamation, the committee's principal responsibility is for legislation relating to existing and potential multiple-purpose irrigation and reclamation projects, including policies and procedure applicable to such projects. Its responsibilities include legislation involving the public lands generally, forest reserves and national parks created from the public domain, and military parks, battlefields and national cemeteries. It has responsibility for legislation involving the relations of the United States with the Indians and Indian tribes, including their care, education, and management, the allotment of Indian lands, and claims paid out of Indian funds. In the field of mines and mining, the committee's responsibilities include legislation involving mining interests generally, the mineral resources of the public lands, and the mineral land laws.

TERRITORIAL AND INSULAR AFFAIRS

The most important measure to come out of the Interior and Insular Affairs Committee during this session was the bill providing for the admission of the State of Hawaii into the Union. This action alone would mark the session as a productive one for the committee and the Congress. In view of the many years and many sessions of Congress devoted to this matter, it is very gratifying that Hawaii's admission as our 50th State followed so closely the admission of Alaska as the 49th.

One other measure involving our new States deserves specific mention. This is the Alaska Omnibus Act which made many changes in Federal laws—changes that became necessary and desirable upon Alaska's admission into the Union. Most of these changes are designed to put Alaska under the same general laws, rules, and policies as are applicable to all other States. Other provisions of the bill will also make the transition from territorial status to statehood easier and smoother than it would otherwise be.

Several other bills, of a minor nature, relating to Alaska, Puerto Rico, the Virgin Islands and Guam were reported by the committee, passed by the House, and enacted during this session.

There are several pieces of legislation presently before the committee which have broad implications for the future of the Commonwealth of Puerto Rico. In order that the committee may have adequate background for the consideration of this legislation the services of a special consultant were obtained to make a firsthand, on-the-spot study of the progress Puerto Rico has achieved since enactment of the Commonwealth Act of 1952. An excellent report has been prepared which will be of great value to the committee in its planned comprehensive hearings in Puerto Rico this fall.

IRRIGATION AND RECLAMATION

In the field of reclamation and the development of the Nation's water resources, the most important committee action was the approval of H.R. 7155, to authorize the San Luis unit of the Central Valley project, California, and to open the way for a joint Federal-State development in the San Luis area. Favorable action on this urgently needed project, which will involve a Federal cost of about $290 million, concludes several years' work and study on the part of the committee. This bill was not acted on by the House during the first session.

Three reclamation project authorizing bills which passed the House are H.R. 968, to authorize the Bully Creek extension of the Vale reclamation project in Oregon—$3.3 million development; S. 994, to authorize the Spokane Valley project in Washington and Idaho—$5.1 million development; and H.R. 4279, to authorize the La Feria rehabilitation project in Texas—$6 million development. All three of these bills also passed the Senate and were enacted.

The long-standing problem as to whether the Federal Government or the Pacific Gas & Electric Co. would construct the power facilities of the Trinity River project in California was settled once and for all by turning down the so-called partnership proposal. This action was the key to the inclusion of funds in the public works appropriation bill for initiating Federal construction of the powerplants. Further delay in providing these funds would have meant large revenue losses to the Federal Government.

PUBLIC LANDS

The committee reported more bills in the field of public lands, national parks, and so forth, than in any other field. It approved bills establishing four national park units—the Minute Man National Historical Park in Massachusetts, H.R. 5892; the Arkansas Post National Memorial, H.R. 6108; Wilson's Creek Battlefield National Park in Missouri, H.R. 725; and the Chesapeake and Ohio Canal National Historical Park in Maryland, H.R. 2331. H.R. 5892 was enacted, H.R. 6108 is pending in the Senate, and H.R. 725 and H.R. 2331 are pending in the House.

A great deal of time was spent considering the Chesapeake and Ohio Canal National Historical Park bills that were referred to the committee. The problems that were particularly troublesome involve potential conflicts in use of the land and water resources of the Potomac basin. The committee resolved the matter by providing that park lands would be available upon Federal statutory authorization for future necessary nonpark uses such as municipal water supply and thereby cleared the way for enactment of this important legislation.

The committee also approved H.R. 5412, which increases the acreage which may be patented to States and local governments under the Recreation and Public Purposes Act of 1926. Among other things, this bill provides that up to 6,400 acres may be conveyed in any one year to any State for not more than three recreational sites. For the years 1960, 1961, and 1962, these figures are doubled. S. 1436, in which the language of H.R. 5412 was substituted, was enacted.

Other measures approved by the committee and passed by the House in this field include several for revising the boundaries of existing national parks and monuments, a few relating to national shrines and monuments, several relating to land exchanges, and one extending the leasing provisions of the Recreation and Public Purposes Act to certain lands in Oregon which have heretofore been excluded from its operation.

INDIAN AFFAIRS

Many Indian bills were approved by the committee and passed the House. All are important to the Indian tribes they relate to or affect. Three are important enough to mention here. One is H.R. 8587, which provides for the equalization of allotments on the Agua Caliente Reservation in California. The problem of finding an effective way of securing a reasonable degree of equalization among those to whom full allotments have not already been made, without parceling out certain lands which the band wants to retain in tribal ownership, has been troublesome for a long time. It is a real accomplishment to have this problem satisfactorily resolved.

The second is H.R. 6128 which provides for division of the tribal assets of the Catawba Indian Tribe of South Carolina among its enrolled members. This bill provides for the closing of the mem-

bership roll and for terminating Federal services to the Catawba Indians.

The third bill, H.R. 2722, provides for the final disposition of the affairs of the Five Civilized Tribes of Oklahoma, a matter which has been pending since 1906. The bill provides for the establishment of a corporation or a foundation which will handle the sale of certain lands, distribution of per capita funds, and the management of mineral interests.

MINES AND MINING

In the field of mines and mining, the committee approved several important measures. One was the coal research and development bill which had as its objective encouraging and stimulating the production and conservation of coal in the United States through research and development. It would have created a Coal Research and Development Commission as an independent agency to administer this research and development program. Unfortunately, the bill was pocket-vetoed by the President, although it had passed both Houses by very substantial majorities.

Another is House Concurrent Resolution 177, declaring that it is in the national interest to maintain a sound and stable domestic mining and mineral industry without critical dependence on foreign sources. It calls for reviews of existing agency programs with a view toward using them more effectively to increase production and employment in the critically depressed mining and mineral industries of the country. The resolution points out that further delays in recovery would cause irreparable damage to mining and mineral properties, waste of human and natural resources and loss of productive capacity, and would have a depressing effect upon the national economy and threaten national security.

The hearings on the resolution made clear the precarious state of important segments of our domestic mining and mineral industries. Among the causes of the current condition are the administration of Government purchases, contracts, loans, grants, technical assistance, and barter—all or many of which have directly or indirectly caused abnormal stimulation of foreign development.

During the consideration of the resolution, there was discussion of the extent to which Government might reasonably go in assisting in the increased production and employment in the mining industry. The resolution establishes as a present goal more effective use by the executive agencies of their existing authorizations to protect the critically depressed domestic industries and to provide increased production and employment. None of the requested reviews or studies would be aimed at increasing production or employment beyond a prudent economic limit with due consideration to the public interest.

The committee also approved, and the Congress passed, H.R. 6939 which increases the acreage in Alaska which may be held under coal lease by any one person or firm from 2,560 acres to 10,240 acres or, in some circumstances, to 15,360 acres. This puts Alaska on the same basis as other States.

One other bill deserves mention. The committee approved S. 2181, to amend the Mineral Leasing Act. This bill provides a means whereby bona fide and innocent purchasers of oil and gas leasehold interests in public lands can be dismissed from contests brought by the Department of the Interior for alleged violations by prior leaseholders of acreage limitations. S. 2181 was enacted.

FIELD HEARINGS DURING ADJOURNMENT

In my opinion, proper performance by the Interior and Insular Affairs Committee of its mission requires its members to be familiar with the people and places under its jurisdiction and the local situations that give rise to legislative matters referred to it. It is for this reason that I favor on-the-ground hearings and inspections and have authorized several trips this fall for a number of special subcommittees.

In connection with territorial and insular affairs, I have authorized a visit to the Pacific to include Guam and the Trust Territory of the Pacific and comprehensive hearings in Puerto Rico and the Virgin Islands. I have authorized a special irrigation subcommittee to inspect potential and existing reclamation projects in the Upper Colorado River Basin and in California. I have also authorized a special public lands subcommittee to hold hearings in Oregon and California on national park and public land matters.

Recruitment of Agricultural Workers

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MORSE. Mr. President, I ask unanimous consent that there be included in the Appendix of the RECORD an excellent statement on the proposed regulations of the Department of Labor pertaining to the recruitment of agricultural workers, prepared by Mr. Norman O. Nilsen, Commissioner of Labor of the State of Oregon, which was presented in his behalf by the Honorable EDITH GREEN, U.S. Representative, Third Congressional District, State of Oregon.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY OF NORMAN O. NILSEN, COMMISSIONER OF LABOR, STATE OF OREGON, PRESENTED BY HON. EDITH GREEN, MEMBER OF CONGRESS, THIRD CONGRESSIONAL DISTRICT, STATE OF OREGON, PUBLIC HEARING CALLED BY SECRETARY OF LABOR, JAMES P. MITCHELL, SEPTEMBER 10 AND 11, 1959, WASHINGTON, D.C., PERTAINING TO AMENDMENTS TO INTERSTATE RECRUITMENT OF AGRICULTURAL WORKERS AND PLACEMENT POLICY

Before discussing whether conditions warrant the proposed regulations, it is well to remember that the agricultural industry has literally no investment in the public employment services of the various States. The farm placement activities of these services are financed exclusively by industries covered by unemployment compensation acts. Since agriculture is not covered, it makes no dollar contribution. The activities of the services do not receive money from general taxation and therefore do not make even an indirect contribution.

I am not objecting to this system, necessarily, but I do believe that it becomes more imperative that the farm placement activities use care and diligence to prevent the undermining of agricultural labor conditions. In the nature of things, if the agricultural industry were supplyng any of the funds which support farm placement activities a case might be advanced for allegiance to the immediate or special interests of the agricultural employers. At least, they would earn a large voice in how their contributions were spent. Under the circumstances, however, we are all on an equal footing in making recommendations as to the activities of the farm placement servce, regardless of whether or not we are connected with the agricultural industry.

Patently, under these circumstances, there can be no excuse for any activity which fails to accord minimum standards of fair job placement, housing and wages of workers supplied interstate through the farm placement activities of the public employment services of this country.

The major justification for the proposed regulations, however, are the conditions suffered by many of this country's migratory farm workers—conditions which Government should not countenance at all, let alone conduct itself in such a way as might encourage such conditions. There is incontrovertible evidence of the existence of these conditions but they should be reviewed briefly at this time.

We in Oregon have made an exceptionally close study of their existence and can cite them, chapter and verse. However, every State in which any study has been made has found conditions similar, or worse, to those found in the State of Oregon. A number of State agencies, at the request of a State legislative interim study committee, conducted the extensive survey in 1958 which led to the accumulation of a mountain of information on conditions in Oregon. The bureau of labor interviewed over 1,200 migrants in a scientific sampling of this State's sizable migrant population. In doing so, staff members of my department worked long hours, 7 days a week, during many weeks—they lived with the migrants, worked in the fields with them and sought them out wherever they were—in the camps, in the fields, even in the railroad jungles and the taverns if that was where they were. Other agencies took assignments related to their jurisdiction.

In Oregon the public employment service is not under the bureau of labor. This separate department, therefore, had a different assignment from ours. The State employment service interviewed over 4,000 growers with respect to their problems and their viewpoint. The welfare department talked to all of the migrant applicants for aid during a 2-month period throughout the State. The board of health interviewed 2,000 migrants relative to their health and checked the sanitation of a large number of camps and fields. The industrial accident commission checked over 500 trucks and buses for safety.

The following comments relate in very brief form the findings of these agencies pertinent to the three major areas treated by the regulations proposed by the Secretary of Labor at this hearing:

HOUSING—TITLE 20, CHAPTER V, SECTION 602.9 (D)

The Oregon State Board of Health reported that over one-quarter of all migrant housing facilities in their survey sample were in a condition, or of a type, which were so unsatisfactory as to be menaces to the public health of the State of Oregon. The board of health, moreover, showed that many, many more than one-quarter of the facilities were unsatisfactory in one respect or another, conditions which also would be considered as unhealthful.

The Bureau of Labor found in one county, for example, 14 percent of the migrant population had no shelter other than bedding rolls, tarp and stick arrangements, or personal automobiles. This 14 percent included many family groups, and the total migrant population at the time in this county exceeded 3,000. This same county housed nearly one-quarter of their migrant population in tents, some of which were large platform tents, but many of which were ordinary camping equipment.

The Bureau of Labor found throughout the State that a one-room cabin was the typical situation for a family, or for three or four single migrants. Of those family heads and singles in buildings of one kind or another in our survey sample, 75 percent were in one-room cabins; 65 percent of the families were in one-room cabins. We found these families, approximately 650 rooms, or an average of 4.7 people per room.

We took no average measurement information on the size of the cabins, but anyone familiar with migrant housing knows that the cabins are extremely small. In this one room the parents eat and sleep, feed and bed their children, entertain their friends, store their belongings, and breed and bear more children.

Although the Oregon Board of Health survey, even more than the Bureau of Labor survey, contains conclusive information, the Oregon State Employment Service survey adds insight into the economic context upon which we must focus some attention.

One thousand and seventeen farm operators with migrant housing answered an employment service question which showed that only 15.5 percent of their family units, and 14.6 percent of their barrack units, have been constructed since 1952. There is considerable doubt that the percentage is as high with respect to the proportion of workers accommodated. The only figure available on proportion of workers accommodated was on the barrack type. Of the barrack units built since 1952 (14.6 percent of the total barracks), only 6.3 percent of the total worker capacity was accommodated. (Tables XVII and XVIII, 1958 Farm Operator Survey, Oregon State Employment Service.)

These statistics are dramatized by the most frequent estimate of these farm operators that the life expectancy of their migrant housing was between 10 and 14 years (table XX). With 85 percent of the present housing units already over 7 years old, it is obvious that new construction was not keeping pace with the need.

Furthermore, of the 4,273 farm operators reporting (1,017 of whom had some housing), only 53 were planning any expansion (table XXI).

Since this is the housing situation, it would appear unjustifiable for a Federal agency to sanction importation of workers into a State without some prior investigation of the adequacy of the housing. If such a substantial proportion of the housing is of a quality below decent standards, it is more than likely that a substantial proportion of the imported workers would be inadequately housed.

Many of the growers in Oregon have housing of which they can be proud, and of which the State can be proud. Most Oregon farmers have accommodations which would meet any standards likely to be set. It is, however, the minority of the growers about whom we must concern ourselves, and it is that unfortunately sizable minority who should not receive the benefit of farm placement service activity until some improvement is shown in their housing.

PREVAILING WAGES—TITLE 20, CHAPTER V, SECTION 602.9 (C)

In our survey of the migrant in Oregon in the early part of the 1958 season, the Bureau of Labor found the average weekly earnings of the male migrant to be $32.36 per week. This figure was corroborated by the Oregon State Employment Service study of payroll and man-day figures supplied by the growers themselves. The grower figures reflected average pay per man-day as being $5.37 in the year 1957 for all seasonal farm workers. The low level of earnings of the individual cannot be ignored, even though the earnings of a total family, often cited, might reasonably support them if they were able to earn consistently. In our survey we found the average family earnings to be $80.36 during the season.

The regulations of the Secretary of Labor take on particular importance for the State of Oregon if we are to maintain the standards we now have, inadequate as they are. Farm earnings in Oregon are among the best in the country. In view of the extremely low level of actual earnings, however, we certainly should not permit Government funds to be used in such a way as might undermine wage standards already lower than necessary to maintain a minimum decent standard of living.

AVAILABILITY OF LOCAL WORKERS—TITLE 20, CHAPTER V, SECTION 602.9 (A) AND (B)

The problem of assuring local workers of employment opportunities before clearing an order for out-of-State workers requires consideration of several basic problems and concepts. The most prominent basic concept involves the theoretical benefit to the workers of improved wages and conditions in their local area as a shortage of workers improves their competitive situation. The automatic brake on any runaway effect of such a local shortage is normally that as wages and conditions improve, outside labor is attracted to that area.

These homely statements apply more to industry than to agriculture, however, because heretofore some agricultural industry recruiting practices have prevented agricultural wages and conditions from keeping pace even relatively, with industry. The agricultural industry has demanded that Government supply more workers to meet labor shortages, instead of improving wages and conditions to attract more workers.

While I am not desirous of hurting the agricultural industry, nor of shutting off services to the industry, nor of promoting sudden changes in the patterns of which I complain, I am certainly in accord with allowing basic economic forces to help the situation. Supplying outside labor when not absolutely essential to prevent grievous loss to the agricultural industry acts as a restraint on basic economic forces to the detriment of the wages and conditions.

By being overanxious to supply foreign labor to the Nation's large farms, we have allowed a vampire bat to feast at the expense or our migrant and seasonal farmworkers. The net result in the Western States is that we have two tidal waves of workers flooding over the areas. The Mexican nationals have been moved into the Southwestern States and then into California in such numbers that local farmworkers have not been in much demand, and in such numbers that it could not help but have a deleterious effect on wages and conditions which would have improved more under normal economic circumstances. As the foreign tidal wave grew, the domestic labor which normally lived in those areas or normally served those areas was forced to run to the North in search of a better competitive situation. As these domestic migrants moved North more and more pressures were placed on the competitive situation of local farm labor in Oregon and other States deleterious effect of this second tidal wave of displaced domestic workers has further worked to limit improvement in farmwork conditions.

This statement does not propose to turn back the clock. The Nation must work itself out of this situation carefully, responsibly, and gradually in order not to do an injustice to either our workers or economy. Nonetheless, the Secretary of Labor must be supported in the promulgation of such regulations as are here proposed which will act to curb unnecessary recruiting of outside labor.

Even while avoiding irreparable harm to the agricultural industry, there must still be sufficient pressure maintained on the industry to cause it to more energetically seek answers to the problems of its employees. In any event, Government funds should not be spent in such a manner as to relieve the industry of the responsibility and the need for seeking such answers.

CONCLUSION

To all thinking persons of good conscience, it must be apparent that there is an illness in American economic and social life resulting from the conditions under which our migrant farmworkers live and work. The agricultural industry, perhaps through no fault of its own, has not been able to solve even the uppermost of these problems. Since migrants, either individually or collectively, are not in a position to defend their own interests, and since we cannot realistically expect the industry to make any more substantial progress than it has in the past, it is incumbent upon Government to provide the necessary minimum protections for these citizens and fellow human beings in our country.

The case is so strong for the regulations as proposed by the Secretary of Labor that it is clear that they do not go far enough. How can anyone argue for the expenditure of public funds to bring workers to an employer who is not able, or will not, provide a minimum standard of decency, either through sufficient wages to maintain such a standard or through a combination of wages and housing facilities which would assure such a standard? There can be no reason why the various State employment services, supported as they are by the Federal dollar, should be permitted to dispatch to any farm employer, any labor, interstate or intrastate, if the housing of that employer does not meet minimum standards of sanitation, or if the working conditions and wages provided by that farmer undercut the general level in the area.

Actually, the proposed regulations will not make a substantial contribution to the progress of the domestic migrant worker, but they are important in any event. Substantial progress remains to be made and should be made through legislative and community approaches to the problem, preferably supported or even led by the agricultural industry. At the administrative level, however, certainly these regulations as proposed are the very least that we in this country should expect of a public official with the power and responsibility conferred by statute upon the U.S. Secretary of Labor.

This is all the more true because the standards under the proposed regulations will remain in most States fixed at a level considerably below the level guaranteed by contract to the foreign nationals we import to the competitive disadvantage of our own workers.

It has been a privilege for my testimony urging adoption of the regulations to be entered in the record at this most im-

portant hearing by the Honorable EDITH GREEN of the Third Congressional District in Oregon. I trust that the results of this hearing will be a further indication that we are belatedly recognizing our responsibility as a Nation to provide minimum levels of protection for our farmworker fellow citizens.

Is Tight Money the Only Way To Fight Inflation?

EXTENSION OF REMARKS
OF

HON. HENRY S. REUSS

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. REUSS. Mr. Speaker, the 1st session of the 86th Congress might well be called an educational session in the area of economic policy—educational for the Members of Congress, for the American people, and perhaps even for the members of the executive branch.

There has been much serious thought and serious discussion devoted this year by many Members of the House and Senate to our economic problems and our economic future.

Unfortunately, most of our serious discussions of economics have been overshadowed by repeated political charges against the majority party of budget busting, heavy spending, and fiscal irresponsibility—charges which cannot be substantiated because they are not true, and charges which, whatever their imagined political value, have contributed nothing but confusion to honest efforts to solve the real economic problems our Nation faces.

However, Mr. Speaker, I am sure that the American people have not been fooled and will not be fooled by such political shouting, which is intended to divert attention from serious discussion of our real economic problems—how to maintain a strong and growing America, with maximum employment and sustained economic growth, without inflation.

Mr. Speaker, I hope that the political crying towels will be thrown away after this session, and that in the second session of the 86th Congress we will come to grips with reality, forget the slogans, and get down to the serious business—on both sides of the aisle—of developing sound economic policies which strengthen instead of weaken the United States.

In this connection, I submit for the RECORD the following article which I have just prepared for Commonweal magazine:

IS TIGHT MONEY THE ONLY WAY TO FIGHT INFLATION?

(By HENRY S. REUSS)

A few days short of adjournment, the Democratic Congress handed the Republican administration one of its few defeats of the 1959 session. By a nearly party line vote, the House rejected, 256 to 133 the administration request for removal of the 4¼ percent interest ceiling on U.S. bonds, a ceiling which has been in effect since 1918.

The vote was based mainly on instincts. The Republicans' instincts were with tight money and Andrew Mellon; the Democrats' instincts were with adequate money and Andrew Jackson. The larger question behind the controversy over the 4¼ percent interest ceiling—the question of how best to fight inflation—has not been explored, either by the administration or by Congress.

During the debate, Democrats pointed out that refusal to lift the 4¼ percent ceiling would entail no disastrous consequences for Treasury financing. No Treasury obligations of more than 5-year maturity come due until November 15, 1960. Refunding—the issuing of new securities to replace those that come due before then—can proceed without reference to any interest ceiling. By November 15, 1960, Democrats hope that interest rates will be lower and that the Treasury will be able to sell obligations for less than 4¼ percent.

Meanwhile, why permit the Treasury to saddle generations of future taxpayers with issues of 30-year U.S. bonds at 5 or 6 percent interest? For the next year, refunding operations can just as well be handled by issuing securities of 5 years or less, followed by their refunding at lower rates.

WHY PAY MORE LONGER?

In short, Democrats argue that if the taxpayers are to pay more than 4¼ percent on Government borrowings, it is better to pay it on shorter term obligations than to be stuck with high interest payments for 10, 20, 30, or 40 years.

The dust has partly settled on the interest ceiling issue for the moment. But the question remains: Is the administration's method of fighting inflation—tight money and high interest rates—the way to do it?

High interest rates have been brought about in several ways. On numerous occasions the Treasury has put a higher interest coupon on a new issue than the market required. Then, too, the Federal Reserve has repeatedly raised rediscount rates—the rate which Federal Reserve banks charge member banks for loans it makes to them. Most important of all, the increase in the money supply from 1954 to 1958 was held down to 6.6 percent, compared with a 21.6 percent increase in gross national product during this same period.

Sometimes the administration tries to escape responsibility for high interest rates, asserting that these rates are simply the result of "supply and demand" for money. But this argument overlooks the fact that the administration controls the supply of money through its power to create bank reserves, and controls a good part of the demand for money through the borrowing and credit activities of the Government.

FISCAL POLICY IS BETTER

Critics of administration economic policy argue that a one-track-tight-money policy is far inferior to fiscal policy—the expenditure and taxing policy of the Government—as a means of fighting demand inflation. A tight-money policy, say these critics, retards economic growth, and it fails to make contact at all with some of the most disturbing actual price rises, where the trouble is not primarily excessive demand but interference on the supply side.

Let us look at the first proposition: that a policy of extreme monetary tightness is undesirable, and that better anti-inflationary results, with less damage to the overall economy, can be obtained by a policy of fiscal tightness.

Monetary restraints operate by raising interest rates. By making it more expensive to borrow, this discourages activities which are most easily discouraged by high interest rates. In the main, these are activities, both private and public, which require long-term capital.

On the private side, this takes in the whole housing and construction industry. In 1952, a $10,000 FHA mortgage at 4 percent interest could be paid off over 25 years at a total cost of $15,840 (of which interest was $5,840). In 1959, the same mortgage, now at 5¼ percent, would cost $18,000 to pay off (of which interest is $8,000). The extra $2,160 would have bought another bedroom and bath.

Capital expenditures in new plant and equipment—particularly by small businesses—are likewise sensitive to high interest rates, and are likely to be curtailed.

HALTS LOCAL PROGRAM

On the public side, State and local public works program—vitally needed schools, highways, hospitals—are stretched out, or cut out, because of higher interest rates.

The dangerous effects of all this, on employment, on growth, on meeting national needs, are obvious.

But one may ask, Doesn't tight money restrain consumer spending as well as capital spending? All the evidence is that high interest rates restrain consumer spending only in a marginal way. Today's interest rates are the highest in a generation. Yet consumer spending is at an alltime record high. If interest rates go up, downpayments are reduced, the period of installments strung out from here to eternity, and few installment purchasers ever know the difference.

Nor do consumers tend to increase their savings substantially when interest rates rise. Today, for example, the overall percentage of consumer savings has not expanded despite record-breaking interest rates.

INVESTMENT, GROWTH SUFFER

The administration's obsession with monetary restraints, therefore, fights inflation at the expense of investment and national growth.

During 1947–52, with a policy of adequate money, but fiscal tightness, resulting in a budget surplus of $12.4 billion, our growth was at the healthy rate of 4½ percent a year. During 1953–58, a period of tight money, but loose fiscal policies, resulting in a deficit of $8.5 billion, our growth rate declined to around 2 percent a year. (Compare this with the 5- to 6-percent growth rate achieved during the same period in Western Europe and the 8 to 10 percent achieved in the Soviet Union.)

Besides slowing our rate of growth, the administration's combination of tight money and loose fiscal policies has reduced the management of the national debt to a shambles. Higher and higher interest rates have meant lower and lower market prices for outstanding U.S. securities. This is the largest single factor causing the present crisis in managing our $290 billion national debt.

If price stability, economic growth, and a well-managed national debt are primary objectives of national policy (as they should be), then there is a strong case for abandoning the administration's tight money, fiscal laxity policy and substituting a policy of fiscal tightness and adequate money. A look at next year's budget can give us the outline of such a changed policy.

BUDGET CAN SHOW SURPLUS

If the present recovery continues, there is no reason why the budget to be submitted in January of 1960 cannot adequately provide for the Nation's needs and still show a surplus of $2 to $3 billion. If fat and waste are trimmed from the budget, particularly in the defense and farm programs, expenditures need not run substantially above the present year's $77 billion level. If the temptation is resisted to support a vote-catching election year tax reduction, present prospects are for a surplus of several billions.

The surplus could and should be increased—perhaps to $5 billion—by plugging some of the large loopholes in our tax structure: the oil depletion allowance, failure to

report dividend and interest payments, and excessive entertainment deductions, for example.

A substantial Federal surplus would in itself go far to bring an end to the present tight-money, high-interest, growth-discouraging position. The surplus could be used to retire some of the national debt. Banks and other lenders could use the funds thus obtained to make needed loans both to the private sector of the economy and to State and local governments. With credit more available, interest rates would go down. Growth would be spurred, and the national debt made more manageable.

UPGRADING FISCAL POLICY

Happily, there are signs that forces in both the administration and Congress are beginning to see the advisability of downgrading monetary policy and upgrading fiscal policy as a method of combating demand inflation.

Henry Wallick, just appointed to the President's Council of Economic Advisers, had this to say at the Twenty-ninth Alumni Conference of the School of Business Administration, University of Michigan, on May 9, 1959: "The combination of fiscal-monetary policy that I envisage here is one of the surplus in the budget—you might call it a 'firm' budget policy—and, with a budget surplus, a relatively more relaxed monetary policy. This combination would favor growth because it means more saving and lower interest rates."

And Representative WILBUR D. MILLS, of Arkansas, the extremely hard-headed chairman of the powerful House Ways and Means Committee, has scheduled a series of hearings between now and January for a thoroughgoing overhaul of tax loopholes.

But even if the emphasis shifts from monetary to fiscal policy as a means of fighting inflation, attention must still be given to those areas of price rises which seem to occur because of what happens on the side of supply, rather than because of excess demand.

LOOK AT ADMINISTERED PRICES

The administration has virtually closed its eyes to administered prices as an inflationary factor. Yet it is clear that the largest part of our cost-of-living increase in recent years is a direct result of the practice of key industries, such as steel, autos and petroleum, to raise prices whether justified or not—a practice which can be foisted on the public because such industries are dominated by a few companies and a few men, and everybody goes along for the ride to higher profits.

There must be vigorous enforcement of the antitrust laws to halt interlocking collusion against the public interest by administered pricing.

In addition, it is high time that the Government began to perform its duty as the public's fact-finder and educator in cases where industrywide price increases, and related wage increases, may tend to be inflationary. There is need, I think, for legislation, such as that proposed by Senator JOSEPH CLARK of Pennsylvania and myself, establishing Government machinery to give the people the facts on profits, wages, prices and productivity in controversies of vital national concern, such as the current steel strike. A truly informed public opinion can have a moderating effect at the bargaining table.

Food prices to the consumer likewise continue to rise, despite drastic reductions in the family farmgr's income. And at the same time the Department of Agriculture budget goes up and up, while millions of farm folks leave the land.

FARM PROGRAMS GONE SOUR

Obviously, our farm programs have gone sour. Nearly everyone agrees that the piecemeal approach to the farm problem must be replaced with a total overhaul of agricultural legislation, and for months Congress has awaited Secretary Benson's new farm "package." But it has not come, and vetoes have met the admittedly piecemeal efforts of Congress to lessen the problem.

Perhaps the Brannan plan is a term in disrepute. But having seen the agriculture experts and the farm organizations and farmers themselves unable to come up with a solution, I am willing to try almost anything different from what we have now. For why shouldn't food prices reflect what is happening in our farm economy, so that the consumer benefits from lower prices? And why shouldn't the family farmer who follows sound agricultural and conservation practices get direct help if he needs it? It could hardly cost more than the existing mess.

The cost of hospital and medical care is another area of major concern. Short supply, as well as increased demand, makes health care a fast climbing item of family expense, and our expanding, longer living population only adds to the problem. Increased research activity, which the Government has helped to spur and which we clearly need, may add to the shortage of practicing physicians. Moreover, present population growth (3 million a year) surpasses current projections of the rate of increase in medical school enrollment or in number of physicians. And shortages already exist in many specialized areas of medicine, not to mention nursing and related health-care occupations.

To keep the cost of health care from skyrocketing further, we need more doctors, more nurses, more hospital facilities, more training facilities, more nursing homes, and more research. And initially, we need more planning and coordination of private and public effort to attack the needs.

SLOGANS DON'T SOLVE PROBLEM

If, therefore, we are going to face our economic future at all, we must face it honestly, head on, and in its many aspects. Coupled slogans can, of course, fool the public (as well as the slogan writers), but they seldom serve the public interest. It is hardly the answer to shout repeatedly, as the administration does, that it is against inflation and against spending. I know no one in Congress (and few outside it) who is for inflation, Democrat or Republican.

Of course there's room to argue how much to spend on what—and the public should know that the issue between Democrats and Republicans is not one of spending or not spending, but whether what we spend is meeting the priorities of our national needs and whether the taxpayer is getting his money's worth.

On the one hand, the President's defense, agriculture, or foreign aid budgets are not sacred cows, automatically beyond criticism. Nor, on the other hand, are such congressionally approved programs as urban renewal, housing, water pollution control, hospital construction, and medical research to be considered beyond the needs or capabilities of the United States just because the Budget Bureau doesn't like them.

LET'S OPEN BOTH EYES

The economy of the United States must be strong if we are to meet the worldwide challenge of international communism and still take care of our pressing domestic needs. This means sustained economic growth, maximum employment, and price stability. The present administration's policies have fallen short on all counts, and the heart of the problem is in the administration's one-eyed view of inflation as the only evil, and of tight money as the only answer.

If we can only open the other eye, and get some depth perception, we will find there is more than one road leading away from inflation and toward growth and stability.

Arctic Study Lags

EXTENSION OF REMARKS

OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. GRUENING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Anchorage Times of August 31, 1959, entitled "Arctic Study Lags."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARCTIC STUDY LAGS

Alaskans can serve the Nation by launching an all-out effort to win better understanding of the importance and significance of the Arctic Health Research Center in Anchorage.

The program conducted by scientists under this Federal agency is of more than ordinary importance. Its purpose is to find solutions to the problems that make strategic and economic operations difficult in the cold weather areas of the far north.

National leaders at Washington have failed to understand this. They have been niggardly in allocating funds to support and expand the program. Congress, too, has shown misunderstanding and misconception of the program by deleting from appropriation bills some of the funds that have been requested.

It behooves all Alaskans, through their political and civic organizations, to sponsor an educational program that will lead to decisions in Washington that are in accord with the national interests.

During recent years the research programs have been shrinking instead of expanding. Work has had to be curtailed on studies of the factors that make man and animals adaptable to cold weather.

Facilities have been closed down, instead of expanded, in connection with efforts to discover efficient methods for the disposal of human wastes in permafrost areas.

The Nation is not carrying forward as it should scientific investigations into the diseases related to unhealthy environments such as diarrhea and dysenteries.

Even the methods for operating septic tanks in mid-latitudes of Alaska, from Anchorage northward, need improvement. More efficient operating procedures can be found only by study.

These are some of the fields of study in which the Arctic Health Research Center operates. It is one of the few Federal agencies concerned with Arctic investigations and should be a major operation instead of a small one.

Russia is far ahead of the United States in Arctic research. The Soviets have developed grains that grow in the Arctic. They are operating farflung outposts on the polar icecap that outnumber the U.S. activities in that field. They have built large cities in the far north while in Alaska the United States is still trying to make the first beginnings.

The study of problems pertaining to man's adaptability to cold, the building of adequate sanitation facilities and the elimination of diseases, is a basic need for the northward movement of civilization that marks this era.

Discoveries made by the scientists could have strategic value in that the movements and operations of men and weapons might be more efficient, more dependable and less costly. Long-range benefits would be additional dividends in enabling man to bring

to human use many of the resources in areas now considered almost uninhabitable.

The importance of Arctic research should be made known by the State chamber of commerce. It would be appropriate as a special project of the Anchorage chamber. Civic groups would find informational addresses by participants in the research program of great interest.

This subject is too important to leave to the whims and fancies of national leaders who are distant and often uninformed on the problems of the northern areas.

Record of Committee on Public Works in the 86th Congress, 1st Session

EXTENSION OF REMARKS
OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BUCKLEY. Mr. Speaker, under leave to extend my remarks, I include the following summary of public works legislation reported by the Committee on Public Works during the 1st session of the 86th Congress:

GENERAL STATEMENT

The Committee on Public Works had 430 bills referred to it during the 1st session of the 86th Congress. These dealt with such subjects as navigation improvements, flood control, water pollution, beach erosion, highways, bridges, public buildings, land conveyances, and water supplies.

The committee acted upon 100 river and harbor, flood control, and watershed resolutions proposed by individual Members of Congress, which require only committee action. The civil works resolutions authorized review survey studies by the Corps of Engineers, Department of the Army, that will ultimately result in project reports submitted to Congress if the projects are found feasible and are approved by the Board of Engineers for Rivers and Harbors, the Chief of Engineers, and the Secretary of the Army. The watershed resolutions were acted upon pursuant to the Watershed Protection and Flood Prevention Act—Public Law 566, 83d Congress, as amended by Public Law 1018, 84th Congress—which requires watershed projects having more than 4,000 acre-feet of total capacity to be approved by the Committee on Public Works.

The committee studied and gave particular attention to the needs of every section of the country in reporting the omnibus river and harbor and flood control bill of 1959, believing that continuing conservation and control of the Nation's water resources is necessary and desirable. The committee found it necessary, too, to enact emergency legislation to continue the interstate program on a reasonably uniform schedule, to prevent the economic disadvantages which would result from drastic fluctuations in the level of the program.

The formal opening of the St. Lawrence Seaway on June 26, 1959, marked the beginning of the last phase of one of the most tremendous projects ever to affect the economy of the United States and the Midwest in particular. In order to utilize the seaway to its full capacity, other concomitant projects are necessary. One is the deepening of the connecting channels in the Great Lakes to depths commensurate with the seaway. The other is the deepening of the major harbors to accommodate the shipping which will be able to use the seaway and the connecting channels. Deepening of the connecting channels has been authorized. Deepening of several of the major harbors on the Great Lakes is authorized in projects included in the 1959 Rivers and Harbors and Flood Control Act.

For many years there has been need for a law to provide continuing and permanent authority for carrying out a program for the repair, remodeling, improving and construction of public buildings in communities throughout the Nation at the least possible cost. A patchwork of laws going back to 1870 and regulations drawn under emergency conditions of depressions and wars hindered the orderly planning and construction of public buildings. The Public Buildings Act of 1959, which originated in the Committee on Public Works, abolished many obsolete laws and will provide a much-needed basis for the planning and construction of public buildings in the future.

The committee again held extensive hearings on legislation to authorize the Tennessee Valley Authority to finance needed additions to its power system by the issuance of revenue bonds. The House and Senate approved the legislation and it became a public law on August 6, 1959.

One of the most important measures acted upon by the committee in this session was the bill to amend the Federal Water Pollution Control Act to increase the authorization of funds for construction of sewage-treatment plants. The bill passed the House and Senate and is awaiting conference action.

Following action on the 1959 Highway Act, a special subcommittee on the Federal-aid highway program was appointed to study policies, procedures, and practices involved in the administration of the road program. The investigation was deemed necessary and desirable in the light of numerous serious complaints about the program from many sources during committee hearings and floor debate on the bill providing an additional increase in the Federal gasoline tax. The initial phase of the subcommittee's activity will be devoted primarily to intensive investigative work by the staff. Public hearings will follow, possibly early in the next session.

I have had splendid cooperation and invaluable aid from all committee members. I am grateful to Representatives GEORGE H. FALLON, CLIFFORD DAVIS, JOHN A. BLATNIK, ROBERT E. JONES, and FRANK E. SMITH, who served so ably as subcommittee chairmen. The committee is fortunate in having an efficient, hard-working staff of experienced persons, and I commend them for innumerable tasks well done.

Following is a summary of the bills and resolutions acted upon by the committee in the first session:

Bills and resolutions enacted into law

Public Law No.	Bill No.	Date approved	Title
41	H.R. 2228	June 11, 1959	Mount Vernon Memorial Highway, additional land in exchange for dredging privileges.
35	H.R. 4695	May 29, 1959	Amend title 23 of the United States Code—Highways, to increase period in which construction shall commence on rights-of-way.
[1] 137	H.R. 3460	Aug. 5, 1959	Tennessee Valley Authority Act of 1933, amend re sale of revenue bonds.
203	H.R. 2193	Aug. 25, 1959	Designating Coyote Valley Reservoir in California as Lake Mendocino.
109	H.R. 904	July 17, 1959	Renaming New Richmond locks and dam, Ohio, as the Captain Anthony Meldahl locks and dam.
193	H.R. 2101	Aug. 25, 1959	Designating Petaluma Creek, Calif., as Petaluma River.
77	H.R. 5515	July 6, 1959	Big Sandy River, Ky.-W. Va., increase authorization relating to dam No. 3.
189	H.R. 109	Aug. 25, 1959	Designating dam and reservoir on Pound River, Va., as the John W. Flannagan Dam and Reservoir.
98	S. 42	July 17, 1959	Storage space in Table Rock Reservoir, Mo., for water supply for a fish hatchery.
249	H.R. 7645	Sept. 9, 1959	Public Buildings Act of 1959.
191	H.R. 1074	Aug. 25, 1959	Repealing act of Aug. 9, 1939, creating Louisiana-Vicksburg Bridge Commission.
190	H.R. 802	....do....	Validating and confirming a contract between the United States and the town of Bridgeport, Wash.
82	S. 692	July 13, 1959	Authorizing sale of certain lands at Table Rock Dam and Reservoir project, Missouri, to State of Missouri.
228	S. 300	Sept. 8, 1959	Amending the act establishing a study commission on certain river basins in the State of Texas.
264	S. 2291	Sept. 14, 1959	Plaque in honor of Hon. Sam D. McReynolds on site of Chickamauga Dam.
328	H.R. 7125	Sept. 21, 1959	President Adams Parkway, study of feasibility.
307	H.R. 616	....do....	Designating dam across Lampasas River, Tex., as Stillhouse Hollow Dam.
334	H.R. 8035	....do....	Designating Dyberry Dam and Reservoir, Lackawaxen River Basin, Pa., as the Gen. Edgar Jadwin Dam and Reservoir.
342	H.R. 8678	....do....	Federal-Aid Highway Act of 1959.
297	S. 2230	....do....	National Cultural Center Act, amend re disposition of donated funds.
347	S. 1473	Sept. 22, 1959	Sale of certain land to First Baptist Church of Plymouth, Mass.
348	S. 2302	....do....	Conveyance of land at John Day lock and dam to city of Arlington, Oreg.
248	H.R. 968 (S. 902)	Sept. 9, 1959	Improvement of channel to Port Mansfield, Tex. (S. 902 included in H.R. 968 by Senate amendment.)

[1] Amended by Public Law 86-157 (S. 2471) to delete certain language from sec. 15d(a)

Bills passed by the House and pending in Senate committee

Bill No.	Passed House	Title
H.R. 1	Mar. 13, 1959	Lake Michigan, diversion of water into Illinois Waterway.
H.R. 7634	July 16, 1959	River and harbor and flood control omnibus bill, 1959.
H.R. 7808	July 8, 1959	Designating new lock on St. Marys River at Sault Ste. Marie, Mich., as the John A. Blatnik lock.
H.R. 8171	Sept. 9, 1959	Rail transit crossing across Bay of San Francisco.
H.R. 5738	....do.....	Public wharf in Waukegan Harbor, Ill., Waukegan Port District.
H.R. 5349	Sept. 14, 1959	Conveyance of certain real property to Orange County, Calif.

Bills reported by the committee and pending on House Calendar

Bill No.	Reported from committee	Title
H.R. 8347	Sept. 5, 1959	National wildlife refuge at Jackson lock and dam, Alabama.

Bills approved by House and Senate and awaiting conference action

Bill No.	Passed House	Title
H.R. 3610	June 9, 1959	Federal Water Pollution Act, amendment to sec. 6 re sewage treatment plant construction grants.

Bills approved by Senate and referred to committee

Bill No.	Passed Senate	Title
S. 219	Apr. 29, 1959	Government Printing Office annex building.
S. 601	....do.....	Authorizing construction of Bardwell Reservoir, Tex. (included in H.R. 7634).
S. 846	May 20, 1959	Designating Cannelton lock and dam, Indiana, Ohio River, as the George Ewing lock and dam.
S. 1632	....do.....	Authorizing modification of existing navigation project for Kahului Harbor, island of Maui, Hawaii (included in H.R. 7634).
S. 2440	Aug. 19, 1959	Designating Green Peter Dam and Reservoir, Middle Santiam River, Oreg., as the Douglas McKay Dam and Reservoir.
S.J. Res. 115	....do.....	Pan American Health Organization headquarters site.

There follows herewith a digest of the important legislation of national interest and effect handled by the committee:

DIGEST OF FEDERAL-AID HIGHWAY ACT OF 1959 (PUBLIC LAW 86-342)

Title I of the new law does the following:

(a) Amends section 108(b) of the Federal-Aid Highway Act of 1956, as amended, by decreasing the authorization for fiscal year 1961 by $500 million, from $2,500 million to $2,000 million.

(b) Amends section 8 of the Federal-Aid Highway Act of 1958, as amended, by approving the 1956 estimate of cost of completing the Interstate System as the basis for apportioning funds to the States for the fiscal year 1962. This estimate had previously been approved for the 1960 and 1961 fiscal years.

(c) Authorizes an additional $2 million to be appropriated for parkways for the 1960 fiscal year.

(d) Directs the Secretary of Commerce to make a study of the need for extension of the Interstate System in Alaska and Hawaii, and report to the Congress by January 14, 1960, with recommendations as to the approximate routes and mileage thereof.

(e) Amends the Federal standards for State regulation of billboards along the Interstate System to exempt from the standards "those segments of the Interstate System which traverse commercial or industrial zones within the presently existing boundaries of incorporated municipalities wherein the use of real property adjacent to the Interstate System is subject to municipal regulation or control, or which traverse other areas where the land use, as of the date of approval of this act, is clearly established by State law as industrial or commercial."

(f) Provides for the use of emergency relief funds for the repair or reconstruction of forest highways, forest development roads and trails, park roads and trails, and Indian reservation roads whether or not such highways, roads, or trails are on any Federal-aid highway system, with the Federal share of 100 percent payable on account of such work performed with emergency funds on such roads on the public domain.

(g) Increases the authorization for bridges over Federal dams from $10 to $13 million.

Title II provides additional financing for the highway trust fund for the period from October 1, 1959, to July 1, 1964. The Federal tax on gasoline, diesel fuel, and special motor fuels is increased by 1 cent a gallon. The increase is effective for 21 months, from October 1, 1959, to July 1, 1961. Five percent of the 10 percent excise tax on automobiles and 5 percent of the 8 percent tax on automotive parts and accessories are earmarked to be allocated to the highway trust fund from July 1, 1961, to July 1, 1964. Several other miscellaneous provisions are included in this title which was handled by the Committee on Ways and Means in the House and the Committee on Finance in the Senate.

The bill became a law with the signature of the President on September 21, 1959.

DIGEST OF TVA SELF-FINANCING (PUBLIC LAW 86-137)

For several years the Tennessee Valley Authority warned that it faced a power shortage. The TVA not only provides power to a burgeoning economy in formerly depressed areas in seven States, but its operations contribute greatly to public health and provide recreation on more than 10,000 miles of manmade lakes behind its dams.

To meet power demands, this legislation was enacted granting the TVA authority to sell up to $750 million worth of revenue bonds to finance expansion of its facilities. Passage of the bill and Presidential approval on August 6, 1959, removes the threat of a power shortage in the important TVA region and will permit these areas to continue sound economic growth.

DIGEST OF THE PUBLIC BUILDINGS ACT OF 1959 (PUBLIC LAW 86-249)

This law provides the basic statute which vests in the Administrator of General Services authority and responsibility for acquiring, constructing, altering, repairing, remodeling, improving or extending public buildings and acquiring the necessary sites or additions to sites in connection therewith.

It authorizes a program of public building construction by direct appropriation, which, in the estimation of the committee, will facilitate the construction, at the least possible cost, of public buildings in communities throughout the Nation where an urgent need has been apparent for some years.

Projects initiated under this program must be submitted to the Committees on Public Works of the Senate and House, respectively, for approval, except in the case of alterations costing less than $200,000 and new construction costing less than $100,000.

The bill won bipartisan support, passed House and Senate without controversy, and received presidential approval on September 9, 1959.

DIGEST OF FEDERAL WATER POLLUTION CONTROL ACT AMENDMENT (H.R. 3610)

The purpose of this bill is to further stimulate construction of needed mu-

nicipal waste-treatment facilities to prevent the discharge of untreated or inadequately treated sewage or other waste into the waters of the Nation.

The bill amends section 6 of the Federal Water Pollution Control Act (33 U.S.C. 466e) dealing with grants for treatment-plant construction by authorizing—

(a) Grants for projects in the amount of 30 percent of the estimated reasonable cost thereof or $500,000, whichever is the smaller, with the provision that no grant of more than $250,000 shall be approved for a project in any State until all previously filed applications from that State and political subdivisions thereof for grants not exceeding $250,000 have first been approved.

(b) Municipalities to join together to build joint treatment facilities with the amount of grant allocable to each community as if it were a separate project.

(c) Reallocation of grant funds from States not using funds because of lack of projects to States having projects approved for which grants have not been made because of lack of funds.

(d) One hundred million dollars to be appropriated for purposes of construction grants for any fiscal year.

(e) An aggregate of $1 billion to be appropriated for such purposes.

The Senate amended the bill in several respects. One major amendment would reduce the amount authorized to be appropriated for construction grants to $80 million in any fiscal year and to $800 million for the 10-year period which the bill would cover.

The bill is awaiting conference action to reconcile differences between the House and Senate versions.

DIGEST OF RIVERS AND HARBORS AND FLOOD CONTROL OMNIBUS BILL (H. R. 7634)

This is an authorization bill containing a number of navigation, beach erosion, and flood control projects. Title I would authorize 36 navigation projects and 2 beach erosion projects (shore protection). Title I would authorize 10 flood control projects and increase the monetary authorization for six river basins.

No legislation enacted by the Congress is subjected to more study, evaluation, and closer scrutiny than measures authorizing civil works improvements. This bill is no exception. All of the projects in it have been certified as economically sound, promising a greater ratio of benefit than cost.

Included in the bill are a number of authorizations for surveys of similar problems in other localities to be carried out by the Corps of Engineers.

Improvement of waterways has been an important factor in the development and economic growth of the Nation. Piers, wharves, elevators, warehouses, and trackage, developed by local interests as a result of these improvements, help to add to this growth. Civic and local interests must often contribute to the cost of flood control remedial work and harbor and channel improvements with cash, rights-of-way and spoil areas for dredged material.

The bill was approved in the House on July 16, 1959, and is pending in the Senate.

A Modified Statute

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. SCOTT. Mr. President, during the session I had the privilege, along with several other Senators, of cosponsoring a bill introduced by our colleague, Senator KEATING, to abolish mandatory capital punishment in the District of Columbia. Under the provisions of the bill it would be discretionary with a jury in murder cases to recommend either the death penalty or life imprisonment. Under the present District of Columbia law, death is the automatic penalty in all first-degree murder cases without regard to the facts and circumstances in a particular case. Such rigid justice is self-defeating, and I am hopeful that in the next session of Congress we will enact this much needed improvement in the present law.

Favorable editorial comments have appeared with regard to this bill in the Jacksonville Journal and the WTOP television and radio editorial. I believe these comments will be of interest to many Members interested in this problem, and I therefore ask unanimous consent that they be printed in the Appendix to the RECORD.

There being no objection, the editorial comments were ordered to be printed in the RECORD, as follows:

[From the Jacksonville Journal, June 12, 1959]

A MODIFIED STATUTE

Arguments as to the value and justification of capital punishment still go on. There are few remaining champions of mandatory capital punishment, however.

Most reasonable men of good will have concluded that the automatic death penalty for certain crimes, with neither judge nor jury permitted any discretion in the matter, cannot be justified.

Outward evidence of this feeling lies in the fact that mandatory capital punishment has been abolished in every State. This makes all the more disturbing the fact that such a law is still on the books in the District of Columbia. Anyone who is convicted of first degree murder in the Nation's Capital automatically faces the death penalty.

Senator KENNETH B. KEATING, of New York, has introduced a measure to correct this deplorable situation. In introducing it, he declared that "it is high time that the District of Columbia code was attuned to the practice in the rest of the country."

He is quite right. There seems little valid reason for delay in passage of this legislation modifying a barbaric statute.

[Editorial Broadcast on July 7, 1959, Over WTOP Television and WTOP Radio]

This is the WTOP editorial for tonight.

One of the measures that shouldn't be lost in the legislative shuffle during the closing weeks of Congress is Senator KEATING's bill to abolish mandatory executions for first-degree murder in the District of Columbia.

The present law—passed in 1901—requires that all persons convicted of first-degree murder shall automatically be put to death. The practical effect of this statute is to hinder rather than help process of justice, because juries frequently refuse to return a first-degree conviction, knowing that execution is mandatory, or because the appellate court finds some way to reduce the sentence.

U.S. Attorney Oliver Gasch recently reported to the District judicial conference that since 1953 only 1 of the 104 persons indicted for first-degree murder in the District has been executed. The conference itself voted by an overwhelming majority that mandatory executions should be done away with.

WTOP not only supports the Keating bill but suggests that the whole question of capital punishment should be reviewed. There is a very serious doubt indeed that capital punishment is a deterrent to crime. If it is not, then it is difficult to find moral justification for executions, unless it is the philosophy of an eye for an eye, a tooth for a tooth. It may well be significant that nine States, including Alaska and Hawaii, have abolished executions.

Perhaps the District should adopt a moratorium on capital punishment, maybe for 5 years, to see what would happen to the murder rate. But at the very minimum, the Keating bill should be passed.

That's tonight's WTOP editorial, Jack Jurey speaking for WTOP.

Twenty-fifth Anniversary of America's Farm Workers Union

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SHELLEY. Mr. Speaker, recently I received from Mrs. Franklin D. Roosevelt a letter asking that I join her, Dr. Frank P. Graham, and Mr. A. Philip Randolph in sponsoring the 25th anniversary celebration of one of America's most historic movements for social justice.

I immediately accepted Mrs. Roosevelt's invitation, as for many years I have been very close to this outstanding labor organization which is known as the National Agricultural Workers Union AFL–CIO.

I have since learned that a number of my colleagues in the House are also among the 100 or more equally well known Americans who are also serving on a committee of sponsors for this affair. There are several distinguished Members of the other House and many of the top officials of the larger unions who are also listed, along with religious leaders and other citizens' groups which are interested in the welfare of that segment of our affluent society which has almost been forgotten. They are the men, women, and children who follow the crops with the sun, helping produce the food and clothing we all use.

I have also learned that the quarter of a century struggle by this group of Americans in the lowest economic bracket is to be celebrated on October 17 and 18, in the city of Memphis, Tenn.

This movement had its origin in Arkansas. In the summer of 1934, 18 sharecroppers—11 white and 7 Negro—met in an abandoned schoolhouse on a cotton plantation to form what was first known as the Southern Tenant Farmers Union. Like most organizations of American workers, this movement grew out of the needs of the people it represents. For a quarter of a century it has kept before the public the plight of those who work on the land.

If it had not been for this organization of American farmworkers, few of us would have known about the problems of this depressed element in our country. We are indebted to its inspired leadership and its devoted members for much of our knowledge of what is wrong down on the farm.

I personally participated in one of this organization's major struggles. One of these was an effort to organize and secure recognition on one of the largest corporation farms in California back in 1947. I saw that effort to organize the 12,000-acre Di Giorgio Fruit Corp. ranch defeated by a combination of gunfire, injunctions, and strikebreakers. A strike meeting was fired upon by unknown assassins, and the leader of the strike, Jim Price, was injured for life. An injunction under the newly enacted Taft-Hartley Act prohibited other unions from cooperating, and finally the employer succeeded in breaking the strike by bringing in illegal aliens from Mexico to work his huge holdings. I saw the union make a comeback 2 years later and secure recognition when it led a spontaneous movement of farmworkers resisting a wage cut in the cottonfields of California's rich San Joaquin Valley. Later I saw the union swamped by illegal aliens, or wetbacks from Mexico, in the Imperial Valley down on the border. When I came to Congress I was among those who fought to enact a measure to penalize employers of wetback labor. Although we lost that battle here in Congress, the administration was forced to begin enforcing our immigration laws and the influx of illegal aliens from Mexico, which amounted to over 1 million men in 1953, was brought to an end. Now, nearly half a million legally contracted workers from Mexico are entering the United States each year to work on our larger farms. California imports 100,000 Mexican nationals each year, over one-fifth of the total. For the past 7 years the union has persisted in my native State, as well as elsewhere. Its members were often blacklisted and could not get a job. Its officers and organizers went without a salary, and seldom had the money to buy gasoline to travel in a jalopy along with their members in search of work.

Only this year the executive council of the AFL–CIO approved a broad program to seek to improve the wages, working and living conditions of the Nation's farmworkers. An assessment was levied on the 13½ million members making up the AFL–CIO, and a part of this money has been allocated to build the National Agricultural Workers Union. President George Meany selected the director for the first major effort ever made by organized labor as a whole to unionize workers on the larger farms. An AFL–CIO Agricultural Workers Organizing Committee has been formed and central headquarters opened in Stockton, Calif. A staff of organizers, mostly farmworkers, are now employed by AFL–CIO in the field. While little or no attention has been paid to this development outside California, our local newspapers have carried many feature articles and stories about the AFL–CIO reaching down to help that last man without a strong and effective union.

Ever alert to the major developments likely to affect the big business interests of this country, the Wall Street Journal on August 21 carried a front-page story which I include at this point:

BIG CALIFORNIA FARMS GET UNWELCOME CROP: AFL–CIO ORGANIZERS—MEMBERSHIP GOAL IS 150,000; BIG RANCHERS CONCERNED, STUDY COUNTERMEASURES

(By Jonathan Spivak)

MODESTO, CALIF.—"They should take those guys and run them out of town," growls an angry peach rancher, referring to two union organizers who talk earnestly with harvest hands in front of a State employment agency here.

"Since the AFL–CIO came in here we have hopes and we've got financial aid," declares 54-year-old Charles Walker, an organizer who was recruited by the union right out of the fields.

These opposing viewpoints reflect the battlelines that are forming in California's lush Central Valley around organized labor's newest and most ambitious attempt to unionize agricultural workers.

"They've got a lot of money behind this effort, and if the farmers don't get together to stop them they will succeed," comments Harley Steward, a local rancher.

EARLIER EFFORTS HAVE FAILED

Attempts to organize farm workers are not new, of course. Their traditionally low pay has made them the repeated targets of organizing drives by various unions, including the Teamsters and the United Packinghouse Workers of America. Little has come of these efforts, largely because of the migratory habits of many farmworkers, observers believe.

However, the AFL–CIO, with an eye on the highly mechanized farms in California, recently formed an Agricultural Workers' Organizing Committee with the goal of enrolling 150,000 of the State's farmworkers. Operating out of an abandoned labor hall in Stockton, the AWOC has a full-time paid staff of a dozen, including nine organizers. It has opened branch offices in two other California cities.

Although the number of AWOC organizers is small, it contrasts sharply with previous AFL–CIO policy, which generally was to ignore the task of organizing farm labor. This effort "is for real," a union spokesman declares. And farmers in this area, while stubbornly maintaining that labor organizing will get nowhere if they present a united front, concede they are concerned.

FARMERS ARE OPPOSED

"Our farmers have fully made up their minds they do not want to have to deal with industrial-type unions. I think many of them would let their crops rot on the ground rather than be pressured into recognizing such a union," says John Zuckerman, a director of the San Joaquin Production Association, which has 2,200 farmer members.

The statewide California Farm Bureau Federation, based in Berkeley, is asking its local units to form special committees to keep a close watch on the labor situations in their areas.

"We are encouraging our county leaders to do all they can to remedy a deficiency in farm-labor housing or wages, if any exists," says Louis Rozzoni, president of the federation. Such efforts, of course, would be aimed at lessening any desire of farmworkers to join a union.

The AWOC's activities in California are being financed by part of the proceeds from a cent-a-month levy imposed by the AFL–CIO on all its members for a 6-month period to support organizing drives. A former organizer in the auto industry, Norman Smith, is director of the AWOC.

CONFIDENT OF SUCCESS

Mr. Smith is confident of success, despite past failures. "There are 2 million to 2.5 million farmworkers in the country," he notes. "This could be the largest union in organized labor."

For the last month, the AWOC has been soliciting members for an existing but nearly dormant AFL–CIO union known as the National Agricultural Workers Union. Prior to the current organizing drive, this union was totally inactive in California, according to Mr. Smith. In July, he estimates that 500 workers were enrolled—and he predicts another 1,500 will be signed up this month.

A basic dispute between the union and the ranch owners concerns the adequacy of the wages farmers pay. In the current harvest of California's $22 million peach crop, farmers are offering 15 cents for picking a 40-pound box. They contend an average worker can fill 100 boxes in 7 or 8 hours and earn at least $15 a day. The AWOC counters that at best a fast picker can handle 80 boxes in 10 hours and earn only $12 a day.

Mr. Speaker, it is within the context of these developments that the 25th anniversary celebration of the founding of the National Agricultural Workers Union is being held.

Much of the new activity will no doubt be in my State for some time. However, eventually the organized labor movement of this country will extend its organizing program among farmworkers in the East, the North, and to the South.

One of the slogans of this union is "To the Disinherited Belongs the Future." We who have joined in sponsoring the 25th anniversary of the struggles of this union are hopeful that at last the Nation's farmworker is about to come into his own.

Open House at Prison Chapel

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HART. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD the following story about the new All Faiths Chapel at the State Prison of Southern Michigan. This chapel is located with-

in the confines of the largest walled-prison in the world, located on the fringe of Jackson, Mich., 60 miles east of Detroit. As one privileged to participate in the dedication of this chapel I can testify to its beauty and great value.

The story of this new chapel has attracted great interest among correction officials, as well as the general public, and I feel it merits widespread attention.

There being no objection, the story was ordered to be printed in the RECORD, as follows:

OPEN HOUSE AT PRISON CHAPEL

The public had an opportunity to view the State Prison of Southern Michigan's new All Faiths Chapel at an open house Tuesday, June 30, 1959. The prison is located just north of Jackson near Highway 12.

The new $150,000 chapel is modern in design and contains three distinct chapels for the three major religious groups. It was designed by the J. & G. Daverman Co., a Grand Rapids architectural and engineering firm, and it was dedicated in a special Christmas ceremony last December.

The State Prison of Southern Michigan is the largest walled prison in the world and was in 1952 the scene of one of the most violent riots in penal history. Many of the inmates volunteered their services in the construction of the new building which has been constructed in the center of the 54-acre walled yard.

According to Gus Harrison, State corrections director, "more than $11,500 was received in donations toward furnishing the chapel. The inmates themselves contributed nearly $2,000 in a cell-by-cell fund raising campaign."

"This is the first chapel building to be constructed at any of the State's penal institutions and is an integral part of the ambitious and constructive rehabilitation program being cultivated by the Michigan Department of Corrections," Harrison said.

Requests for a chapel facility that would lend itself to an atmosphere of worship and meditation have been of long standing. Several years ago inmates requested permission to erect their own chapel with the stone salvaged from a torn down wall.

The Record on Housing and Urban Renewal—Some Progress in the First Session, More Must Come

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MOORHEAD. Mr. Speaker, despite the opposition of the administration, the first session of the 86th Congress did make some progress in the important field of housing and urban renewal. Much more, however, remains to be done in the next session.

Despite two vetoes, a housing bill providing for continuation of minimum programs in urban renewal and housing was enacted.

The bill, as finally passed, will provide funds to keep present housing programs going, at least until next year. The FHA program, so necessary to the private home-building industry, was continued, and 37,000 additional units of public housing were authorized.

The successful voluntary home mortgage credit program was extended to help provide FHA and GI financing in rural communities. Home improvement loans under FHA to enable home owners to continue improving properties were extended. Amendments were added to older laws which should stimulate farm housing research and production of more rental and cooperative housing.

In one most encouraging forward-looking step the bill recognized the particularly pressing housing needs of elderly citizens by authorizing $50 million to be used as loans on liberal terms to private nonprofit groups, such as labor unions and charities, to build housing for the elderly.

The bill encourages FHA loans for the construction of nursing homes, which are desperately needed.

In another advance, the bill recognizes social and economic patterns of our times by an avoidance-of-foreclosure provision designed to prevent citizens from losing their homes because of sudden, communitywide unemployment or other economic factors over which the homeowner has no control.

Much more, however, remains to be done.

The $350 million in slum clearance grants which the bill makes available immediately, and the $300 million to be made available next year, will hardly be enough to cover the projects already approved and others for which applications are pending, let alone the many new urban renewal plans which realistic leaders in cities throughout the country are now drawing up in the interest of continued orderly growth. More public housing will be needed, if only to provide for persons displaced by urban renewal, highway, and other programs.

Long-term, low-interest Government loans to help our colleges expand facilities were deleted from this year's bill because of the President's vetoes. Such loans should be provided next year, either in the new housing bill or in other legislation.

Beyond this, we must face the stark fact that, by 1975, we will have to draw upon our combined private and public resources to build better housing for 22½ million families occupying substandard dwellings.

Fortunately, there is every likelihood of a new housing bill at the next session.

The additional $8 billion overall new authority granted by the present bill to the FHA to enable it to continue insuring loans under its various programs will be used up some time in 1960.

The vexing problem of how to assure an adequate supply of mortgage credit to the homebuilding industry remains unsolved. In periods such as the present when the administration is applying a tight money noose to our economy, the housing industry inevitably becomes the No. 1 victim.

We must somehow find an answer to this "feast or famine" problem if we are to sustain a productive and ever-expanding homebuilding industry. This industry is absolutely vital, not only in meeting the growing needs of our people, but also in maintaining the basic health of our overall economy.

A partial answer may lie in the encouragement of the central mortgage bank type of facility which was proposed by the homebuilders.

The use of mortgage pools managed by commercial banks and sold to pension funds and similar organizations may be the means of tapping the potential reservoir of mortgage credit. Partly because of administration problems, these funds have shied away from mortgage investments, but mortgage pools, administered by commercial banks, and possibly with a Government guarantee, might be attractive investments for these funds into which vast amounts of capital are now flowing.

Lack of basic research has created a problem which has defied housing experts for decades. That is the question of how to produce housing at lower costs so that prices of new housing can be brought more into line with the income of the average American family.

Homebuilding corporations are too small to carry on their own research programs. It seems to me that the solution to this basic problem is an expanded program of housing research. Yet, sadly, Government-aided housing programs do not include a research program. Despite the vast stake which all of us have in meeting this great challenge in the housing field, we are presently failing to provide the research tools which will help to find the answers. By a broad and effective Government-assisted research program we may be able to find ways of making housing production more efficient and lowering the costs of home construction and home ownership.

Against heavy opposition, Congress has maintained housing programs for at least another year. For this the Nation can be thankful, but more, much more, remains to be done.

Primitive Area in South End of Wallowa County, Oreg.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MORSE. Mr. President, recently I received a communication from the Wallowa County Pomona Grange, No. 22, of Joseph, Oreg., advising me that it adopted a resolution opposing any building of roads or facilities within the primitive area in the south portion of Wallowa County.

I ask unanimous consent that the text of this resolution be included in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY WALLOWA COUNTY POMONA GRANGE, No. 22, AUGUST 1959

Whereas the primitive area in the south end of Wallowa County is one of the few such areas remaining in the Western States; and

Whereas the Forest Service is now surveying and contemplates further surveying and location of roads into this primitive area, which if carried out and used by the public will destroy this area as a resource: Therefore be it

Resolved, That this Pomona Grange go on record as opposed to any building of roads or other facilities within this primitive area.

The Need for Closer Relations Between Korea and Japan

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FEIGHAN. Mr. Speaker, the cause of a free and independent Korea has long enjoyed the sympathy and support of the American people. Our sympathy and support for this cause is anchored in our historic belief that all nations and people are, by right, entitled to the blessings of self-government.

We attested to our belief following World War II when we supported the demands of the Korean people for national self-determination. Dr. Syngman Rhee, the leader of this cause, had spent many years in the United States before World War II, where he espoused the aspirations of his people for national independence. It was only natural that he should return to his native land following the war and there to lead the way in the rebirth of his nation. Dr. Rhee was elected as the first President of the Republic of Korea, in free and unfettered elections, a fitting reward for his life time of service and sacrifice for the cause of Korean liberty and independence. One of the many unfortunate consequences of allowing the Russian Communists to assume the false character of allies of the free world alliance, was the division of Korea into two zones of military occupation. The so-called 38° parallel line was agreed to at Yalta, during the time of this strange alliance with the Russian Communists. Thus, today, we find a divided Korea. One-half is free and self-governing. The other half is under the ruthless, inhuman tyranny of Russian proconsuls whose only loyalty is to Moscow and its goal of world conquest.

Our support for the cause of Korean freedom and independence was again demonstrated in 1950. Then the Russians provoked a war of aggression in Korea, supported by the Red Chinese army. An effort was made to drive the United States out of Asia and to put all of Korea under the inhuman control of Moscow. President Harry S. Truman met this wave of tyranny with swift and direct action. The United Nations, as a consequence, organized its first joint command in support of freedom and against an unprovoked war of Communist aggression.

We Americans will never forget the sacrifices our young men and women made on the battlefields of Korea. Nor will we forget the valor of the Koreans as they fought for the survival of freedom's cause in northeast Asia. Our memory is fresh to the valor and sacrifice of those who came from many countries of the free world to defend freedom's cause.

Had Korea fallen, Japan, the next country on the list of the Communist aggressors, would have been subjected to the tyrant's whip. In this respect the people of Japan owe a just debt of gratitude to the people of Korea and to all the countries who stood with the Koreans in their fight against Communist aggression.

The United Nations properly branded the North Korean puppets and the Red Chinese as criminal aggressors for starting the war in Korea. The resolution of the U.N. still stands on the books. So long as it does, no civilized nation will have any relation with the illegal Russian-puppet regime in North Korea. Nor will Red China be admitted to the United Nations. Any dealings with the puppet regime in North Korea discredits the U.N. and will, if persisted in, eventually destroy the U.N. by discrediting it as an organ working toward peace and justice in the world. The same goes for the case of Red China.

A growing number of Americans are showing concern over the worsening of relations between the Republic of Korea and Japan. This concern results from the realization that misunderstandings between Korea and Japan weaken the fabric of the free-world community. In particular, it weakens the position of freedom's cause in northeast Asia. That is why I have concerned myself with the question of Korean nationals now living in Japan and the problems this has created for both Korea and Japan in the postwar era.

At present there are some 600,000 Koreans living in Japan. These unfortunate people want nothing more than the opportunity to live in peace, in a climate where they are accepted and where they can work out their destiny as free men. At present they are destitute. Lacking acceptance, and uncertain of what the future holds, they are desperate. This situation cries out for remedy, for a solution based upon human justice.

The Governments of Korea and Japan have not been able to reach a settlement of this problem. While these two free Governments remain in disagreement as to a solution of the problem, the Communists are busy exploiting the disagreement to their own advantage.

On the one hand the Government of Korea charges Japan of secret dealings with the puppet regime of Communist occupied North Korea and efforts at the forced deportation of these 600,000 Koreans into the hands of the Communist regime in North Korea.

On the other hand Japan is rightfully concerned with the Communist penetration of the Korean community living in Japan and, in particular, with the threat this poses to their internal security.

Several years ago, during a visit to Japan to study the administration of the Refugee Relief Act, I became acquainted first hand with this problem. I was convinced that Communist agents were making a concerted drive to manipulate this problem as a wedge between the Koreans and the Japanese. As usual, the Communists were trying to win the allegiance of people by playing upon their miserable plight and lack of hope for the future. It was clear to me then that the Communists were playing a game calculated to make both Japan and Korea the losers.

Now the outlines of the Communist plan are out in the open.

They relish seeing the Japanese accused of engaging in acts of forced deportations because they know this will alienate the many friends Japan has won in the postwar era. They enjoy anything which casts the Japanese nation in the role of oppressor, as cold to human values and human rights.

The Communists enjoy equally anything which will keep open the wounds Korea feels from that era of the past which Japan has denounced. Moreover, the Communists seek to pour salt into these reopened wounds so as to distract the Korean nation from its role as defender of a critical flank of the free world.

Thus the Communists are using the sad plight of some 600,000 Koreans to accomplish these two objectives.

It is not my purpose to pass judgment upon the merits or demerits of the case as seen by Japan or Korea. My singular purpose is to warn of the dangers involved in allowing this problem to worsen and reach a climax out of which no one but the common enemy—the Communists—can benefit. Normally, this is a problem which should be resolved through negotiations between the Governments of Korea and Japan. Such efforts made to date have failed to produce a remedy. The matter is now being handled on what might appear to be a nongovernmental basis, that is, between the Red Cross Society of Japan and the so-called Red Cross Society of Communist-occupied North Korea. The legitimate government of the Republic of Korea is being ignored.

The Japanese Government cannot expect the American people to close their eyes to the obvious. It is clear that the Japanese Red Cross can not act in this case without the approval and assistance of the Japanese Government. This is a reality of life and we Americans are realists. We are also aware that any so-called Red Cross Society in North Korea is nothing but a facade—a cheap and shoddy cover for the puppet regime installed there by the Russian Communists. The ling of negotiation between the Government of Japan and the illegal regime in North Korea is painfully obvious.

I point up these facts not to be critical in a negative sense, but to emphasize the need for a remedy to this problem, based upon direct negotiations on a

governmental level, in a spirit of justice and amity. It appears further efforts at bilateral settlement between Japan and Korea will not produce the desired results.

The Republic of Korea is anxious to have these Korean nationals repatriated to free Korea. The people concerned, that is, the overwhelming majority, want to return to free Korea. However, there remains open the question of maintaining the personal and property rights of these people during the repatriation. There is also involved the question of a free choice, that is, the voluntary movement of these people as against measures of duress.

Accordingly, I propose that the good offices of a third nation, a free nation, be accepted by the Governments of Korea and Japan. This is clearly a problem of free Asia and should, therefore, be settled by free Asians. The people of free Asia have come a very long way along the road to democratic self-government during the past decade. We Americans rejoice in this accomplishment and look forward to an unprecedented era of prosperity and progress for the people of free Asia. We believe free Asia has the leadership to resolve problems which may arise between the nations of that vast area.

Specifically, I propose that the Governments of Korea and Japan invite the Government of the Philippines to exercise its good offices in finding a remedy for the 600,000 Koreans now in Japan.

I am confident the Government of the Philippines would act in the name of all humanity and would find a solution which would bring justice to the 600,000 people directly concerned and at the same time heal the old wounds which the meddling Communists have opened on the body politic of both Japan and Korea.

Here, I believe, is an opportunity for both Japan and Korea to remove any doubts which may exist as to their good faith in resolving a problem which has earned both the interest and concern of large numbers of people throughout the world. Here, too, is an opportunity for Japan and Korea to strengthen the cause of human freedom by starting down the road together toward a long era of friendly relations and mutual assistance.

More Civil Defense Waste

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. YOUNG of Ohio. Mr. President, may I have unanimous consent to insert in the Appendix of the RECORD an interesting and very shocking news item published in the Cleveland Press.

Civil defense, as presently operated, has caused a waste of nearly $1 billion of taxpayers' money. Here is another example of $195,000 which may be added to the huge waste of this boondoggling, outmoded, futile agency. Defense of our citizens is a part of the defense of the United States against enemy attack, and, of course, the Armed Forces of this Nation should be placed in charge as they would be immediately when a state of emergency exists. Let us not wait until the President of the United States as Commander in Chief of our Armed Forces should be compelled to proclaim martial law. We should refuse to make further appropriations for civil defense. We should follow the example of the Commonwealth of Canada and of other allies where the Army or Home Guard is conducting civil defense.

There being no objection, the news item was ordered to be printed in the RECORD as follows:

STATE-BUILT AIRSTRIP LACKS ONLY PLANES
(By Robert Burdock)

ATHENS, OHIO.—Ohio University has a new, gleaming, 3,200-foot concrete airstrip built with State money.

But the university doesn't own any airplanes.

The $195,000 airstrip was supposed to handle civil defense air traffic when the university was named last year as the emergency seat of Ohio State government.

But Athens is no longer the official emergency civil defense capital. There now is no specific site.

What's more, until a reporter told him, Thane M. Durey, deputy director of Ohio civil defense, submitted he didn't even know about the new emergency field.

Originally it had been proposed to build the concrete runway with civil defense and other Federal funds. But the State stepped in when these plans fell through.

"It was a special grant by then Gov. C. William O'Neill and the State board of control," said Ohio University Business Manager L. P. Lausche (no relation to the Senator). The grant came during the closing days of the O'Neill administration.

Tribute to Hon. Isidore Dollinger

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BUCKLEY. Mr. Speaker, ISIDORE DOLLINGER is the regular democratic candidate for the office of district attorney of Bronx County and I am certain that he will be elected to that high office this November. This means that he will be leaving Congress and will not be with us in January.

I know that he will be greatly missed in Washington. He is highly spoken of by all who know him; he has made many friends here during the 11 years he has served in the Congress. He is an able legislator, a person of great integrity, a fine gentleman in the truest sense of the word. I know that he will be an outstanding district attorney because of his experience in the law, his capabilities, his conscientious adherence to duty. I knew ISIDORE long before he came to Congress and have found him to be a loyal and true friend; I value our association.

The Bronx will always owe Mr. DOLLINGER a debt of gratitude for the fine work he did in Congress. He has now been drafted for another position of great responsibilities and service to the people. This reflects the confidence we place in him, as well as our faith in his ability. ISIDORE DOLLINGER leaves Congress with our best wishes for his continued success and our kindest regards.

Progress in Diplomacy

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to include a letter to the editor by Gen. Hugh B. Hester—retired—that appeared in the June 10, 1959, edition of the Louisville Courier-Journal. I believe that it will be of interest to the Members of the Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PROGRESS IN DIPLOMACY

Vice President RICHARD M. NIXON's speech before the Academy of Political Science, April 13, marks the first time in more than 10 years that a top official of this Government has dared suggest that the Soviet Union might conceivably be quite honest in placing a different interpretation upon an agreement from that of ours. This represents real progress. Instead of accusing the Soviet leaders of willfully violating their alleged agreement for the unification of Germany through free elections (an allegation repeatedly denied by Soviet officials and questioned by many of our ablest students of international relations), the Vice President stated: "But while the agreement seemed clear, as events subsequently developed, Mr. Khrushchev's understanding of its meaning was ostensibly different from ours." And he went on to state "the crucial question remained, How was the agreement to be effective when the parties disagreed as to what it meant? This is typical of a problem that can arise whenever any agreement is entered into between nations."

More than 2 years of experience in negotiating with representatives of the Soviet Union, Great Britain, and France in Berlin, Germany, 1945–47, convinces this writer that two essential ingredients at least must always be present in any successful negotiation among great powers, mutually of benefits, and a meeting of minds in a common understanding of the terms of agreement.

The adoption of the Vice President's proposal that a clause in all international agreements permits recourse to a world court or tribunal in cases of different interpretations, would greatly reduce disagreements and tensions later. A further provision for any party, suffering substantial disadvantage or loss of mutuality of benefits through a change in circumstances over which it had no control, to appeal to an international court of equity for redress would further reduce tensions by providing for peaceful settlement of disputes. John Foster Dulles made such a proposal in his book "Peace and War," prior to World War II.

Gen. HUGH B. HESTER (retired).

PHILADELPHIA, *June 10, 1959.*

Report on the Progress of the 86th Congress, 1st Session, to the People of the 32d Congressional District of New York

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. STRATTON. Mr. Speaker, as the 1st session of this 86th Congress, of which I have had the honor and privilege to be a Member from the great 32d District of New York State, draws to a close, I would like to review briefly for the people of my district some of the highlights of these exciting 8½ months—what we have accomplished as well as what remains to be done, for the Nation as well as for our own district.

REPRESENTING MY DISTRICT

May I say at the outset, Mr. Speaker, that when I campaigned for Congress last fall I promised the people of my district that if they sent me to Washington I would be sure to speak up loudly and strongly for the interests of our district, and I would work and fight as hard as I knew how to meet the special needs of our area. I assured the people that the Members of Congress would certainly come to know of our district, and would be made well aware of the kind of legislation required to meet our problems.

This, Mr. Speaker, as you know, I have sincerely tried to do, and I hope I may have succeeded in some measure in carrying out these objectives.

REPORTS TO THE PEOPLE

I also promised to keep my people posted on what was going on here in Washington, what I was trying to do as their Congressman, what were the big issues pending before us, how I had voted on these issues, and the reasons why. This, too, Mr. Speaker, I have sincerely tried to do—with weekly newsletters to my constituents, monthly television reports, and periodic press and radio releases. My people may not all approve 100 percent of every vote I have cast, but at least they know how I voted and they knows the reasons why.

This final report to them is being made in this same spirit, as an accounting to which they are rightfully entitled of the stewardship I have tried to render for them as their personal representative in the seat of our National Government in Washington.

THE SESSION IN BRIEF

This has been a long session of Congress, one of the longest in recent history, and in many respects it has been a difficult session, too. And yet I believe that nearly all of us will agree it has also been a worthwhile and productive session. Together we have hammered out a sizable program of constructive, responsible, and effective legislation of which the people of the country and our individual districts can well be proud. We have not, of course, done all of the things that some of us would have liked to see done. But the record we have made has been, in my judgment, Mr. Speaker, a sound, middle-of-the-road record on which we may confidently expect that the 2d session of the 86th Congress will continue to build when it convenes next January. In spite of party differences, the Members of this Congress have worked to achieve a harmony of view with the President of the United States so that together we could write the best legislation possible. Very wisely, in my judgment, we have avoided the strong temptation to play politics, and merely draw the lines of political difference more sharply in preparation for coming campaigns instead of actually passing laws for the benefit of our people.

As a freshman Member of this body I am also proud that the RECORD will show that on the issues presented to us here I have consistently refused to vote on any purely partisan basis, but have tried to cast my vote in the interests of all of the people of my district as their representative, irrespective of party affiliation.

JOBS AND UNEMPLOYMENT

During the months that this first session has been in progress there has been one overriding and essential issue in the minds of all of the people in our district and that has been the issue of jobs and unemployment. Members will recall that I have repeatedly taken the floor of this House to point out the serious economic conditions confronting upstate New York, and to impress upon them the need for appropriate legislative action to meet the steady loss of jobs from certain areas of our country at the very same time that other areas have been reporting unprecedented prosperity.

To my deep regret we did not succeed, in spite of all of the efforts of our bipartisan steering group, in passing through this House the so-called distressed areas bill, adopted earlier by the Senate. This bill would have made funds available immediately to help communities help themselves attract new industries to take up the slack of unemployment and vanished jobs. I confidently expect, however, that this legislation will stand high on the agenda of priority items when the second session convenes in January, and I for one intend to devote my full efforts toward seeing some such legislation enacted into law. Eliminating needless pockets of chronic unemployment such as exist today in Amsterdam, Gloversville, Johnstown, and Schenectady—and to some extent also in Oneonta—is certainly the most pressing single piece of unfinished business before the 86th Congress.

In fact when we convene again I hope we will pass not only the distressed areas bill, of which I am a cosponsor, but also legislation similar to a bill which I have introduced to provide tax relief—through faster tax writeoffs—for industries which will locate or expand their facilities in areas already suffering from unemployment. Legislation of this type is needed to halt the movement of industry away from established industrial States like New York, and will also, I believe, go far toward preventing the growing concentration of defense production in the far western section of our country while New York State, which still pays 20 percent of all Federal taxes, is receiving less than half the amount of defense contracts going to a State like California.

SCOTIA NAVY DEPOT

Even though we need to meet this problem of unemployment on a broad national basis, I am happy to be able to report that we have made some small progress in arresting the decline in jobs in our district and in turning the employment curve back up again. Last fall, before I took office, the Navy announced the closing of the supply depot at Scotia, with an attendant loss of 675 jobs in our area, plus the countless skills and productive know-how built up by these loyal employees over many years. Although the Navy indicated that some of its activities would still be carried on at Scotia after December 31 by the General Services Administration, this was still a heavy blow to our hard-hit area. I have appealed repeatedly to the Navy during the last year, and I have enlisted the full support of our two U.S. Senators in these efforts. But the Navy has refused to alter its plans in any way and, until recently, had been most vague about employment details after January 1, 1960. In the meantime loyal workers were being gradually thrown off their jobs.

I am happy to report, however, that within the past few days Navy Secretary Franke has given me the first official assurance that at least 90 persons presently employed at Scotia will be retained after December 31 to work with GSA. He has also agreed to my request that these persons be selected in advance by the Navy rather than being discharged now and then rehired later on. I hesitate, of course, to hope too much for the future, but I do believe that experience will prove that the proper and most effective conduct of our defense program requires the continued and even fuller utilization of existing facilities and skills at Scotia. In the meantime I have been assured by the Civil Service Commission that they expect to place almost every employee who is let go at Scotia in some other job, either Government or private, and I have tried to be helpful myself in making these changes possible for individual employees.

TURBINES AND TVA

One of the major factors contributing to heavy unemployment in my district has been the sharp decline in turbine manufacturing at the great General Electric works in Schenectady. Part of this decline has resulted from a sudden shift in policy on the part of some of our Government agencies, notably TVA, in favor of purchasing foreign-built turbines rather than those built in America. I have frequently taken this floor, Mr. Speaker, as Members will recall, to protest this disastrous and shortsighted policy on the part of our Government. I am proud that as a result of my efforts along these lines the RECORD shows that before the TVA self-financing bill was adopted this year the TVA Board made a definite commitment to Congress that the Buy-American Act would continue to apply to the $750 million of

additional funds being made available under the legislation. Shortly thereafter Schenectady General Electric was awarded a contract by TVA for production of the largest steam turbine ever built, a 600,000-kilowatt machine. This contract will be of great benefit to our area, though I do wish the lag in time between the contract award and the moment when men are actually put to work was not so long.

Our continued battle against foreign turbine purchases on the part of the Government has also helped, by the way, to channel several other substantial awards to Schenectady GE, including a contract for four huge turbine-generators for the Army Engineers Barkley Dam project in Kentucky. The Army's original award to GE had been protested by one of GE's foreign competitors. But I took exception to this most unusual interruption of normal Army contract procedures, and the Comptroller General ended by authorizing the contract, plus the many jobs it will entail, to Schenectady GE as the Army had originally planned.

GLOVES, CARPETS, AND FOREIGN IMPORTS

The inroads of foreign competition into the turbine manufacturing field are compartively new. But the heavy impact of low-cost, low-wage competition is an old, old story for the glove industry in Fulton County and the carpet industry in Amsterdam. Both industries are in need of immediate relief in terms of higher tariffs or lower import quotas, and I have introduced and fought hard for legislation to help them both. Some measure of the seriousness of the problem which both industries face from foreign imports is shown by the recent announcement that the only two really "chronic" areas of unemployment in all of New York State are Amsterdam and Johnstown-Gloversville, both in my district.

Within recent weeks the leather glove industry has instituted a so-called escape clause action with the U.S. Tariff Commission in Washington. I have joined in support of this action, and expect to testify in behalf of the glove industry during the hearing. Similar action has been taken by the knit glove industry with the Office of Civil and Defense Mobilization, designed to get relief on the basis of the importance of the glove industry to our whole defense mobilization base. After all, you cannot fight with cold hands. I am also supporting this action in the strongest possible way.

Yet more is needed than even favorable decisions in both of these cases. Under present law, for example, even a successful recommendation by the Tariff Commission in favor of the glove industry could be overruled or vetoed by the President for "international" reasons. In fact over the past few years most such recommendations to help hard-hit industries have been vetoed in this way. Decisions to protect local industry must therefore be given greater legislative weight, and I have introduced a bill to prevent any indiscriminate overriding or vetoing of such tariff relief decisions. Besides that, if we are really to be safe, a more favorable tariff on foreign gloves and a sharply reduced quota of imports must be written into the basic trade law itself. I have introduced legislation to fix this import quota at 50 percent of domestic production, which seems to me a fair and reasonable figure.

It is true, Mr. Speaker, that those of us who are fighting for legislation to protect local jobs against throatcutting, unfair, low-wage competition from abroad are fighting a hard, uphill battle. But I am confident that our ranks are growing. Our bipartisan group in this House has grown considerably in size during this session, and many influential organizations, including leading national labor unions who originally were opposed to tariff restrictions, have now rallied to our side. The battle is still far from won, but I sincerely believe that our cause is prospering and that victory is in sight.

Legislation of the same kind is needed to protect our local carpet industry. In the meantime I have had occasion to speak out, as Members will recall, against some recent efforts being made to eliminate rugs and carpets from offices in the new Senate Office Building. While this exchange may have had its lighter aspects, the move to replace carpets with other types of floor covering could well jeopardize hundreds of jobs in Amsterdam and other carpet centers in America and it was therefore something that should not have gone unchallenged.

BIPARTISAN CONGRESSIONAL COOPERATION

To me, Mr. Speaker, one of the most encouraging developments of this 1st session of the 86th Congress has been the new spirit of harmony and cooperation between all 43 members of the New York State congressional delegation, regardless of party affiliation. For the first time in many a year, so I am told, Democrats and Republicans got together and pledged our joint efforts to work for increased jobs and industry for our own State. Certainly the need to keep business in New York State and to attract new businesses is something that transcends narrow party lines. If New York suffers we all suffer together. I am glad to have had a small part in stimulating this bipartisan cooperation, and I want to commend the gentleman from New York [Mr. CELLER] and the gentleman from New York [Mr. TABER] for the job which they have done in heading up our delegation's bipartisan steering committee. It is time that we in New York pulled together to see that our State gets its fair share of defense contracts, for example, and to see that the interests of an established and progressive industrial State like New York, where men and women work under advanced and civilized conditions and at fair and reasonable wages, are not impaired or jeopardized by unfair legislation or shortsighted actions my executive departments.

KEEPING AMERICA STRONG AGAINST AGGRESSION

I know the people in my district were as pleased as I was at the recognition afforded to our 32d District when I was fortunate enough, as a freshman Member of the House, to be assigned to the powerful Armed Services Committee. We in our district have a direct and personal interest in keeping America strong against any threat of Communist aggression, and in having our armed services efficiently operated and ready for any emergency.

Mr. Speaker, as a member of this committee it has been a high privilege to serve under our outstanding and deeply beloved chairman, the gentleman from Georgia [Mr. VINSON], one of the really great Members of this House and the one man who unquestionably knows more than any other living American about the defense of our Nation. I was honored to be selected to represent him this past year on the Board of Visitors at West Point. I was likewise honored to be among those selected by him last March to visit our furthermost outpost of freedom, West Berlin, during the Berlin crisis, so as to report to the other members of our committee as to the condition of our defenses there. And I have been happy to have been selected to serve on the special subcommittee investigating the misuse of personnel in our armed services, under the distinguished chairmanship of the gentleman from Illinois [Mr. PRICE], and alongside the able gentleman from Connecticut, Colonel KOWALSKI, who has waged such a relentless fight against all waste of military manpower.

I believe the record will show, Mr. Speaker, that one of the great achievements of this Congress has been what we have done in the field of national defense. We have appropriated, for example, some $400 million in additional funds to modernize our Army. We have provided funds for a new modern Navy carrier. We have continued the sound program of constructing more of those atomic submarines, pioneered by Vice Admiral Rickover, and developed with the efforts of so many of the great General Electric Co. scientists at the Knolls Atomic Power Laboratory in my own district.

Working together without any touch of narrow partisanship, members of our committee have called attention to the need to stand firmly behind the President in Berlin. As a result of the outspoken comments of some of us with regard to the recent aggression in Laos, our Government has also taken, as it must take, a firmer line there too. Surely we cannot accept at face value the protestations of Premier Khrushchev or other Communist leaders about wanting peace or disarmament while "brush fire" aggressions, nibbling at the fringes of the free world, are allowed to continue unabated in faraway places. We must not be lulled, by any exchange of visits, into letting down our guard or abandoning our defenses without first receiving some ironclad assurances of international inspection and control.

In this past session, Mr. Speaker, I have found myself branded as a warmonger by the Communist propaganda radio for voicing sentiments such as these on the floor of the the House. But I am proud of that attack and I shall of course continue to speak out without fear or hesitation in exercising my responsibility as a Member of Congress and a member of its Committee on Armed Services.

NO DEFENSE CONTRACTS FOR GE?

Knowing the defense needs of our country, Mr. Speaker, I was especially proud, as a freshman member, to have led the fight on the floor of this House some months ago against legislation which would have banned all defense contracts to any company, including the General Electric Co. and ALCO Products in my own district, which had any retired admiral or general on its payroll. Had this hastily conceived legislation actually been approved, New York and my own district would have suffered a heavy blow against our industrial production. Fortunately we defeated the amendment by a single vote, and the subsequent investigation—conducted by the Hébert investigating subcommittee—into the charges which inspired this amendment has not substantiated any of the original assertions about improper influence on the part of our retired officers.

LABOR-MANAGEMENT REFORM LEGISLATION

Let me touch briefly on some of the other highlights of this session too. We have adopted, for example, a bill to eliminate racketeering from labor-management relations. As I have already reported elsewhere in greater detail, I opposed the original Landrum-Griffin bill because I felt that in dealing with racketeering excesses it infringed unfairly and unnecessarily on the legitimate rights of decent, law-abiding unions, and might even jeopardize the industrial position of established States like New York by speeding up shifts of industry to the South. I did support the move to send this bill to conference, however, rather than pigeonholing it, because I believed that many of these bad features could be eliminated by the conference committee. That in fact is just what happened. The bill which finally emerged, and which I supported, even though it has some imperfections which ought to be corrected in the light of the bill's operating experience, is substantially the same kind of fair, middle-of-the-road legislation originally reported out of our House committee.

OTHER ACCOMPLISHMENTS

This session of the 86th Congress also took a forward legislative step when it increased the appropriation for medical research by some quarter of a billion dollars, which means that we can now speed up the search for a cure to such diseases as cancer. I am especially pleased that this expanded medical research appropriation included an item of $50,000 which was inserted at my request to authorize a nationwide study into the effects of naturally radioactive rocks on unborn babies, a study to be based on earlier research carried out in New York by our State Health Department in areas of the Adirondacks and in Otsego County with such startling results.

We passed a bill providing much-needed increases in railroad retirement pensions.

We approved admission of Hawaii as the 50th State in our Union and in so doing welcomed to Washington a bipartisan delegation of Congressmen from the Aloha State who are themselves evidence that one more barrier has fallen in our continuing fight against prejudice and bigotry in America.

We adopted an improved and expanded program of veterans' pensions, although the special needs of many of our World War I veterans have still failed, in my judgment, to get proper recognition.

We approved higher interest rates on Government savings bonds, which means that men and women who invest their funds in the future of America will no longer be penalized for their patriotism.

We extended the good work of the Civil Rights Commission for another 2 years.

We passed a reasonable housing program.

We continued the Federal highway program, even though Congress unfortunately refused to provide proper reimbursement for States like New York which have already accomplished so much at their own expense without Federal help. Without such reimbursement, incidentally, it will be much more difficult to get Federal assistance for needed road improvement projects in Hamilton County and elsewhere. Incidentally I voted against the 1-cent boost in the gas tax that was tied onto this program because I believed it was unnecessary and improper.

We authorized a new food-stamp plan to make more of our huge food surpluses, which we are already sending abroad in great quantities, available also to needy people within our own country.

We put a much-needed and long-overdue limit of $35,000 on farm subsidy payments, which should now help to get our farm program geared back toward the small family farmer instead of toward the huge factory-type of farm.

ECONOMY AND INFLATION

I am pleased that this Congress has chosen to live within the Federal budget and not risk further inflation by incurring budget deficits. That decision was the direct result not only of the spirited campaign waged by President Eisenhower, but also of all the letters, telegrams, and phone calls which came from our constituents. I am happy to have had a small part in helping to nail down this important policy decision because I voted against earlier bills which called for excessive spending over and above the budget figures. Later these programs were scaled down to more moderate figures and I was glad to support the programs in that new form. Official figures in the CONGRESSIONAL RECORD now show that Congress has not only ended the session by staying within the President's budget figure but has even reduced the total by some $1.8 billion. This is one more dramatic proof that it does pay to write your Congressman.

Even the public works appropriation bill, the annual water development and flood control measure, was passed at a figure under the President's budget, in spite of much apparent confusion on this point. Congress may have disagreed with the President as to which flood control projects were most urgently needed, but there was no real disagreement that these costs too must be kept within overall budget allocations.

KEARNEY PHILIPPINE AWARD BILL

Naturally I am proud that the final record of this Congress includes one bill, H.R. 5477, which I introduced and fought for until it became law. It is a bill which authorizes my predecessor, former Congressman Bernard W. Kearney, who represented this district with great ability for 16 years until his retirement last year, to accept a medal conferred upon him some time ago by the Philippine Government in appreciation of his many services to Philippine veterans. In spite of some difficulties in getting the bill approved in the Senate, I am happy that with the support of Senator LYNDON JOHNSON, of Texas, and Senator EVERETT MCKINLEY DIRKSEN, of Illinois, both former colleagues of "Pat" Kearney in this House, we did get the bill passed and signed into law. This Kearney bill not merely a fitting tribute to a great legislator, and, incidentally, a real thrill for a new Congressman, but it has also served to teach me something about how bills are really enacted into law—a lesson, I hope, that will be helpful in the upcoming second session.

FARM LEGISLATION

While the record of this session of Congress has been a successful one, much of course remains to be done. Besides the urgent need for legislation to deal with the critical problem of unemployment, to which I have already referred, there is, for example, the pressing need for a revamped and more satisfactory farm program. Congress has failed thus far to face up to the challenge of drafting such a program. In voting as I did against such separate agricultural bills as the wheat and cotton legislation offered in this session, I tried to demonstrate my conviction that we cannot continue indefinitely just to increase farm subsidies and then pile up greater and greater surpluses to be stored at the taxpayers' expense. We need a fresh approach to the needs of the farmer, to lift from his back some of the weight of unnecessary government interference, and to give him a fairer opportunity on his own merits to make a more ample living and keep his farm income ahead of his costs of production. In placing a top limit on farm subsidy payments this session of Congress made at least one step in what I regard is the right direction. But we need to move much further ahead next year to assure that any farm program is geared strictly to the family farmer.

MILK CONSUMPTION

Much of the difficulty that confronts the Nation's dairy farmers comes from our continuing failure to promote a really adequate level of fluid milk consumption across the Nation. Here is one area where Government can properly be helpful to the farmer without interfering with the operation of his own busi-

ness. As a Member of Congress I have been greatly concerned with the need to stimulate the consumption of milk, and as a Member of the House Armed Services Committee I have suggested a number of proposals for greater utilization of milk by our armed services and for civil defense stockpile purposes. This is one line of approach that offers real possibilities for expansion and I plan to pursue it even more vigorously in the months ahead.

YOUTH CONSERVATION CORPS

Unfortunately no action was taken in the House this session on a bill which I joined in sponsoring to establish a Youth Conservation Corps to provide useful outdoor jobs in conservation and reforestation work in such counties as Hamilton, Fulton, and Otsego for young men who have not yet located a position in industry. The bill did pass the Senate, however, and, considering the renewed attention that has been focused on this kind of useful outdoor activity in the light of increased juvenile crime, I am very hopeful our bill will receive an early hearing next session and be speedily adopted into law in line with the recommendation of many civic groups.

NO BIG DAMS FOR OTSEGO COUNTY

My experience during the past year in Washington, I am happy to report, has convinced me that the pressure for construction of any big flood control dams in Otsego County has disappeared. The fact that the 1960 public works appropriation bill contained funds for flood control operations in the Binghamton area is clear evidence, I believe, that the Army Engineers have now abandoned any serious attempt to carry out the alternative program of big upstream dams, including those in Otsego County, originally authorized in 1936. In fact, as a practical matter, I have discovered that hundreds of authorizations for similar flood control projects all over the country have been adopted over the years on which no further action has ever been taken. Apparently it is only when the Army seeks the funds to carry out such authorized projects that the matter really becomes serious. I have learned that no effort whatsoever has been made to obtain any funds for these Otsego County dams, which would indicate that the Army has changed its mind. Still as long as the legal authorization remains on the books there is a kind of technical sword of Damocles hanging over the heads of the people of Otsego County, and so I have introduced legislation to rescind that original 1936 action, and shall continue to fight for the adoption of my bill, to relieve once and for all the minds of the people I have the honor to represent of the fear that their farms and homes might some day be taken from them.

TAX RELIEF FOR THE RAILROADS

The steady decline in railroad passenger operations has become a serious national problem directly affecting our own district. From many angles, including national defense, we simply cannot permit the railroads to wither away, nor can we allow regular passenger operations to be abandoned. One step in helping the railroads is a sensible program of tax relief. With that in mind I have introduced legislation to provide such relief through faster tax writeoffs for railroad equipment and rolling stock. My bill received a highly favorable report last month from the Interstate Commerce Commission, and in view of this favorable report I am hopeful the legislation can be scheduled for hearing and action early in the second session.

COLLEGE SUMMER INTERN PROGRAM

One of the major problems in a democracy is training young men and women in the workings and techniques of free, representative government. Unless our younger people not only understand how government works but also become enthusiastic enough to seek government service themselves we cannot expect to have a healthy and workable democracy.

With this in mind I made my Washington office available this past summer to three young college students who joined our office staff temporarily as summer interns. These young men proved of tremendous value in helping to carry out the many tasks that any congressional office is called upon to perform. One came from Union College in Schenectady, one from State University Teachers College at Oneonta, and one from Harvard. Two of the three were selected by their own colleges and were supported in Washington by special educational grants. I am most enthusiastic about the merits of this program, and the young people who took part in it likewise seemed to enjoy the opportunity to watch the operation of Congress at close hand. I look forward to repeating this arrangement for two or three other students next summer.

ADJOURNMENT SCHEDULE

Let me just conclude by saying that being the Congressman from the 32d District of New York has been the most exciting and thrilling experience I have ever had. Never have I had a more challenging or more stimulating job, and I am deeply grateful to all the people of my district for the opportunity they have given me to serve them in the U.S. House of Representatives. I look forward eagerly to the opportunity to return home and to see and talk with them again. It is my intention to hold open-air office hours in each community throughout my district over the next few weeks so as to be easily available to anyone who may want to take up some kind of problem with his Congressman. The schedule of these visits will be locally announced and I hope everyone will feel free to drop in on me. In these months while Congress is in adjournment I hope to be able to speak with hundreds of my constituents about what I have tried to accomplish in the session and, what is even more important, to learn from them their thoughts, views, criticisms, and suggestions as to the kind of additional legislation which will best meet their needs and interests in the year ahead.

During this period my local office will be open as usual at 505 State Street, Schenectady, telephone Franklin 4-4000, and my staff or I will be available there at all times to render any service we possibly can.

Mr. Speaker, I want to take this opportunity, too, to extend to you, to my colleagues in this body, and to all the people of the 32d District of New York, my sincere thanks and appreciation for the magnificent support, assistance, and understanding that have been rendered to me during the past 8½ months I have served here. I am more proud today than ever before to be a Member of Congress. And I sincerely hope that with the help and advice which I will seek from my constituents as I meet with them personally during the adjournment period I can come back down here next January prepared to try to do an even better job toward promoting the health, prosperity, and welfare of the people of the 32d District of New York State and of all free Americans.

Safety on the Kitchen Shelf

EXTENSION OF REMARKS

OF

HON. EDNA OAKES SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mrs. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Safety on the Kitchen Shelf" from the spring 1959 issue of Corn, a publication of the Corn Industries Research Foundation, Inc.:

SAFETY ON THE KITCHEN SHELF

(The corn-refining industry, having a century-old history of identification with the food industry, and mutual interests with other food manufacturers and their products, offers this discussion as a contribution to a better public understanding of food additives.)

The Food Additives Amendment of 1958, Public Law 85-929, was signed by President Eisenhower last September and became effective as of March 5, 1959. It is regarded by the Food and Drug Administration not only as a comprehensive insurance policy for the public health but as a positive impetus to the advance of food technology. The new law can meet both of these desirable ends and thus become that legislative rarity—a law that satisfies everyone—only if wisely administered by the Government and strictly observed by industry.

The old law, enacted in 1938, regarded chemicals for foods as falling into one of two classifications—"poisonous" and "nonpoisonous." The former group, with certain notable exceptions, was ruled out of foods. Exceptions were substances required in production or unavoidable in good manufacturing practice, and even these were disqualified unless a tolerance for their use had been established.

Under the old law there was no fixed responsibility to prove an additive safe. It was the job of the Food and Drug Administration to prove an additive harmful, if such were the case. The new law takes the burden of proof from FDA. The food manufacturer or chemical manufacturer must now prove that his additive is safe in the amount of its intended inclusion in a food.

Adequate proof of safety will require pharmacological and toxicological testing of substances, on the basis of commonly accepted testing procedures. Testing of certain substances may require large numbers of animals to be on test diets for 2 years or more. Such proof of safety can be expensive. The cost of a full-dress toxicological investigation for a new and unknown substance is estimated at around $75,000.

Should the substance for test even be suspected as carcinogenic, testing periods may be as long as 7 years.

Once the food manufacturer's additive tests are completed, the Food and Drug Administration will approve, or decide otherwise. If the available toxicological data point to the necessity of restricting the substance to specific uses and/or amounts, such restrictions will be applied.

If not approved, the additive will be rejected for use. In the latter event, the food manufacturer has a right to a public hearing on the proposed additive and the further right of appeal in court.

In effect, the new law recognizes and corrects the former unrealistic distinction between "harmful" and "safe" additives. It affirms a truth enunciated in the 18th century by a famous alchemist and physician, Paracelsus: "All things are poison and nothing is innocuous. It is only the dosage by which a thing is not poison."

The dosage, indeed, is the very essence of the new law. The difference between safety and danger depends not on the chemical, per se, but on the amount of the chemical. It is at last officially recognized that many chemicals, though harmful in large doses, offer positive improvement to foods—in taste, color, keeping quality and other factors—and should therefore be included in foods if the inclusion is held within strict limits which are proved to be harmless.

Human metabolism decrees whether a substance is harmful or not. Is the substance absorbed, stored, broken down by enzymatic action, chemically changed, or excreted? Since humans react differently from animals, and since the differences are not clearly understood, it is assumed for the assurance of safety that humans are 10 times more sensitive than animals and that 1 human may be 10 times more sensitive than another. You have here a 100-to-1 ratio in the animal human safety equation. This means, in effect, that if 1 gram of an additive in 100 pounds of food is safe for an animal, one-hundredth of a gram may be deemed safe for any human. The 100-to-1 ratio is not inexorably fixed, however. It may be tightened even further, or loosened, depending on the case at hand. An additive that adversely affected bone development in rats would not be permitted in milk at any level. Another additive which, in heavy doses, merely discolored rats' livers, might be permitted in sauces or condiments in greater quantity than the 100-to-1 ratio implies.

Regulation applies not only to intentional additives—substances added directly to foods—but to incidental additives. The latter includes any substance likely to enter food as a result of use in food processing. The law applies to food-packaging materials, irradiating processes, and residue from animal feeds which may carry over into meat, milk, and eggs. It specifically prohibits the use of an additive in any amount if tests show that the substance produces cancer in humans or animals when fed or otherwise appropriately tested.

The Food and Drug Administration has published a list of 188 additives and about 180 flavorings and seasoning agents which it proposes to declare safe but on which final decision has not yet been made. Additives which lack official sanction, and which have been in use prior to January 1, 1958, must have approval within 18 months from the date of passage of the bill, or their use in foods must be discontinued.

Since the cost of testing a single new additive may run from $10,000 to $75,000, it is plain that the Government's new insurance policy for the public health carries a substantial premium, to be paid by industry. John A. Osmundsen, writing recently in the New York Times, estimates that industry will spend "about $20 million in the next 5 years just to clear doubts about some of the additives already in use."

Though the public has been largely unaware of it, the food industry has long been paying, through research and plant improvement, substantial premiums on public health insurance. The great majority of manufacturers who compose this industry have been testing additives for years, satisfying themselves that the additives are safe before including them in foods. Such concern has been based, of course, on a decent and normal regard for the public health. It has been based, too, on the simple economic fact that it is good business to make and sell a product that is wholesome.

Industry's practice of pretesting additives was recently cited by Dr. Arnold J. Lehman, one of the top food and drug officials. He pointed out that although the old law did not require industry to pretest proposed additives, industry had been doing just that for the last 12 years or more. "The responsible members of industry * * * have been testing their additives and discussing their data with us for as long as I've been here," Dr. Lehman said.

What the new law should accomplish, besides public health insurance, is public awareness that its health is being insured—by Government and industry alike.

WHAT ARE ADDITIVES AND WHY NEEDED?

To the food technologist, whether in Government or industry, "additive" is a familiar word. Among laymen, however, the word is not clearly and widely understood. Until recently, no dictionary acknowledged it as a noun. "Trace ingredient" is not a good synonym, for some additives are used in quantities which are far more than traces. An additive is of course an ingredient, but in FDA's meaning of the term it is the kind of ingredient that is proscribed from food unless it qualifies under the procedures enforced by the new law.

Additives and ingredients can be many things, and are added to foods for many reasons—to preserve, to color or flavor, to neutralize certain effects, to stabilize certain ingredients, to emulsify others, or simply to enhance the nutritive quality of a food. Because many of them have long chemical names they may arouse needless apprehension in the lay consumer mind.

Among the 360-odd additives, flavorings and seasonings which FDA proposes to declare safe, many have long chemical names. Probably several hundred others will be declared safe after the evidence from tests is in. A few, deemed safe in the past but later proved to have harmful effects over long periods of use, have been discontinued in food manufacture.

Perhaps the best known and least feared of all chemical additives is that eminently safe deadly poison—salt. It is eminently safe because its intake is strictly limited by taste. It is a deadly poison only in Paracelsus' sense: that all things are poison if taken in excess. In the same sense, water could be called a deadly poison too. Used judiciously, salt delights your taste buds and benefits your digestion. It is in every household, not only because of its fine flavoring effect but because it has a familiar and time-honored name. At the table you could say "pass the sodium chloride" if you wished, and while you'd be perfectly correct you might scare the children or your completely nonchemical dinner guests.

Baking soda has a familiar name, too, and its presence in foods alarms no consumer. Even its chemical name, sodium bicarbonate, is fairly well known and hardly likely to cause goose pimples to arise on the skins of housewives or domestics. One kind of baking powder, which is sodium bicarbonate plus cream of tartar plus corn starch, is in the same comfortable category.

If space permitted, this article could cite scores of useful additives (and many of them have long chemical names) employed today by the baking, soft drink, brewing, dairy products, confectionery, meat packing, and other industries.

The history of adding substances to food is almost as old as the history of food itself. Probably it began when man first learned to preserve meat by salting it. But mostly he ate his food when and where it was produced. The time and space intervals between production and consumption were brief; hence, distribution was but a slight factor in the overall food supply. Diets were lacking in variety, little was known about nutrition, dietary deficiencies and the illnesses resulting therefrom were rife, and life expectancy was short.

A hundred or so years ago the so-called industrial revolution began. The years that followed, and particularly the last two decades, saw first a gradual, then an explosive acceleration of all the factors that have brought chemical additives by the hundreds into foods. Population increased rapidly; people moved to all quarters of the Nation, and distribution had to keep pace. Large areas became urbanized; as the tempo of life quickened more foods were prepared in factories and fewer in homes. Nutritionists unlocked the mysteries of proteins, carbohydrates, fats, and vitamins, and the application of their findings was a tremendous stride forward in balanced and healthful diets. Foods quick frozen in subzero vaults entered the picture, and presently were reaching kitchens, still ice hard, 2,000 miles from the point of origin. The packaging industry contributed a major share to the preservation and distribution of foods and the convenience of their use.

In this gustatory paradise, chemical additives found a place and a need.

CHEMICALS AND FOODS

If the average consumer clearly understood the word "chemical," he could live more comfortably with its application to foods and be less subject to the apprehension which the word inspires. The chemist knows the meaning of the word better than anyone; hence, the chemist is not afraid of it. To the chemist, foods themselves—with or without additives—are but combinations of chemicals. He thinks of food as a compound of proteins, fats, carhohydrates, minerals, cellulose, vitamins, and water, all of which are chemicals.

The trouble with the word "chemical," in the majority of lay minds, is that somehow it is associated with toxic or with poison. This semantic hookup is unfortunate. Some chemicals such as water, the proteins, fats, and carbohydrates, can be consumed in considerable quantities to the great benefit of mankind; indeed their lack in considerable quantities means malnutrition, starvation, and even death.

The Food Protection Committee of the National Research Council has gone on record as follows: "There need be no hazard in the use of chemical additives provided scientific research programs are carried out prior to use. The fact that a chemical is toxic does not mean, per se, that its proper use as an additive will entail a hazard."

Distinguishing between a hazard and toxicity, FPC continues: "Toxicity is the capacity of a substance to produce injury; hazard is the probability that injury will

result from the use of the substance in the quantity and in the manner proposed. A chemical additive should not be used in a food (either in production or in processing) until its safety for a given food use has been established beyond a reasonable doubt, as judged by competent experts."

Precisely that factor of safety, "as judged by competent experts," is the assurance given the public by the new law. Industry will do its own testing, but the final review, and approval or disapproval, rest with the competent experts of the Food and Drug Administration.

THE CRITICS AND ALARMISTS

No responsible scientist, whether employed by Government, industry, or independent research, would contend that absolute safety in foods can ever be achieved. One of the major problems today lies in the area of a great unknown—the longtime effect of some chemicals used in foods. Testing over a period of years will be needed; meanwhile the suspicion of deleterious effects over long periods is enough to keep an additive out of foods.

On the other hand, the responsible scientists, cognizant of the facts of regulation and the efforts of industry to comply with the spirit and letter of the law, will agree that additives are essential to foods, as foods are made and distributed today, and that the minimal hazard they impose is far outweighed by the good they do.

Since everyone must eat, the safety of food is everyone's vital concern. Few public issues have generated more controversy and attracted more critics. The anti-additive voices have ranged from the tempered criticism of thoughtful men to the shrill screaming of quacks, faddists and professional frightmongers. All of them are heard, and most of them must be reckoned with.

A writer who charges government and industry with negligence in food regulation, and warns the public of imminent calamity resulting therefrom, may find a wide audience. Often the pages of popular magazines are open to him, no matter how poorly buttressed by facts his text may be. But the scientist usually defends his cause in one of the professional journals with a small fraction of the audience available to the quack.

WHAT REMAINS

While food regulation probably never will achieve perfection, the provisions of the new law should assure the public that the utmost is being done to enforce safety. Confidence has been voiced by the men who are charged with administering the law, and by others whose integrity and concern for the public welfare are their only guide.

The dietary health of the Nation is probably better than at any time in history. FDA attributes the wholesomeness of foods largely to careful testing programs of the food and chemical industries for many years, and to the continuous exchange of information between industry and Government regarding new additives.

The Manufacturing Chemists' Association, Inc., awake to the responsibilities of its industry, has organized a food additives committee.

The food protection committee's liaison panel, composed of representatives from industry, consulting groups, trade associations, and foundations (of which Corn Industries Research Foundation, Inc., is one), Government agencies, and scientific and technical societies, is charged with exchange of information on problems before the committee.

Industry has no wish to be the sacred cow on the food landscape, above reproach and immune to criticism. But despite the charges sometimes leveled against it, industry can be credited with most of the constructive work in behalf of safe and better foods—the toil and study and the expenditure of fortunes in research. For these efforts it is high time that the food and chemical industries be accorded the recognition that is their due. The millions they have spent in the testing of additives is only part of the story. Additional millions have been spent in obtaining the cleanest raw materials, and on machinery to clean these materials still further once they arrive at plants. The improvement of plant equipment—closed-up processes to prevent airborne contamination—and the institution of better plant-sanitation methods have cost millions more. Painstaking sampling and analyzing of products in process are costly, but they are routine practices in all modern food plants. Sanitary packaging and sanitary conditions of bulk shipments are also part of industry's total contribution to safe and wholesome foods.

It is easy for critics to alarm consumers with undocumented allusions to the perils in foods. But what remains, despite all the prophets of poison, is an incredibly wide choice of good foods, available to consumers everywhere, and constituting collectively the best tasting, most varied and most wholesome diet ever enjoyed by any people.

What remains, after all the viewers with alarm have taken their cracks at industry, is a sharp decline in dietary diseases and a heartening increase in life expectancy, chiefly in past two decades—the very period that has seen an explosive increase in food additives.

What remains, despite the ills the human flesh is heir to, is a generally higher level of the national health than ever in history. It is exemplified in the everyday evidence of the well-being of your family and of ours, and of the family next door, multiplied 50 million times across the country.

People in America are eating well and feeling well.

Kentucky Admits First Negro Woman To Practice Law

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. COOPER. Mr. President, under the authority previously granted, I request that the following article from the September 15 edition of the Louisville Courier-Journal, concerning Miss Alberta O. Jones, the first Negro woman admitted to practice law in the Commonwealth of Kentucky, be included in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMAN PASSES LAW TEST—FIRST NEGRO IN KENTUCKY

(By Marion Porter)

Notified yesterday she had passed her bar examinations, Kentucky's first Negro woman lawyer already is working on her first case.

Miss Alberta O. Jones is one of 64 men and women who successfully passed the July 1–3 examinations.

Though she intends to specialize in tax law, Miss Jones gladly accepted a divorce case which has been hanging fire 4 years.

FOUR YEARS AGO I PROMISED, IF—

"This girl I know asked me 4 years ago—when she separated from her husband—to handle her divorce," Miss Jones explained. "I promised I would if I made the grade.

"I've seen her in church during the past month and, being uneasy about the outcome of the examinations, I told her, 'You'd better get yourself another lawyer.' She said she'd wait."

Daughter of Mrs. Sadie Jones, 3237 Virginia, Alberta is a graduate of Central High School and the University of Louisville where she majored in accounting.

She took 1 year of law at the University of Louisville and transferred to Howard University, Washington, D.C. She was fourth honor graduate in the university's law school last June.

Miss Jones had a scholarship to Howard. Before entering the university she worked 2 years as accountant for an insurance firm here to earn money for living expenses. At Howard she was on the staff of the Howard Law Journal and was a student counselor.

VOLUNTEERED TO DRAFT LEGISLATION

She was one of the seniors who volunteered to help draft legislation. She explained that often Congressmen would submit the main points of a bill to law students to have it drafted in proper form.

"None of 'my' bills have passed yet, but I'm watching for them," she said.

Studying law in Washington had a special fillip, Miss Jones recalled. Instead of being something very interesting bound between the covers of a book, law came alive.

"Everybody was talking about proposed and old laws—you had to read the newspapers to keep up," Miss Jones said.

The cheerful, outgoing young woman has had offers from several legal firms. She would like to work for a Government agency for a time, then enter private practice.

After her graduation she had several interviews in Washington. Senator JOHN SHERMAN COOPER invited her to use his office to study for the bar examinations.

"It was kind of him, but there was so much going on I didn't study a lot," she said.

"I WOULD ALWAYS SAY, 'NOT YET' "

Describing her mental anguish waiting for the results of the examinations, Miss Jones said it didn't help any when, in making public speeches, she was introduced as a lawyer.

"I would always have to say, 'Not yet.' "

She often is called on to speak before civic groups and churches, including Phillips Memorial Church where she formerly was Sunday school superintendent.

When she showed up for the exams she went into a tizzy after Vincent Goodlett, secretary of the State Board of Bar examiners, told her that as far as he knew she was the only Negro woman ever to take the State bar examinations—and that she would be Kentucky's first Negro woman attorney if she passed.

"I was completely demoralized at first," Miss Jones said. "If I had known how much was depending on me I would have studied harder—and I would have worn something different."

Picturesque Religious Pageant Marks Golden Jubilee of Sisters of SS. Cyril and Methodius at Danville, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following feature story written by Mr. John C. Sciranka, editor, of Passaic, N.J., on the occasion of the Golden Jubilee of the Sisters of SS. Cyril and Methodius of Danville, Pa., which was observed on September 7, 1959:

PICTURESQUE RELIGIOUS PAGEANT MARKS GOLDEN JUBILEE OF SISTERS OF SS. CYRIL AND METHODIUS, DANVILLE, PA.

(By John C. Sciranka)

The golden jubilee of the Sisters of SS. Cyril and Methodius on Labor Day, September 7, was a picturesque pageant which attracted over 6,000 people to the Sacred Heart Villa, Danville, Pa., their Motherhouse, which also is the home of their Slovak Girls Academy. Four bishops, 150 priests, and over 400 nuns took part in this historical ceremony.

Most Rev. George L. Leech, D.D., bishop of Harrisburg, Pa., pontificated in the morning and preached the sermon. He also imparted the Papal Blessing from Pope John XXIII. Rt. Rev. Msgr. Michael Polcha, Swoyerville, Pa., preached in Slovak.

After dinner a procession was led by 200 students, 400 sisters, 150 priests, four bishops and several thousand people to the convent cemetery. During the procession the traditional SS. Cyril and Methodius hymn was sung. Here at the grave of Father Matthew Jankola, founder of the order and the late mothers and sisters of the order, Bishop Leech recited prayers. Rev. Michael Lacko, S.J., professor at the Collegio Pontifico Russicum in Rome, preached in Slovak.

At 4 o'clock in the afternoon, Bishob Grutka pontificated in the old Slavonic known as the Glagolitza. It was the first time that the Roman-Slavonic Mass was celebrated by special permission of the Vatican in the Western Hemisphere. Bishop Grutka also preached in Slovak. The students of the academy sang responses and sacred hymns in old Slavonic.

At the conclusion of the religious services, Monsignor Polcha read messages from Gov. Nelson Rockefeller of New York, Gov. Abraham Ribicoff of Connecticut, Gov. Robert B. Meyner of New Jersey, Congressman Daniel J. Flood of Wilkes-Barre, James P. Mitchell, U.S. Secretary of Labor and John L. Lewis, president of the United Mine Workers of America.

The Voice of America sent three representatives from Washington, D.C., to record the program to be beamed to Slovakia.

Joseph G. Pruša, supreme secretary of the Slovak Catholic Sokol, had a special interview with Mr. Lajda and Mr. Lisy, of the Voice of America, in which he reported the activities of the Slovak Catholic Sokol youth.

Other Sokol officials present at the golden jubilee were Father Louis P. Hohos, supreme chaplain; Paul C. Paliat, supreme president; Miss Mary M. Ruyak, supreme vice president; John A. Kanuck, chairman of the board of auditors; Miss Mary Sterbinsky, Mrs. Helen Ellis, John J. Bartos, Miss Helen Filip, who has two sisters as nuns in Danville, and many Sokol members; John D. Check's daughter, of Wilkes-Barre, Pa., is also a nun in Danville. All American Slovak organizations were represented.

Now let's review the story of the Sisters of SS. Cyril and Methodius with Sisters M. Alice, SS. M., who writes that the story of the growth of America is, in part, the story of the birth and growth of the Congregation of the Sisters of Sts. Cyril and Methodius. The history of the community is not bound up with the adventures of the Spanish gold seekers, or the missions of California, or the War for Independence, but with a period that has its own unique importance in the development of our country—the last decades of the 19th century when many of the peoples of Europe braved the Atlantic to escape poverty and oppression.

With this great tide of immigrants a young Slovak seminarian, Matthew Jankola, came to America in 1894. After completing his studies for the priesthood at St. Bonaventure's, Allegheny, N.Y., he was ordained, January 10, 1895, as a priest for the diocese of Scranton, Pa.

Here he found a rich field for apostolic work among the Slovak people who, poor in material possessions but rich in faith, were struggling with an unknown language in a foreign land. To preserve "the pearl of great price," the faith, among their people was the aim of Father Jankola and other priests who had come from Slovakia.

FOUNDS NEW ORDER

As he cared for his own parish in Pittston, Pa., and organized five other parishes where the people could hear the word of God in a language they understood, Father Jankola began to realize the need for parish schools if the faith was to be strengthened among the young. After having applied unsuccessfully in America and in Slovakia for religious teachers, he decided on what seemed a bold and daring plan—the foundation of an American community of Sisters to teach in the Slovak parish schools.

On July 29, 1903, he called a meeting of the Slovak priests of the diocese, discussed his plan with them, established with their cooperation the St. Anthony's treasury to finance the future community, and urged them to encourage vocations among the girls of their parishes.

After he had given the first vocation sermon in his own church, a young girl, Mary Mihalik, presented herself to him as his first candidate. Miss Mihalik and two other applicants were sent to the Czech Benedictine Sisters in Chicago to receive their high school education and later to be trained in the religious life.

But their good intentions were not sufficient to carry the young girls, away from the family circle for the first time in their short lives, through an acute attack of loneliness. While the next two girls who had applied were waiting for the train which would take them to join the first candidates in Chicago, Father Jankola sent a message that they should not go because the other girls had asked to come home. This was the first of the disappointments and frustrations that would water the little seed, hidden and dying in the dark earth, that it might produce rich and precious fruits 50 years later.

When the girls returned, Father Jankola asked several other communities nearer home to train them, but none of the Sisters was able to assist him.

ABOUT TO QUIT

Just as he was about to give up the whole plan, one of his colleagues, Father Pavco, suggested that Father Jankola seek the help of the Superior General of the Sisters, Servants of the Immaculate Heart of Many, of Scranton. "I have heard that her name is Mother Mary Cyril; our common patron might help here; let us try, in the name of God."

Father Jankola found Mother Cyril to be a woman of universal charity, motherly prudence, and great magnanimity of soul, who was to be his greatest support in this difficult undertaking. She accepted the girls, not however, as postulants, but as aspirants, on November 26, 1903, at Mount Saint Marys' Scranton.

After 3 years of study, three of the girls became postulants, January 6, 1906. The decision as to whether the girls should be received into the community of the Immaculate Heart Sisters or be the nucleus of a new community had not as yet been made. Mother Cyril favored the latter plan to which Bishop Michael Hoban at last consented.

Therefore, on July 26, 1906, the "three Marys," Mary Mihalik, Mary Bartek, and Mary Pauly were clothed in a new habit designed by the Immaculate Heart Sisters, and were named in honor of the Holy Family, Sister Mary, Sister Joseph, and Sister Emmanuel. The community was to be known as the Sisters of Saints Cyril and Methodius as Father Jankola wished to honor the patrons of the Slovak people.

IMMEDIATE DEMAND

Immediately four requests for teachers for that school year were received: "We have only three Slovak Sisters. How can we send them to four parishes?" Father Jankola asked.

During the next 2 years, and indeed until the community was able to stand on its own, Mother Cyril provided the novices with the same spiritual and educational advantages that she offered to her own novices.

On September 8, 1908, the Sisters opened their first school in Sacred Heart parish, Wilkes-Barre, Pa.

Already there had been a second reception in 1909, and yet approbation from Rome was not forthcoming. At last the strain of anxious waiting was replaced by joy when Bishop Hoban returned from Rome that August with Pope Pius X's approval of the new community. On September 11, 1909, the three novices made their profession in Mount St. Mary's chapel and a new community was born.

The Sisters remained under the superiorship of the Immaculate Heart Sisters until Mother Mary Mihalik was elected first superior general in 1915. Just as the Sisters seemed to be facing a promising future, they found themselves in the darkness again. Mother Mary died April 30, 1916, and Father Jankola followed her May 5, 1916.

Moreover, the problem of finding a motherhouse confronted the bereaved Sisters. This was temporarily solved by the lease of a large building at Middletown, Pa., from the First Catholic Slovak Union of America. Finally, with the advice and assistance of Bishop Philip R. McDevitt, of Harrisburg, and other priests of the vicinity, the Sisters purchased an estate at Danville, Pa. They took over in 1919, changing "Castle Grove" to Sacret Heart Villa.

RAPID GROWTH

Here in 1922 they opened Slovak Girl's Academy which has recently been renamed St. Cyril Academy. Both the community and the school grew so rapidly that ground was broken for a new building in 1929. From then on the records show a sure and steady progress.

Today, the congregation, numbering 389 members is in charge of 36 schools in 3 archdioceses and 9 dioceses. Founded to meet the urgent needs of the growing church in America, the Sisters have extended their activities as far as their capacities permit, inspired always by their motto "Thy Kingdom Come." Their primary work is teaching in parish schools, principally in the East, although they have established schools in Charleston, S.C., Chicago, Ill., and several other midwestern cities. Besides conducting an orphanage and two homes for the aged, one at Middletown, Pa., and one at Highland Park, Ill.; the Sisters also engage in cooking, nursing, sewing, and gardening.

Historically, the congregation of the Sisters of Sts. Cyril and Methodius can be traced back 50 years to a priest of zeal and determination, an Immaculate Heart Sister of prudence and charity, and three teenage girls of eager generosity. But the spirit of the Sisters and of their founder has its wellspring in the courage and perseverance of two brother apostles, Cyril and Methodius, who sacrificed wealth and position to bring the faith to the Slavic people 1,100 years ago. Yet, following the example of their holy patrons, the Sisters are not limited in their apostolic ambitions by place or nationality, but measure their mission by the charity of their Divine Model who prayed "that all may be one."

Interpretation of Labor-Management Reporting and Disclosure Act

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. KEARNS. Mr. Speaker, section 8(e) of the Labor-Management Reporting and Disclosure Act makes it an unfair labor practice for a labor organization and an employer to enter into any agreement whereby the employer ceases or refrains or agrees to cease or refrain from doing business with any other person. The act makes such agreements void. The section provides, however, that the prohibition against such agreements does not apply to the construction industry relating to work to be done at the construction site. My attention has been called to a statement in the Appendix of the CONGRESSIONAL RECORD by Senator MCNAMARA on September 14—page A8141—to the effect that, in his opinion, the prohibition on hot cargo agreements was not intended to prohibit a fabrication-type clause where the work of fabrication could be done or performed at the jobsite. This view of Senator MCNAMARA does not coincide with mine. In my opinion it is contrary to the clear and literal meaning of the act and would, if accepted, open up a Pandora's box of evils in the construction industry which Congress meant to eliminate, not only in the Reporting Act but in the Taft-Hartley Act as well.

The Senate bill merely outlawed hot cargo agreements with common carriers. The House amendment interdicted agreements not to do business with another entered into by any employer. At the time of the consideration of this amendment there had been some discussion of a proposal to permit unions to picket a construction site if they had disputes with any contractor on the job. It was partly in this frame of reference that the proviso to section 8(e) was written which provides—

> That nothing in this subsection (e) shall apply to an agreement between a labor organization and an employer in the construction industry relating to the contracting or subcontracting of work to be done at the site of construction.

As in the common-situs picketing problem, it was the location of the work that we had in mind and, as a reasonable compromise, we provided that the agreement must relate to work actually done at the site. Work done or products manufactured, processed, fabricated, and so forth by another employer away from the construction site could not be subject to a hot cargo agreement. It was not intended to restrict an employer's freedom to do business or purchase from any other person and to decide in what form the product or materials shall arrive on the job. Furthermore, to interpret the proviso to cover any work or product which could be done at the site would permit restrictions on the installation of many other products besides prefabricated pipe which arrive on the job in prefabricated form. This certainly was not in my mind.

The conference report supports my view. It states, at page 39, that the proviso in question relates only and exclusively to the contracting or subcontracting of work to be done at the site of construction and that it does not exempt from section 8(e) agreements relating to supplies or other products or materials shipped to the site of construction. The legislative history in the Senate is also in accord with my view. On September 3, 1959, Senator KENNEDY, in reporting the conference agreement to the Senate, said at page 16415 of the RECORD:

> It should be particularly noted that the proviso relates only to the "contracting or subcontracting of work to be done at the site of the construction." The proviso does not cover boycotts of goods manufactured in an industrial plant for installation at the jobsite, or suppliers who do not work at the jobsite.

Senator MORSE also said, on the same day at page 16399 of the RECORD, in referring to the hot cargo amendment:

> First. It would prevent a union from protecting the bargaining unit it represents by obtaining an agreement not to subcontract work normally performed by employees in the unit.

The Senate Committee on Labor and Public Welfare printed a section by section analysis of the act, published September 10, 1959, and stated with respect to the section in question that the prohibition against hot cargo agreements does not apply to the construction industry relating to work to be done at the construction site.

It seems clear to me, therefore, that an employer, even in the construction industry, retains the freedom to choose how the products or materials he utilizes shall arrive on the job—prefabricated or not—and that such freedom cannot be restricted by agreements with labor organizations.

Mutual Security Appropriation Conference Report

SPEECH

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MEADER. Mr. Speaker, I voted against the conference report on the Mutual Security Appropriation bill because I protest the conferees' compromose on the Hardy amendment.

Through the years I have supported the mutual security program and adequate appropriations to carry out its necessary and appropriate functions. But I think the conferees should not have yielded to executive pressures with respect to the phraseology contained in the Hardy amendment, which would have assured effective enforcement of the right of the Congress to complete and accurate information about the expenditure of foreign aid funds.

I believe the bill should have been sent back to conference with instructions to stand fast in upholding the basic prerogatives and necessary factfinding powers of the Congress, as provided in the Hardy amendment.

Mr. Speaker, I believe it is important to point out exactly what we have done and what we have not done in our final action on the Hardy amendment:

First, the Hardy amendment, even in its tattered and decimated form does establish the principle that the Congress may employ the power of the purse to compel personnel in the executive branch of the Government to honor requests for information by the Congress, its committees, and the General Accounting Office through imposing limitations on the use of appropriated funds.

Second, the watered down phraseology accepted by the conferees is not a recognition by the Congress of the alleged doctrine of executive privilege but rather it indicates only that the Congress, in its wisdom, has refrained from exercising its full power to obtain information from the executive branch of the Government.

Although I am sympathetic with the conferees who were subjected to great pressure, I disagree with what appears to be their retreat in this important area of effective scrutiny by congressional committees of expenditures in the executive branch of Government. Therefore, I was compelled to vote against the conference report.

However, let me hasten to add, Mr. Speaker, that I fully appreciate that we have established in law a foundation upon which to build in the future an effective means of obtaining facts with respect to the public business within the possession of executive agencies, without which the Congress cannot intelligently and wisely discharge its policymaking responsibilities.

Mutual Security Appropriation Conference Report

SPEECH

OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HARDY. Mr. Speaker, the gentleman from Michigan has expressed very clearly many of my own misgivings about the changes to which the conferees have agreed in the language of my amendment. I am disappointed that there has been some yielding in phraseology and for that reason, I too felt that the conference report should be defeated and the original House language should be insisted upon. In voting against the conference report, I want to make it clear that I am not opposing the mutual security appropriation.

Mr. Speaker, I would like especially to commend the gentleman from Michigan for the effective work which he has done on this subject. He has made a study of it, and he has been extremely helpful to me. In fact, we have joined our efforts to preserve the rights of the Congress in securing the information which is needed in order that we may carry out our constitutional responsibilities.

Notwithstanding my disappointment in the action of the conferees, there is gratification in the fact that the Congress has clearly asserted its power to enforce its legislative and investigative prerogatives through employing its constitutional power of the purse.

Radio Broadcasts of Farmers Union Grain Terminal Association, St. Paul, Minn.

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA daily radio roundups of September 9 and 10, 1959, prepared by the public relations staff of the Farmers Union Grain Terminal Association, St. Paul, Minn.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, WEDNESDAY, SEPTEMBER 9, 1959

The kind of gobbledygook that is being fed to the public in some newspapers and magazines is enough to make the most hard-hearted confidence man cry "Uncle." There's just enough truth in what is being said and printed to give the falsehoods and omissions of fact—a ring of veracity.

It is pointless to argue whether this is being done deliberately or through ignorance. What's important is that farmers are being given a black eye in a deliberate attempt to shift the blame for farm troubles to somewhere other than where it really belongs.

Now, what's this gobbledygook that we talk about? Let's look at an example. It's from the Christian Science Monitor, a newspaper of excellent repute and one well-known to many readers. In talking about President Eisenhower's veto last June of the wheat bill that would have cut both production and costs the Monitor says: "In his (the President's) view, overproduction in wheat or any other price-supported crop will not be cut back until the incentive for overproduction is removed. That is until price supports are dropped to a normal market equivalent."

Now, that's gobbledygook. High-sounding but gobbledygook nonetheless. What's the normal market equivalent that wheat prices should be dropped to? Do you know? Does anyone know? The biggest wheat farmer in the country says it costs him up to $1.50 a bushel to raise wheat. The price support next year is $1.77, national average, and much lower in the big Wheat Belt. Can you live on two-bits a bushel?

So no one knows what the normal market equivalent might be. It's just words. Gobbledygook. Many farmers are convinced that the real aim of the administration is to eliminate price supports entirely or drop them so low that it would cost the farmer more to raise and sell wheat than he could get for it. And sure enough, that would bust the surplus and the farmers, too.

Let's look at another statement, again from the Christian Science Monitor. We quote: "Secretary of Agriculture Ezra Taft Benson has often warned that unless steps are taken to bring the farm program into line with realities it may collapse of its own weight."

But here again—what are "realities?" Do you know? Maybe 50-cent corn or $6 hogs would be "realities" for Benson. Who knows? It's a word with no basis in fact—but in the reader's mind it arouses fears—and stirs prejudices against farmers and farm programs.

Strictly a reality, however, is Secretary Benson's huge 4 billion bushel plus corn crop this year. That's hardly designed to cure overproduction. Yet the Secretary deliberately encouraged farmers to grow it—with his rigged referendum to do away with controls—at the same time offering a price support with no strings attached. Many people in high positions of responsibility are tired of gobbledegook. The very least that farmers and the public are entitled to, they are saying, is factual information, a clearcut Federal farm policy, and a sincere administration to protect the interests of both farmers and consumers.

So beware of gobbledegook. It's nice to hear and nice to read sometimes, but look between the lines for the real meaning. And remember, you can't go wrong when you do business with your own business—GTA the co-op way.

GTA DAILY RADIO ROUNDUP, THURSDAY, SEPTEMBER, 10, 1959

The hog market at Minneapolis continues to hover around $13 or $14. That's for 100 pounds of pork on the hoof, alive and kicking. Now just to refresh your memories, that much pork, just one short year ago, was worth between $21 and $22. You can do your reckoning with a stub of a pencil on a scrap of wrapping paper like so many of us do, or with a fancy calculating machine like a big-time statistician but either way you come up with a difference of about $8 a 100 pounds. That's how much less farmers get for 100 pounds of pork that has cost them just as much—or more—to raise. Percentagewise, it's a price cut of about 40 percent in 1 year.

That's hard on farmers. The old excuse that farm prices just naturally act that way is worth about as much as a foam rubber check.

But hogs are just a symbol of the basic weakness in the whole farm pricing system. Except for those few crops that still are favored with a Federal price support farm products are sold at auction. It's a buyer's market. Costs of production, return on investment, payment for labor and management on the farm don't seem to enter into the picture at all the way they do in the price-fixing mechanisms used by all other American businesses.

You've all heard or read the considered opinions of so-called market experts who say: "Well, there's just too many hogs right now. Farmers overproduced. They've got to expect cheap hogs until the market is flushed out."

But compare that to the situation in the auto market. The business magazines tell us that there are almost 1 million surplus 1959 models sitting around with 1960 models already rolling off the production lines. Certainly around the cities there are dozens of vacant lots filled hub to hub with unsold 1959's. But can you buy them for 60 cents on the dollar? No, sir. You can't. The price tag is right there in the window. So much for the factory, so much for the dealer, so much for transportation, heater, turn lights, radio, and so forth. You might wrangle a small discount out of the dealer, but that's the best you can do.

Farmers might like to price their products that way, too, but it is physically impossible with more than 4 million producers scattered all over the Nation. So they long ago appealed to Washington for Federal help in stabilizing farm markets. They got that help, beginning about a quarter of a century ago, but in return they had to agree to accept at least limited control over production, which they did. In recent years help has been very limited and parceled out only with great reluctance. There's a dragging of feet now in top U.S. Department of Agriculture offices over action to bolster hog prices. Washington sources say USDA might step in and buy some pork products from processors if prices skid to $12. But critics say that wouldn't be much help, because so little trickles back through the marketing channels to farmers.

Most farm-State Congressmen look with more favor on a plan that would pay a premium for lightweight hogs. For the same amount of money the premium plan would do twice as much good at the farm level, they say. The Secretary of Agriculture already has the authority to put this premium plan into operation. But has he the will to do so? The answer to that question could mean millions of dollars more or less to farmers who raise hogs.

Tom Burke

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent that there be included in the Appendix to the RECORD a brief statement about Tom Burke, who so many of us knew and respected.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TOM BURKE

All of us who knew and worked with Tom Burke loved him for his sincerity, and we were deeply moved by his death on September 12, 1959.

In 1935, he was a skilled workman in a Toledo factory who joined with and led other workers to form a unit of the United Automobile Workers Union. Although he subsequently attained high political office, he never lost his interest in his fellow workers. He was elected to the Toledo City Council and then to the 81st Congress where he served with ability and devotion to his ideals. He brought to the House Labor Committee firsthand knowledge of the struggle of American workmen to build democratic unions. This personal experience in the labor movement and deep concern for improvement of the American education system, coupled with his natural candor and judgment, made his advice extremely useful to the Congress.

In recent years, as legislative representative of the CIO and of his own United Auto Workers Union, Tom continued to fight for social legislation and to defend with great

dignity the rights and institutions of American working men and women.

Tom Burke had a distinguished career of public service. I know we are all richer for having known Tom and the country is better because of him.

Addresses by His Eminence Francis Cardinal Spellman

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monddy, September 14, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I included a powerful, appropriate, and timely address by His Eminence Francis Cardinal Spellman, Archbishop of New York, on September 13, 1959, in the auditorium of the U.S. Coast Guard Academy at New London, Conn. There is no person in the world who knows and understands the evil minds of the Kremlin and of Communists than does Cardinal Spellman. Each year, Cardinal Spellman travels, at great sacrifice, to far corners of the world, wherever Americans in our Armed Forces are serving, to bring to them spiritual inspiration and guidance, and his ringing message of Americanism, without regard to race, color, or creed.

His address, and the other one included in my remarks, that His Eminence made at the dedication of the chapel at the U.S. Military Academy, West Point, N.Y., should be widely read.

Cardinal Spellman speaks the thoughts of all Americans without regard to race, color, or creed. He pointedly warns of the duplicity and hypocrisy of atheistic communism.

How true, when His Eminence said in his U.S. Coast Guard Academy address:

The Founding Fathers of our great country were religious God-fearing men and their faith in God and man gave birth to our country and to our traditions. Our Nation began with sacrifices of religious men, and it grew strong in the blessings of our faith merited from God. If we depart from our religious beliefs, if we cast aside the moral principles which are the pillars of our national strength, then we are definitely and rapidly moving along the road to personal and national destruction. The faith of our fathers is stronger by far than any weapon of the enemy.

Cardinal Spellman's two addresses follow:

I am grateful for the opportunity and privilege of offering mass this morning in your beautiful memorial chapel dedicated to our heroic men of the U.S. Coast Guard who, in war and in peace, gave their lives for their country. My message to you this morning may be summarized in your own direst slogan of your philosophy of service: "You have to go out, but you don't have to come back." In these significant, straight speaking words is expressed a concept of duty and sacrifice which has inspired your glorious contributions to our beloved America since the days of Alexander Hamilton.

The Coast Guard is one of the oldest organizations under the jurisdiction of the Federal Government, and your achievements become more notable as the years press on. There is no need for me to speak to you of your noble traditions of service, your heroic dead, the important part you played in the major campaigns of recent wars, your constant and continuing sacrifices for the safety of our country. Whenever I pass along the shores of Long Island I think of a starless night a generation ago when a young man of the U.S. Coast Guard confronted enemies of our country landing on a lonely beach. With the pounding surf and seagulls as his only witnesses, 82c, John Cornelius Cullen met the invaders as they tumbled from a rubber boat, bringing with them powerful explosives and detailed plans to wreck our military and industrial potential.

We have come a long way since that night. Times have changed, the scene of battle has shifted, new and more fearsome weapons have been forged in the fires of hate and greed. Saboteurs now arrive on our shores in jet airliners rather than in rubber boats. They meet, not a lone member of the Coast Guard who immediately grasped the situation, knew what to do about it, and did it—rather today some saboteurs are greeted with honors and civic receptions although their briefcases may bulge with propaganda more lethal than explosives. And while their purpose is still sabotage, their targets now are the mind and the conscience of America.

"You have to go out * * *" but no longer do you launch your ships on the beautiful ocean of God's creation; instead you must push along the uncharted and murky channels of native and imported propaganda. And the oceans of printer's ink are more dangerous to our national safety than ever were the perils of the salty seas. In this great, outstanding institution you have learned the normalcies and the vagaries of nature spread across the face of the ocean. But that is not enough. You must also learn the perversions and deceits of the human mind expressed in the lies and distortions of Communist propaganda, vicious and fearsome and which can become fatal unless you recognize it for what it is, even though the text may not be written on a Kremlin letterhead. You must discover it, you must contradict and counteract it wherever you find it. And to do this often requires skill and courage equal to the heroism demanded in facing blazing fire of enemy guns or enduring the fierce strength of raging hurricanes. The men who go down to the sea in ships have a special brand of bravery which has ever been the envy of the landlocked, and America prays today that you may have courage in abundance to bring her safely through the soul-searing storms of these fateful times.

"You have to go out, but you don't have to come back." These ancient words have rung in the minds and hearts of the men of the Coast Guard for many generations. They must have a deep and penetrating meaning to you, as in your turn you go out to meet the challenge of a war against insidious Communistic foes in a divided and confused America. For our national conscience has been sabotaged, and the bugle call to action sounds an uncertain note. We know not which way to turn to meet the enemy. But the war is very real. The stakes are high, and unless you are alert and courageous you may well never come back. And 50 million Americans may perish with you.

I do not give you my opinion. I present a fact which no amount of wishful thinking or loose talking can alter—the grim reality that communism is the most immediate and dangerous threat to America and her free way of life. Where lies proof of this? Attend to the sad litany of 22 once free, now captive countries—among them heroic Poland, Lithuania, Latvia, Estonia, and Hungary; North Korea, North Vietnam, East Germany, Tibet, Czechoslovakia—and so across the map of the world communism infiltrates and dominates, until at last Russia and America are face to face.

Modern history is filled with the wreckage of nations whose leaders thought they could temporize with Communist promises and guarantees and still maintain their liberties. Today, they are the victims of the most monstrous tyranny known to man. They accepted Communists within their free governments; they gave them the protection of their laws; they believed them when they professed that they had no desire to overthrow the countries' legitimate authorities and subjugate their peoples. The faith and good will of these once free nations toward Communists were rewarded with base treachery. And now freedom is but a memory, made more bitter by the knowledge that they themselves played key parts in its loss.

We must remember that history is the only record from which men can profit. By the record of the recent past—which is spread across the face of the earth for all to read—communism condemns itself, for there it tells its own sordid tales of hopes blighted, promises broken, pledges violated, and 900 million peoples enslaved. What has been written is written, and all the waters of the earth's seas cannot wash it away. If we familiarize ourselves with that record we shall take a giant step toward safeguarding our dearly bought liberties, for it is better to be warned by memory than to be betrayed by hope.

Communism is not an idea, it is not an ideal. It is a way of life, a way of life totally opposed to the heritage of freedom which we have received from our fathers. A way of life opposed to every idea, to every ideal we hold sacred and for which millions of our brothers have shed their blood. Misinformed peoples, deceived by the variety of blueprints of peace offered by the Communists, have listened to the silken words of propaganda and have rushed madly to their doom.

What is the Communist blueprint of conquest proposed for America? One of its main objectives is to destroy our belief in the fundamentals of religion and morality. We need but to look about us to see how far we ourselves have departed from the religious practices and the moral code of our fathers. For more than two generations the practice of religion has grown steadily weaker in our Nation's life. We are now reaping the harvest sown over the past decades. A dreadful harvest it is—terrible and terrifying crimes committed by juvenile delinquents; a breakdown of morality in public life so that we now must have a code of ethics for public officials to remind them of what they should have learned earlier in life; the sale of tons of obscene literature to the young, a multimillion-dollar industry; and a daily menu of film and television depravities. Nor is it necessary to fish for further examples from out the dregs of our modern living.

Immorality is not communism, revolt from God is not communism but immorality and irreligion are the best climate for the growth of communism and when we drive God and His law from our lives we have struck a blow for the enemy.

The Founding Fathers of our great country were religious, God-fearing men and their faith in God and man gave birth to our country and to our traditions. Our Nation began with the sacrifices of religious men, and it grew strong in the blessings our faith merited from God. If we depart from our religious beliefs, if we cast aside the moral principles which are the pillars of our national strength, then we are definitely and rapidly moving along the road to personal and national destruction. The faith of our fathers is stronger by far than any weapon of the enemy. The teachings of our faith are more appealing to the hearts of men than the deceits of propaganda. By the ex-

ample of our own lives, believing in the fatherhood of God and living the brotherhood of man, we can save our own immortal souls and influence and help others to save their souls. This is America's way of life. We are in possession of divine truth itself. What the Communist promises with a sneer to those whom he would destroy, we already have in our religious heritage and tradition. Our precious heritage of our faith and our patriotism have been fortified by the sacrifices of our forefathers. Shall we squander it, and in the squandering destroy ourselves?

Cadets of the U.S. Coast Guard Academy you have the training, you have the tradition, you have the rough-hewn philosophy of sacrifice which will assure you victory for yourselves and your country. In this crucial hour we Americans must have the strength and the courage to maintain the noble vision which has been given to us in the faith of our fathers, and we must pray that we shall not be false to its lights and inspirations.

One of America's proudest utterances proclaims the glorious fact that we are "a nation under God." The quality of faith which inspired those sublime and meaningful words must be recaptured if we are to insure our own salvation and the survival of our free and wondrous land; for, in the last analysis it will be the faith of America which shall determine the fate of America—either the faith of the Communists or the faith of our fathers.

As earlier we shared our prayers, I now would like to share with you some thoughts on what we have done here this morning. The dedication of a building to the glory of God is an act of supreme importance. The intense, far-reaching spiritual effects of our actions are expressed by the church in these words, "This is truly an awesome place." Truly we stand in awe of what we have done—the fruit of the heart and the hands of man will be forever the dwelling place of the living God. This chapel is the gate of Heaven, and the court of God. The Lord shall remain here with you; may you always stay close to Him.

In a wider sense the entire Hudson Valley is for me an awesome place, rich in the beauties of nature, dwelling place of duty, stern daughter of the voice of God. To visit the valley of the Hudson is to make a pilgrimage to the shrine of duty consecrated by the sacrifices of religious and military martyrs. In this valley America grew strong, in these highlands of the Hudson was she shielded from those Herod-like tyrants who would slay an infant nation.

It is the good fortune of our country that you are privileged to spend your years of formation in this sanctuary dedicated to honor, duty and service of country. At the head of the valley you may see the raw courage of Nicholas Herkimer at Oriskany and the brilliance of Benedict Arnold at Saratoga, while to the south you may ponder the unwavering leadership of Anthony Wayne at Stony Point. These great victories secured for our new nation the Hudson Valley correctly described as the key to a continent.

We have come a long way since those days—Morgan's forced march from Philadelphia to Saratoga could now be made in less than an hour, and Mad Anthony would be able to demolish the fortifications of Stony Point without leaving the sunshine of Florida. We have come a long way also in another direction. We have entered a new era which has been recently described as the "age of the shrug." You are young men and in this new age you may well discover the answer to the questions asked by Patrick Henry: "Shall we gather strength by irresolution and inaction? Shall we acquire the means of effectual resistance by lying supinely on our backs, and hugging the delusive phantom of hope, until our enemies shall have bound us hand and foot?" Pray God that while there is yet time America may realize that you cannot shrug off the yoke of the conqueror be it forged in steel or in the base metal of propaganda.

So far have we traveled along the wrong road that I feel it our duty as Americans to contrast the vice of Benedict Arnold and the virtue of Anthony Wayne, to speak of the strength and the weakness which have been witnessed by the sheer cliffs of West Point and the brooding rocks of Stony Point.

If General Washington were asked in the summer of 1777 to name his outstanding officers he would certainly have placed Benedict Arnold very near the top of the list. And the conduct of Arnold at Saratoga would have justified his choice. Is there not the legend that even in the white heat of rage at Arnold's base treachery it was said that the leg of the traitor mangled at Saratoga would be buried with full military honors while the rest of him would be hanged?

Saratoga, considered one of the decisive battles of world history, was the climax of Arnold's career. A brilliant soldier, an acknowledged master of military science, Benedict Arnold is remembered chiefly for his treason. What happened to him—was it a desire for luxurious living, wounded pride, religious bigotry? Historians may argue and biographers may choose but this much is certain—he gazed too long on the face of the enemy. He found it comely. He saw there an escape from the harsh realities of life. We too have gazed too long on the face of the enemy, and many of our fellow Americans see there a solution and an escape from fearsome reality. Too many of us have gazed on the face of the enemy until they see there not the countless crushed bodies of freedom fighters of the world but only the seductive smile of the sinister master of Moscow. They have gazed on the face of the enemy too long and now they are deaf to all save the husky voice of the sorcerer, as glibly he speaks of peaceful coexistence, competition in consumer goods.

Benedict Arnold placed his personal problems and his religious bigotry above duty to his country until finally he slipped down the dark waters of the Hudson to the sloop *Vulture* eventually to die in the slums of London. If Americans continue to place a high standard of living above duty to country then we too shall be picked up by today's vulture and carried to suffering and death as have brave but unthinking men before us.

In what seems to be long years ago I stood on these plains of West Point and upon the vigil of the Second World War spoke of the "Road to Victory." Today I must speak of the "Road to War"—a war of the spirit, a war of ideas and ideals.

The impregnable face of Stony Point is a constant reminder that unwavering leadership, complete devotion to duty, rigorous personal discipline can topple any obstacle in the path of America. Within sight of these gray walls Anthony Wayne proved that the human spirit is supreme to any and all material obstacles. There is no need to labor this point with you, cadets of the U.S. Military Academy. You have but to consider the monuments on every side to read again the list of valiant men who were here formed and grounded in the essentials of duty and leadership. To protect our beloved country they marched from here through the length and breadth of the world.

Our enemies have learned to their sorrow that physical power and brute strength are but weak weapons when used to attack the spirit of America. Mighty bastions of oppression around the world have toppled beneath our blows as did Stony Point fall to Anthony Wayne. And for the same reasons—complete devotion to duty, unwavering leadership, rigorous personal discipline.

The enemies of liberty have learned their lesson well, and, for the moment at least, they hesitate to attack us with military power. Rather have they moved the attack to another level. They have unleashed the full force of bestial fury against the moral and religious fiber of America. Duty, leadership, discipline shall once again, under God, bring us victory despite the narcotic of consumer competition, and peaceful coexistence so skillfully administered that we do not realize that liaison with the assassin can end only in the death of the victim.

The grim fact of today's world is this: America is under spiritual siege and her defenses are crumbling. Your warfare is not yet against flesh and blood because the destruction of our spiritual heritage is not yet complete. The rugged uncompromising morality of our fathers has yielded to the simple question, "What's in it for me?" Is this not the same question Benedict Arnold asked himself when he first considered his acts of treason? And is not his answer echoed in the hearts and actions of many Americans today? Is it too much to say that the swelling tide of loose living and personal immorality is also a form of treason? Although it is a treason of pleasure and selfishness committed by foolish and thoughtless men, still it weakens our national fiber and draws us closer to destruction. The treason of Arnold was a deliberate, malicious act calculated to destroy his country. But we will be just as dead, and our country will suffer, be our betrayal stupid or contrived.

The litany of our national transgressions of the moral law is a sordid tale—betrayal of the common good for personal gain, destruction of the home for personal pleasure, dishonesty in public office for personal profit and so on down the miserable categories of depravity. Slowly but surely the individual and his pleasures are becoming the norm of morality and the object of every judgment.

Can a nation be stronger than the sum total of her citizens? If there be no discipline in our personal lives how can we expect to find sacrifice in our national life? To be profligate in our personal lives is truly treason because it aids the enemy to execute his blueprint for Communist domination. The flame of religious fervor which burned so brightly in the days of our fathers has sunk so low that we see no wrong in attempting to join forces with men who burn churches, destroy temples, and murder those who bless the name of God. We are now reaping the bitter harvest of generations of religious apathy and indifference. Because we have abandoned God we have no firm foundation for moral judgment. Is it an exaggeration to say that this is giving aid and comfort to the enemy? The sad course of modern history shows quite clearly that it is a Communist tactic to crush religion and destroy morality. Sometimes it is done by force of arms, sometimes by the sheer weight of words. In either case the result is the same, with liberty lost and the nation destroyed. Study the case of any Soviet-enslaved nation and there you will find Communist propaganda first appealing to the selfish desires of the weak, and later Communists tanks crushing them in the streets of their own cities before they could taste the fruits of their sins.

The same general plan of conquest is in motion in our own land today and so successfully has it been carried out that many Americans are beginning to feel that rather than endanger our standard of living we should take another look at the possibility of cooperating with the enemy. Wise men

learn from history, but, in spite of the abundant evidence of the desire of Russia to engulf the world, in spite of the fact the Russia under communism has reached our own shores in her march to world power, we Americans have failed to learn our lesson from those once free now captive nations who have made the same mistake before us.

It is vital to the safety of America that you cadets of West Point realize that your contribution to our national welfare is not limited to the field of battle. You must be convinced that you are engaged in a war of ideals. Share this conviction with others. Help to restore to our national life those precious concepts of duty, leadership, and sacrifice for the glory of America. When you leave this citadel of duty and honor take with you your conviction that the code is bigger than any one man or personal friendship. And I pray that your devotion to the principles of justice and truth be always as deep rooted and real as it is today; for then will your sacrifices for goodness and truth be rewarded by the strength and security of your beloved country in this world, and your own salvation with God.

Radio Program Entitled "Today in Congress"

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. SPARKMAN. Mr. President, throughout this 1st session of the 86th Congress we who are privileged to serve in this body have had a unique service rendered us and I feel some recognition should be given it. I refer to Joseph McCaffrey's nightly radio program, "Today in Congress," in which Mr. McCaffrey summarized the day's developments here on Capitol Hill and informed us of the program scheduled for the following day.

What made this program unique is the fact that it is the only one of its kind on the air, a sort of Congressional Record of the Air, devoted exclusively to the workings of Congress and all the other interesting events which take place here on the Hill.

Mr. McCaffrey has spent 12 years covering Capitol Hill and knows intimately the workings of Congress. From his experience and his knowledge of the Hill, Mr. McCaffrey is able to capture and compress into his program lively and interesting comprehensive reports of the day's doings.

"Today in Congress" is sponsored each session by the Independent Airlines Association as part of its public service activities.

I know that I do not speak first for those of us immediately concerned, but for those who work in and around the Capitol, and those in other Federal departments whose jobs require them to keep an ear turned to congressional happenings; when I say that this program has been most helpful and that we are indebted to the Independent Airlines Association for making it possible.

The Airlines and Logistics

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to submit an editorial which appeared in the New York Times entitled "The Airlines and Logistics."

During this session of Congress, the question of the Military Air Transport Service and its increasing competition with the civilian air carriers has received much attention and has often been a subject for discussion in both Houses. In keeping with my feeling, and that of many of my colleagues, that MATS should be kept out of the airline business and restricted to military functions, I wish to call attention to this editorial.

The editorial follows:

THE AIRLINES AND LOGISTICS

The country has two merchant marine fleets—the ships of the sea and the great carriers of the air. In both of these fields of commercial transport it is generally felt that pressure must be maintained on Government, to prevent the encroachment of federally operated transport systems on the domain of private endeavor.

Both also feel that military establishments could and should do more to channel military cargoes and passengers to private carriers. And, indeed, the Armed Forces are, on both counts, good customers of the air and sea fleets. They recognize, as military authorities have repeatedly made clear, that ships are priceless auxiliaries of the Navy in time of emergency and that private air fleets are an essential part of the military overseas logistic pipeline.

Congress sought, in the session that just ended, to bolster private air enterprise by forcing a reorientation of the Military Air Transport Service nearer to its basic defense mandate: readiness for swift airlift of military personnel and equipment overseas in the event of emergency. In Congress, in the Defense Department and elsewhere in the administration (everywhere, in fact, except in the Air Force itself) there was general agrement that MATS should turn over much of its routine worldwide airline operations to private lines and concentrate on its job. Yet, strangely, this was not accomplished.

The airlift arm has become the world's largest airline. Last year it carried 62 percent of all transatlantic cargo. The regular U.S. carriers handled 17 percent. MATS carries 25 percent of all transatlantic passengers. It has more than 400 aircraft and some 480 stewardesses.

Senator A. S. MIKE MONRONEY of Oklahoma, who led the fighth to aid the airlines, warned that in 1960 more than 90 percent of the military passenger traffic scheduled by MATS will move on routes where scheduled airlines operate. He and others in the campaign asked two questions: Can MATS be a commercial-type airline and still be ready for emergency? Can military authorities expect commercial lines to stand ready with adequate emergency fleets if Federal competition continues to stifle private enterprise?

The answer to both questions appears clearly to be "No." A redirection of the big airline's activities is an administrative matter, not legislative: It is a move that is long overdue.

Tragedies at Railroad Crossings

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. LANGER. Mr. President, recently there were two great tragedies at railroad crossings, one at Mount Lake Park, Md., where seven children were killed and numerous children were injured, some of the critically, when a school bus was struck by a train at an unprotected grade crossing, and one at Waseca, Minn., where a mother and six children were killed when their automobile was struck by a train at another unprotected grade crossing.

Mr. President, at one time there were warning gates and guards at grade crossings but they have been gradually disappearing from the scene resulting in tragedies such as the above. I introduced a bill that would require all of the railroad companies of the United States to erect warning gates and post a guard at all grade crossings adjacent to the schools. By doing so, I think that we will avert tragedies such as the two great tragedies which happened so close together in the sister State of Maryland which borders us and the sister State of Minnesota which borders my State of North Dakota.

Mr. President, there appeared an article in the Washington, D.C., Star entitled "School Buses Ply 27 Rail Crossings," which gives a rundown on the places where public school buses daily transport children over 27 railroad crossings in the suburban areas of Maryland and Virginia.

Mr. President, I ask unanimous consent that this article be printed in the CONGRESSIONAL RECORD at this point since it has a bearing on the bill I introduced.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOL BUSES PLY 27 RAIL CROSSINGS—DISTRICT OF COLUMBIA SUBURBAN AREAS TAKE STRICT SAFETY PRECAUTIONS

Public school buses daily transport children over 27 railroad crossings in the suburban areas of Maryland and Virginia, a survey shows.

Although most of the crossings are on seldom used spur lines, school transportation officials in each of the jurisdictions surrounding the District said yesterday strict precautions are observed to insure that buses cross the tracks safely.

The survey was prompted by a school bus-train accident in Oakland, Md., on September 10 which killed seven children.

Last Wednesday a grand jury investigating the accident recommended that trains decrease their speed during school hours, especially at crossings; flashing red lights to be installed on top of all school buses, and that school bus drivers be given periodic surprise checks.

School officials in Fairfax County, Va., and Prince Georges County, Md., reported each area has 10 railroad crossings used by school buses.

Montgomery County, Md., has four; Arlington County, Va., two, and the city of Alexandria, Va., one.

PRINCE GEORGES

Prince Georges County has about 200 school buses which carry more than 26,000 students daily. Between 1,000 and 2,000 are carried over 10 railroad crossings.

If possible, buses are routed around railroad crossings even if the route is lengthened by an extra mile or so, according to John Heim, director of school transportation.

"If we avoided all crossings we'd add 4 or 5 hours to some runs and we don't have enough buses to do that," he said.

In Ardmore, bus drivers are told never to take a load across the Pennsylvania Railroad tracks at Ardwick Road. However, they can use the crossing if the vehicle carries no children.

When loaded, the bus uses the Wickfield road bridge about 2 miles away. This bus serves the Landover Hills Elementary School.

Buses use the Pennsylvania Railroad crossing at Springfield-Hill Meade Road in Bowie, and a Seabrook crossing while serving Bowie Elementary, Glenridge Junior High, and Bladensburg Senior High. Both crossings have a watchman, Mr. Heim said.

WATCHMAN ON DUTY

A watchman also is stationed at the Pennsylvania crossing at Glenn Dale Road, which is crossed by buses serving Lincoln Elementary, Glenridge Junior High, Bladensburg Senior High, and Fairmont Heights Junior-Senior High.

The Baltimore & Ohio Railroad crossing at Calvert Road in College Park is guarded by a flashing-light signal and is used by buses serving College Park Elementary.

Other B. & O. crossings are used at Riverdale Road by buses serving Northwestern High School, and at Bladensburg Road by buses going to Bladensburg Senior High and schools for handicapped children at Calvert Homes and Mount Rainier. The two crossings have gates and flashing-light signals.

The Pope's Creek spurline of the Pennsylvania Railroad crosses four roads used by school buses servicing the southern part of the county. These unguarded crossings are at Mitchellville, Central Avenue, Upper Marlboro, and another road farther south.

Buses using one or more of these four crossings carry children attending Mullikin, Tall Oaks, Brandywine, Orme, Holly Grove, and the Marlboro Elementary Schools, in addition to Gwynn Park Junior High and Douglass and Frederick Sasscer Junior-Senior Highs.

FAIRFAX COUNTY

In Fairfax County, 29 county school buses cross 10 railway tracks twice daily.

William H. Ebhardt, supervisor of school transportation, said bus drivers cross tracks only when necessary.

Buses, he said, are timed for the number of seconds it takes them to cross the railroad tracks. The average bus takes about 6 seconds to cross a double line of tracks, he said.

Mr. Ebhardt outlined this safety procedure:

Each bus stops at the grade crossing so the driver can look both ways along the track. The youngster that serves as safety patrolman, gets out and crosses the tracks, looking both ways.

The patrolman then waves the driver across. Before starting up, the driver again looks both ways and then crosses in low gear, not changing gears until he is across.

Mr. Ebhardt said two school employees are on the road at all times checking for safety violations by bus drivers.

County police and Southern Railway inspectors also check on the drivers, he added.

Seven school buses cross over three Southern Railway grade crossings twice a day in Fairfax. Two of the crossings are at Burke and one at Clifton.

There are seven grade crossings on the single track Old Dominion line, which is used infrequently, Mr. Ebhardt said. The crossings and the number of buses using them are: Vienna, five; Dunn Loring Road, two; Cadar Lane Road, three; Shreve Road, four; Route seven in Falls Church, one; Herndon, six; and Hunter Mill Road, one.

All buses make the crossings twice daily.

MONTGOMERY

In Montgomery County, a decision to reroute school buses from two main line grade crossings was made several weeks ago by the school board's transportation director, Richard M. Ream.

Mr. Ream said the two crossings "always worried me."

They were at Halpine and Randolph roads, the only locations where school buses crossed main railroad lines in the county. Baltimore & Ohio railroad crossings in the upper county—at Gaithersburg, Boyds, and Dickerson—are made through underpasses.

At four spots in the county, school buses cross seldom-used spur lines where trains pass at a slow pace after a brakeman halts automobile traffic.

The spur line crossings are on River Road, Dorset Avenue, Jones Mill Road, and Connecticut Avenue.

ARLINGTON

Both school officials and railroad spokesmen agree that railroad crossings in Arlington County do not present a problem.

A school official said school buses travel over two grade crossings, but that all of these involve freight lines over which slow-moving and infrequent trains pass.

A Washington & Old Dominion Railroad spokesman said the railroad maintains about 11 miles of single-track right-of-way in the county. The rail line connects Alexandria with the railroad terminus in Purcellville, Loudoun County.

A spur line, or switchback, branches away from the main line and connects with Rosslyn. In addition, the Pennsylvania Railroad has a short spur line which crosses the 14th Street Bridge to the Pentagon. The spur continues a short distance to Rosslyn.

ALEXANDRIA

The only grade crossing used by school buses in Alexandria is where a sidetrack crosses Washington Street at Wilkes Street.

Assistant Superintendent Raymond F. Sanger said three buses cross that track each schoolday. He added that a school guard always is on duty near that location and signals to the buses if a train is approaching. He noted, however, that the track is used only a few times a week and that trains always travel at low speed.

Mr. Sanger said one bus crosses the track daily en route to Lyles Crouch Elementary School. Two buses cross on their way to the Robert E. Lee Elementary School.

Perversion Portrayed in Mail to Kids

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. AVERY. The following is an article by Bill Colvin, editor of the Manhattan (Kans.) Mercury newspaper which, in my opinion, merits the close attention of all Members of Congress. It is a very excellent article on a subject which is everybody's business. The article follows:

PERVERSION PORTRAYED IN MAIL TO KIDS
(By Bill Colvin)

(EDITOR'S NOTE.—Much of what is written below will be found offensive by many readers. It is shocking. But it was not written as a shock-treatment gimmick to get you to read. The article is the result of an experience in Washington that we believe should be conveyed as clearly and candidly as possible to every parent in every community. If some good is accomplished, we will run the risk of offending.)

WASHINGTON.—How would you like to have your teenage son or daughter take a "correspondence course" in sexual perversion?

I realize this is a shocking and revolting statement. But unless sufficient numbers of parents are shocked and revolted—mainly through the family newspapers of the country, such as the Mercury, where ordinarily such subjects are taboo—the chances get better every day that teenagers in Manhattan are going to be tempted to be enrollees in the "courses" I have mentioned.

Like me, you probably have scoffed at, or at least minimized, the seriousness of the obscene mail problem. But I have changed my mind after seeing a display of this filth, pornography, and perversion that has been taken from the U.S. mails. It is kept under lock and key in a room across the hall from the office of Postmaster General Arthur Summerfield in Washington.

The display in itself was enough to cause the concern I hope to pass along to you. My concern was heightened by the conviction with which the Postmaster General is attacking this problem, for it was Summerfield who personally escorted me into this actual "chamber of horrors."

Have I been too strong in my opening statement of this story? I honestly don't think so after the nauseating experience of seeing what the Nation's filth mongers—to use a charitable description—are mailing to increasing numbers of our youths.

It may surprise you to know this is a half-billion-dollar-a-year enterprise.

It is so lucrative—and becoming more and more so—that there is strong suspicion on the part of responsible authorities, including Postmaster General Summerfield and FBI Chief J. Edgar Hoover, that the field is being eyed seriously by the organized underworld. The Post Office Department is certain that the racketeers already have made a start in it in certain cities—along with their dope, prostitution, and other dirty money schemes.

At the outset let me make it abundantly clear that what we are concerned with is not censorship. This is clearly objectionable and immoral, obscene material going through the mails into fertile fields—children's hands, eyes, and minds. (Unfortunately, the censorship case of "Lady Chatterley's Lover" has arisen in the midst of the obscene mail campaign and has confused the real issue somewhat.)

This is not art, although there are some borderline materials that have been declared art by the courts. The bulk of this junk is not art by any stretch of the imagination.

The so-called art studies or art poses mailings, whether they are actually art or not by interpretation or legal ruling, are not the chief worry causers to the Post Office Department. Postmaster General Summerfield stresses, however that these works of art are the teasers or the starters. In a less serious way perhaps, they can be likened to eventual addiction to dope after being introduced to marihuana. As such they too have become targets of the Department and some local groups.

Gradually youngsters all over the Nation have become somewhat calloused to the art poses. What once was a thrill to kids a generation ago is now old stuff, thanks to a

multitude of magazines on practically every newsstand that leave little or nothing to the imagination. But they still serve to tease—and, better yet, they provide the mailing lists for the plainly obscene and the perverted poses and writings.

And over the course of the years the filthmongers' techniques have improved. Only a few of the photographs are of dilapidated old hags. Relatively young women who might pass for coeds model for these perverted photos that defy description in most oral conversation, let alone writing.

"A young girl or boy with no sex education gets ahold of a set of these," Summerfield says. "He or she sees a normal appearing, attractive person photographed in an unnatural act. Not knowing what is normal the natural inclination is for them to accept this as the normal way to have relations. A potential pervert has been created."

(Summerfield, in an aside, calls attention to the attractive girl who has posed for a series of these acts of perversion. She is a schoolteacher, the postoffice inspectors have found out, in a small southern town. She handsomely adds to her substandard pay as a teacher by making periodic weekend trips to New York to pose for these photographs.)

No, this is not the stuff you and I sneaked into our rooms or gawked at in the alley behind the high school when we were kids. This is mainline material kids are being tempted with—through the mails—by a vastly better organized bunch of filth mongers than they were 20 or 25 years ago.

Quite aside from the warped sexual morals this trash breeds it has been found there is a traceable and direct relationship between the volume of this mail to the juvenile crime rate.

The Federal authorities are convinced that youngsters agitated by the photographs, literature, gimmicks, and movies set forth on a sex sashay—many times with what are mild intentions in their own minds. Thwarted and frustrated when they meet resistance, their aroused and distorted minds flare to violence. The result: the sex maimings and sex murders that are becoming more frequent headline pieces in the papers. The germ was planted in all probability, by a mailed piece of obscenity.

Keep in mind I am not talking about the "arty" kind of stuff but about indescribable photos, drawings and even moving pictures, mainly featuring perversion and unnatural acts.

Many men readers have been to stags where those movies have been shown. But I will challenge any normal man—even as calloused as newsmen frequently get to be—to view two films I saw in the postoffice exhibit and not be shocked beyond any previous experience. These two particular films, by the way, had been sent through the mails. They were being sold by a 16-year-old boy in Texas.

Remember, however, that the first approach, the inroads, the conditioning, was made by the so-called art studies and the girly magazines anyone can buy on almost any newsstand.

Where does this obscene material come from? The Postmaster General's investigators have established New York, Chicago, and Los Angeles as the chief points of origination. But they are mailed everywhere and no home is off-limits to these filth peddlers. They employ first-class mail because that class is not subject to postal inspection. What's more the obscene material market has become so profitable they can afford the first-class rates.

Thousands and thousands of copies can be made from one photographic negative at a fraction of a cent each. Reading material is easily and cheaply reproduced by modern methods. The movies are generally foreign imports. They too are mass copied. Perversion is the keynote here too.

There is even evidence that enterprising youngsters themselves find the filth market profitable. In one particularly nauseating display of drawings depicting unnatural acts there was a group of copies drawn by an artistically inclined teenager. He was cutting out the middleman by doing his own art work and offering them for sale.

I admit that my previous conclusion about Postmaster General Summerfield's attitude was that maybe he just hadn't been exposed to the facts of life or that he is overemphasizing the problem. My conclusion is now that I hadn't been exposed enough myself to the facts of this situation.

In the first place the Postmaster General is bound by Federal statute to ban from the mails any obscene material. This stuff that is going to teenagers by the ton—17 mail bags full picked up in just one haul in New York—is clearly and undeniably obscene. Thus Summerfield is only doing what he is directed to do. But better than that he is reacting in a way that more Americans should: He is righteously indignant and properly so.

Clearly Summerfield intends doing something about the situation that deserves stronger language than "disturbing."

Rightly, we believe, after this first-hand experience, the Postmaster General feels one of the starting places is the newsstands where the "marihuana" material is easily purchased by youngsters.

The second avenue of action is for parents of youngsters receiving obscene mail to take it to their local postmasters. They in turn will turn it over to the inspection department of the Post Office Department for possible prosecution.

Thanks largely to Summerfield the Federal law has now been changed permitting prosecution at the point of receipt. Formerly the offenders could only be tried at the point of mailing. Obviously it would be difficult to take witnesses from Kansas to New York or Los Angeles and as long as the law stayed that way convictions were few and far between. Recently, however, the first conviction was rendered under the new law. Two culprits were prosecuted in Idaho and given 10-year sentences.

Mailing lists? They are easy to come by. Purveyors of perversion frequently buy school yearbooks as their source. Teaser ads—"send just 19 cents for a water gun"—furnish a wealth of names for these folk.

I want to stress once again that I am not easily shocked. I don't think the Postmaster General is either. He appears to me to be a man who has been around the block, as they say. But I can easily understand now what he is talking about when he rises up against obscene mail. I think he has tackled something that is inherently more dangerous to the national welfare than the objects of a good many other crusades that seem more justifiable to the public.

WHAT TO DO? TWO ACTIONS LOCALLY

A two-pronged attack is the approach recommended by Postmaster General Summerfield for combating the inroads of obscene mail and literature.

Success is almost entirely dependent on action from the local level.

One is for parents to take objectionable material that comes to their house in the mail to the local postmaster. He, in turn, will forward it to the Inspector General's office in Washington for possible prosecution. It is necessary to get conviction after conviction to halt the volume of this material that is going through the mail.

The second is to rid local newsstands of objectionable material. Here moral and economic pressure is the key weapon.

Since the courts generally hold in favor of these magazines—the teasers for the more obscene material through the mail—the Post Office Department is powerless to ban most of it from the mails. But local pressures are and can be effective. Organizations like the parent-teacher associations, ministerial alliances, patriotic organizations such as the American Legion, and women's groups all can have important, dynamic, and telling parts in this off-the-newsstand phase that is a major blow against obscenity in the mails. It boils down to refusing to trade with stores with this filth on their newsstands.

Indianapolis, Ind., for example, has been signally effective. In a campaign spearheaded by the Governor of that State several of the above-named organizations went to work assisted by local authorities. They were also aided statewide by the magazine distributors association. The publishers and distributors of the "clean" magazines are finding the economic inroads of the "art" publications are serious. So they have helped.

Today in Indianapolis and several other Indiana cities it is virtually impossible to buy 72 of the worst offender magazines. And among these are some pretty popular and well-known publications that have strayed too far over the borders of decency and morality.

It would be interesting to see what could be accomplished in Kansas and its communities. This State has not been the target of obscene literature that more populated ones have been up to now. But unless action is forthcoming it seems inevitable that the same sickening experience of others awaits us.

As Postmaster General Summerfield summarizes:

Don't be mistaken. This is not censorship. It is not "book burning." Not just a bogeyman scare dreamed up by some do-gooders. This is stomping out an evil that can touch everyone's home.

The Hellenic University of America

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. LANGER. Mr. President, recently a group of prominent Americans of Greek extraction led by Judge John C. Pappas, Ambassador Thomas A. Pappas, Mr. Spyros P. Skouras, and others inaugurated plans for the Hellenic University of America, a nonsectarian institution for the enrollment of all students regardless of faith, nationality, race, or creed. History has recorded ancient Greece's many contributions to civilization and they are too many to restate here. However, it is most significant that Americans of the Greek heritage will give to America an educational institution at a time when colleges and universities are full to the brim and prospects of future enrollment for many of our youth in this country will become more and more difficult because of the overcrowded conditions in our Nation's colleges.

To assure the success of the Hellenic University, His Eminence, Archbishop Iakovos, primate of the Greek Orthodox

Church in the Americas, is the honorary chairman of the project and the full support of the many Orthodox Churches' clergy and laymen leaders will be given to the project. I am also informed that the leaders of the many Greek-American organizations, such as, George Loucas of AHEPA, Phillip Williams of GAPA, Demetrios Tsintolas of Pan-Arcadians, Speros Boudoures of GOYA, Andrew Fasseas of Pan-Lacohians, Charles Kotsilibas Davis of Pan-Eleians, and the leaders of Philoptohos, Epirotians, Pan-Rhodians, Macedonians, Pan-Messinians, Levcadians, Fanarion, Cretans, Pan-Cypriots, Naxios, Voice of Greek Orthodoxy, and Daughters of Penelope have expressed their approval and desire to aid such a worthy National Institution for education of the youth.

To best illustrate the great need for such a college of learning and the great effort needed to fulfill this dream for a Hellenic University, I ask unanimous consent to include as a part of these remarks an address by Judge John C. Pappas at the Supreme Convention of AHEPA in Los Angeles in excerpt form, a letter to Judge Pappas from P. Tsoumpris, supreme counselor of GAPA and past supreme president of Pan-Arcadians, an editorial from the Boston Traveler, and an article by Richard Jacobson in the Boston Traveler.

Mr. President, I wish the sponsors of the Hellenic University great success because it will bring to our Nation another university at a time when there is the great need. The success of this program will require the best efforts of all, and I am sure that the foundations and those who are in a position to do so will lend a helping hand to the Americans of Greek descent who will make a noble contribution to America in the form of the Hellenic University.

There being no objection, the address, letter, editorial, and article were ordered to be printed in the RECORD, as follows:

I am speaking, of course, of the eventual establishment of the Hellenic University of America—using the existing facilities of the Holy Cross Greek Orthodox Theological School in Brookline, Mass., as the nucleus.

The provocative plan for the eventual establishment of our own university has been approved by the board of trustees of our theological school, and I am delighted to tell you that work started some time ago on the very first of the new buildings at the seminary, and that I am hopeful by the time I return to Boston the new building will be completed. Thus, the actual physical work on our own Hellenic-sponsored university has begun, and step No. 1 practically completed.

The board of trustees of our seminary has also unanimously voted to accept the creation of the charitable vehicle through which funds will be accepted for the eventual establishment of our university.

The charitable corporation through which the archdiocese will accept funds will be known as the Friends of the Proposed Hellenic University of America.

Without going into details let me read to you the corporate purposes and powers from the bylaws:

"To foster the charitable, educational, and eleemosynary purposes of the Greek archdiocese of North and South America, and more particularly for the purposes of expanding the physical facilities and educational program of the theological school of the archdiocese in Brookline, Mass., enlarging the religious instruction program of the said archdiocese, providing for the eventual establishment of a nonsectarian university with the theological school as a nucleus in said Brookline, Mass., to be known as the Hellenic University of America, provide financial aid to the patriarchate, and for such other educational and religious objectives as the said archdiocese may determine."

Thus, step No. 2—the medium through which we can accept funds—has been accomplished by the board.

Step No. 3—the acquisition of more real property contiguous with our present property—has also been accomplished. I am delighted to tell you that the theological school has just purchased 25 acres of land adjoining its property, thus providing the land requirements for the eventual establishment of our university. You will be happy to know that the theological school now owns approximately 60 acres of desirable land which is more than sufficient space for the university we envision.

With the unanimous aproval and finalization of these three steps—the adoption of the plan to establish the Hellenic University of America, the approval of the establishment of the Friends of the Proposed Hellenic University of America, as a means of raising funds, the acquiring of more real property—the board of trustees has been alert, astute, and farsighted. They should be commended for their wisdom.

The concept of the eventual establishment of the Hellenic University of America is a provocative plan, and goes hand in hand with the ascending dignity of our people in this country.

His Eminence Archbishop Iakovos and America's leading Greek-American industrialist, Spyros Skouras, are cochairmen of the fund-raising activities for the proposed university.

I need not tell you how fortunate the Greek community in America is to have two such distinguished men of vision and endless energy to provide us with their leadership.

* * * * *

But, only last month in New York at a meeting with his Eminence and with Greek-American lay leaders, Mr. Skouras had this to say relative to the university:

"There is still a considerable number of us who emigrated here. But the Greek immigrant is no more. We have now the American of Greek extraction. He is an integral part of the American community. He is now a citizen of substance and moral stature. Up to now, he has been consolidating his position, contributing to American life as a whole by his industry, by his eagerness to work and to learn, by his example as a law-abiding citizen, by serving his adopted country faithfully in peace and war.

"But now he wants to give more—he is in a position to give more. And he looks around. He wants to be identified with America, to leave a lasting monument to this great country of ours, to give something of greater, more lasting value.

"One of the great needs of America today is schools. With our rapidly expanding population, this is of paramount importance.

"Everywhere the cry is for more and more schools. Young people have difficulty in entering college. There are not enough to fill the demand. Other minorities have contributed toward that need. So will the American of Greek extraction.

"Let us give America another great institution of learning, equal to our existing great and world famous universities. A university where any American of any ethnic background will be proud to send his sons, a university toward the establishment of which any American will be willing to contribute.

"Such a university then will be the contribution of the American of Greek extraction to American life and culture. And such a university must have also a school of theological studies. This will fill the need for the higher, more rounded preparation of any theological student, but especially those of the Greek Orthodox faith."

If a man of Mr. Skouras' stature can find the time to analyze the situation as just described, surely we lesser lights can find the time to dedicate ourselves to this concept of a university sponsored by Greek-Americans.

Although I spoke about the Greek spirit, the university itself will be nonsectarian; and to its halls of learning will be welcomed boys of all faiths.

As Mr. Skouras indicated, the Greek community in America will be rendering a great service to its adopted land by providing a much needed institution of higher learning.

According to all available statistics, the need for additional reputable colleges is fast becoming critical. Five years from now the need will be acute. All colleges with good standards are crowded, and admission to colleges of high standing is extremely difficult.

The establishment of a Greek-sponsored university in New England seems to me to be particularly appropriate because it was to New England shores that first came those seeking freedom, and it was in New England that the first colleges were established.

I have talked with many persons associated with colleges and universities and they are thrilled with the decision of the seminary board to establish our university. They think it is a wonderful idea.

When His Eminence Archbishop Iakovos came to Boston last spring to break ground for the first of our university buildings, we together visited His Eminence Richard Cardinal Cushing, popular Roman Catholic archbishop of Boston. Cardinal Cushing was delighted to learn of our decision and said it was about time we did sponsor our own university. He said he would personally endorse it and would make a financial contribution toward its success as soon as the drive is commenced.

[From the Boston Traveler, Sept. 2, 1959]

ATHENS IN AMERICA

For a long time Boston has taken pride in the artistic and intellectual assets that have made it known as the Athens of America.

And now there's reason for more satisfaction, as that description takes on the shape of literal truth in plans for establishing the Nation's first Hellenic University in Jamaica Plain.

The $100 million nonsectarian college, already under construction by the Greek Orthodox Theological Seminary, will add substantially to Boston's standing as a cultural and educational center.

It comes at a fortunate time—in the midst of America's pressing need for more colleges to accommodate a fast-growing student population.

And in emphasizing the Greek heritage, as it will, it will underscore the origins of democracy, to the benefit of all of us.

As important as anything else, the new university will serve as a focus for the fine relationships that exist throughout the Greek community in America.

[From the Boston Traveler, Aug. 31, 1959]

ONE HUNDRED MILLION DOLLAR UNIVERSITY PLANNED BY GREEK GROUP

(By Richard Jacobson)

The Greek Orthodox Theological Seminary has bought the adjacent 25-acre former Bacon estate in Jamaica Plain and will build on it America's first Hellenic University.

The seminary, which now occupies a 35-acre site in Brookline and Jamaica Plain will be the nucleus of the proposed $100 million educational institution.

The university will be nonsectarian and dedicated to inspire and continue the heritage of Greek culture in America.

Although its support will come from Hellenes throughout the United States, Judge John C. Pappas, a moving force behind the development, emphasized that this "will be an educational institution which every American should and will support."

The Bacon estate was purchased at auction in 1941 by the late Vincenzo Barletta, of Roslindale, a contractor. The latter's widow sold the million-foot estate, located off Jamaica Pond, to Judge Pappas, acting for the seminary.

The purchase price was not disclosed, but it was believed to be $200,000.

Judge Pappas said the Greek community in America felt that now was the time to establish a university—a time when higher education of the American youth was so vitally needed.

SAYS GREEK CULTURE HAS MADE UNITED STATES STRONG

"Greek culture has contributed so much in the past to make America strong" he said, "that the Greek community felt this heritage should be encouraged and continued in full bloom in America and with American vigor.

"Hellenes are aware that only in education can we stop the advance of communism and dictatorship in the world. The future of Greek heritage lies in the inspiration we can give to our American youth and to those generations yet unborn.

"Only a university we can call our own—yet which will also belong to all Americans—can nurture that inspiration.

"This university—the first Hellenic University of America—will be our endowment in culture."

WILL SET UP CHAPTERS THROUGHOUT UNITED STATES

Pappas said chapters to support the proposed university would be established throughout the United States as foster alumni groups.

"Spyros Skouras, of New York and California, prominent business industrialist, will lead the campaign for the $100 million," Pappas said.

The first $250,000 building of the university is under construction and will be dedicated shortly.

It lies alongside the seminary, which is the Holy Cross Theological School.

The first structure will contain a library, classrooms, and a gymnasium.

The cost was underwritten by Judge Pappas, his brother, former U.S. Ambassador Thomas A. Pappas, Angelos Cotsidas, and Theodore Tonna, all of New England.

Pappas said Massachusetts was chosen as the site for the university because of the presence here of other great religious and educational institutions, such as Boston College, Tufts, Boston University, and Harvard.

He also cited, as an example of what an ethnic group could do, the amazing growth of Brandeis University under the auspices of the Jewish people.

"I am a member of the board of trustees of Brandeis," he said, "I have seen this educational institution rise in 10 years into one of America's mightiest schools of higher learning for all Americans."

DEAR JUDGE PAPPAS: • • • the Greek Orthodox in this country extend their deepest thanks for the initiative that you have taken in espousing the project of a Hellenic University. This is a tremendous undertaking and one that will capture the spirit and the imagination of the American people of Greek descent, as well as philathropists and educators throughout the country.

• • • First, without a doubt the most tremendous effort ever performed by the Greek people in this country in fund raising was the Greek War Relief Drive, which brought together on the national level, on the regional level, on the State level, and at the city level representatives of our many divergent groups; namely, businessmen, church leaders, and representatives of the two great national organizations, AHEPA and the Greek-American Progressive Association (GAPA), and the numerous large Topica Someta such as the Pan-Arcadian Federation, and the officers of the various churches and groups within a church community. There was hardly a group that was not represented on the Greek War Relief Committee. They did such a tremendous job in raising millions of dollars to send to Greece.

Since you and your brother Tom and Spyros Skouras, among others, are the motivating forces behind this Hellenic University, and since all of you have been for so many years leaders in the Greek War Relief movement and are so well aquainted with the people in the regional, State, and local levels, I do believe that you should call upon these people again to aid you in your nationwide campaign to raise the $100 million that will be necessary to complete this magnificent project. It will require the intensified efforts of all groups to reach the million and a half Greek-Americans in this country.

Secondly, as president of the Voice of Greek Orthodoxy in America, several years ago I wrote the Ford Foundation and the Rockefeller Foundation after reading of their numerous bequests to colleges and asked them if their foundation could not also grant a sizable sum to the theological seminary in Boston for its expansion program. Bishop Athenagoras also wrote similar letters. Effort should be made by your committee to contact such foundations who do make substantial contributions for such a purpose.

Thirdly, there must be an intensified public information and education program in bringing vividly to our people the great need and significance of a Hellenic University. This can best be done through the Greek-American newspapers, who have thus far done a magnificent job in editorials and articles; through our Greek-American radio and television programs that are doing so much for the Greek-American community; through the Greek Orthodox Churches throughout the country by announcements from the pulpit by our reverend fathers and through the various church organization meetings; and through discussions in our national organizations, AHEPA and GAPA and Topica Someta and other Greek-American service and civic groups. This method of informing and educating Greek-Americans in the United States of the need of a Hellenic University can be conducted at very little cost and the benefits will be tremendous. You have already received the blessing of the AHEPA family with its pledge of $250,000. I know that both GAPA and the Pan-Arcadian Federation in previous conventions have endorsed the project of a Hellenic or Greek Orthodox University and you can expect their full support.

Address by Hon. William Hamilton, Postmaster General of Canada

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Honorable William Hamilton, Postmaster General for Canada, at the 42d Annual Convention of the Direct Mail Advertising Association in Montreal, Quebec.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a particular pleasure for me, on behalf of the Government and the people of Canada, to welcome your great convention to this country. Some of you will be visiting us for the first time, but I suspect that many—and perhaps the majority—are here on return visits, for between no countries in the world is there such an ebb and flow of people as between Canada and the United States.

As a result, we understand each other rather well and, because we are good neighbors and good friends, we are able to engage in a certain amount of frank talk and discussion of a sort which is not considered polite among more casual acquaintances. There has been a good deal of this in recent years and, while I think it has all been to the good, not all of it has been clearly understood and some false impressions have been created among some people. The most unfortunate of these is that some sort of animosity exists between our two nations in the economic sphere. This is completely false.

It is not to be expected that Canada and the United States will constantly be in agreement on all important matters. In almost everything save geographical limits and natural resources, our country is but a fraction of the United States—in population, in industrial might, and in most other ways the massiveness of our good neighbor to the south is incomparably beyond that of Canada. It has been history's experience that when such a situation exists the smaller national unit falls often under the domination of the larger and in many cases loses its identity completely. This we Canadians are determined will not happen to us, and in that determination we have the complete support of the United States.

However, it is only natural that in many cases specific problems will arise where the interests of our two countries will not coincide and where Canadian interests must be protected by us. Whether it be the development of Canada's natural resources, the growth of our industrial potential, the furtherance of our cultural activities, or anything else, when we in Canada follow a certain course of action our actions are dictated by the positive values of Canada's interests and not by negative feelings of animosity toward anyone and most particularly those who are our friends and with whom we have such a tremendous amount in common.

The friendship of Canada and the United States and our unity of purpose is based on a common tradition, a respect for the rights of man and an unswerving dedication to freedom. We share the basic belief that only under free institutions, with government the servant and not the master, can the individual secure his life, his liberty and the pursuit of happiness. We are both determined to frame and follow policies which safeguard the lives and homes of our people, their peace of mind, their material well being, and above all other things, their ideals.

Members of your association from all over the United States and Canada are met here in common interest and as representatives of a field of activity in which national boundaries are of no concern. Your creations flow without let or hindrance from one nation into another and far beyond the borders of our continent and, in so doing, are a powerful and vital force in our economy and, even more important, a fundamental factor in the successful operation of our whole system of free enterprise.

I know something of the great accomplishments of the Direct Mail Advertising Association itself and of the powerful media which it represents and I congratulate you on your achievements. You are welcome here in Canada, and having some firsthand knowledge of both the members of your local committee and the efforts to which they have gone to make your convention a success, I feel sure your are going to have one of the most successful meetings of your history.

While I know that my previous association with two of Canada's principal sales and advertising organizations lends particular point to my being here with you today, it is a fact that any Postmaster General of Canada, irrespective of his other interests, would feel honored to be asked to your meeting and would feel that he comes to you as a friend of your industry and that that friendship is reciprocated by you.

For it is a cardinal principle of the postal service of Canada that we are a service organization for all Canadians and that our effectiveness depends on the existence of a friendly spirit of cooperation between those who use our services and ourselves. To achieve this, my department must as much as humanly possible adjust itself to our patron's requirements, tailor our operations to their wishes and conduct ourselves in a way which is pleasing and helpful to them. The very motto of our service is a constant reminder of that fact for it is "Servire Populo—To Serve the People" and it is that end which we have ever before us.

As in every business operation—and ours is a business operation—there are limitations to what can be done and these are set primarily by the financial resources available to us. Generally we attempt to operate on a break-even basis by which our postal revenues approximately equal our postal expenditures. We have not done badly in this respect—in the last 2 years we have had revenues of $177,500,000 and a net deficit of $400,000 and in the second revenues of $183,400,000 and a net deficit of $173,000. My good friend, Arthur Summerfield, Postmaster General of the United States, whose last annual report showed a deficit of $890 million tells me that our record in this respect in Canada is not a bad one.

Keeping postal revenues and postal expenditures approximately in balance does not mean by any means that postal service must remain static. While a growth in mail volume brings both increased revenues and increased expenditures, revenues normally increase more rapidly than expenditures and it is our policy to take advantage of this fact and use a portion of the net increase to improve and expand our service to the public and another portion to improve the working conditions of our staffs in various ways.

For example, over the past 2 years we have introduced changes in our policy covering letter carrier delivery which has allowed us to extend house to house deliveries to many new suburban areas which would previously not have been eligible for usch service. We have changed our regulations regarding rural mail services so that these might be extended to thousands of areas and persons previously not so served. We have improved our special delivery services, we have made substantial investments in stamp vending machines, commenced the sale of prepackaged stamps and made many other improvements of direct benefit to our patrons and thus to you as direct mail advertisers.

As far as our staffs are concerned, we have done much to lessen the drudgery of manual labor by the installation of mechanical aids such as conveyors, electric tractors, push-button sortation, and automatic chutes. We have done a lot of experimenting with electronic sorting and have recently let a contract to Canadair for a pilot installation of a complete electromechanical mail-sorting system. As evidence of our determination in this field, we have set up a new Engineering and Development Branch within our organization which will concentrate on developing new methods and new equipment for mail handling.

A steady liberalization of the regulations governing our employees is going on. Our whole Civil Service Act is under revision. It is to be modernized and alined with the newer ideas and practices of industry. Leave credits have been extended and their granting simplified; overtime regulations have been eased and rates adjusted to the greater satisfaction of the employees; terminal leave grants and bonuses are now far more attractive. Encouragement is given to employees' organizations such as recreation associations, credit unions, and sports groups, and the post office has frequently gone on record as being in favor of employee organizations and their functions in improving the working conditions of postal employees.

I place special emphasis in our employee relations, and travel tens of thousands of miles each year to inspect our operations and talk to all ranks of our workers, because I know that in the final analysis the quality of our service is determined by the quality of our staff and the way they do their job. We have 50,000 people in our service, we operate 12,000 post offices, and we handle over 10 million pieces of mail each day, and I am determined to carry our policy of service to the public and cooperation with such people as yourselves to every member of our service, to every part of our country, and to make it genuinely effective. In this I have the support of postal officials at all levels and of our staff and employee associations.

While we all feel that Canada's postal service today is the equal of any in the world, we shall never cease in our efforts to make it even more satisfactory.

Our concept of service to the public, however, extends far beyond improvements in mail services and working conditions. Nowhere is this better illustrated than in the functions assigned to our public relations division.

In my opinion the title "Public Relations Divisions" is not the most appropriate one because it brings to mind a rather restrictive field of press releases, advertising and publicity and those other functions which normally fall under public relations work. Admittedly, these are a part of the work of this division but they represent only a portion of its activities for our staff in this field is largely engaged in activities which most business corportations would class under the heading of customer relations and client service.

I want to emphasize this point because I believe our work in this field is different and probably more emphasized than with other postal administrations. In most countries postal problems of the mailer, when they arise, are dealt with by the local postmaster or any members of his staff who happens to be available. These men are busy people, primarily concerned with the movement of the mail and no matter how much they may wish to cooperate they must deal first with the immediate problems of the day in their own operations. I suspect, too, they sometimes have a tendency to subsordinate the interests of the post office patron to the demands of effective postal administration.

In our Canadian postal service we have 22 public relations officers in 17 major centers across Canada where there is a sufficient volume of postal business to merit their work. These men cover not only that immediate point but the surrounding territory as well. Just last week, for example, when I was travelling between Halifax and Moncton I met one of our public relations officer in an area served by a tiny post office with only three employees. It was some 50 miles from his home base in Halifax. One patron using this office was a substantial mailer and our representative was there to help him with his particular problems in order that he might make better use of our services.

These men have a host of functions, all devoted to helping the public. And, because the direct mail industry accounts for such a large volume of our business each year, our public relations officers have a special interest in advising and assisting direct mail advertisers.

In this respect, our men are ready—and indeed anxious—to offer their services at a very early stage in the planning of a direct mail campaign. We have found through experience that we can often save an advertiser a great deal of time, money, and peace of mind if we are brought into a job in the planning stage.

Advertising agencies, of course, all have wonderful creative people full of smart, crisp merchandising ideas. But sometimes, in their eagerness to put out something that is different or punchy, they have a tendency to ignore the mechanics of transmission. Very often we will have agency people come to us with a new direct mail piece that rates tops in selling appeal. It is new, different, smart. The only trouble is, they have left no place in the design where postage can be prepaid, or where an adequate address can be imprinted. Often there's no possible space for the letter carrier to mark a change of address or a reason for nondelivery.

And sometimes it is a size or a shape that will, we know from sad experience, cause nothing but headaches for advertiser and post office alike.

Lately there has been for example, a rash of jumbo-size advertisements and cards. Now these look fine when they come in to us all neatly bundled and packaged. But by the time they've come down to the final sortation, it's a different story. Bundled with other, smaller pieces, they are bound to be string cut, bent and bruised. We can't help it, no matter how careful we may be.

And then, too, there's the problem of letter slots. In Canada, most letter slots are somewhat less than 4¾ inches wide. If a direct mail piece has to be folded to go in the slot, it is never the same again. It gets crushed. The art is spoiled, the presentation lost, the impact destroyed.

Against this sort of thing, our public relations officers stand ready to protect the direct mail advertiser. We don't expect you to know all the intricacies of the postal service, any more than you expect our men to be fully conversant with all the aspects of the advertising business. But we would like to have you call us in—the earlier the better—to our mutual advantage. Our public relations officer is an expert in mail handling. He will steer you around the pitfalls that may beset your mail from the time it comes off the press until it is delivered to the householder. He will see that your service company—or your service department—is supplied with up-to-date zone breakdowns and the other information they must have to handle your materials economically.

And, finally, if you do run into trouble, our public relations officer is there as a trouble-shooter to help pick up the pieces. This is a necessary part of his work—but one that can be, with your cooperation, a less time-consuming one.

No more typical example exists of these men and their devotion to their work than one postal employee of whom we are very proud and who is well known to you—Victor Perry, our senior public relations officer in Toronto, who is one of your six honorary lifetime members. Vic typifies that friendly association between the Post Office Department of Canada and our patrons, and the fact that you have honored him as you have done demonstrates far more than any words of mine the fact that this system of ours really works and really benefits postal users.

I am enthusiastic about my association with the post office, and proud of the part my department plays in your business, because I believe in the value of all kinds of advertising and feel direct mail is one great media of advertising with very special qualifications and advantages which merit its use. All media have fields in which they are preeminent but, to my mind, direct mail leads in two respects which are vital to successful advertising—personal approach and selectivity.

Not all of your output is personalized but that which is, short of the individual salesman's call, comes closest of all advertising to the personal contact. The individually addressed envelope and, even better, the individually personalized enclosure singles out the prospect as one individual human being and gets home to that individual as nothing else can. This costs money but it brings results.

Again, in the field of selectivity direct mail offers particular advantages. A campaign can be restricted geographically down to such fine divisions as one postal walk for a householder mailing; it can be directed to specific income groups, to particular professions, to language and national groups, and to just about any group that the list houses have thought of—and they have a brilliant imagination.

At the outset of my remarks I referred to the friendship which exists between Canada and the United States. I have emphasized during my speech the desire of Canada's postal service to cooperate with you and serve you. I know that the very purpose of your association and this great convention is that you may better work together and benefit one from another.

In the spirit of all these ideals, and in furtherance of our common purpose nationally, postally, and professionally, let me close by quoting to you the words of a simple Canadian spoken more than 50 years ago at the Canadian Club in Boston. You will find in them the expression of that purpose which motivates us both as citizens of two great nations and as practitioners of an activity fundamental to our way of life:

"We're the common heirs of British traditions and the common repository of the splendid achievements of the race, and whatever the flag that flies over our heads, or whatever the formal government to which we subscribe, we are common workers for the social betterment and the moral progress of mankind.

"Is there any reason why we should not neighbor * * * in the blessing of an enduring peace * * * for the high and magnificent ends of a common civilization?

"We desire only that sympathy shall beget sympathy, that confidence shall inspire confidence, and that through the changes and shocks of time we shall stand together. * * * The American people sowed this half of the continent with graves rather than have their flag dishonored or their country dismembered. We are of the same brood, as proud of our free institutions and as jealous for the independence and integrity of our young commonwealth. So let us go on together in peace and in neighborly intercourse and in hearty cooperation."

Mrs. Lydia Cady Langer

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain articles, editorials, and resolutions concerning the death of Mrs. Langer.

There being no objection, the articles, editorials, and resolutions were ordered to be printed in the RECORD, as follows:

[From the Steuben News, August-September 1959]

SENATOR LANGER'S WIFE PASSED AWAY

WASHINGTON, D.C.—Mrs. Lydia Cady Langer, wife of Senator WILLIAM LANGER, of North Dakota, died after a long sickness. Born into a New York family of social distinction, she had been his untiring helpmate in his long and occasionally stormy career. She was known in the Capital as a gracious hostess, and the citizens of North Dakota held her in high esteem.

In addition to the Senator, the following children survive: Mrs. Emma Bulkley Schaeffer, Mrs. Lydia Cady Irwin, Mrs. Mary Erskine Gokey, and Mrs. Cornelia Langer Noland. In North Dakota, the Langers made their home in Bismarck and Wheatland.

The Steuben Society of America, which has had close ties with the Senator since he campaigned for Robert La Follette in 1924, sent him a message of condolence.

SENATORS EXPRESS SORROW AT DEATH

WASHINGTON.—The death of Mrs. William Langer, wife of the Republican Senator from North Dakota, was announced to the Senate Tuesday by Senator EVERETT DIRKSEN, of Illinois, the Republican leader.

DIRKSEN described Mrs. Langer as a "kindly, gracious lady."

Senator MILTON YOUNG, Republican, of North Dakota, said he regarded Mrs. Langer as one of the most outstanding and wonderful women he had ever known.

Senator LYNDON JOHNSON, of Texas, Senate Democratic leader, also said he was deeply distressed by Mrs. Langer's death. At least 10 other Senators extended sympathy to LANGER.

Representative DON SHORT, Republican, of North Dakota, expressed his grief Tuesday.

"Mrs. Short and I were extremely grieved to learn of the passing of Mrs. William Langer," SHORT said in the message from Washington.

"No one was more highly admired and respected by North Dakotans and by all with whom she came in contact here in Washington. North Dakota has lost a fine lady who fought a valiant battle these past several months against an incurable disease.

"Our sympathy goes out to the Senator and his family."

[From the Minot Daily News, Aug. 5, 1959]

WE ADMIRED HER

In North Dakota, the State of her adoption, Mrs. William Langer will be remembered as a gracious woman who pretty well personified the ideas North Dakotans have of those qualities of loyalty and courage which a wife and mother should possess.

We think we speak just about unanimously for the State when we pay Lydia Langer such a personal tribute, and express our sincere sympathy to the Senator and all members of the Langer and Cady families in their bereavement.

The people of North Dakota have known their senior Senator and his career well enough to guess that despite the fact he has been a devoted husband and father, he probably hasn't been the easiest man in the world to keep a home for. The times in which he rose to political strength were turbulent to say the least, and the home he and Mrs. Langer kept at Bismarck while he was Governor was a place to which just about any appellant for the Governor's intervention could gain access, day or night.

Though she ran for Governor herself once, at a time when the Nonpartisan League-controlled Republican machinery needed a candidate to uphold the Langer name in politics, Mrs. Langer was really a modest woman who personally preferred to be a wife rather than a candidate. In the main she kept out of the political limelight. Yet she was, in Bismarck and afterward in Washington, a mainstay of Mr. LANGER. Her loyalty throughout her husband's controversial career made people respect her, and doubtless it was a symbol which made some of his political success possible.

The story of the West is replete with cases of eastern girls who married western men and left environments of refinement and comfort to adapt themselves successfully to new country. Lydia Langer made that adjustment, and the regard North Dakotans had for her is perhaps the best proof of her success. She was a memorable example of the popular western story.

Those messages many North Dakotans have been accustomed to receive from the Langers about Christmas time, signed "Lydia and Bill," were always gracious, and somehow they seemed personal. It may well have been Lydia's touch that made them so. Those messages will be missed. To her bereaved husband, all of us can say, "BILL, we admired Lydia."

[From Bulletin No. 28, Government Employes' Council AFL–CIO, Aug. 6, 1959]

WASHINGTON ACTIVITIES

Mrs. William Langer: We join with Senator and Mrs. Langer's legion of friends in expressing our sympathy to Senator WILLIAM LANGER, his daughters, and all members of their family, in the passing of Mrs. Langer. Thousands of postal and Federal employees will remember Mrs. Langer who attended many national, State, and local conventions along with our great friend and supporter, the Honorable WILLIAM (BILL) LANGER, who has faithfully served for 20 years on the Senate Post Office and Civil Service Committee. Mrs. Langer's untimely death was brought about by cancer. Mr. and Mrs. Langer were married for 41 years and worked closely together on all legislation. Services will be conducted from the Augustana Lutheran Church, 16th, New Hampshire Avenue, and V Streets NW., at 1 p.m. Friday, August 7.

CITY OF FARGO, N. DAK.,
August 5, 1959.

The Honorable WILLIAM LANGER,
U.S. Senator and Family,
Washington, D.C.

DEAR SENATOR LANGER: The city of Fargo is deeply grieved at the passing of your beloved wife and our constant and good friend.

As an expression of our deepest heartfelt sympathy, I am enclosing a certified copy of a resolution which I offered to the Board of City Commissioners of the City of Fargo last evening, as a lasting tribute of our respect and affection for your beloved wife and the mother of your children. The people of Fargo, as well as all the people who knew Mrs. Langer, will forever honor and hold sacred her memory. She was indeed a good friend.

In closing, I sincerely hope that you will take good care of yourself, and with kindest personal regards, I am,

Sincerely yours,
HERSCHEL LASHKOWITZ,
Mayor.

RESOLUTION

President Lashkowitz offered the following resolution and moved its adoption:

"Be it resolved by the Board of City Commissioners of the City of Fargo, that—

"Whereas Mrs. William Langer, the beloved wife of our esteemed senior U.S. Senator, the Honorable WILLIAM LANGER, has just passed on to her eternal rest; and

"Whereas Mrs. William Langer, as the first lady of North Dakota, and as the helpmate of our distinguished senior Senator, has

come to be known and loved by all the people of our city as a dear friend, whose place will forever be enshrined in our memory; and

"Whereas the city of Fargo deeply mourns the passing on of its beloved friend and good neighbor; and

"Whereas Mrs. William Langer achieved eminence not only as the helpmate and inspiration of North Dakota's greatest Governor, but also has been recognized as an outstanding example of American womanhood who took a vital interest and played a prominent role in local, State, and National affairs and made a lasting contribution to the advancement and development of her adopted State, and merited the affection and respect of the people of our city and State; and

"Whereas Mrs. William Langer has been an example of courage and inspiration to all: Now, therefore, be it

"Resolved by the Board of City Commissioners of the City of Fargo, That it does hereby extend its condolences and deepest heartfelt sympathy on behalf of the citizens of the city of Fargo to the Honorable WILLIAM LANGER, our distinguished senior Senator, and the bereaved family of Mrs. William Langer; and be it further

"Resolved, That a copy of this resolution be spread upon the permanent minutes of the Board of City Commissioners of the City of Fargo, and that copies be forwarded to the Honorable WILLIAM LANGER, U.S. Senator from North Dakota, and to the bereaved family of Mrs. William Langer, and also to the congressional delegation from North Dakota, with the request that this resolution be read from the floor of the Senate and the U.S. House of Representatives and made a part of the proceedings thereof."

Second by McCannel. On the vote being taken on the question of the adoption of the resolution, Commissioners Hagen, Lewis, Markey, McCannel, and Lashkowitz all voted "aye."

No commissioner being absent and none voting "nay," the president declared the resolution to have been duly passed and adopted.

HERSCHEL LASHKOWITZ,
Mayor.

STATE OF NORTH DAKOTA,
County of Cass, ss:

I, William G. Johnson, do hereby certify that I am the duly appointed, qualified, and acting city auditor of the city of Fargo, N. Dak.; and

That the foregoing is a full, true, and correct copy of a resolution adopted by the Board of City Commissioners of the City of Fargo at the regular meeting of the board held on Tuesday, August 4, 1959; and

That such resolution is now a part of the permanent records of the city of Fargo, N. Dak., as such records are filed in the office of the city auditor.

WM. G. JOHNSON,
City Auditor of the City of Fargo, Fargo, N. Dak.

An Invitation to Eastern Oklahoma, Recreational Heartland of America

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. EDMONDSON. Mr. Speaker, I should like to call the attention of the Congress and every American to the significant fact that the State of Oklahoma, and especially eastern Oklahoma, is rapidly becoming the recreational heartland of America.

One of the most amazing developments in recent years is the phenomenal and almost unbelievable growth of Oklahoma in the field of outdoor recreation. For John Q. Public we are fast becoming the Vacation Mecca of the United States.

Few people realize that we have two lakes in Oklahoma whose annual visitor attendance greatly exceeds the combined annual visitor attendance of both Yellowstone National Park and the Grand Canyon—and an even smaller lake with more annual visitor attendance than the Washington Monument and Yosemite National Park combined. These facts are hard to believe about a State only recently known as a "Prairie State."

The present and future role of the State of Oklahoma in outdoor recreation—a new growth industry developing in this country in tremendous proportions and possessing almost unlimited potential—is so promising that it ultimately can transform the State and could well hold the key to providing us with the most amazing economic development in our spectacular State history.

The great boom in outdoor recreation in Oklahoma is keyed to the tremendous development of water resources in our State, which already has more than a quarter of a million acres of surface water impounded in our lakes, to which will be added more than 140,000 surface acres when 5 reservoirs now under construction by the Corps of Engineers and the Bureau of Reclamation are completed. Still more thousands will be added when other authorized projects are finished.

Oklahoma early realized the great potential in the field of outdoor recreation, and especially water recreation. Its development of State parks and its investment of more than $7 million in five fine resort lodges on Oklahoma lakes, which provide luxury surroundings at moderate prices and which rival the best that are being built with Federal funds under the Mission 66 program, have been unique. In particular, its development of the fabulous Lake Texoma lodge, and of the equally beautiful Western Hills lodge on Fort Gibson Reservoir, has drawn visitors and conventions from all over the country.

Maj. Gen. E. C. Itschner, chief of Army engineers, speaking at Western Hills Lodge about 3 years ago, said that Oklahoma "among all of the State has taken the No. 1 spot in developing reservoirs for recreational use".

Earlier the same year, a corps official of the Tulsa district office, in commending the "foresight and initiative of the Oklahoma Planning and Resources Board in realizing the recreational opportunities" on corps reservoirs, said Oklahoma had "given the greatest impetus to the development and use of these lakes far beyond any other agency or private development."

It will come as a major surprise to many people that attendance at State parks in Oklahoma in 1958 was in excess of 8 million, and that Oklahoma ranked eighth nationally among all the States reporting attendance at State parks during 1958 to the National Park Service.

It will come as another surprise to many people that between 1950 and 1958, attendance at Oklahoma State parks increased by a startling 217 percent, as compared to an increase nationally of 108 percent.

It will come as a further surprise to many people that attendance at State parks in Oklahoma in 1958 was considerably greater than it was at State parks in such noted vacation States as Colorado, Florida, Minnesota, Maryland, New Hampshire, New Jersey, Massachusetts, and Wisconsin.

With these statistics in mind, it is no wonder that the present Governor of Oklahoma recently said that recreation in the Oklahoma lakes area presents opportunities that stand out "like a beacon light of hope" for the future of our State.

Mr. Speaker, what are the ingredients which have brought about this situation in a State which is the fifth youngest in the Union? What accounts for this fantastic growth in recreational visits?

One of the key ingredients is the fact that Oklahoma City early recognized the great potential in water recreation present on its great and growing chains of lakes, and based the fabulous development of its park systems, its lodges, and its resorts primarily to take advantage of this opportunity. In cooperation with other men of vision from the Army Corps of Engineers office in Tulsa, and with other experts in the field, the State of Oklahoma became the true pioneer in the development of a park system based upon the future growth in this new water recreation industry.

As a result, you have in Oklahoma some of the best planned recreation plants on earth. They are in operation 24 hours a day, 12 months a year. More people, more frequently, and over a longer period of the year and during more days of each week, and during more hours of each day, visit lakes and State parks in Oklahoma than at almost any similar area on earth.

As one corps official in Washington said, the type of reservoirs we have in Oklahoma and the Southwest represent a virtual revolution in recreational habits. They serve a much greater proportion of the public, regardless of income, than almost any other kind of outdoor recreation. With the climate of the Southwest, these resorts are open throughout the year, and are in operation day and night—with their lodges, their cottages, their night-fishing docks, and their many other low-cost facilities.

Blessed not only with a climate which permits outdoor recreation throughout the year but also with countless streams and wooded hills and rolling plains, possessed of varied and beautiful natural resources, abounding with scenic spots of infinite beauty and history sites of great interest, Oklahoma is also geographically located to serve all the people of the United States.

Situated right in the middle of the most rapidly growing market areas of

the United States, with 42 million people now within a 500-mile radius of the center of Oklahoma, and realizing that the present rate of population growth in the United States could bring a national population of approximately 260 million people in 1980 and 350 million in the year 2000, Oklahoma is already in a position to capitalize on its pioneering work in the field of outdoor and water recreation.

Still another factor in the development of outdoor recreation is the national trend in the field of recreation and the tremendous growth in public use of recreational facilities throughout the country. It is on this growth trend that Oklahoma has capitalized, and it is most revealing to examine some of the amazing statistics in this field.

Recently I asked the Library of Congress to prepare for me a report on "The Growth of Recreation in the United States"; and this fine report, prepared by Erin W. Nisbet of the Legislative Reference Service, was completed only on September 4. It is probably the most up-to-date report of its kind in existence at the present time.

The Library of Congress report comments upon the astonishing rate of growth on the basis of attendance figures in the recreational use of public lands and State parks. It says in part:

In contrast to a 15.5-percent increase in population from 1950 to 1958, attendance figures show a 492-percent increase at Corps of Engineers water resources projects, a 76-percent increase at all National Park Service areas except the National Capital Park System, a 108-percent increase at all State parks, a 150-percent increase at national forest areas, and an estimated 195-percent increase in attendance at Bureau of Reclamation projects.

I might point out that corps projects located primarily in Oklahoma have, for the past several years, accounted for about 20 percent of national attendance at all corps projects, which in 1958 totaled almost 95 million visitors.

The Library of Congress report continues:

The actual use of the public recreation facilities has far exceeded the planning estimates made over 10 years ago. It is obvious that there will continue to be a growing need for more of such facilities in the future on both public and private lands. In the last 8 years, attendance has been growing at an average annual rate of 7 percent in the National Park System, 11 percent at the national forests, 12 percent at the wildlife refuges, 10 percent at TVA reservoirs, 13 percent at Bureau of Reclamation projects, 22 percent at Corps of Engineers reservoirs, and 9 percent at the State parks.

Mr. Speaker, as a further example of the tremendous public use for recreational purposes of public parks and Federal recreation areas, let me quote the figures on estimated attendance in 1958 in the major categories of facilities of this type in the United States. Attendance at corps projects was 94,793,000; at National Forest lands it was 68,450,000; at all National Park Service areas not including National Capital Park System it was 58,677,000; at State parks it was 237,328,853; at TVA lakes it was 36,600,408; and at wildlife refuges it was 9,114,000.

These figures are astounding because the totals far exceed the population of the United States, which of course is largely accounted for by the fact that many people make repeat visits, and also visit more than one such area each year. But nonetheless, it points up that the entire field of outdoor recreation, with pressing needs for additional facilities which are clearly evident, is sorely in need of increased national attention, especially by the Congress.

The field of outdoor recreation, of which water recreation is a major part, is a tremendous new growth industry. The Library of Congress report indicates that a recent article on the industries related to outdoor recreational activity estimated that business income in this field amounted to $32 billion in 1958.

Mr. Speaker, if we accept that estimate, which could be very conservative, it still would be big business in every sense of the term. Compare that $32 billion estimate with statistics for other fields as estimated by official governmental agencies. The current earnings of all member banks of the Federal Reserve System in 1958 amounted to $7.1 billion. Revenue from ultimate customers of the electric light and power industry amounted to $9.7 billion in 1958. The value added by the manufacture of the primary metal industries—iron, steel, and the nonferrous metals including copper, tin, lead, zinc, and aluminum—was $13.1 billion in 1957. The value added by the manufacture of all chemicals and chemical products was $12.1 billion in 1957. The value of all mineral production in the United States in 1957 was $18.1 billion, and is expected to fall slightly below that figure for 1958.

It is that terrific $32 billion outdoor recreation industry which Oklahoma, and especially eastern Oklahoma, will increasingly share in the future.

For example, in the Second Congressional District of Oklahoma, which I represent, there are three Corps of Engineer projects located completely within the district. They are Fort Gibson Reservoir, which in 1958 had a total visitor attendance of 4,177,800; Tenkiller Ferry Reservoir, which in 1958 had a visitor attendance of 2,297,700; and the smaller Hulah Reservoir, which last year had a visitor attendance of 578,100.

I am certain it will startle a large percentage of the American public to realize that in 1958, attendance at Tenkiller Reservoir exceeded the combined total attendance for the same year at the Washington Monument and the Yosemite National Park; and that attendance at Fort Gibson Reservoir exceeded the combined total attendance at both Yellowstone National Park and the Grand Canyon. Truly these are striking figures, and point up the great future to Oklahoma, and specifically to eastern Oklahoma, that lies ahead of us in the field of outdoor recreation.

Already existing in the Second Congressional District are other additional lakes. One of them, the very highly developed recreational area of Grand Lake, has a surface area of 46,500 acres. Another, much smaller but providing magnificent recreation, is Greenleaf Lake with its fine State park of 1,475 acres built around a jewel of a lake containing 920 acres of surface water.

Mr. Speaker, it is well known that Lake Texoma, which Oklahoma shares with Texas, has broken all visitor attendance records at corps reservoirs throughout the Nation during 6 of the past 7 years, and in 1957 had more than 8 million visitor attendance. This Texoma Lake, created by the impoundment of water by Denison Dam during 1942, is noted throughout the world for the fantastic attendance records it has set—and a most significant thing is that in 1946, estimated annual attendance for 1956 was set at 600,000, whereas in that year it actually reached the astounding total of 7,471,600 visitor days—more than 12 times the estimate of 10 years earlier.

As astonishing as is the record of Texoma, corps reservoirs within the Second District of Oklahoma have set some records of their own. In 1950 the corps started keeping attendance records at Lake Hulah, Tenkiller Lake and Fort Gibson Lake although all of them were still under construction and impoundment of water did not begin until March 1951, in the case of Hulah, and late in 1952 in the case of Tenkiller and Fort Gibson.

Attendance figures at Hulah in 1950 were 26,000, 45,000 at Tenkiller, and 195,000 at Fort Gibson. Attendance figures for 1958, which already have been given, would indicate that attendance records have grown since 1950 by the startling figures of 2,120 percent in the case of Hulah, 2,043 percent in the case of Fort Gibson, and 5,007 percent in the case of Tenkiller. Percentage increase at Texoma since 1950 has been 74 percent, while percentage increase at Texoma since 1945—which was after impoundment but earliest attendance records which I have seen—has been approximately 2,745 percent. It should be borne in mind that Texoma has been established not only much longer than any of these other three lakes, but that also it is more than twice as large in water surface area and considerably larger in shoreline area than all the other three lakes combined.

Mr. Speaker, it is my understanding that the corps is planning for a total of 12 million visitors at Texoma within the next few years, and similar great growths are expected at Fort Gibson, Tenkiller, and Hulah Lakes.

In the light of these statistics, it came as no surprise to me to learn that the corps has extremely high expectations for attendance at Oologah, Eufaula, and Keystone Reservoirs when they are completed within the next few years. Oologah will lie within the second district, Keystone just to the west and Eufaula will be shared with the third district of Oklahoma.

It is my understanding that the corps expect, within 5 years after impoundment, 1 million visitor attendance at Oologah, and a whopping 10 million visitor attendance each at Eufaula and at Keystone Reservoirs.

If you are a fisherman, consider these interesting reports from Oklahoma lakes: In 1958 the fishing catch at Fort

Gibson was 2,140,000 pounds; at Tenkiller it was 930,000 pounds. At relatively tiny Lake Hulah the 1957 fishing catch was 75,000 pounds. Experts predict that fishing at the new lakes now under construction will be outstanding. Think what this means to Oklahoma, and especially to the second district, in terms of new businesses created by these lakes—such as fishing docks, boating docks, cottages and motels, grocery and supply stores, oil and gasoline stations, and many other related businesses. All go with boating, fishing, swimming, exploring, sightseeing, water skiing, hunting, and other overall vacation activities associated with water recreation.

As a single index, watercraft on peak days jumped from 50 to 950 at Fort Gibson between 1952 and 1958. At Tenkiller, it jumped from 16 in 1952 to 650 in 1958; and at Hulah, it jumped from 10 in 1951 to 250 in 1958.

A corps estimate of the value of recreational activity at the three largest corps projects in Oklahoma in 1957 was set at $66.5 million, of which $60 million was assigned to the much older and long-developed Lake Texoma. However, 1957 recreational business at the recently completed Fort Gibson and Tenkiller Reservoirs was estimated to total at lease $6.5 million, and it has been increasing by leaps and bounds since that time.

The Grand Lake recreational investment had a $31 million price tag placed on it by an official of the Grand Lake Association this year. He also estimated that the number of out-of-state visitors there had increased from 62 to 68 percent.

These figures are striking examples of the pulling power of these lakes and water recreation facilities to people from other States and from very considerable distance. It is my understanding that a Corps study of visitor attendance a couple of years ago at Fort Gibson and Tenkiller indicated that approximately 50 percent of the cars bore out-of-State licenses. Chamber of commerce officials in the Fort Gibson Reservoir area say that cars from virtually every State in the Union have been seen at lake access points, and are being seen in increasing numbers each year.

Mr. Speaker, with eye-opening facts like these before me, I speak with pride and great anticipation for the future of Oklahoma, and particularly of eastern Oklahoma, which will have a tremendous and growing share of our national outdoor recreation business and development. The future is unlimited. The foresight of the State of Oklahoma in preparing for this fabulous revolution in the recreational habits of our American people is hitting pay dirt, and we are prepared to ride with this great tide of the future and to capitalize on the magnificent potentialities which lie before us.

We can also glory in the fact that we will have both a happier and a healthier America as our people move outdoors for recreation, in increasing numbers each year.

General Itschner this year predicted that the Arkansas River basin, which is now being developed for navigation, has the resources to produce an unprecedented explosion of economic growth. He said he "could conceive of few areas of America which have a brighter future." In earlier speeches he has predicted our region would prosper, as has the Ohio Valley, with the industrial development which would come to pass with the completion of the navigation project.

Mr. Speaker, I share fully with General Itschner his faith in the economic boom and the tremendous industrial growth which lie ahead for our region. With river navigation, an abundance of coal and other fuels, and abundant water supply, we are blessed with all the things which we need for great industrial growth.

But, I would point out that the recreational benefits alone which are coming with the development of these great water projects are providing and will increasingly provide an economic growth which will transform the State. Furthermore, I believe that outdoor recreation is as nearly a depression-proof industry as can be found anywhere, and this is demonstrated by cold facts and figures.

Oklahoma is richly blessed with its present and planned facilities for outdoor and water recreation. We have much to offer all America. We invite each and every American to come to our lakes, to visit our historic spots, to see our cowboys who have attained national fame at rodeos, and to thrill as you see the priceless heritage and tremendous contributions our outstanding American Indian tribes have added to our culture and our civilization.

We promise you an Oklahoma welcome you will never forget—a welcome from the Recreational Heartland of America.

Fact Sheet on Puerto Ricans in the United States

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HART. Mr. President, at the recent New York City hearings of the Senate Subcommittee on Juvenile Delinquency, several witnesses presented conflicting views on the relationship of that city's growing Puerto Rican population to juvenile crime. The record of the hearing was kept open so that the committee might receive a statement from Mr. Joseph Monsuerrat, director of the New York office of the Migration Division, Department of Labor, Commonwealth of Puerto Rico.

Attached to the statement filed by Mr. Monsuerrat was a document entitled "Fact Sheet on Puerto Ricans in the United States." I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD because it should receive the widest possible circulation. While it is quite brief, it provides an excellent background for some of the sensational headlines that have appeared recently implying that our problems will be solved if we simply discourage migration. It records the constructive contribution being made by persons of Puerto Rican birth or descent in New York City and elsewhere. Certainly, we in Michigan look upon our growing Puerto Rican population with the knowledge that the typical American community has been strengthened by the diversity of its population. The quest of each new group for improvement in their living standards, their levels of education, and their sense of achievement and recognition in the community has brought new vitality to our way of life with each new group.

In my view Mr. Monsuerrat and the migration service of the Puerto Rican Labor Department are to be commended for the skill and dedication which they bring to the difficult problems of family adjustment in situations of economic dislocation such as we are now facing.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

FACT SHEET ON PUERTO RICANS IN THE UNITED STATES

1. WHY DO PUERTO RICANS COME TO THE UNITED STATES?

About 40,000 Puerto Ricans migrate to the United States each year for the same major reason that 40,000,000 immigrants came to our shores in the past and that 5,000,000 mainland Americans migrate from one State to another each year: Better job opportunities in the new area.

The size and destination of the Puerto Rican migration depend on employment opportunities in the United States. When the country is in periods of prosperity, the demand for workers increases and migration also increases. During recessions, migration drops. During depressions, there has been a net migration back to Puerto Rico. The following figures show how the recession affected migration from Puerto Rico during 1957 and 1958:

	Total to the United States	To New York City
1956	52,315	34,000
1957	37,704	22,600
1958	27,728	17,000

The proportion of the newcomers settling in New York City, the world's largest labor market, has declined steadily as relatively more job opportunities have opened up in other areas. In 1947, 95 percent of the newcomers from Puerto Rico were settling in New York. By 1957 and 1958, this figure had dropped to about 60 percent.

2. HOW MANY PUERTO RICANS ARE THERE IN THE UNITED STATES?

Population estimates for December 31, 1958, showed 849,000 Puerto Ricans in the continental United States as a whole. Of these, 608,000 had been born in Puerto Rico, and 241,000 had been born here of Puerto Rican parentage. In New York City, there were 654,000 persons of Puerto Rican birth and parentage, of whom 463,000 had been born on the island and 191,000 on the mainland. Puerto Ricans have been living in every State since 1930.

3. WHO ARE THE PUERTO RICAN NEWCOMERS?

Studies of the Puerto Ricans show that, like all groups of voluntary migrants, they include a larger proportion of more skilled

and better educated persons than would be found in a perfect cross section of the island's labor force. Over 90 percent of the adult migrants are literate, as compared with 87 percent of the population of Puerto Rico. Five percent of the migrants in 1958 had completed at least 4 years of college, including 3 percent who had completed one or more years of graduate study. Most of the migrants have worked in manufacturing and service industries; only a minority have an agricultural background. In 1958, 43 percent of the newcomers knew English at the time they migrated. The 1950 U.S. census showed that 92 percent of the Puerto Rican-born persons living in the United States were white, as compared with 80 percent of the population of Puerto Rico; studies indicate that fewer dark-skinned persons migrate because of an awareness of discrimination and segregation patterns on the mainland.

Misimpressions of newcomers are often based on the ones who tend to be conspicuous in their new environment—those who do not speak English well or are distinguishable by their general appearance or dress. The thousands of Puerto Ricans already well-adjusted to life in the United States are inconspicuous and therefore are frequently not even recognized as Puerto Ricans.

4. WHAT KINDS OF JOBS ARE PUERTO RICANS FILLING ON THE MAINLAND?

In New York and other cities, Puerto Ricans are filling labor shortages in practically every type of industry. The New York garment trades are highly dependent on their more than 45,000 Puerto Rican workers ("If it hadn't been for the Spanish [influx] the industry would have left New York"—head of Local 142, ILGWU). The city's $460 million hotel business and a wide range of related commercial services similarly depend on their workers from Puerto Rico ("The Waldorf-Astoria could not run without its 450 Puerto Rican workers"—personnel director, Waldorf-Astoria).

Puerto Rican workers are also found in restaurants, laundries, drycleaning establishments, hospitals, and throughout the city's manufacturing industries—office equipment, electrical and electronic products, plastics, optical goods, toys, and others. There are more than 4,000 Puerto Rican owners of grocery stores, barbershops, drugstores, and other businesses; several thousand civil service employees, including postal workers, teachers, and police; and physicians, dentists, and lawyers.

Outside New York City, principal jobs include foundry work, leather tanning, shoe manufacture, and electronics in Chicago and Milwaukee; steel in Bethlehem, Pa., and Lorain and Youngstown, Ohio; automobiles in Detroit; men's clothing in Rochester; radio and television manufacture in northern New Jersey.

5. HOW MANY PUERTO RICANS ARE ON WELFARE?

As with other groups, the number of Puerto Ricans receiving public assistance varies with economic conditions, going down in good times and rising during recessions. Data from the New York City Department of Welfare show that between 85 and 95 percent of New York's Puerto Ricans have always been completely self-supporting. During the recession preceding the Korean war, the proportion receiving welfare benefits rose to a high of about 14 percent of the city's Puerto Rican population; during the recent recession, data for April 1957 showed 11 percent receiving welfare; during periods of prosperity, the percentage has been reported at 5 and 6 percent. Approximately half of the Puerto Rican home-relief cases arise because the wage earner, although fully employed, is not paid enough to provide minimum support for his family.

With respect to nonresident relief (persons who have been in the State less than 1 year), studies conducted by the New York State Department of Social Welfare showed that in 1957 total nonresident welfare cases constituted only 1.6 percent of all welfare recipients in the State and that Puerto Ricans accounted for a minority (38 percent) of the nonresident recipients. The majority (54 percent) were from other States and a small number (8 percent) from foreign countries.

It is also significant, as reported by the State welfare department, that between the first half of 1957 and the first half of 1958, when the recession was becoming more severe, resident welfare rolls in New York City increased 11 percent while nonresident rolls decreased by 7 percent. This is another indication that the migration of all groups to new areas declines when fewer jobs are available.

A further study of nonresident relief recipients by the city welfare department showed that Puerto Ricans are the last group to obtain relief. The New York Times reported on June 2, 1957, "A welfare department study on new arrivals who have got relief indicates that the Puerto Ricans involved had been here 5.9 months—longer than both the 5.3 months for Negroes and 4.8 months for other persons." Thus, neither the Puerto Ricans nor the Negro newcomers are the first to obtain relief.

6. HOW HIGH ARE PUERTO RICAN CRIME RATES?

Available figures confirm Time magazine's statement of June 23, 1958: "In New York City some Puerto Ricans have managed to gain for the rest an out-size reputation as gang fighters, "West Side Story" style; actually, Puerto Ricans form 8 percent of the population, and their share of the crime rate is only slightly more than 8 percent."

Accurate overall data on juvenile crime are scant, but a study of two Manhattan school districts showed a lower delinquency rate for the Puerto Rican children than for the non-Puerto Ricans. "The Puerto Rican children were offenders at the rate of 12 per 1,000; the non-Puerto Rican children at the rate of 14 per 1,000." (The Puerto Rican Study: 1953–57 (New York City Board of Education, 1958; p. 120).) The study concluded that "Like other children Puerto Rican children tend to become about as good or about as bad as the children or youth with whom they associate."

From other cities come reports such as the following: "The incidence of crime among the Puerto Ricans has been very low. Almost all run-ins with the law have resulted from lack of understanding about motor vehicle laws." (Trentonian (Trenton, N.J.), Oct. 14, 1957.) "There is no evidence that the Puerto Rican in Reading today is a problem. He is not living on relief, not drawing unemployment checks, not arrested in higher percentage than whites or Negroes." (Reading (Pa.) Record, Oct. 11, 1957.) Nassau and Suffolk police have had virtually no problem with new Puerto Rican residents because the newcomers have integrated themselves into their communities and have been given the opportunity of slumless living." (Newsday, (Garden City, Long Island, N.Y.), Sept. 3, 1959.)

Record Progress in Flood Control for Central Massachusetts

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PHILBIN. Mr. Speaker, 4 years ago Hurricane Diane hit the Northeast with a devastating blow, leaving behind a trail of ruin, destruction, and death. It was on August 19, 1955, that Diane dumped some 19 inches of rain on central Massachusetts and caused one of the worst flood disasters in the history of our area.

In central Massachusetts, which makes up most of the Third Congressional District, seven persons died and an estimated $110 million in property damage was caused.

Today, just 4 short years after this great disaster, we in central Massachusetts are beginning to see the results of a $40 million flood prevention program which got under way almost simultaneously with the rehabilitation program set up immediately after the floods. In these 4 years, there have been inaugurated in New England more flood control projects than in all the previous years of Federal flood work in our section.

When the Congress met in January of 1956, the Massachusetts Congressional Delegation Committee on Flood Control and Rehabilitation recommended eight new construction starts to speed flood control in Massachusetts: Barre Falls, Buffumville, East Brimfield, Hodges Village, Worcester Diversion, West Hill, Westville, and Littleville.

Mr. Speaker, I am pleased to report to the House today that the efforts of the Massachusetts delegation in Congress have been 100 percent successful in getting these vital and necessary projects completed or on the way to completion. In fact, by 1960, those Massachusetts areas hit by the 1955 floods should be afforded a high degree of protection against future floods.

Four of these projects have been completed or are in the final stages of construction: Barre Falls, Buffumville, Hodges Village and Worcester Diversion. East Brimfield will be completed with funds voted by Congress this year. Westville construction will be initiated with funds voted by Congress this year over the President's veto. West Hill construction will be substantially advanced with the $975,000 made available by Congress this year, and finally, the advance planning of Littleville will get underway with the $98,000 authorized by Congress in this year's appropriation bill.

This is a remarkable record of achievement, Mr. Speaker, in such a short span of time but, in final analysis the success of this flood program is due to the urgent and extensive work of many officials and agencies, local, State and Federal, and many individuals who joined to speed the vital and necessary work ahead. Our deep appreciation and gratitude to the House Committee on Appropriations must be reiterated again and again because these good colleagues not only completely evaluated our desperate plight, but moved speedily with a fine spirit of sympathetic understanding and effective support and cooperation to extend Massachusetts and New England the relief and protection from floods for which we had such urgent need.

It is most unfortunate, in my opinion, that such rancor and misunderstanding have been raised as a result of the events

surrounding the public works bill this year.

For 2 years in a row, the President directed that there be no new construction starts. This all-embracing order took in all projects. As a result, our Committee on Appropriations last year, and this year tempered this sweeping rule by providing funds for urgent projects. The committee showed great wisdom and courage in voting these funds because there is no question that a blanket presidential policy of this kind would be bound to work hardship. No better illustrations than West Hill and Westville have demonstrated the need for relaxation of this arbitrary order.

These projects are required as a direct result of the 1955 floods. Had they been instituted after the 1938 floods, Westville and West Hill could have saved in 1955 many lives and millions of dollars in damage. Why, then, include them in a blanket ban on new construction? Not only was the President's directive and subsequent votes of the two public works bills this year most disappointing, but these actions have been entirely incomprehensible. I am at a complete loss to understand such an inflexible policy.

Westville, for example, is a project which has been penalized twice by the very fact that construction funds were deferred until such time as its companion East Brimfield project was in the advanced stages. Congress acquiesced in 1956, at a time when funds were being sped for New England flood control, in an engineering judgment that Westville could be built for less if East Brimfield were built first. Subsequently, the President denied funds for Westville last year and again this year, because it was new construction, thus canceling out a sound engineering judgment prompted largely by motives of economy.

I believe that the Appropriations Committee has shown great foresight and a true apprehension of the real meaning of economy by voting necessary funds for Westville and West Hill. Already deferral of these projects has resulted in heavier costs and expenditures. Further delay would make a bad situation worse and I commend and thank the committee and the Congress for advancing these projects now in the interest of human life and property.

What makes the public works situation all the more incomprehensible, Mr. Speaker, is the fact that the foreign aid bill requested by the President this year contains money for new starts—new starts which are denied in our own country—on water development projects and many other large public works scattered all over the world totaling $320 million—all extracted from the pockets of American taxpayers.

This amount of $320 million represents just a little less than the money required for all of New England's flood needs for generations to come. Yes, Mr. Speaker, the present estimated cost of all of the 60 authorized flood control projects for New England, including those which have been completed, those under construction, and those not yet started, is estimated at only $330 million. This is just $10 million more than provided this year for new construction in foreign lands at the expense of the American taxpayer.

Again, to illustrate, Mr. Speaker, how modest our Federal requests are, this $330 million is less than the cost of one single large project in the West, for instance, the John Day Dam and Reservoir on the Columbia River in Oregon and Washington.

True, New England in past years has been passed by for flood control funds largely because of its own indifference, but now that the need is urgent and recognized by our people, let us not gamble with future losses of life and property by budgetary restrictions on such projects as Westville and West Hill and other worthy projects.

This year has seen truly remarkable progress toward the achievement of a flood-control program for New England and particularly for the Central Massachusetts area.

In June a flood-control compact was signed at Hartford, Conn., between Massachusetts and Connecticut to facilitate Federal construction of the four major dams in the Thames Basin: Buffumville, Hodges Village, East Brimfield, and Westville. In addition, the compact, resulting from legislation I was pleased to cosponsor in the 85th Congress, has provision for reimbursement to Massachusetts by Connecticut for 40 percent of the tax losses suffered by landtakings for these dams and reservoirs in the Commonwealth. A six-man commission, of which my good and able friend, Mr. Samuel Sheard, of Sturbridge, is chairman, will assess the tax losses as they affect the individual communities. I am much indebted to Mr. Sheard for the valuable aid rendered by him and his group.

On October 17, Woonsocket in the Blackstone Basin will dedicate the newest link in New England's flood prevention program when the South Main Street dam in the center of the city is formally completed. Some $5 million has been channeled into the project by the Federal Government to build the dam and bridge and deepen, widen, and straighten the Blackstone Channel from the Uxbridge-Rhode Island line.

On October 3, ground is being broken for the Hopkinton dam and reservoir in New Hampshire which may ultimately become one of the largest Federal flood projects east of the Mississippi. The estimated cost is $30 million of which $5,429,000 is provided this year. This project is vitally important to the Merrimack Basin. It will save life and property in the future.

This summer marked the groundbreaking for West Hill in the Blackstone basin, the first major flood control project in Blackstone Valley proper. This is a $2,400,000 dam and reservoir project, for which Congress has previously voted $498,000 and for which $975,000 is being made available this year. The Army engineers have estimated West Hill would have prevented $12,215,000 in damages had it been in operation during the 1955 floods.

Congress has been keenly aware of the Blackstone Valley flood problem for some time past and has demonstrated time and time again its deep concern by taking concrete and effective steps to help. Just 15 years ago this past May, Congress voted $43,000 to begin the planning of West Hill. In 1956, the House took the unprecedented action of voting $100,000 to speed the West Hill planning despite the lack of needed State concurrence, a vital requirement before Federal funds can be made available.

This action was all the more welcome because the engineers had previously indicated their workload was such after the 1955 floods that they would have great difficulty in utilizing these funds in view of the planning workload for other New England projects. Luckily, the engineers' misgivings proved to be groundless and the West Hill planning went ahead instead of being delayed another year.

Again, last year, and as I have stated, Congress reiterated its approval of the West Hill project by making available construction funds despite the budgetary freeze on new construction starts. This congressional action made possible the earmarking of $975,000 this year for West Hill construction, thus gaining more valuable time.

Indeed, Mr. Speaker, this has been a good year for New England flood control. Initial approval has been given by the Congress for the authorization of West Thompson Dam and Reservoir on the Quinebaug near Putnam, Conn. This would be the fifth in a series of dams to provide flood protection for communities along the French and Quinebaug Rivers in Massachusetts and Connecticut in the Thames Basin.

The five projects when completed—three are in varying stages of completion with Buffumville in operation, Hodges Village for all practical purposes completed, and East Brimfield nearing completion—these projects should provide the Thames Basin with the most effective protection of any similar basin in the United States, according to the Army Engineers.

This basin, one of five major watersheds in New England, is the one which has seen more than $62 million in damages in the past 20 years.

Completion of the $2,900,000 Buffumville Dam provided a vital protection from the often rampaging waters of the Little River above Webster. Army Engineers estimate that the Buffumville Reservoir has a storage capacity of 12,700 acre-feet, equivalent to 4.2 billion gallons at spillway crest elevation. At full capacity in time of floods, the reservoir will extend about 1.7 miles upstream on the Little River itself and about 1.9 miles upstream on the southerly branch of Little River. A permanent pool of 200 acres is being maintained and a recreational area with free use of all facilities has been developed by the engineers this past summer.

Finishing touches to the $5,300,000 Hodges Village Dam and Reservoir, companion project to Buffumville, are now being made. Operation tests on the sluice gates and a general cleanup of the area will complete the work.

Whenever flooding occurs, the waters of the French River will be controlled

behind the 55-foot dam and dikes for about 3 miles.

The East Brimfield Dam and Reservoir, another Thames Basin project, is designed to provide major reductions in flood damages at Southbridge. It is a $7,400,000 project which will occupy a 2,270-acre basin in Sturbridge, Brimfield, and Holland.

A permanent pool, suitable for recreational activities, will be located immediately above the dam. Storage of water in the lower areas of the reservoir will occur rather frequently, but complete filling of the reservoir will not occur except during major floods.

Some 2,840 acres of land, including about 225 dwellings, are required for East Brimfield. This requirement—and other Federal landtaking for flood control in our area—has meant great sacrifices on the part of the people and the communities involved, as often as not not even indirect beneficiaries of flood control, and it certainly is a tribute to these good people that they have been willing to sacrifice needed land, some of it improved, for the greater benefit of those communities below who have suffered from previous floods.

It is understandable that there should be reluctance to leave these homes, some of which have been in the family for generations, and every effort is being made by the Army engineers to ease this trying period of transition.

Additional progress was made this year, Mr. Speaker, with the completion of the Ware local protection project. This was one of the first projects authorized by the Bush-McCormack Act, speeding small flood control projects up to $400,000 in Federal cost without specific congressional authorization. In July of this year, rains totaling 3.21 inches fell on Ware, raising the level of the Ware River to an unusually high level for the summer months.

Despite the heavy July rainfall, there was no serious flooding. The Barre Falls Dam closed its flood gates and waters were impounded, thus alleviating the heavy flow of water downstream on the Ware River. According to Ware Water Department Superintendent James W. Reilly, the local protection project at Ware helped to prevent flooding, largely as the result of dredging made possible by the Bush-McCormack Act.

Some considerable concern was felt at Ware about the final cost of the Ware local protection project since the Federal Government could only allot $400,000 for the needed work.

It now appears that Ware will be billed only about $2,500 for this work, recent estimates of the final cost having been set at $402,500. Original estimates of Ware's share were set as high as $20,000.

There remains work to be done, Mr. Speaker, because there is a continuing need for solutions to the water disposal problems of all parts of our great Nation. Changing land uses have brought new flood prevention requirements, but the continued cooperation of the State and Federal Governments is bringing about concrete remedies to many troublesome areas.

In the Blackstone Basin, surveys are continuing under the $95,000 voted by Congress in varying amounts since the 1955 floods. This amount includes $20,000 voted this year to continue the study of the Blackstone Valley's flood problems.

Thus far, similar studies in the Chicopee Basin carried out by the Army Engineers with funds for the Northeast flood survey have shown the need for local protective work at Three Rivers above Palmer, local protection at West Warren on the Quabaug and local protection on Conant Brook at Monson, the latter involving a dam and reservoir. Further definite engineer recommendations are awaited by the Congress for legislative action.

In addition, flood protection projects are contemplated under the watershed protection program of the U.S. Department of Agriculture through the SUASCO project on the Sudbury, Assabet, and Concord Rivers in the Merrimack Basin and Upper Quabaug project in the Chicopee Basin.

In addition, the Army Engineers are giving special attention to the Merrimack Basin under the Northeast flood study, with particular attention to the Nashua River in the Fitchburg-Leominster area. This summer the Engineers initiated a special study of the Merrimack Basin and consideration is being given to all possible reservoirs which might increase the degree of protection provided by the existing channel improvement project on the Nashua in Fitchburg.

As it can be seen, Mr. Speaker, the central Massachusetts are is moving forward in harnessing the floodwaters which have spread so much destruction in the past. The advancement and progress of our flood control program to date make that much easier the no less vital tasks which lie ahead.

And so again, Mr. Speaker, in behalf of my esteemed colleagues, all our people and myself, I express heartfelt thanks to all those in and out of this great Congress who so effectively helped us in our hour of desperate need and in safeguarding the future flood protection of our district, State, and area.

Commissioner Hesburgh on Civil Rights

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. DWYER. Mr. Speaker, in all the publicity attendant upon the release of the Civil Rights Commission's report, too little attention has been paid to one of the most remarkable statements on this fundamental matter which I have ever seen.

I refer to the statement of his individual views filed by the Reverend Theodore M. Hesburgh, C. S. C., a member of the Commission. Those who are familiar with the career and accomplishments of Father Hesburgh, as president of the University of Notre Dame and in many other positions of heavy public and private responsibility, would be led to expect a statement of high quality.

Their expectations, Mr. Speaker, would be completely fulfilled. As a masterful summary of the philosophical and practical considerations underlying the Commission's report on civil rights, and as a testament to a person's deepest convictions about the rights and dignity accruing to every human being, this statement deserves the widest possible attention. Under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT BY COMMISSIONER THEODORE M. HESBURGH

I should like to explain my personal position on the basic issues of this report and especially on those recommendations which were not unanimous. May I say at once how deeply I respect the persons, the convictions, and the judgments of all my distinguished fellow Commissioners, and may I frankly disavow for myself any personal claim to ultimate wisdom in these difficult questions of prudential judgment. One can only, in good conscience, do his honest best.

In appraising admittedly thorny situations in the various areas of civil rights examined by the Commission, one must be guided by his own general philosophical and theological convictions. I believe that civil rights were not created, but only recognized and formulated, by our Federal and State Constitutions and charters. Civil rights are important corollaries of the great proposition, at the heart of western civilization, that every human person is a res sacra, a sacred reality, and as such is entitled to the opportunity of fulfilling those great human potentials with which God has endowed every man. Without this spiritual and moral concept of the nature and destiny of man, our political philosophy is meaningless, bankrupt, and defenseless in the face of the opposite philosophy of man that stalks the world today.

I begin then with the proposition so well enunciated in our Declaration of Independence, that all men are indeed created equal. Equality, however, is not the same as egalitarianism, for all men are not created with equal intelligence, equal ambition, equal talent. But all men are entitled to an equal opportunity to exercise and develop whatever intelligence, ambition, and talent they possess. Ultimately, the full flowering of the democratic process depends upon the full development of all the various human talents existing in the Nation.

As I read American history, the unfolding story of our Nation centers about the often agonizing attempt to achieve the fullness of human dignity through the ever-widening application of that equal opportunity which has best characterized America in the family of nations. Deep and often dark emotions have been aroused by the discussion of integration and segregation, but anyone who really understands the majesty of the American dream cannot fail to see in our history that equality of opportunity for all men has been our most valid response to the inherent and God-given dignity of every human person.

I firmly believe that if all Americans are given the equal opportunity to be educated to the full extent of their human talents, equal opportunity to work to the fullness of their potential contribution to our society, equal opportunity at least to live in decent housing and in wholesome neighborhoods consonant with their basic human dignity,

and, moreover, equal access to housing and neighborhoods as befits their means and social development, and, finally, equal opportunity to participate in the body politic through the free and universal exercise of the franchise, then the problem of civil rights for all Americans will eventually solve itself, to the end that America, and the human dignity of all Americans, will be the richer for this solution.

The growth of equal opportunity on this fourfold front of voting, education, work, and housing is the full and unavoidable price of completely eliminating second class citizenship across the face of America. The civil rights problem differs, of course, from place to place, but it would be difficult, if not impossible, to find any section of America where all of these equal opportunities flourish in their fullness. And there are localities in America today where not one of these four opportunities exists for nonwhite Americans.

Several myths impede a reasonable approach to a solution. Perhaps the most basic is the myth of white superiority: that any white man is simply by reason of his being white, superior to any nonwhite man. Apart from the philosophical, theological, and scientific absurdity of this myth, it is best disproved in practice. Deprive any white man, however talented and ambitious, of the equal opportunity to become educated; to work as befits his education, ambition, and talent; to live in a decent house and neighborhood; deprive him of the opportunity of participating in the political process; continue this total deprivation for his children and his children's children, and then see how superior he, his children, and his grandchildren are. On the other hand, open up such equal opportunities to nonwhites and their children, and see how many of them will begin to excel. This is not a distant speculation. It is already happening here and abroad.

A lesser corollary of this myth of white superiority is to say that the nonwhites are not ready for equal opportunity. Yet, if nonwhites are to be eternally denied the opportunity, they will never be ready, and the problem becomes eternally insoluble. There must be a beginning to every solution.

No full-fledged solution is possible unless the fourfold equal opportunity mentioned above is considered to be indivisible. If the nonwhite American is granted one equal opportunity, say, education, and then denied the choice of a job and a house commensurate with his education and achievement, the inner core of his motivation for self-improvement is destroyed. If he achieves education, professional status, and the vote—three equal opportunities possible in some sections of America—and still is constrained from living where his heart desires and his means and achievement permit, then the stigma of second-class citizenship is still visited upon him and his family. I see no answer to this total problem unless human judgments and evaluations be made by reason of the quality, not the pigmentation, of the human person.

No one is so naive as to imagine the complete and overnight realization of equal opportunity on this fourfold front for all Americans. But, on the other hand, no one who really believes in full-fledged citizenship for all Americans should delude himself today regarding the true personal price involved in achieving it. The price will be nothing short of heroism in certain areas. Because of the deep emotional overtones of this problem, and its existence in every phase of American life, no American can escape taking a stand on civil rights. No American can really disengage himself from this problem. Each of us must choose to deepen the anguish of the problem, by silence and passivity, if nothing more, or must take a forthright stand on principles that give some hope of eventual solution.

There have been and will be reasonable differences of opinion regarding the nature and timing of practical solutions. But prudence, patience, good will, honesty, and compassion must be among the ingredients of all hopeful solutions. I pray that our differences of opinion may not divide us; that the basic principles of human dignity may be asserted by all; and that respect for the sacred reality of every human person may be central to all solutions.

Now for the specifics. The Commission's voting recommendation No. 5, for the Presidential appointment of temporary Federal registrars in cases of voting discrimination, is an attempt to assure qualified voters of equal opportunity to vote in the next Federal election, an opportunity now denied many. I have gone beyond this, together with Chairman Hannah and Commissioner Johnson, to propose an amendment to the Constitution that as a long-range solution would clearly and simply, assure all Americans the equal opportunity of free and universal suffrage in all elections. The American dream would thus at last become a political reality, and America could then validly proclaim to all the world that we have full faith in the democratic process, without equivocation, chicanery, or subterfuge. To me, this is the final answer to the problems we have studied in the field of voting.

In education, again I have associated myself with Chairman Hannah and Commissioner Johnson in calling for consistency in the three powers of the Federal Government. The judiciary has outlawed compulsory segregation, and yet legislative programs and executive agencies continue to grant millions to institutions of higher learning which in practice disregard the supreme law of the land. Solutions are admittedly more difficult and complicated in the area of elementary and secondary education. But higher education is a mature and sophisticated domain, the birthplace of our future leaders, the alma mater that is ready, I believe, as the Armed Forces were, to grant immediate full opportunity to all Americans who qualify to enter this domain. I favor equal opportunity to obtain Federal educational subsidies that strengthen all our institutions of higher education in this country, both public and private. But the reception of these public funds should be conditioned by the equal opportunity of all the public to enjoy the educational benefits they provide, insofar as any American is qualified educationally, not racially, to enjoy them. Any other arrangement allows the various branches of Government to work at cross-purposes, and places an undue burden on the judiciary alone. Moreover, I am personally convinced that the intelligent and mature leaders of higher education, administrations and faculties alike, are ready for this forthright admission of equal opportunity in this most sensitive segment of our Nation—our colleges and universities, both public and private.

Finally, in the field of housing, perhaps the most difficult of all areas, I have associated myself with Commissioner Johnson in several conclusions beyond those unanimously adopted by the Commission. Again, the use of public money for the benefit of all, equal oportunity, is the cardinal principle. How to do this practically, in a world of admitted prejudice, is the nub of the problem. It does not appear revolutionary to insist that, when the most needy members of our society—those with the presently poorest housing and the lowest income—are displaced by federally assisted slum clearance, urban redevelopment, or new highway programs, they be given opportunity to find decent, safe, and sanitary housing elsewhere, within their means, and not be dumped into already overcrowded racial ghettos. It does not seem inconsistent with the testimony we have heard to suggest that local and State laws might lead the way in those communities that pride themselves on equal opportunity. However, it would seem inconsistent with equal opportunity if Federal funds are used in a discriminatory manner, either to confine nowhite Americans to a certain area of the city, generally less desirable, or to circumscribe Federal assistance in new private housing almost entirely at the whim of builders for white Americans. Also, it seems unfair that federally assisted hospitals and airports have different facilities for different classes of American citizens.

While Federal laws and policies may and should illuminate the ideal of equal civil rights for all Americans, it is fairly obvious, from the varying and nationwide dimensions of the problem, that only State and local leadership, wise and courageous, patient, compassionate, and understanding, will eventually bring the ideal to greater reality throughout our Nation. It is in this sense that legislation alone will not solve the problem, and that ultimate solutions must come, as the President has said, from individual minds and hearts. But law, defining the goals and standards of the community, is itself one of the great changers of minds and hearts. In this democracy, law points the way toward ultimate freedom and justice for all Americans, everywhere in our land. Equality under the law has long been a cherished American ideal. May it ever become, more and more, a proud American reality.

Report to the 11th Congressional District of Michigan

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include the following report to my constituents, the people of the 11th Congressional District of Michigan:

YOUR WASHINGTON OFFICE REPORT

(By VICTOR A. KNOX, Member of Congress)

NATIONAL DEFENSE AND INTERNAL SECURITY

History teaches us that the way to preserve the peace of the world is to have a strong defense, and for our national defense program Congress has appropriated over $39 billion for fiscal year 1960. Advancements in the field of space exploration and rocketry is deemed essential if we are to remain a preeminent power; for such space purposes $485 million was appropriated.

The Air Force Air Guard at Alpena County Airport will receive $105,000 for operational facilities. Kincheloe Air Force Base at Kinross, Mich. will receive $1,006,000 for troop housing, training, maintenance, and supply facilities.

GOVERNMENT AND REORGANIZATION

The 86th Congress provided five rows of six and four rows of five stars in Old Glory with the addition of Hawaii as the 50th State.

AGRICULTURE

I regret to report that this session of the Congress failed to enact any constructure legislation for the farmer. President Eisenhower vetoed a grossly inequitable wheat bill and no leadership effort has been made to bring this up for recensideration or to act on an omnibus farm bill. Many abuses exist in our farm program which should be

corrected, and I fervently hope this will be accomplished in the 2d session of the 86th Congress.

NATURAL RESOURCES

Of great importance to the people of Michigan was legislation that would have granted diversion of water from Lake Michigan into the Chicago drainage canal. This legislation, which I have always opposed, passed the House; however, on September 2, after many days of debate, the Senate referred the bill to the Foreign Relations Committee for further study.

Contained in the public works appropriation bill that had been vetoed twice by the President, but finally approved on September 10, are funds for the following projects: Construction at the Grand Marais Harbor, $292,500; planning for the Hammond Bay Harbor, $19,500; improvements to the South Canal of the St. Mary's River, $2,479,425; and $357,825 for planning the new Poe lock. I believe you would be interested in knowing that from July 1, 1952 to June 30, 1959 some $38,283,000 has been spent in the 11th Congressional District for civil works projects, not including funds that are needed for normal operations and maintenance of existing projects.

HEALTH AND WELFARE

Effective July 1, 1959, those eligible for benefits under the Railroad Retirement Act received a 10 percent increase.

Effective July 1, 1960, the pensions received by the veterans of World War I, World War II, and the Korean conflict, and their dependents will be increased. Under the provisions of this law the widows and orphans of the veterans will be eligible for pensions on the same basis as those dependents of World War I. This law will provide a 10 percent increase or more for 854,406 individuals who are now on the pension rolls, and provide benefits for an additional 72,039 cases that are not now eligible. I believe it is interesting to note that this year the total number of pension cases is expected to reach about 1,331,824 and by 1970 it is expected to be 2 million. The dollar cost of all pensions paid so far for all wars and conflicts in which the United States has engaged totaled $20,293,751,000 on June 30, 1959.

The Congress provided $100 million for direct housing loans to veterans raising the interest rate ceiling from 4¾ percent to 5½ percent, so as to assure availability of funds.

The special school milk program for 1959 was increased by $3 million, and the authorization for this program for 1960 will be $85 million and $90 million for 1961.

After two Presidential vetoes acceptable housing legislation was finally enacted. This provides for the spending of some $1 billion; earmarking $650 million for urban renewal loans; $179 million for public housing; and $250 million for loans for college housing.

NATIONAL ECONOMY

After considerable difficulty in reaching agreement on providing funds to finance the Federal aid highway program, Congress enacted legislation that provides a 1 cent a gallon increase in the Federal motor fuels taxes effective October 1, 1959 to July 1, 1691. With this motor fuels revenue and 5 percentage points of the existing manufacturer's excise tax on passenger cars and 5 percentage points on the existing excise tax on automobile parts and accessories beginning July 1, 1961, and ending June 30, 1964, funds should be available to maintain this program on schedule.

The 1st session of the 86th Congress made history in adopting labor reform legislation. I do not believe we can claim that this action was either a personal victory for the President nor for the Republicans and the conservative Democrats who supported the provisons of the Landrum-Griffin bill. It was instead a victory for the working people of our country and the pubilc. The enactment of such legislation was an example of the people asserting their rights when sufficiently aroused. The powerful and well-financed labor bosses could not defeat the demand of the people that legislation be passed which would drive racketeering and corruption from the ranks of organized labor, and that the rights of the individual union members be protected. The new law does these things—it contains a bill of rights with enforcement provisions; then it adds protection to the public as well through the curbing of secondary boycotts, organization and recognition picketing, and in settling the no man's land between State and Federal jurisdictions.

ADDITIONAL BENEFITS RECEIVED IN THE DISTRICT

In 1959 new post offices were dedicated at Mackinaw City, Mackinac Island, and Ellsworth. New facilities will also be provided in McMillan and Newberry. An extensive repair program is in progress at Menominee.

The sewage treatment plant at Escanaba received $58,200 of Federal funds; the sewer pumping station and sewage treatment plant at Sault Ste. Marie received $250,000; the Presque Isle Electric Co-op received a loan of $50,000 and the Cloverland Co-op received $2,650,000; Cheboygan received a loan in the amount of $620,000 for 40 low rent family dwellings.

The Office of Civil Defense and Mobilization has approved Gaylord as the location and placement of Civil Defense Emergency Hospital. The equipment that will be furnished by the Federal Government consists of a complete hospital unit of 200 beds and includes everything from bandages and X-ray machines to equipment for 3 operating rooms.

From September 28 to October 15 I will make a tour of the 16 counties in the 11th Congressional District. It is my hope that my travels through the district will give me opportunity to greet you personally and obtain the benefit of your views on important national issues as well as to be of service to you with respect to any problems you may have involving Federal affairs.

Because of my position as a ranking member of the Committee on Ways and Means I have been designated by the Speaker of the House of Representatives to be one of two House Members attending the meeting of the contracting parties to the General Agreement on Tariffs and Trade to be held in Tokyo, Japan, beginning October 26; therefore, it will be necessary that I return to Washington after the district tour in order to leave on this important assignment. During the meetings in Japan I will study steps that may be taken by our Government and business community to protect the jobs of our citizens against unfair import competition as well as to expand our export markets.

From November 18 to December 16 the Committee on Ways and Means will be holding panel discussions on the various provisions of the Internal Revenue Code, and I will have to be in Washington for these sessions. My Washington office will be open during the adjournment period of the Congress to handle all matters pertaining to the 11th District.

The thousands of letters that I have received during this session from the district were most welcome. It is good to have the views of the people back home, either for or against a legislative proposal, or on any other problems in which you are interested.

Columbus Day, a National Holiday

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. PHILBIN. Mr. Speaker, one of the outstanding Members of the House, the distinguished gentleman from New Jersey, Congressman PETER W. RODINO, JR., has introduced H.R. 418 which seeks to declare October 12, Columbus Day, a legal holiday.

I want to congratulate Congressman RODINO for the great ability, zeal, and enthusiasm with which he has pursued the laudable objective of making Columbus Day a national holiday. His efforts are an appropriate accompaniment to his valuable, effective work in many important fields with which the Congress is concerned. Congressman RODINO's service in the Congress has reflected great ability, dedication, and unswerving purpose in serving his district and the Nation.

The designation of Columbus Day as a national holiday has already been too long delayed. I hope that the Congress at an early date will give suitable attention to Congressman RODINO's bill, H.R. 418, and effect its enactment.

At this time I will not elaborate on the many reasons which suggest the propriety of favorable action on this measure. Christopher Columbus was one of the great men of history, an intrepid explorer who, with extreme courage faced untold dangers to discover a great new continent and establish the first settlements here which have led to the fabulous, historic developments of the Americas, and particularly of our own great, beautiful Nation.

Many States, including my own State of Massachusetts, have recognized Columbus Day and there is every reason why the Nation should give fitting recognition to the memory and heroic exploits of a great son of Italy whose achievements made possible the establishment of the greatest government of all times and many other governments and nations of the Western Hemisphere which share with us the common legacy of democracy, freedom, and justice.

Americans of Italian blood and descent, who have made such great contributions to America, and all true lovers of liberty, are interested in H.R. 418 and I hope that it will be passed without further delay, and am proud to pledge myself to that most appropriate objective.

Government Financing

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, from time to time I have asked the Director of the Bureau of the Budget to make a careful evaluation of estimates, appropriations, new obligation authority, and new obligation authority outside of the appropriation process—commonly referred to as "backdoor" financing.

In addition I have requested complete data on all other measures which might affect the 1960 budget and also future

years. I am therefore submitting, and ask unanimous consent, for inclusion in the RECORD on the next to the back page of the RECORD certain tables relating to these matters. This I believe will bring this entire physical matter up to date.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE I.—*Adjustment to appropriation bills*

	President's budget estimates	Final amount approved	Increase or decrease compared to President's budget estimates		President's budget estimates	Final amount approved	Increase or decrease compared to President's budget estimates
Total, all bills (CONGRESSIONAL RECORD of Sept. 15, 1959)	$74,859,006,445	$72,977,598,352	−$1,881,410,093	Decreases, etc.—Continued			
Decreases which are actually postponements to another year or reductions which must be restored for uncontrollable items:				Liquidation of contract authority, prior-year deficiencies, etc			$48,300,000
Development Loan Fund, 1961 requirements			500,000,000	Reductions in uncontrollable items: Veterans' compensation, pensions, etc			20,962,500
Defense production expansion—restoration of capital			179,285,072	Actual decrease			1,032,862,521
Commodity Credit Corporation—restoration of capital			100,000,000				

TABLE II.—*New obligational authority provided outside the appropriation process (so-called back-door financing)*

Bill No.	Title	President's request	Amount agreed to by conferees	Increase or decrease made by the Congress	Bill No.	Title	President's request	Amount agreed to by conferees	Increase or decrease made by the Congress
H.R. 4452 S. 1094	Bretton Woods Agreement Act	$4,550,000,000	$4,550,000,000		H.R. 3460	Tennessee Valley Authority	$750,000,000	$750,000,000	
S. 2654	Housing Act of 1959, 1959-61	800,000,000	925,000,000	+$125,000,000		Total, 1959-61	6,220,000,000	6,451,000,000	$+231,000,000
S. 1 H.R. 1011	Aid to Airports, 1960-61	120,000,000	126,000,000	+6,000,000					
H.R. 2256	Veterans Housing Loan Act		100,000,000	+100,000,000					

TABLE III.—*Other measures affecting the budget in 1960 and future years*

A. AUTHORIZATION IN APPROPRIATION ACTS

Bill No.	Title	President's requests	Amount agreed to by conferees	Increases or decreases made by the Congress	Remarks
H.R. 7349	Commerce appropriation bill—increase in merchant marine subsidized voyages.		$1,300,000,000	+$1,300,000,000	For a 20-year period.
H.R. 7175	Agriculture appropriation bill:				
	Agricultural conservation program	$100,000,000	250,000,000	+150,000,000	Authorization for 1960 crop year, requiring appropriations in fiscal year 1961.
	Farmers Home Administration—loan authorization.	388,000,000	421,000,000	+33,000,000	
H.R. 7509	Public works appropriation bill—public works starts		751,000,000	+751,000,000	Cost to complete after 1960.
H.R. 5676	District of Columbia appropriation bill—loan authorization.	35,400,000	34,300,000	−1,100,000	

B. SUBSTANTIVE LEGISLATION

H.R. 7060	Veterans pension bill		$9,300,000,000	+$9,300,000,000	Estimated costs for 40-year period over existing law. Administration bill (H.R. 6432) proposed savings below existing law of $47,862,000,000 over the 40-year period.
S. 2654	Housing Act of 1959:				
	Public housing—annual contributions		719,000,000	+719,000,000	For a 40-year period.
	All other authorizations for appropriations	$10,000,000	75,000,000	+65,000,000	
S. 1289	Extension of special program		11,000,000	+11,000,000	For a 2-year period.
S. 2162	Federal employees health benefits	80,000,000	110,000,000	+30,000,000	1st year costs.

C. FAILURE TO ENACT PRESIDENT'S PROPOSALS

Postal rates	−$350,000,000		+$350,000,000	Proposed increased in postal rates.
Aviation fuel tax and user charges	−140,000,000		+140,000,000	Proposed increase in receipts for full year.
Tax adjustments	−50,000,000		+50,000,000	Do.
Total (net)	73,400,000	$12,971,300,000	[1]12,897,900,000	

[1] The food stamp program (H.R. 8609), which is nonmandatory, would add $220,000,000 to this total for a 2-year period (1960-62). The total excludes pending legislation passed by one or both Houses now awaiting further congressional action. In future fiscal years these bills would cost several billion dollars beyond the President's requests. They include peacetime ex-servicemen's readjustment benefits (S. 1138), youth conservation corps (S. 812), international medica research (S.J. Res. 41), grants to States for educational television (S. 12), area redevelopment (S. 722), and water pollution (H.R. 3610).

Food Stamp Plan Makes Sense Both From Economic and Humanitarian Standpoints

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. OLIVER. Mr. Speaker, one of the most monumental problems facing this country today is the almost inconceivable amount of surplus foods stored by the Federal Government as a byproduct of our overall farm program.

We are indeed in a dilemma. Our legislative program, combined with an extremely efficient agricultural economy, has produced the most bountiful crop in the history of mankind. The basic economic law of supply and demand dictates the unwisdom of dumping our surplus on the world market because of the resulting chaotic effect on the economies of the Nation and the world. On the other hand, we have millions of undernourished Americans to whom survival itself is most precarious. Is it not ironic that so many are starving in the midst of plenty?

In my opinion, Congress has provided the tools which, while not solving the problem in its entirety, will certainly be a forward and constructive step toward providing food for the needy at home. I refer to the recently enacted food stamp plan. If the President would follow the intent of Congress and place this plan into effect, the now idle surpluses would be reduced and many of the unfortunate citizens would be given the means to supplement their meager diets.

Beyond question, a healthy America is essential to a strong America. In this connection, I appealed to the President to use the tools given him by this Congress and put into effect pilot food stamp projects in distressed areas of our country.

My letter in this regard follows:

Hon. DWIGHT D. EISENHOWER,
The President of the United States,
Washington, D.C.:

Please accept my humble apology for burdening you with additional problems, especially when you are already overburdened with the details of the Khrushchev visit and talks in the interest of all mankind.

But, the daily problems of existence of many unfortunate constituents of mine weigh heavily upon me, also. In the Biddeford-Sanford area of the First Congressional District of Maine there has been for several continuing years, because of economic depression, a condition of surplus and distressed labor which persists even in these times of relative job security in other parts of our country.

Consequently, those of us who represent this district, and that, of course, includes yourself through yours, the highest office of the land, have the direct responsibility to protect the individual welfare of these good citizens who, through no fault of their own, need the support of their fellow Americans in order that they and their families may have something more than a mere existence. They, too, are a part of this great Nation. They have contributed to its growth and they have made it possible over the years, through their conscientious work, for many of the financially secure to achieve the material security which they are now enjoying. But, Mr. President, hundreds and thousands of these most respectable constituents of yours and mine are existing on standards of living far below the levels necessary for self-respect and dignity. Of these facts you must be aware, even though your hours are filled to overflowing with the details of the responsibilities of American and world leadership which bear down so heavily upon your shoulders.

Despite these burdens, none of us in national office today can shrink especially because of ideological reasons from the responsibility of meeting the minimum needs, to say the least, of individual citizens and family groups who need help. Adequate food supplies, with some consideration, at least, for a decently balanced diet, seem to me to be a "must" in our consideration for these good, but needy, people of our own country.

To meet this minimum need the Congress has enacted a permissive food stamp program and, as you know, the language of the bill declared it to be the intent and purpose of the Congress that such a "food-for-the-needy distribution plan with an annual limitation of $250 million should be initiated at your discretion which, in my opinion, should be made applicable in several experimental localities where chronic unemployment has caused these conditions of poverty and undernourishment to develop and persist.

It is with regret that I have noted newspaper comment attributed to you to the effect that you do not intend to honor this intent of Congress. The reasons stated are to the effect that the Federal Government is already contributing to a disproportionate degree to the subsistence needs of these needy people, as well as that the stamp plan would only replace existing food distribution programs by Federal agencies. Of course, you have never stood in one of these food lines and observed the inadequacies and the indecencies of the present distribution plan under the current surplus commodities distribution program. I wonder if you know that butter was recently discontinued by Secretary Benson although the only remaining fat in this unbalanced food distribution program. Cheese was formerly included, and gave these worthy Americans some variety from the drab items to which they are now doomed by your Secretary of Agriculture, who refuses to use funds under section 32 of Customs receipts, where he has broad authority, if he was only ideologically minded to use them.

When you say, Mr. President, that a disproportionate load would be borne by the Federal Government if these very meager provisions of the food stamp plan were implemented, I wonder if you are mindful of the general welfare clause of our Constitution, which obligates us to treat all Americans with the dignity and justice to which they are entitled.

You have never hesitated to urge upon us the need to shoulder far-reaching obligations for the undernourished and the underprivileged of all the foreign areas of the world. I realize that you are a deeply religious and Christian man. I know that Secretary Benson is the same. But, I respectfully submit that neither you nor Mr. Benson are practicing what you preach. If we are our brother's keeper, and I believe that we are, then surely, we should never hesitate to see to it that our brother gets some small part of the fat that this great and wealthy Nation has and will continue to accumulate. It occurs to me that the Secretary may be touring Soviet Russia and other foreign areas looking for needy brothers to "keep," while consciously overlooking the undernourished of America.

In closing, may I respectfully remind you that Ambasasdor Lodge, during the past few days, brought Premier Khrushchev up to date on the type of capitalism which we enjoy, and, in correcting the Premier, our able Ambassador told him that we practice humanitarian principles toward all our people, stressing our social-welfare laws. Your expressed intention to bypass the intent of Congress and deny to our people the humanitarian justice implicit in the food stamp plan certainly is not in keeping with the words of Mr. Lodge.

I urge you, Mr. President, to apply the provisions of this stamp plan, and to name the Biddeford-Sanford area of Maine as a pilot area for this program. My worthy, but needy, people are looking to you for this Christian consideration.

Most respectfully yours,

JAMES C. OLIVER,
Member of Congress.

Summary of the Record and Accomplishments of the Committee on Ways and Means During the 1st Session of the 86th Congress

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MILLS. Mr. Speaker, in accordance with the usual custom of the chairman of the Committee on Ways and Means, and also in specific response to the request of our distinguished majority leader, the Honorable JOHN W. MCCORMACK, to committee chairmen, I am pleased to take this means and opportunity to summarize the record and accomplishments of the Committee on Ways and Means during the 1st session of the 86th Congress.

At the outset, I would like to commend the members of the Committee on Ways and Means for their hard work, their devotion of long hours and days and weeks to our committee activity, and to the manner in which they have diligently carried out their responsibilities as legislators and as members of the committee. My colleagues on the Committee on Ways and Means have served ably and conscientiously, and during the course of this session of the 86th Congress they have initiated and acted upon legislation which is meritorious and which is greatly in the public interest.

During the session of the 86th Congress which has just drawn to a close, the committee has acted upon legislation touching practically every field of its broad jurisdiction. As will be recalled, the Committee on Ways and Means has the primary responsibility for considering legislation relating to Federal revenue, our Federal social-security laws and programs, our customs and tariff laws and programs including reciprocal trade agreements, measures relating to the management of the public debt and deposit of public moneys generally, renegotiation, legislation to control the trafficking in narcotics and narcotic drugs, and certain other miscellaneous categories of legislation which are minor

but nonetheless important areas of activity. It is unnecessary to emphasize that the consideration of legislation touching upon any of these fields calls for the highest degree of responsibility, because these areas of legislative activity have an immediate effect upon the lives of all of our citizens and the economy of our Nation.

The legislation which has been favorably acted upon is sound, responsible, and beneficial to the American people. Of course, as is the usual case, there were some measures reported on which there was not unanimous agreement, just as there were some bills reported which I voted against. However, that is the way our committee system works. Customarily, due to the complexities of the legislative measures which come before the Committee on Ways and Means, it is necessary for the committee to devote a considerable amount of time to an intensive exploration of the issues involved and an evaluation of the ramifications which any given proposal may have upon the economy of the Nation prior to taking action. It should be borne in mind, therefore, that the 1st session of the 86th Congress has also been a period of establishing the necessary detailed groundwork in preparation for further activity which will transpire during the second session of this Congress.

Before reviewing in detail the legislation which was favorably reported by the committee during this first session at this point I will present statistics on the committee activity which may be of interest.

From early January of this year until the adjournment of the first session, the full Committee on Ways and Means met in executive session 91 times, covering approximately 75 days, many of which days consisted of both morning and afternoon sessions. In addition, the committee met 40 days in the conduct of public hearings on subjects falling within its jurisdiction. The hearings of the full committee are contained in some 10 volumes covering 5,200 pages of testimony. During the course of these public hearings approximately 450 witnesses personally appeared before the committee to present testimony. In addition, the hearings contain statements and expressions of views of hundreds of additional individuals and organizations on the subjects under consideration.

There follows a complete table which shows all the subjects upon which public hearings were conducted by the committee, along with the number of witnesses who actually appeared personally before the committee and the number of days devoted to each such hearing:

TABLE 1.—*Public hearings, Committee on Ways and Means, 1st sess., 86th Cong.*

	Dates held	Number of—	
		Days	Witnesses
Advisory group recommendations on chs. C, J, and K of the Internal Revenue Code	Feb 24, 25, 26, 27, Mar. 2, 3, and 4, 1959	7	41
Mineral treatment processes for percentage depletion purposes	Mar. 5, 6, 9, 10, and 11, 1959	5	46
Unemployment compensation	Apr. 7, 8, 9, 10, 13, 14, 15, and 16, 1959	8	95
Extension of the Renegotiation Act	Apr. 27, 28, and 29, 1959	3	19
Public debt and interest rate ceiling on bonds	June 10, 11, and 12, 1959	3	16
Foreign Investment Incentive Act (H.R. 5)	July 7, 8, and 9, 1959	3	52
Children's estate tax deduction (H.R. 7924)	July 10, 1959	1	8
Hospital, nursing home, and surgical benefits for beneficiaries (H.R. 4700)	July 13, 14, 15, 16, and 17, 1959	5	91
Taxation of exchanges and distributions pursuant to antitrust decrees (H.R. 8126, 8231)	July 20 and 21, 1959	2	12
Highway trust fund and Federal-aid highway financing program	July 22, 23, and 24, 1959	3	70
Total		40	450

There were referred to the Committee on Ways and Means during the session just concluded a total of 1,606 public bills and resolutions which constitutes approximately 20 percent of all the public bills and resolutions introduced in the House of Representatives during this period. The committee favorably reported to the House of Representatives a total of 56 bills, of which 51 have passed the House of Representatives, 25 have passed the Senate, and 25 have been enacted into public law. These reported measures, as has been pointed out earlier, cover all areas of the committee's jurisdiction. There follow tables which show the foregoing in more detail, including a breakdown of the measures both referred to the committee and reported by the committee:

TABLE 2.—*Legislation referred to Committee on Ways and Means, 86th Cong., 1st sess.*

	Total number of tax bills	Total number of tariff bills	Total number of miscellaneous bills	Total number of social security bills	Total
House bills	943	189	55	385	1,572
House joint resolutions	3	2	1	1	7
House concurrent resolutions	1	0	21	0	22
House resolutions	1	1	2	0	4
Senate bills	0	0	1	0	1
Total	948	192	80	386	1,606

TABLE 3.—*Statistics on status of bills reported by Committee on Ways and Means, 86th Congress, 1st sess.*

	Social security	Tariff	Tax	Miscellaneous	Total
Bills reported to House	4	16	32	4	56
Bills passed House	4	14	28	5	51
Bills reported to Senate	2	9	10	4	25
Bills passed Senate	2	9	10	4	25
Bills enacted into law	2	9	10	4	25

ESTABLISHMENT OF SUBCOMMITTEES

The Committee on Ways and Means, under the Rules of the House of Representatives, is charged with maintaining continuous watchfulness over the administration of the laws within the jurisdiction of the committee by the administrative agencies concerned. In order to more effectively carry out its responsibilities in this regard the committee in the early part of this first session established three subcommittees as follows: Subcommittee on Administration of the Internal Revenue Laws; Subcommittee on the Administration of Foreign Trade Laws and Policy; and Subcommittee on Administration of the Social Security Laws. These subcommittees were authorized and directed to maintain watchfulness over the administration of the existing laws within their respective jurisdictions and to take such actions as were appropriate in the premises to advise the full committee with regard thereto. During the latter part of the session just concluded the committee also specifically charged its Subcommittee on the Administration of the Internal Revenue Laws to make certain studies with respect to the administration of the laws relating to the Federal highway trust fund.

Due to the heavy schedule of the full committee, the subcommittees generally deferred their hearing activities until after adjournment, at which time it is anticipated that each area involved will receive careful and intensive consideration.

The membership of each of the subcommittees is as follows:

Subcommittee on Administration of the Internal Revenue Laws: Hon. WILBUR D. MILLS, Democrat, of Arkansas, chairman; Hon THOMAS J. O'BRIEN, Democrat, of Illinois; Hon. EUGENE J. KEOGH, Democrat, of New York; Hon. FRANK IKARD, Democrat, of Texas; Hon. RICHARD M. SIMPSON, Republican, of Pennsylvania; Hon. NOAH M. MASON, Republican, of Illinois; Hon. HOWARD H. BAKER, Republican, of Tennessee.

Subcommittee on the Administration of Foreign Trade Laws and Policy: Hon. HALE BOGGS, Democrat, of Louisiana, chairman; Hon. CECIL R. KING, Democrat, of California; Hon. FRANK M. KARSTEN, Democrat, of Missouri; Hon. THADDEUS M. MACHROWICZ, Democrat of Michigan; Hon. JAMES B. FRAZIER, Jr.,

Democrat, of Tennessee; Hon. JOHN W. BYRNES, Republican, of Wisconsin; Hon. VICTOR A. KNOX, Republican, of Michigan; Hon. JAMES B. UTT, Republican, of California; Hon. BRUCE ALGER, Republican, of Texas.

Subcommittee on Administration of the Social Security Laws: Hon. BURR P. HARRISON, Democrat, of Virginia, chairman; Hon. A. S. HERLONG, JR., Democrat, of Florida; Hon. WILLIAM J. GREEN, JR., Democrat, of Pennsylvania; Hon. JOHN C. WATTS, Democrat, of Kentucky; Hon. LEE METCALF, Democrat, of Montana; Hon. THOMAS B. CURTIS, Republican, of Missouri; Hon. JACKSON E. BETTS, Republican, of Ohio; Hon. ALBERT H. BOSCH, Republican, of New York.

PREPARATION FOR PANEL DISCUSSIONS ON TAX REFORM

The committee completed plans for the initial stages of consideration of the practical possibilities for constructive reform of our Federal income tax system. Beginning on November 16, 1959, a series of panel discussions will be conducted at which time the committee will receive the views and opinions of acknowledged experts in all of the major areas of income taxation covered by the Internal Revenue Code. Prior to the conduct of these actual panel discussions there will be published a volume of papers which will have been prepared by the experts who are expected to take part in the November panel discussions. This volume of papers will be made available to Members of Congress and the interested public at an early date. It is anticipated also that a record will be made during the panel discussions which will run for approximately 5 weeks and that this record will likewise be published and made available to all who are interested.

LEGISLATION TO STRENGTHEN AND AID SMALL BUSINESS

Before proceeding to a discussion of the major legislation reported by the Committee on Ways and Means, it is worthwhile to briefly mention at this point several measures which received favorable consideration by the committee which in the aggregate will result in material assistance to our small business enterprises throughout the Nation. As may be recalled, the committee has properly been concerned for the past several years with the continued maintenance of effective opportunities for the Nation's small business activities. During this session of the Congress, the committee took favorable action on a series of measures which will strengthen and assist many small business endeavors. Without undertaking to enumerate them in any order of relative importance, the following measures are worthy of mention: The committee took action to provide that, for purposes of the provisions relating to the payment of the excise tax on gasoline, wholesale distributors of gasoline are to be treated as producers. Under this legislation, a hardship previously existing with regard to the payment of the excise tax by independent distributors and jobbers will be effectively removed. Second, the committee favorably reported and there has been enacted into law a measure to remove a hardship with regard to the taxation of so-called dealer reserves. This legislation, which is summarized at a later point, should be of material benefit in assisting not only dealers in automobiles, but also dealers in other forms of personal and real property. For the most part, these are all small business enterprises. Third, the committee acted to amend the laws relative to the tax treatment of expenditures made to determine the presence, location, quantity, or quality of any deposit of ore or other mineral—except oil and gas. Prior law provided for a maximum deduction which might be taken for any one year of $100,000, but for no more than 4 years. The legislation approved by the committee would remove the 4-year limitation while maintaining an overall litmit of $400,000. This legislation would, therefore, assist the small enterprises engaged in this form of activity. Still another provision of law which was agreed to by the committee, in the form of acceptance of Senate amendments to another House bill, was a change in the statute relating to the election of certain small business corporations as to their taxable status. Specifically, this provision removed a hardship which had developed under prior law in determining the number of shareholders of a small business corporation where a husband and wife owned stock jointly or as community property. Additionally, the law was clarified with regard to the definition of a small business corporation. Finally, these amendments also included a provision to exempt small-business investment companies from the personal holding company tax, a measure which was requested by the Small Business Administration.

The foregoing is not intended to be a complete or exhaustive discussion of all of the measures which the committee favorably acted upon which will benefit small business, but merely to list a few examples of such measures as indicative of the committee's solicitous regard for the importance of maintaining and strengthening small-business enterprises in our great Nation.

BRIEF OVERALL SUMMARY OF MAJOR BILLS REPORTED

The following measures might well be classed in the category of major legislation favorably reported by the committee during the 1st session of the 86th Congress: the Life Insurance Company Tax Act of 1959; the Public Debt Act of 1959; the financing provisions of the Federal-Aid Highway Act of 1959; a bill permitting the issuance under specified circumstances of series E and H U.S. savings bonds at interest rates above the existing maximum, et cetera; a bill making technical changes in certain excise tax laws; the extension of the Renegotiation Act of 1951; the Tax Rate Extension Act of 1959; the Self-Employed Individuals' Retirement Act of 1959; and the Narcotics Manufacturing Act of 1959. A brief summary of each of these measures follows:

H.R. 4245, by Mr. MILLS; Public Law No. 86-69, signed June 25, 1959:

The Life Insurance Company Tax Act of 1959 provided the most comprehensive revision of the taxation of life insurance companies since 1921. In 1921, life insurance companies were taxed only on a portion of their investment income. The portion taxable broadly represented the amount of investment income over and above the company's requirements for adding interest to life insurance reserves. This excess portion has in the past been computed on the basis of formulas derived from the aggregate industry experience. Since 1921, the life insurance companies paid no tax on their so-called underwriting income, that is, the excess of their premium income over their expenses and their provisions for death benefits and additions to reserves.

The new life insurance company tax law makes two fundamental changes. The law provides that the tax will be based only in part on the company's investment income, and in part on the company's underwriting income. In computing the taxable portion of the investment income, the law avoids the use of industrywide formulas and provides a method whereby each company's investment income tax liability is based upon its own investment experience.

To explain the new law more specifically, the investment income tax is contained in the so-called phase 1 tax. For purposes of this tax, the company first determines its net investment income, that is, the total of interest, dividends, and the like, minus investment expenses. From this, it is permitted a reserve interest deduction computed by multiplying its adjusted reserves by its earnings rate. The earnings rate is the lower of its current earnings rate or the average of its earnings rate over the previous 5 years. The adjusted reserves are the book reserves adjusted to eliminate the effect of the company's arbitarary reserve interest assumption.

The so-called phase 2 of the tax is based upon the company's actual net gain from operations which is, generally speaking, its total income. This total income figure is derived from the company's own books with certain adjustments. If the total income exceeds the phase 1 tax base, the company must add to its taxable income from phase 1 one-half the difference. If the total income is less than the phase 1 tax base, the company may substract the difference, after limiting its deduction for policyholder dividends to a maximum of $250,000.

To comment on the second alternative first, it should be pointed out that the new law for the first time since 1921 provides that the life-insurance company's tax may go down when the company's actual operations show losses. It has been a feature of the investment income tax approach that many new and small life-insurance companies have had to pay substantial taxes on their investment income in years when their own books showed an aggregate loss. For this reason, the new tax law will be of great benefit to many new and small life-insurance companies.

In the case of life-insurance companies whose aggregate income is in excess of the tax case from phase 1, it was explained that they will be taxable currently on only one-half of this difference. The other half will, so to speak, be available as a reserve to meet future contingencies and will be added to the tax base at any time that it is actually paid out to shareholders.

The bill also contains a number of provisions dealing with special situations that might arise in the life-insurance industry.

H. R. 7749, by Mr. MILLS; Public Law 86-74, signed June 30, 1959:

This bill, which became law without amendment, provided for an increase in the permanent debt ceiling of $2 billion, to $285 billion, and for an additional temporary in-

crease of $10 billion for 1 year, making the debt ceiling $295 billion to June 30, 1960.

The administration had requested that the permanent ceiling be raised to $288 billion, with an additional temporary increase for fiscal year 1960 of $7 billion. The committee, however, did not consider it necessary or advisable to raise the permanent ceiling to the full extent requested by the administration, and in subsequent testimony the Secretary of the Treasury indicated to the Senate Finance Committee that the provisions of the bill reported by the Committee on Ways and Means were workable in terms of Treasury requirements, and acceptable to the administration.

Title II of H.R. 8678; Public Law 86-342, signed September 21, 1959:

One quite significant and important action of the Committee on Ways and Means was the development of title II of H.R. 8678, which provided financing provisions to secure additional revenue for the Federal-aid highway program, which is financed through the highway trust fund. While the bill H.R. 8678 was formally reported by the Committee on Public Works, title II thereof was developed and drafted by the Committee on Ways and Means in accordance with a prior agreement which had been worked out by the Committee on Ways and Means and the Committee on Public Works. Likewise, the material contained in title II of the House report which accompanied the bill was developed and drafted by the Committee on Ways and Means.

It was drawn to the attention of the committee during the course of the first session that an immediate problem with regard to financing the Federal-aid highway program was in evidence in that without legislation providing further funds for the program, it was estimated that there would be a deficit in the highway trust fund by the end of fiscal year 1960 of some $490 million, and at the end of the fiscal year 1961, an accumulated deficit of $980 million would be in prospect even if no further apportionments were made.

Legislation, therefore, was urgently necessary to provide additional financing for the highway trust fund to meet this immediate problem.

Title II of H.R. 8678, therefore, contained a solution for the financing problems and enabled the continuance of the Federal-aid highway program at a level commensurate with the completion of the program and the needs of the economy. Specifically, title II of H.R. 8678 provided for the imposition of an additional 1-cent-per-gallon tax on gasoline, diesel fuel, and special motor fuels, for the 21-month period beginning October 1, 1959, and ending June 30, 1961, and allocation to the highway trust fund of 5 percentage points of the manufacturers' excise tax on passenger cars, etc., and of 5 percentage points of the tax on auto parts and accessories for the 3-year period beginning July 1, 1961, and ending June 30, 1964. The additional revenue provided by title II, combined with the existing revenues of the trust fund, should make possible apportionments for the interstate system of $1.8 billion for the fiscal year 1961 and $2 billion for the fiscal year 1962, in addition to the $2.5 billion of apportionments which had already been made for the fiscal year 1960. These apportionments can be made without suspension of the limitation on the trust fund, which is the so-called Byrd amendment.

These provisions should assure that there will be no deficit in the highway trust fund for 1961 or in any subsequent year through the fiscal year 1964.

H.R. 9035, by Mr. MILLS; Public Law 86-346, signed September 22, 1959:

Another major bill in the field of general fiscal and debt management legislation which was favorably reported by the Committee on Ways and Means was H.R. 9035 (which has become Public Law 86-346, approved September 22, 1959).

This bill made a number of changes in the laws relating to savings bond interest rates and other aspects of debt management:

First, it permits the maximum interest rate (or investment yield) limitation of 3.26 percent on series E and H savings bonds to be exceeded where there is a finding by the President that the national interest so requires. The bill also authorizes increasing the interest rates on outstanding series E and H savings bonds. In this case, also, the existing maximum limitation of 3.26 percent on these bonds may be exceeded, but only in the case of a finding by the President that the national interest so requires. A Senate amendment to this section of the bill, which was accepted by the House, added a proviso that in no event may the interest rate or the investment yield on these bonds exceed 4¼ percent per annum.

Second, the bill adds a new section to the Internal Revenue Code providing for nonrecognition of gain or loss on the exchange of U.S. obligations when so provided by regulations. This is intended to aid the Government in its attempts to achieve a better balance in the debt structure by facilitating the refinancing of outstanding securities in advance of their final maturities.

Third, the bill authorizes the issuance of obligations of the United States to Government trust funds at the issue price, whether or not at par. Under existing law in the case of certain trust funds, these obligations may be issued to the funds only at par.

Fourth, the bill makes it clear that both the principal and interest on U.S. obligations are exempt from all State taxes except nondiscriminatory franchise, etc., taxes.

Fifth, the bill relieves from liability to the U.S. Government agents who erroneously paid U.S. bonds if they did not receive written notice from the United States within 10 years from the date of the erroneous payment.

This legislation is quite important to the millions of American citizens who purchase and hold series E and H savings bonds, since it will permit an increase in the interest rate payable to these individuals on this important type of savings, if the President finds that the national interest will thereby be served. The legislation will further encourage investment in these bonds by our individual citizens and will permit them to continue to participate in this vitally important savings program. It will assist the Treasury in the management of the public debt.

H.R. 8725, by Mr. HARRISON; Public Law 86-344; signed September 21, 1959:

In 1958 the Congress passed the Excise Tax Technical Changes Act of 1958, which constituted a comprehensive revision of the technical and administrative provisions of the Federal excise taxes. In a technical revision of this magnitude, almost of necessity there are changes made which after experience in actual operations will require further modifications. The purpose of H.R. 8725, as amended by the Committee on Ways and Means, was to effect six such modifications which experience under the 1958 act has shown to be required. These technical changes amend the provisions relating to the retailers' excise tax on jewelry, the exemptions from excise taxes for nonprofit educational organizations, the club dues tax, the tax on communications as it relates to common carriers and communication companies, the basis of the documentary stamp tax in the case of transfers of stock rights or warrants, and the occupational tax applicable to so-called claw, crane, or digger machines in certain cases.

This legislation, which was favored by the Treasury Department, became law in the form reported by the committee.

H.R. 7086, by Mr. MILLS; Public Law 86-69; signed July 13, 1959:

As reported to the House by the Committee on Ways and Means, this bill provided for an extension of renegotiation authority for 4 years to June 30, 1963. Certain other amendments were contained in the bill which the committee was of the opinion would be of benefit to industry as well as contributing to the administration of the act. These related to the factors to be considered in determining excessive profits, the provision for carry forward of losses on renegotiable business, the statements required to be furnished by the Renegotiation Board, proceedings before the Tax Court in renegotiation cases, and review of Tax Court decisions in such cases.

The Senate amended the House bill substantially, and it was sent to conference. Under the conference agreement, which was accepted by both bodies, a 3-year extension of renegotiation authority was provided, to June 30, 1962. In addition, a 5-year carryforward to fiscal years ending after December 31, 1958, of renegotiation losses was provided, in the cases of losses arising in fiscal years ending on or after December 31, 1956. An increase in the compensation of the General Counsel of the Renegotiation Board was provided, to $19,000 per annum. Further, certain studies of procurement policies and practices, the Renegotiation Act, and the policies and practices of the Renegotiation Board were directed to be made. The overall report developed from these studies is to be made not later than March 31, 1961.

H.R. 7523, by Mr. Mills; Public Law 86-75, signed June 30, 1959.

As reported to the House by the Committee on Ways and Means, and as the bill passed the House, it would have provided a 1-year extension, to July 1, 1960, of the existing corporate normal tax rate and of certain excise tax rates (the so-called Korean increases, including the increased rates on distilled spirits, beer, wine, cigarettes, passenger automobiles, and automobile parts and accessories). The legislation was designed to implement the request of the administration that these rates be continued for another year.

The Senate, while approving the provisions of the House bill, added several amendments. These included the repeal, as of July 1, 1960, of the excise taxes on communication services, the repeal of the tax on transportation of persons, the repeal of the 4 percent credit against tax presently provided for dividend income, and other amendments relating to the Federal share in certain public assistance programs under the social security law.

Under the conference agreement, and as the bill became law, the bill in addition to providing a 1-year extension of the existing corporate normal tax rate and the excise tax rates referred to above, provides that the tax on transportation of persons will be reduced to 5 percent as of July 1, 1960, and that the tax on general (local) telephone service be repealed as of July 1, 1960.

H.R. 10, by Mr. KEOGH; passed House March 16, 1959.

This bill would permit self-employed individuals to take a current tax deduction for limited amounts of investment in certain types of retirement annuity, or a specific type of retirement trust. The investment, plus accumulated earnings, would be treated as ordinary income when taken down.

The House suspended the rules and passed this bill, as amended by the Committee on Ways and Means, on March 16, 1959, and at adjournment it was pending before the Senate Committee on Finance.

H.R. 529, by Mr. KARSTEN; passed House September 9, 1959:

This bill, as reported to the House by the Committee on Ways and Means, is designed

to give full effect to treaty obligations of the United States to limit exclusively to medical and scientific purposes the manufacture of narcotic drugs and to require that such manufacture be restricted to persons and premises that have been licensed for the purpose. It is also designed to amend the Narcotic Drugs Import and Export Act to bring the regulation of exports in conformity with current treaty obligations, and to permit the importation and exportation of certain narcotic drugs for scientific research purposes. It establishes a comprehensive system of licensing and control over the manufacture, distribution, and use of both natural and synthetic narcotic drugs.

The committee received favorable reports on this legislation from the Departments of State and the Treasury, and it has the approval of the pharmaceutical industry. The committee is of the opinion that enactment of this legislation will be of assistance to the agencies charged with administering our narcotic control laws and treaties, and will be beneficial to the citizens of our Nation.

In addition to the major bills discussed above, there were a number of less comprehensive but nonetheless important bills reported by the Committee on Ways and Means during the 1st session of the 86th Congress, which are summarized below, grouped as to the subject with which each deals—that is, taxes, social security, customs and tariff, and so forth.

TAX LEGISLATION (OTHER THAN EXCISES)

H.R. 47, by Mr. BOGGS; Public Law 86-376, signed September 28, 1959:

As reported to the House by the Committee on Ways and Means, this bill provided that, with respect to the $600 dependency exemption for income tax purposes, a child placed with the taxpayer by an authorized placement agency for legal adoption by him shall be treated in the same manner as a natural born child and a legally adopted child, if the child is a member of the individual's household.

The Senate, in addition to approving the provision of the House bill, added two basic amendments, both relating to the tax treatment of small business. The first, making changes in the statute relating to the election of certain small business corporations as to their taxable status (1) amends section 1371 of the Internal Revenue Code to provide that in determining the number of shareholders of a small business corporation, a husband and wife owning stock jointly or as community property shall be counted as only one shareholder; (2) amends section 1374 of the code to make clear that a deceased shareholder will not be denied his pro rata share of a small business corporation's net operating loss; and (3) strikes out paragraph (8) of section 1504(b) (relating to the definition of "includible corporation") of the code, thereby clarifying the definition of a small business corporation. The Senate Finance Committee report indicates that this paragraph of the code actually operates to have an effect just the reverse of its original intent, which was to prevent an electing small business corporation from having an 80-percent-owned subsidiary.

The second Senate amendment amended section 542(c) of the code to exempt small business investment companies from the personal holding company tax. This amendment had been requested by the Small Business Administration in an executive communication which was referred to the Committee on Ways and Means.

The House agreed to the Senate amendments to this legislation.

H.R. 135, by Mr. KEOGH; passed House August 25, 1959:

This bill, which passed the House unanimously as reported by the Committee on Ways and Means, excludes from U.S. tax the portion of amounts paid to nonresident alien individuals by the United States as civil service anuuities and other retirement benefits for services performed abroad as employees of the United States. Under present law, nonresident aliens working for an American Embassy or other Government agency abroad are not subject to U.S. tax on salaries paid by the United States; similarly, amounts set aside by the Government for the future retirement of nonresident aliens working abroad are free of tax. However, to the extent such annuities represent earnings on the amounts set aside by the Government, such payments are taxable. The committee was advised by the Department of State that nonresident alien employees consider their pensions to be deferred compensation, and that since their earned income is tax free, they expect their pensions also to be tax free. The committee was further informed that the imposition of this tax has caused severe hardships and has engendered resentment against the United States, and that this tax treatment has been objected to by many foreign governments, some of which have repeatedly protested its imposition. This legislation, as amended by the committee, was also favored by the Treasury Department.

H.R. 137, by Mr. KEOGH; Public Law 86-175, signed August 21, 1959:

This bill prevents a pyramiding of Federal estate taxes where foreign death taxes are imposed on charitable bequests. This is accomplished by allowing a deduction for estate tax purposes for foreign death taxes (as provided under present law for State death taxes) imposed (and paid) on charitable bequests if (1) the property on which the tax is imposed is situated in the foreign country and included in the gross estate of a citizen or resident of the United States, and (2) if the decrease in tax resulting from the deduction is to go to charities (or the entire Federal estate tax is to be equitably apportioned among all of the transferees of the estate). Where this deduction is allowed, no credit against the estate tax is to be available for the foreign taxes which are deducted.

As reported by the Committee on Ways and Means, and as the bill passed the House, this provision would have been effective with respect to the estates of decedents dying after the date of enactment of the bill. The Senate, however, amended the bill to provide an effective date of July 1, 1955 (that is, to apply to the estates of decedents dying on or after that date).

The Senate amendment was accepted by the House.

H.R.1219, by Mr. BENTLEY; Public Law 86-141, signed August 7, 1959:

This bill adds a provision to the 1954 code relating to persons who have been mentally incompetent for a period beginning at least 3 months prior to December 31, 1947, and who remain so until the date of their death. The bill provides that any powers such persons have at the date of their death to change beneficiaries of a trust they created (of the type referred to in section 1000(e) of the 1939 code) are not to result in such property being included in their gross estate for estate tax purposes. This provision is the same as a 1939 code provision (sec. 811(d)(4)) which was applicable with respect to decedents dying after December 31, 1947, and on or before August 16, 1954.

The provision added to the 1954 code by this bill is to apply with respect to estates of decedents dying after August 16, 1954. Thus, as a result of this bill, and previous actions, the exception for mentally incompetent will apply to all years from 1947 forward, so long as the decedent involved is mentally incompetent from October 1, 1947, to the date of his death.

The bill, which became law without amendment, contains a provision that no interest is to be allowed or paid on any overpayment resulting from its enactment with respect to payments made before the date of enactment.

H.R. 2578, by Mr. YATES; passed House August 18, 1959:

As reported by the Committee on Ways and Means, this bill provides that the marital deduction is to be available for estate tax purposes with respect to allowances or awards which, pursuant to local law, are paid within 15 months from the date of a decedent's death to the decedent's surviving spouse for her support during the period the decedent's estate is being settled. This is accomplished by specifically providing that these allowances or awards are property passing from the decedent to a person, and not terminable interests for which no marital deduction is available. Under present law, questions arise as to the circumstances under which the marital deduction is available with respect to an award or allowance made pursuant to local law for support of a decedent's surviving spouse during the period of the settlement of the decedent's estate; these questions for the most part have been resolved by reference to the governing local law as interpreted by the local courts, with the result that the allowance of the marital deduction for these awards has varied from State to State. Uncertainty also exists as to whether any estate tax deduction is available for these allowances. This bill would assure that the extent to which the marital deduction is allowed with respect to these awards or allowances is the same in all States, and will not turn on technical questions of local law.

This legislation passed the House under unanimous consent and at adjournment was pending in the Senate Finance Committee.

H.R. 2906, by Mr. MCCORMACK; Public Law 86-280; signed September 16, 1959:

As reported by the Committee on Ways and Means, this bill provided that the period of limitations for filing a claim for credit or refund for an overpayment of taxes, to the extent attributable to a creation of or an increase in a net operating loss carryback resulting from the elimination of excessive profits by renegotiation, is not to expire before September 1, 1959, or the end of 1 year after the month in which the agreement or order for the elimination of the excessive profits becomes final, whichever is later. The bill amends both the 1939 and 1954 codes, and applies to all 1954 code years and, with respect to the 1939 code, to claims for taxable years ending after December 31, 1952. While the special period provided under the law where net operating loss carrybacks are involved generally provided adequate time for the filing of a claim for credit or refund, the committee's attention was called to a type of case where this was not true and where the taxpayer may not be in a position to know that he is eligible for a credit or refund before the expiration of the period of limitations. This placed the Government in the position in such cases of taking money away from a taxpayer, on one hand, and yet on the other hand denying him the opportunity to obtain a credit or refund where this decreases his tax liability. This legislation was intended to rectify this situation.

The Senate approved the provision of the House bill, and added an amendment directing the Secretary of the Treasury or his delegate to allow credit or refund to Dexter Phillips and Jeannette H. Phillips of an income tax overpayment for the calendar year 1951, to the extent such overpayment was attributable to the erroneous inclusion in their gross income for such year of the amount received by Dexter Phillips in final distribution of his grandfather's estate. The Senate report (S. Rept. 663) states that "the

circumstances of this case * * * indicate that a timely claim for refund was made, and that this claim was erroneously rejected by the examining officer and his superior. In view of these circumstances, your committee is of the opinion that relief should be given in this case for the particular taxpayers who, following the conclusions of the Government's representatives concerned, did not further prosecute their claim within the period of limitations."

After conference agreement to the Senate-passed bill, the bill became law in that form.

H.R. 3151, by Mr. CURTIS (Missouri); failed of House passage under suspension of the rules September 1, 1959:

This bill would amend the provisions of present law permitting the Federal Government upon request to enter into an agreement to withhold State or territorial tax from compensation paid Federal employees who are employed in the State or territory so as to also provide for withholding of city taxes by the Federal Government, with respect to its employees who are employed in a city with such a tax, if the city has a population of 75,000 or more. The committee was of the opinion that the same reasons which prompted enactment of the law permitting withholding of State tax from the compensation of Federal employees also required the withholding of city income taxes from such employees, i.e., the fact that cities also have cooperated with the Federal Government with respect to fiscal matters generally and do withhold Federal income taxes from compensation paid their employees.

The restrictions of existing law applicable to State withholding taxes, designed to limit the administrative burdens of the withholding by the Federal Government and to prevent hardship and discrimination in the case of the Federal employees involved, would also apply to the city withholding taxes, under the bill.

The Treasury Department indicated its approval of this legislation, which failed to pass the House under suspension of the rules by a narrow margin, and at adjournment was pending on the Union Calendar.

H.R. 4251, by Mr. BAKER; passed House September 9, 1959:

Under present law, a deduction for income tax purposes may be taken for exploration expenditures made to determine the presence, location, quantity, or quality of any deposit of ore or other mineral. (This is not available in the case of oil and gas wells.) The maximum deduction which may be taken for any year is $100,000, for no more than 4 years (whether or not consecutive) with respect to all property held by the taxpayer. The purpose of H.R. 4251, as amended by the Committee on Ways and Means, is to remove the 4-year limitation of present law, and substitute an overall limitation of $400,000; the maximum limitation of $100,000 in any one year would be retained.

The committee was advised that the provision of present law has tended to discriminate against the small producers, in that a large producer may obtain the full benefit of these deductions by claiming $100,000 in each of 4 years, but a small producer whose annual exploration expenditures are not as high as $100,000 will have the deductions available to him reduced below $400,000 because of the 4-year limitation. Under the bill, a taxpayer would still not be able to claim exploration expenditure deductions with respect to any year in excess of $100,000, but if his expenditures on a yearly basis are less than $100,000, he will be able to claim such deductions over more than a 4-year period so long as the total deductions claimed are not in excess of $400,000.

The bill was pending in the Senate Committee on Finance at the time of adjournment.

H.R. 5547, by Mr. MILLS; passed House September 9, 1959:

As reported to the House by the Committee on Ways and Means, this bill would amend certain provisions of the Internal Revenue Code of 1954 relating to possessions of the United States.

First, the bill provides that income tax liability incurred to the Virgin Islands may be reduced by grants, subsidies, or similar payments in the case of corporations, and in general only if in past 3 years they have derived 80 percent of their income from sources within the Virgin Islands and 50 percent from the active conduct of a trade or business. Where such conditions are met the income tax liability of the corporations may be reduced only with respect to their income from sources without the United States. In the case of individuals, the bill provides that tax liability may be reduced only in the case of citizens of the United States (whether or not also citizens of the Virgin Islands) only if they are bona fide residents of the Virgin Islands for the entire year. Where these conditions are met the tax liability of the individuals may be reduced only with respect to income from sources within the Virgin Islands. These amendments are to apply to tax liability for taxable years beginning on or after January 1, 1959.

Second, the bill provides that the estate and gift taxes are to apply to those who are U.S. citizens only by reason of citizenship in the U.S. possession and who are residents of a U.S. possession at the time they die or make a gift in the same manner as in the case of those who are "nonresidents not citizens of the United States." In general this means that they are to be subject to estate or gift tax only with respect to property situated in the United States (but not in the case of property situated in the possessions or elsewhere). The estate and gift tax amendments are to apply to estates of decedents dying after, or gifts made after, the date of enactment of this bill.

The bill had the support of the Treasury Department, and passed the House under unanimous consent.

H.R. 6155, by Mr. BETTS, passed the House August 25, 1959:

As amended by the Committee on Ways and Means, and as it passed the House, the purpose of this bill is to move forward from September 1, 1951, to September 1, 1957, the date before which certain mutual deposit guarantee funds must be organized in order to qualify for income tax exemption. The other requirements for the exemption, which are left unchanged by this bill, provide that the organizations must be mutual, nonprofit organizations without capital stock and operated to provide reserves and insurance for building and loan associations, cooperative banks, or mutual savings banks.

Three of the four presently existing mutual deposit guarantee funds were organized before September 1, 1951, and therefore presently qualify for exemption. A fourth such organization organized after that date but before September 1, 1957, will qualify for exemption under this bill. These organizations perform essentially the same type of services as the FDIC and FSLIC, Federal corporations which are exempt from income taxation.

H.R. 6482, by Mr. UTT, passed House September 9, 1959:

As reported to the House by the Committee on Ways and Means, this bill amends the provisions of the Internal Revenue Code relating to the unemployment tax. At present a corporation, which within the first 20 weeks of the year is merged or consolidated in a second corporation, is not treated as an "employer" for purposes of the Federal unemployment tax but generally is so considered for most State unemployment compensation taxes. As a result, the first corporation usually must pay the State tax in such cases, and then the second corporation must pay the full Federal tax but cannot obtain the credit usually available for the State tax paid by the first. This faulty operation of the credit for State taxes is overcome in the bill by permitting the same credit to the second corporation in such cases for the State taxes paid by the first as if this first corporation had been the "employer."

The House passed this bill under unanimous consent and at adjournment it was pending before the Senate Committee on Finance.

H.R. 6777, by Mr. O'BRIEN, of Illinois; passed House August 25, 1959:

This bill relates to restricted stock options where the spread between the option price is from 85 to 95 percent of the price of the stock on the date the option was granted. In these cases, in general, the spread between the option price and the price of the stock at the time the option was granted is treated as ordinary income at the time of the sale of the stock or at the time of the employee's death.

As reported to the House by the Committee on Ways and Means, this bill provides that if the stock passes to the surviving spouse, the taxation of the ordinary income element is deferred until the spouse sells the stok or dies, etc. The stock must actually go to the spouse, however, by bequest or inheritance (it can also pass to the spouse by surviving in the case of joint ownership) within 15 months of the employee's death, or if not in this interval the Treasury must be given notice within that time that it may go to the spouse and then inform the Treasury of the subsequent disposition of the stock. The amendment would be effective for employees dying in 1959 and later years.

H.R. 6779, by Mr. SIMPSON; passed House August 25, 1959:

Under present law, the unlimited charitable contribution deduction in general is available where in the last 10 years the charitable contributions and income taxes paid by an individual equal 90 percent of his taxable income (with certain modifications) in each of 8 years. The purpose of H.R. 6779, as amended by the Committee on Ways and Means, is to amend this provision of the Internal Revenue Code to provide that the 90-percent test will be considered as satisfied for each of any two consecutive years where it is met on the basis of the average of contributions, taxes, and income in the 2-year period. The bill provides, however, that the charitable contributions and taxes in each of these 2 years must represent at least 75 percent of the income of that year.

The amendment would be effective for the calendar year 1957 and subsequent years, but no refunds or credits are to be paid as a result of this change for any year prior to the calendar year 1959.

H.R. 7588, by Mr. KEOGH; passed House August 18, 1959:

As reported to and passed by the House, this bill would amend the Internal Revenue Code to provide that personal holding company income is not to include income from copyright royalties. The bill specifies certain conditions to preclude the abuse of this amendment.

The personal holding company tax was developed to prevent the establishment of a corporation to be used as a corporate pocketbook in handling investment income. It has been brought to the committee's attention that existing law does in fact characterize as a personal holding company an organization that is actually an operating company. It was not intended that such an organization be included within the definition of a personal holding company, and this legislation would clarify existing law in that respect.

H.R. 7947, by Mr. IKARD; passed House September 9, 1959:

Under present law, financial institutions selling mortgage paper to the Federal Na-

tional Mortgage Association must subscribe to stock of the Association in an amount equal to 2 percent of the mortgages sold. This stock, however, has been selling on the market at substantially less than the issuance price. The purpose of H.R. 7947 is to provide that where FNMA stock is purchased under these conditions, any excess of the issuance price over the fair market value on the date of issuance is to be treated as an ordinary and necessary business expense in the year of purchase rather than as a part of the cost of acquiring the stock. This treatment is to be available for taxable years beginning after December 31, 1958, and the committee stated in its report on the legislation that it intends no inferences to be drawn as to the tax treatment accorded FNMA stock before the enactment of this provision.

The bill passed the House, as amended by the Committee on Ways and Means, under unanimous consent.

H.R. 8126, by Mr. SIMPSON; reported to House September 2, 1959:

As amended by the Committee on Ways and Means, this bill adds two new sections to the Internal Revenue Code relating to the income tax treatment of distributions of stock and dispositions of property made pursuant to orders enforcing the antitrust laws. The committee was of the opinion that this legislation carries out the policies already established by Congress with respect to the income tax treatment of other situations in which a taxpayer is compelled to divest himself of property as a result of Government action. In such situations it has been considered inappropriate to impose a tax where there is an involuntary realization of gain. The provisions of the bill do not result in exemption from tax, but rather a postponement, where distributions of stock or dispositions of property are made as a result of orders enforcing the antitrust laws.

H.R. 8229, by Mr. KNOX; passed House September 9, 1959:

As reported to the House by the Committee on Ways and Means, this bill provides a new exempt category for income tax purposes in the case of trusts providing for the payment of supplemental unemployment-compensation benefits. These may be the only benefit payments made by the trusts, or may be payments made together with subordinate sick or accident benefits (but not retirement or death benefits). This exempt category differs from the category, already under existing law, under which some of these trusts obtain exemption, in that the new provision does not require the subtrusts to obtain at least 85 percent of their income from employers or employees (and not from investment income). The so-called nondiscriminatory provisions of present law applying to qualified pension, profit sharing, and stock-bonus plans are in general made applicable to the trusts qualifying under the new exemption category. In addition, the prohibited transaction and unrelated business income provisions of present law are made applicable to the new exemption category.

H.R. 9004, by Mr. IKARD; passed House September 9, 1959:

This legislation pertains to the timing of reporting for tax purposes with respect to dealer reserves and provides transitional rules to bring the reporting of dealer reserve income into conformity with proper accounting methods. As amended by the Committee on Ways and Means, two alternative methods are provided for payment of tax due on such income not previously reported. First, it provides that such amounts can be treated as required changes in methods of accounting. In general this means that the reserves built up prior to 1954 need not be reported for tax purposes, and that only the excess of the current balance over the 1954 balance in the reserve is to be reported. A second alternative provided permits the computation of the deficiencies (or overassessments) which would arise if the income had been reported in the proper years, and then the sum of these amounts (plus interest up to the time of selecting this alternative) may be paid in 10 annual installments, generally beginning in 1961.

The committee agrees that dealer reserve income should be reported on a proper accrual accounting basis; however, it is believed that a hardship would be created by requiring all dealers to make the transition to this method of reporting this income in 1 year, following recent Supreme Court decisions in this matter, especially in view of the numerous circuit court decisions going to the contrary of these Supreme Court decisions, which many dealers have previously been following.

This legislation passed the House under unanimous consent, and at adjournment was pending before the Senate Committee on Finance.

S. 2282, by Senator SALTONSTALL and Senator KENNEDY; Public Law 86-371, signed September 23, 1959:

The purpose of this legislation was to provide that no department or agency of the United States shall accept compensation from any State or Territory for withholding State or Territorial income taxes. Enactment of this bill had become necessary because of a newly enacted State law providing for compensation to employers who withhold State taxes from their employees, and in the absence of legislation to the contrary, there was doubt as to the power of the executive departments or their officers to decline to accept compensation due to the United States. There are compelling reasons against the wisdom of such acceptance. After consideration, the Committee on Ways and Means agreed to the Senate amendment, and so indicated on the floor of the House, without filing a committee report, whereupon the bill was passed and sent directly to the President.

EXCISE TAX LEGISLATION

H.R. 147, by Mr. KEOGH; Public Law 86-37, signed May 29, 1959:

This bill, which was enacted into law without amendment, suspended through June 30, 1960, the 3-cents-per-pound tax imposed on the first domestic processing of palm oil, palm-kernel oil and fatty acids or salts derived therefrom. This action was taken in order to place these oils on a competitive parity with coconut and babassu oils, which are used for the same general purposes. The tax on the first domestic processing of coconut oil was suspended to June 30, 1960, by the provisions of a Senate amendment to H.R. 2842 of the 85th Congress, which the House accepted and which became part of Public Law 85-235; no processing tax is imposed on babassu oil. The resulting situation, therefore, placed palm and palm-kernel oils at a competitive disadvantage, and this legislation was designed to restore the competitive balance.

H.R. 2164, by Mr. FORAND; passed House September 1, 1959:

As reported by the Committee on Ways and Means to the House, this bill would reduce from 20 to 10 percent the tax imposed with respect to roof gardens, cabarets, and similar establishments. The committee stated in its report on the bill (H. Rept. 817) that this action was taken for two principal reasons: First, the present 20-percent rate is discriminatory in that the rates of almost all other ad valorem excise taxes do not exceed 10 percent; and second, it is believed that the present high rate of this tax has been a substantial deterrent to the employment of musicians and other entertainers. The House suspended the rules and passed the bill.

H.R. 4586, by Mr. FORAND; passed House August 18, 1959:

The purpose of this bill, which was reported to the House without amendment by the Committee on Ways and Means, is to exempt aromatic cachous from the excise tax on toilet preparations. The Committee was of the opinion that aromatic cachous (which are aromatic pellets, such as Sen Sen, which are chewed for the purpose of sweetening the breath) should not be subject to tax as toilet preparations since they are more nearly like mouthwashes and candied mints than like the externally applied toilet preparations which comprise the other articles subject to that tax; moreover, the tax on aromatic cachous places them at a competitive disadvantage with nontaxed articles purchased for similar use; and further, they are usually sold in shops which do not handle other articles subject to the toilet preparations tax, thus discouraging the proprietors from handling them because of the burdensome requirement of collecting and remitting negligible amounts of tax.

The Treasury Department submitted a favorable report on this legislation, which passed the House under unanimous consent and at adjournment was pending in the Senate Finance Committee.

H.R. 4857, by Mr. HAGEN; Public Law 86-319, signed August 21, 1959:

As reported by the Committee on Ways and Means, this bill amended two of the exemptions from the admissions tax to provide that in determining whether an athletic game is played between students from elementary or secondary schools, or colleges, where the proceeds inure to a hospital for crippled children, or an exempt organization operated exclusively for the benefit of retarded children, the term "student" is to include anyone who was a student at the school or college within the 8 months immediately before the athletic game. This makes the exemption available for all-star and other similar benefit games even though the game is played shortly after the end of the school or college year. The bill was favored by the Treasury Department, and became public law in the form reported by the committee.

H.R. 5751, by Mr. MACHROWICZ; reported to House August 18, 1959 (see H.R. 8678, title II):

As amended by the Committee on Ways and Means, this bill would have provided that, for purposes of the provisions relating to payment of the excise tax on gasoline, wholesale distributors of gasoline are to be treated as "producers," when they are registered and bonded for this tax. The gasoline tax is payable by the producer or importer at the time he makes his sale; thus, in the case of the integrated company, no tax is collected until after sale to the service station or ultimate consumer. The tax on sales made to independent wholesalers, however, has heretofore been collected at the time of that sale, which the committee believed has resulted in discrimination against independent gasoline wholesale distributors.

This legislation was reported to the House unanimously by the committee; however, the provisions of this amendment were also incorporated in title II of H.R. 8678 (the financing provisions of the Federal-Aid Highway Act of 1959), and became public law as a part of that bill (Public Law 86-342).

H.R. 6132, by Mr. MILLS; passed House September 9, 1959:

This bill, which was reported to the House by the Committee on Ways and Means and passed the House unanimously, without amendment, amends the Internal Revenue Code of 1954 with respect to the rate of tax on the issuance of shares or certificates of stock by regulated investment companies.

Under present law the documentary stamp tax on original issues of stock is levied at the rate of 10 cents per $100 of actual value. The documentary stamp tax on stock transfers, on the other hand, is levied at the rate of 4 cents per $100 of actual value.

Regulated investment companies which operate as open-end mutual investment companies, however, do not usually provide for the trading of their securities. Instead they issue new securities to those desiring to buy their stock, and redeem the stock of those desiring to sell. As a result they pay a 10-cents-per-$100 issuance tax on transactions which to others would result in a transfer tax of 4 cents per $100 of actual value.

The bill provides that the issuance tax in the case of qualifying regulated investment companies is to be imposed at the rate of 4 cents per $100 of actual value, rather than the 10-cent rate otherwise applicable.

H.R. 6785, by Mr. FRAZIER; passed House September 9, 1959:

The purpose of this bill, as reported to the House by the Committee on Ways and Means, is to amend section 4071 of the Internal Revenue Code of 1954 so as to provide a tax of 1 cent a pound in the case of the sale of laminated tires not of the type used on highway vehicles if the tires consist wholly of scrap rubber from used tire casings and have an internal metal fastening agent. This is in lieu of the 5-cents-a-pound tax which otherwise would apply. Such tires are used for off-highway purposes, primarily on lifts, cranes, payloaders, weed cutters, and similar types of industrial and farm equipment. The committee was advised that there are relatively few known manufacturers of laminated tires, and it is believed that any revenue loss from enactment of this legislation will be negligible.

H.R. 8318, by Mr. KEOGH; reported to House September 8, 1959:

At the present time bicycle tires are subject to the 5-cents-a-pound manufacturers' tax on tires, and bicycle inner tubes are subject to the 9-cents-a-pound manufacturers' tax on inner tubes. This is true both of tires and tubes manufactured in the United States and those imported. These excise taxes do not apply, however, to tires and tubes already mounted on bicycles when the latter are imported into the United States.

The purpose of this bill, as amended by the Committee on Ways and Means, is to exempt from the manufacturers' excise tax on tires and tubes, bicycle tires and tubes sold for use, or used, in the manufacture of new bicycles. The taxes would continue to apply to tires and tubes sold, or used, as replacements.

SOCIAL SECURITY LEGISLATION

H.R. 213, by Mr. PATMAN; Public Law 86-284, signed September 16, 1959:

As this bill was reported by the Committee on Ways and Means, it amended section 218 of the Social Security Act to provide an additional period of time within which certain State agreements may be modified to secure coverage for nonprofessional school district employees. This provision, under which nine States (including Hawaii) can provide OASI and disability insurance coverage for certain nonprofessional school district employees without a referendum and as a group separate from the professional employees who are in positions under the same retirement system, had expired on July 1, 1957, and the committee was advised that at least some of the named States had not secured the desired coverage before its expiration. In order to accommodate the States whose legislatures meet only in odd-numbered years, the committee-amended bill reinstates this provision to January 1, 1962.

In addition to approving the provisions of the House bill, the Senate added several amendments. These amendments extend to the States of California, Kansas, North Dakota, and Vermont the application of the present provision of the social security law which permits specified States to extend old-age, survivors and disability insurance coverage to policemen and firemen covered by a State or local retirement system. A provision was also adopted which has the effect of validating certain social security contributions which had erroneously been made by certain municipal employees in Oklahoma.

In conference, the House agreed to the Senate amendments.

H.R. 3472, by Mr. FORAND; passed House March 23, 1959:

This bill provides that in determining the eligibility of Federal civilian employees for unemployment compensation, their accrued annual leave shall be treated in accordance with State laws. Under present law, no compensation may be paid to a Federal employee during a period subsequent to separation from Federal service when he is being paid for accrued annual leave. The committee was of the opinion that there is no inconsistency in the payment of both unemployment compensation and a sum for accrued annual leave to the same person for the same period of time, as the concept of insurance, unemployment, and maintenance of purchasing power (with which unemployment compensation is concerned) are not involved with respect to the matter of annual leave. The bill would place the Federal civilian worker in the position of being treated in exactly the same manner as workers in private industry who receive similar annual leave payments upon separation, by making the award of unemployment compensation depend upon the provisions of the appropriate State law. The committee approved a technical amendment to the bill to insure that no change would result in the rules for determining "Federal service" and "Federal wages" for purposes of the exservicemen's unemployment compensation program, which became law last year (Public Law 85-848), and the bill passed the House without further amendment. This legislation is presently pending in the Senate Finance Committee.

H.R. 5640, by Mr. MILLS; Public Law 86-7, signed March 31, 1959:

The purpose of this bill, which was reported to the House by the Committee on Ways and Means and passed the House without amendment, was to extend from April 1, 1959, to July 1, 1959, the time during which unemployed persons who had established a claim to temporary unemployment compensation under the Temporary Unemployment Compensation Act of 1958 before April 1, 1959, might receive such payments. The legislation was designed to provide a gradual closing out of the program rather than a sudden discontinuance. The unexpended balance of the appropriation which had been made at the time the 1958 program was enacted was more than sufficient to take care of the additional payments and costs which the Department of Labor estimated were involved in this legislation.

The Senate amended the bill to some extent, and under the conference report which was agreed to by the House and Senate, the bill became law as passed by the House, with an amendment which had been suggested to the Senate Finance Committee by the Department of Labor which was designed to assure that individuals who had exhausted their regular benefits prior to April 1, 1959, but whose regular report days, under procedures followed by their State agencies, would be after April 1, 1959, would not be precluded from receiving the benefits of this act (in all cases such claims must have been filed before April 7, 1959).

H.R. 5920, by Mr. BOSCH; passed House September 9, 1959:

As reported by the Committee on Ways and Means, this bill would amend title II of the Social Security Act to change the rule for crediting quarters of coverage on the basis of maximum creditable wages paid in years before 1951 to conform to the rule applied in the case of maximum creditable earnings in years after 1950. Under present law an individual who receives the maximum creditable wages for OASI coverage is given credit for four quarters of coverage, regardless of when in the year the wages were earned; however, with respect to wages earned in a calendar year before 1951, an individual earning the maximum creditable amount is deemed to have a quarter of coverage in each quarter following his first quarter of coverage of such year.

The committee was advised that this discrimination has precluded some individuals from qualifying for OASI coverage, and this legislation would correct this situation.

CUSTOMS AND TARIFF LEGISLATION

H.R. 1217, by Mr. BENTLEY; reported to House August 3, 1959:

As reported to the House by the Committee on Ways and Means, this bill provides for a 2-year suspension of import duties on amorphous graphite or plumbago (crude or refined) which is valued at $50 per ton or less. The United States is dependent on imports for nearly all its requirements of natural amorphous graphite, which is a mineral with a wide variety of uses. Favorable reports were received on the bill as introduced (which provided for transfer to the free list, irrespective of value) from the Departments of Commerce, Treasury, State, Defense, Labor, and Interior, as well as an informative report from the U.S. Tariff Commission. No action had been taken on this legislation in the House prior to adjournment of the first session.

H.R. 2411, by Mr. MAGNUSON; Public Law 86-262, signed September 1, 1959:

As reported by the Committee on Ways and Means, this bill provided for the addition to the free list of tourist literature issued by certain groups, relating chiefly to places or travel facilities outside the United States, the purpose and effect of the legislation being to simplify the traiff treatment of tourist literature and to extend the present duty-free treatment to a broader class of such literature. Safeguarding provisions against abuse are provided for by law. The bill passed the House without amendment.

The Senate, in addition to approving the provisions of the House bill, amended the bill to include the provisions of two other bills which the Committee on Ways and Means reported individually, and both of which passed the House—H.R. 4576 (providing for a 2-year suspension of duty on the importation of book bindings or covers imported by certain institutions) and H.R. 6249 (liberalizing the tariff laws for works of art and other exhibition material). A further Senate Finance Committee amendment relating to the importation of wood moldings, was deleted on the Senate floor. The amendments of the Senate were accepted by the House.

H.R. 2886, by Mr. KEOGH; Public Law 86-235, signed August 8, 1959:

Enactment of this legislation suspended for 3 years the import duties on certain classifications of spun silk yarn provided for in paragraph 1202 of title I of the Tariff Act of 1930. Spun silk yarns of the fineness provided for in this bill are not produced domestically in any quantity. Imported yarns, which are usually finer in size than those of domestic manufacture, are used for various decorative purposes and in the production of certain types of silk broadcloth and other fabrics. The committee was advised that suspension of the duties on the raw materials for such silk fabrics would improve the competitive position of the domestic silk-

weaving industry and would tend to increase the domestic production of silk cloth. Favorable reports on the legislation were received from the Departments of State, Treasury, Agriculture, and Commerce, as well as an informative report from the U.S. Tariff Commission.

The bill became law in the form reported by the Committee on Ways and Means.

H.R. 3681, by Mr. OSTERTAG; Public Law 86–34, signed May 29, 1959:

This legislation provided for the duty-free entry of certain chapel bells imported for the use of the Abelard Reynolds School No. 42 in Rochester, N.Y. The committee was advised that these bells are not manufactured in the United States, would be used for the musical training and appreciation of students at the school, and would remain the property of the school. The bill became law without amendment.

H.R. 4385, by Mr. MACHROWICZ; passed House August 18, 1959:

As reported to the House by the Committee on Ways and Means, the purpose of this bill is (1) to add iconostases to the list of articles for which free entry is presently provided in paragraph 1774 of the Tariff Act of 1930, as amended (providing for the free entry of certain articles for religious purposes); (2) to provide for the free entry of adjuncts and appurtenances of the named articles whether to be physically joined thereto or not; and (3) to extend the application of paragraph 1774 to cemeteries, schools, hospitals, orphanages, and similar nonprofit activities staffed and controlled by corporations and associations organized and operated for religious purposes.

The committee was advised by the interested Government Departments that enactment of this bill would assist in solving certain difficult interpretative questions which have arisen under the present provisions of paragraph 1774. Favorable reports on the bill were received from the Departments of State, Labor, and Commerce, and informative reports from the Department of the Treasury and the U.S. Tariff Commision. The House passed the bill under unanimous consent and at adjournment it was pending in the Senate Finance Committee.

H.R. 4576, by Mr. COHELAN; passed House August 18, 1959 (see H.R. 2411):

This bill, as it was reported to the House by the Committee on Ways and Means, provided for a 2-year suspension of the import duties on book bindings or covers imported by certain institutions. The suspension of duty on book bindings or covers provided by Public Law 83–694 and Public Law 84–723 expired on August 31, 1958, and since that time these items have been subject to duty. The committee was advised by the U.S. Tariff Commission that it was not aware of any complaints against imports under the previous temporary duty exemption, and favorable reports on the bill were received from the Departments of State, Treasury, and Commerce.

This bill passed the House under unanimous consent on August 18, 1959; the Senate Finance Committee, however, adopted the provisions of H.R. 4576 as an amendment to H.R. 2411, and the 2-year suspension of duty on book bindings or covers became law as a part of that bill (Public Law 86–262).

H.R. 5054, by Mr. HEALONG; reported to House August 31, 1959:

As reported by the Committee on Ways and Means, this bill would amend section 304 of the Tariff Act of 1930, as amended, to provide that imported articles whose container must be marked with the name of the country of origin, shall whenever repackaged, have all succeeding containers so marked, whether repackaged by the importer, jobber, distributor, dealer, retailer, or other person. Failure to mark will make the goods subject to seizure and forfeiture under the customs laws. The Committee on Ways and Means amended the bill to limit the importer's liability under its provision so as to apply only until the article in question passes out of his custody and control, and unless and until subsequently repackaged by or for his account.

H.R. 5508, by Mr. MILLS; Public Law 86–14, signed April 22, 1959:

This bill, which became law without amendment, provided permanent legislation permitting the free entry under bond of imported articles for exhibition or use at fairs designated by the Secretary of Commerce. The bill follows the basic provisions of the numerous trade fair laws which have been enacted for individual fairs in the past, and eliminates the necessity for the enactment of separate laws in behalf of individual fairs and the repeated issuance of regulations, as in the past. The committee was advised that enactment of this legislation, which was recommended by the interested executive departments, would facilitate cultural and commercial interchanges between the United States other countries.

H.R. 5887, by Mr. KEITH; passed the House September 9, 1959:

The purpose of this bill, as amended by the Committee on Ways and Means, is to amend the Tariff Act of 1930, as amended, by placing ground, powdered, or granulated seaweeds on the free list. The seaweed involved is used primarily by domestic processors who produce an end product in the form of a powdered extractive used in foods and other products as jelling, thickening, etc., agents. The committee receives favorable reports on this legislation from the Departments of State, Treasury, Commerce, and Labor, and an informative report from the U.S. Tariff Commission.

H.R. 6054, by Mr. KARTH; Public Law 86–115, signed July 28, 1959:

This bill, which became law in the form in which it was reported by the Committee on Ways and Means, provided for a 1-year continuation, to June 30, 1960, of the suspension of duties on imports of metal scrap. Favorable departmental reports were received on this legislation and the committee received no information indicating any opposion to its enactment.

H.R. 6249, by Mr. METCALF; passed House August 25, 1959 (see H.R. 2411):

As amended by the Committee on Ways and Means, this bill was designed to amend the Tariff Act of 1930, as amended, so as to liberalize the definition of "works of art" which may be imported duty-free to include modern art forms and to ease restrictions on the importation of articles of educational or artistic value when they are meant for exhibition and not for sale. The legislation was worked out in cooperation with the Treasury Department to modernize the antiquated provisions of law which tended to sharply reduce the number of abstracts, collages, lithographs, and primitive carvings imported for the enjoyment of the general public. This bill passed the House unanimously on August 25, 1959; the Senate Finance Committee, however, adopted the provisions of H.R. 6249 as an amendment to H.R. 2411, and this legislation became law as a part of that bill (Public Law 86–262).

H.R. 6368, by Mr. HEALONG; Public Law 86–325, signed September 21, 1959:

The purpose of this legislation, which became law without amendment, was to transfer from the dutiable to the free list of the Tariff Act of 1930 pumice stone imported to be used in the manufacture of concrete masonry products, such as building blocks, bricks, tiles, and similar forms. The Committee on Ways and Means was advised that enactment of this legislation would benefit the makers of building blocks and other masonry products, and that there were no facts to indicate it would have an adverse effect on any U.S. industry. Favorable reports were received on the bill from the Departments of State, Treasury, and Commerce, as well as informative reports from the Department of the Interior and the U.S. Tariff Commission.

H.R. 6579, by Mr. KEOGH; Public Law 86–288, signed September 16, 1959:

This legislation, which was enacted into law in the form reported by the Committee on Ways and Means, provided for the temporary free importation (to the close of September 28, 1960) of extracts, decoctions, and preparations of hemlock suitable for use for tanning, regardless of their chief use. Favorable reports were received on the bill from the Departments of State, Treasury, Commerce, and Labor, and an informative report from the U.S. Tariff Commission.

H.R. 7456, by Mr. BALDWIN; passed House August 18, 1959:

The purpose of this bill, as reported to the House by the Committee on Ways and Means, is to extent for 3 years (until the close of March 31, 1963) the existing suspension of import duties imposed on casein under paragraph 19 of the Tariff Act of 1930, as amended. The committee was advised by the executive departments that they are unaware of any unfavorable developments resulting from the free importation of casein, and favorable reports were received on this legislation from the Departments of Agriculture, Labor, and Commerce, as well as informative reports from the Department of the Treasury and the U.S. Tariff Commission.

H.R. 7567, by Mr. MILLS; Public Law 86–99, signed July 17, 1959:

This legislation, which was introduced in behalf of the administration at the request of the Department of Defense, extends for 2 years, to July 1, 1961, the privilege of free importation of gifts from members of the Armed Forces of the United States on duty abroad. This privilege has been provided continuously since 1942, and is limited to shipments of bona fide gifts not exceeding $50 in value.

The Department of Defense in urging the enactment of this legislation expressed the opinion that a very definite morale factor is embodied in this legislation. It is extremely important to a serviceman on tour of duty overseas that he be able to send small gifts and souvenirs from the region in which he is serving to his family and friends in this country. If such articles were made subject to duty, the administrative problems involved in sending gifts home would serve to discourage this practice.

Adequate safeguarding provisions exist in the act and through appropriate administrative regulations. The bill became law without amendment.

MISCELLANEOUS

Although the following bills amend the Internal Revenue Code, they are not properly classifiable as tax legislation.

H.R. 4029, by Mr. KING of California; passed House August 18, 1959.

This legislation, which passed the House under unanimous consent, amends the sections of the Internal Revenue Code of 1954 which were developed from the National Firearms Act. The primary purpose of that act was to facilitate the control of weapon utilization by gangster and other underworld characters. The purpose of the bill is to eliminate the interference of this police regulation of these weapons with sport and recreational utilization without jeopardising the deterrence to improper and unlawful uses. The legislation, the provisions of which were worked out in conferences with representatives of the Internal Revenue Service and law enforcement agencies, would be of benefit to gun collectors, rifle associations, and persons having an avocation involving firearms, without interfering with the effective administration of the National Firearms Act taxes. As a result of the conferences on

this legislation, a number of features have been incorporated in the bill which are designed to aid in enforcement and simplify the administration of these provisions.

H.R. 8685, by Mr. MILLS; Public Law 86-368, signed September 22, 1959.

The purpose of this bill, which became law as amended by the Committee on Ways and Means, was to provide that the Assistant General Counsel for the Treasury Department who is to be the Chief Counsel for the Internal Revenue Service is to be appointed by the President by and with the advice and consent of the Senate. The office of Assistant General Counsel serving as Chief Counsel of the Internal Revenue Service, which the new office replaces, was filled by an appointee of the Secretary of the Treasury. The basic compensation rate of the new officer will be $19,000.

Enactment of this legislation was favored by the Treasury Department.

Your Community in World Affairs

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. WILEY. Mr. President, around the world, the United States, and other nations, are trying to find new, more effective ways to promote international understanding and better relations among countries.

Over the years, countries have made such attempts—on a more limited scale—to carry on interchanges of people, ideas, technical know-how, and otherwise improve relationships with other nations.

Now, however, we live in a shrunken world. The miracles of science and technology—through man's ingenuity—have greatly diminished oceans, mountains, and distances as natural barriers between nations.

Now, once-far-distant countries are over-the-fence, next door neighbors. Modern communication has provided instantaneous contacts between people. Jet travel has greatly reduced the time it take to travel between places—once far apart on the earth. Rocket-powered missiles with warheaded nuclear bombs could—if triggered for war—create such devastation and destruction as the world has never known, almost in a matter of minutes—anywhere on the globe.

In view of these changed conditions, it is particularly important that a stepped-up effort be made to establish a climate more favorable to peace.

Even though science and technology have largely eliminated the natural barriers to physical interchange, however, there still remain obstacles to improving relations among nations. These include: a wide variety of languages; different histories; conflicting economic interests; differing political, ideological, religious, and other philosophies—all of these sometimes become obstacles to better relationships.

However, I am confident that these are not insurmountable.

Nevertheless, the obstacles—in whatever form they exist—cannot be overcome by a do-nothing attitude.

Rather, it will require a sincere, concerted, active effort, both by governments, by people, by organizations, associations, leagues, and other groups—to win the peace—to create the climate for better relationships among different peoples.

At this time, I would like to pay tribute to a splendid, voluntary program, designed to promote much-needed municipal understanding and relationships with communities of other countries.

Through this effort, more than 100 U.S. cities and towns are now participating in a new form of international relations. The program is serving a most constructive purpose.

Recently, the Municipality, published by the League of Wisconsin Municipalities, contained an informative article on this commendable endeavor to promote good will through municipal affiliations with other communities elsewhere in the world.

Illustrative of the kind of constructive action needed in this field, I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR COMMUNITY IN WORLD AFFAIRS—AMERICAN MUNICIPALITIES FORM AFFILIATIONS WITH TOWNS IN FOREIGN COUNTRIES

(By Alan Beals, director, town affiliations, American Municipal Association)

More than 100 U.S. cities and towns are now participating in a new form of international relations at the grass roots level. Called a town affiliation, sister city or twinning, it means broadening the contacts of community organizations, groups and individuals with counterparts overseas to carry out programs of friendship. Cities formally affiliate with overseas cities to achieve this objective.

Senator ALEXANDER WILEY, of Wisconsin, in commenting recently on the types of programs undertaken by cities now affiliated, stated, "Congratulations for this great job of international goodwill." Senator CLAIR ENGLE, of California, called the affiliation of American communities the most dynamic development in the field of U.S. foreign relations since World War II.

The President of the United States called a group of leading American citizens to a special White House Conference in 1956 to discuss ways and means for building new roads to international understanding. The aim was to build a people-to-people program of communication between Americans and the citizens of other lands. One objective was to encourage American cities to affiliate with cities overseas. Though the idea is relatively new to America, there are hundreds of affiliations among European cities.

INITIAL CONTACTS

The first contacts between affiliated cities are usually made at the municipal level. The mayor serves as honorary chairman of the affiliation. The next contacts are made between organizations that have counterparts; such as educational, cultural, technical, business, professional, social, civic, service, religious, labor, youth, and hobby groups. From these municipal and organizational contacts, the third level is on a person-to-person basis. When the affiliation between cities is properly organized and established, continuing contacts result on all three levels.

Most American communities form a committee to carry out the program. Members of the committee are generally leaders of organizations which represent a cross-section of the community. The committee is responsible for locating an appropriate sister city.

Selection of a foreign city is based, where feasible, on mutual interest. Some affiliated cities are similar in size and economic characteristics; others are not. The American Municipal Association is available to help in locating an overseas community for affiliation. When the overseas community agrees to join hands, formal resolutions are passed by the respective city councils and ceremonies are usually held in both communities.

Following the formal affiliation, contacts and projects are begun with the sister city. The only limitation on the types and numbers of projects in the imagination of the community. Some towns plan only two or three projects a year, while others, because of their greater resources, undertake more extensive programs. No one organization can be expected to execute a successful town affiliation by itself. The work should be divided among the largest number of people and organizations.

FINANCING

A budget is needed of course. It can be small or large and is generally raised outside of city government funds by the affiliation committee. Communities have used different ways for raising funds to finance a major activity of this type. In Montclair, N.J., an annual ball is held, and all the proceeds are used for the affiliation program with Graz, Austria. In San Jose, Calif., civic and service organizations pay annual membership dues to support the program with Okayama, Japan. Many projects are supported by services of business, cultural and civic groups. Hotels have offered free lodging to overseas visitors, auto dealers have supplied transportation, and manufacturers have lent their private aircraft and pilots.

Many projects can be carried out with little or no cost. Examples are exchanges of school artcraft, exchanges of photographic exhibits, pen pals, tape pals (exchange of tape recordings), exchanges of magazines and technical literature, and contacts between ham radio operators in each community. Civic, service and social clubs establish contacts with counterpart groups in the sister city. If such groups do not exist in the affiliated city, it may be possible to assist citizens overseas to establish such groups.

ASSISTANCE AVAILABLE

The American Municipal Association, 1612 K Street NW., Washington 6, D.C., is available to help local communities to establish town affiliations. AMA will provide any city or town with information on speakers who may be able to address a communitywide meeting considering affiliation and with assistance in locating and selecting a city overseas. The AMA brochure, "Your Community in World Affairs," outlines the steps that most American communities have used to initiate affiliation. It is available on request. All communities, large and small, can start a town affiliation with a city overseas. Some fascinating city in another part of the world wants to be friends.

Facts and Fictions of U.S. Capitalism

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CLEM MILLER. Mr. Speaker, a provocative essay on U.S. capitalism

was published in the Reporter magazine this month. The author, Mr. David T. Bazelon, is a corporation lawyer, of New York City.

Mr. Bazelon observes that we, as a Nation, suffer from "an astonishing amount of downright mythical thinking" about property and economic organization. He asks who actually enjoys effective ownership of the great business corporations that are the heart of our private property system.

He suggests that—

The issue is, first, to recognize the existence of this crucial economic power now held by corporate and other managers, and then to request them to justify it to us. Power must be legitimated, otherwise any talk of law itself, much less democratic citizenship, becomes absurdly irrelevant.

* * * We are free to engage in politics—and indeed we were as a Nation created free in order to do so. But to pick up our birthright requires at least a significant number of us to indicate with reasonable frankness and accuracy what the basic national power is, where it is, and who the stewards of it are.

I commend this commentary particularly to some of those whose lobbies were so busy recently pushing certain portions of title VII of the Landrum-Griffin bill under the banners of union democracy and labor reform. I respectfully suggest that these gentlemen—who are among those now pointing and chortling the loudest—pause a moment and look in a mirror. They should be seeing themselves, too.

Under leave to extend my remarks, I include Mr. Bazelon's essay in the Appendix of the RECORD:

FACTS AND FICTIONS OF U.S. CAPITALISM

(By David T. Bazelon)

We seem, as a nation, to be committed equally to increasing production and deceiving ourselves about our productive system. The realities of the American economy are massive and dominant in our way of life; and they are extraordinarily dynamic and original in their evolving nature. But the rhetoric we employ to describe this core activity of ours is overwhelmingly obscurantist: reality and image are hardly within hailing distance. To put it simply, we suffer from an astonishing amount of downright mythical thinking about money and property and basic economic organization. While we all know that America manufactures as much as all the rest of the world, the words, images, and ideological structures we use to represent to ourselves what we are and what we do tend to be a quarter, a half, or even a full century old. Old, irrelevant, and misleading.

This stricture applies to liberals and socialists as well as to NAM publicists and their businessmen backers. Indeed, to be fair, one should credit many of the centrally placed executives and managers with a distinctly superior though unshared comprehension of our economic system. As for the rest of us, we seem to have been too busy enjoying its beneficence to have bothered to examine its realities. It is about time we began.

The falsification of economic reality, buttressed by the laziness (or something) of the educated, is becoming a highly organized, even essential instrument of policy—and that is always dangerous, politically, morally, and intellectually. To obscure, as a matter of policy, the existence and nature of the dominant power in a society is to undermine the basic creative sources of social life. This falsification presents America in the classic image of free enterprise and private-property capitalism; its consequence is to conceal the incontestable fact that we are dominated by great faceless corporations "owned" by no one and run by self-designated "managers."

There is a great deal of talk on Madison Avenue these days about the corporate image, which means giving a humanized face to these impersonal structures. And the New York Stock Exchange publicists are pushing hard the idea of a people's capitalism, which has as much to do with capitalism proper as people's democracy has to do with democracy proper. The purpose of these maneuvers is to plug some of the more gaping holes in the traditional web of justifications which, before the New Deal, was deemed sufficient in itself.

What is being simultaneously justified and obscured is the revolutionary emergence of a new American property system—and the fact that the men in control of it, the managers, occupy unexampled positions of power and privilege which are not based on entrepreneurial accumulation or private ownership, to which they were elected only by their peers, and for which they have been answerable only to history.

The managers of corporate industrial wealth and the big-money funds—along with their expert advisers—are the ones who are creating the new system; they run it, and they also best understand it. They know everything worth knowing in a practical way about money, property, and basic economic organization—because that's what they manage. They milk the pre-tax dollar and thread their way through Government regulation on behalf of all sizable funds or forms of wealth. They are personally intimate with the intricacies of the fragmentation of property ownership and the alienation of capital because their very existence derives from those crucial changes in our property system.

What are some of the things the managers know that the rest have not gotten around to learning? We had better—because of their elaborate nature—avoid the subjects of the tax-torn dollar and other Government regulation. But we might take a straight look at property as such. And here the invitation to understanding reads: Nothing is very private in a mass society, including property.

Advanced or even adequate thinking about property by the people who manage it requires what might be called a nonpossessory or nonowning frame of mind. As any good manager knows, ownership is irrelevant—the main thing is control. And frequently control is created or ensured by means of giving up ownership or by having certain others own the property. Management control of big corporations, for instance, is based on a dispersal of stock ownership among as large a public as possible: A.T. & T. has 1,600,000 stockholders, no one of whom owns more than one-thirtieth of one percent. The Ford family retained control over Henry Ford's creation only by giving its stock in the company to a foundation; if it had held on to ownership, it would have lost control. Sears, Roebuck is controlled by company stock held in the company's pension trust: here the management consolidated its position by "giving away" huge sums of money. Managers manage, they don't own.

WHOSE HOUSE IS IT?

In a modern law school, some of the best all-around fun is had in arriving at a definition of property. The faculty considers it a first essential for the development of legal technique to tease the apprentice lawyers out of their ordinary received notions.

First off, the basic image of property—land and things—is pooh-poohed; then the search for a definition is carried through contract rights, choses in action (unrealized rights, including claims in court), and other intangibles. The class then thinks it has the answer: property is rights—called property rights or, in the short form, property. This is the point at which the modern professor enjoys himself most, and to confound the class completely he pulls out a case in which a property right is recognized and enforced by a court for the first time—a good one is the early radio broadcasting case in which a court first held that the right to broadcast a description of a baseball game "belonged" to the baseball club, could be disposed of by it, and could not be pirated by a party lacking contractual privilege from the "owner." Then the coup de grace: Did the court enforce the club owner's right because it was a property right, or was it a property right because the court enforced it? A smile settles on the professor's face, and the pot of gold is indicated: property is a right of use or disposition which will be enforced by a court. On that day we are men; and the legal elite is then prepared to go out, tautology in hand, and grow rich defending and creating such rights.

But a whisper of doubt remains as older tautologies assert themselves: land is land, to own is to own, and all property, like land, is supposed to be owned. Yes, but less frequently nowadays by any one person. Take land, for example: the bank holds a first mortgage on the suburban home, the contractor has a material man's lien, various governmental authorities hold tax liens, the niece of the guy who sold it to you is suing you because her uncle didn't have the right to convey it, and you hocked your equity in order to post bond for your brother-in-law. Who owns the house? Why everybody who has an enforceable right to its use or disposition; and all the possible rights in and to the home, the whole bundle, add up to the ownership of it. In our crowded, mobile society there has occurred a very extensive fragmentation of property ownership.

Some things are too big to own. If the suburban home is too much for me, and a car is too much for an industrial worker, then General Motors is too much for a Du Pont, and Standard Oil of New Jersey is too much for a Rockefeller. The use of the word "ownership" in referring to an agglomeration of industrial capacity like General Motors is, to put it kindly, overripe. And the simple designation of our system as one based on private property is not merely overripe, it is a calculated deceit. The managers know that the ownership of General Motors is irrelevant, but their spokesmen spend millions attempting to convince us that General Motors—and all publicly held American corporations—are owned by, you guessed it, the people-public. When they say "owned," they mean for us to feel the word in the utterly primitive sense. As Keith Funston of the New York Stock Exchange remarked to a group of advertising men, this "is a very humanizing bit of news."

One can face the question "Who owns General Motors?" if one will face the answer—"Nobody." But that is inconceivable, you say. Our training in property thinking (or lack of it) induces a certain horror in contemplating anything so big and so valuable walking around unowned. We abhor the vacuum of nonownership. But how could GM be owned? The total assets of this corporation amount to nearly $7 billion and the market value of its common stock is in excess of $13 billion. There are more than 750,000 stockholders. A control block of stock, usually put at between 20 and 51 percent, affords a means of translating ownership into control; but this is a feature of the aggregate, not of individual shares, and the courts so recognise it. When Du Pont disposes of the major part of its holdings in the company, there will not be anything like a control block in the GM situation.

THE MITE OF OWNERSHIP

The notion that GM (or any one of the great majority of our public corporations) is "owned" proceeds from the time-honored

assumption that to own stock is to own the corporation. If we examine this old-fashioned "self-evident" truth empirically, we note that what the public stockholder actually has is three double-edged rights: (1) he can sell his stock at a profit or at a loss; (2) he can receive or fail to receive a variable dividend; and (3) he can vote "Yes" or "No" on certain issues affecting control of the corporation and the disposition of its properties. The first two items indicate that he owns a negotiable instrument of a certain character—consisting of an "iffy" return on capital and a lottery ticket on market appreciation. Let us look more closely at the third item, the only one of the three that even looks like ownership of the corporation itself. What does the stockholder's vote mean? To skip over several stages of a dull argument, it means that the voter can effect changes of control over "his" property, the corporation, or it means approximately nothing. Can he do this? The answer is "No," not unless an ambitious, well-heeled syndicate mounts a compaign to do so, and thus gives him the opportunity to support them. This does not happen at all often.

A mite of ownership, indeed. Especially when one considers that the essential difference between the incumbent and contending control groups is apt to be that the one has been at that particular trough for a period of time and the other has not. Moreover, in the absence of blatant mismanagement or special business reverses, it is next to impossible to unseat an in-group that is on the alert and well advised by experts. Unlike a campaign for political office, the "ins" have at their disposal not only the corporate patronage but also the corporate treasury; and the voting apathy of the citizen is a form of frenzied activity compared to that of the lottery-ticket holder. As a recent writer so felicitously put it, "The modern proxy contest is at best a device for tempering autocracy by invasion." Following the New York Central and Montgomery Ward fights, in theory the SEC put the final kibosh on the matter by promulgating proxy-fight regulations which ensure that only nice people fighting a good clean fight may now do battle in the arena of what is charmingly called "corporate democracy."

The fundamental meaning of private property is private control over the property one owns, and all the stockholder owns is a share of stock. The corporation is not private property—only the share of stock is.

Twenty-seven years after the publication of A. A. Berle and Gardiner C. Means' "The Modern Corporation and Private Property," the crucial lessons of that landmark work have not been generally assimilated even among the educated. The processes therein described have in the meantime undergone an extensive development. These were adumbrated by Mr. Berle in a brilliant little essay written for the Fund for the Republic a couple of years ago, in which he states flatly that the American corporate system now represents "the highest concentration of economic power in recorded history." The ever-present factual ground of his thinking, which simply cannot be repeated often enough, is that 150 corporations hold away over 50 percent of American manufacturing, based on asset values. On the same basis, "about two-thirds of the economically productive assets of the United States, excluding agriculture, are owned by a group of not more than 500 corporations."

The liberal view since the progressive era has been that big corporations mean big capitalists. The point that has to be gotten into the liberal skull is that the manager is not a capitalist at all: he is a new fish.

The day of classic capitalism based on private property is gone. This is not a matter of ideology; it is a simple question of observable fact.

PIECES OF PAPER

In comprehending the demise of the private-property system, it may be helpful to think of property as being of two kinds—"thing-property" and "rights-property." The former would be the plants, machines, railroads, buildings, etc., most of which are organized in great corporate units. The latter would be pieces of paper, like stock certificates and bonds, representing certain direct entitlements relating to such property. Now we have to complicate the picture a little by indicating a third, hybrid form of property—liquid capital organized in huge blocks, mediating between corporate thing-property and personal rights-property. An example would be the $13 billion or so in mutual funds (growing at the rate of $100 million a month). The point here is that a mutual funds would be capable of exercising ownership control over thing-property, but no one could exercise ownership control over a big mutual fund. The same would hold true of many banks, insurance companies, and pension trusts.

Now, as a consequence of the dispersion decreed by the estate and income tax laws, and the raw fact that corporations and big-money funds get bigger and bigger, there is observable an increasing fragmentation of rights-property and an increasing concentration and accumulation of thing-property (and hybrid-property). Rights-property remains private, but it is just paper—somewhat like money, except that it earns and changes in value. Most thing-property is not private, because it is not owned by private persons and, as we shall see, it does not exist, in the last analysis, for private purposes.

It is beyond the scope of this essay to indicate the concentration of rights-property, but a few facts may help to suggest the truth of the situation. The stock exchange propagandists tell us, and we should believe them, that there are more than 10 million American stockholders. They tell us nothing, however, about the concentration of holdings. Now besides the fact that everybody knows that Nelson Rockefeller owns more stock than most gas-station attendants, we do have some 1957 Federal Reserve Board figures to help us out. At that time, the Board reported that there were 56.1 million spending units in the United States, and that 11 percent of these owned some publicly held stock. Only 3 percent, however, held investments valued at more than $10,000, and no more than 8 percent of the units had an annual income of $10,000 or more. Which bears out what everyone knows anyway, that the distribution of the ownership of income paper is something like the distribution of income itself, only more so; and there is almost none of this paper at and below the median level of income (except insurance, life-and-death savings, etc.), where the imperatives of consumption are absolute.

THE EXPENSE-ACCOUNT BARONS

The psychology (if not the fact) of private-property ownership goes very deep; as Mr. Berle has suggested, we are "the most violently private-property-minded country in the world." There was a profound truth in Jefferson's image of a democracy as a society of small property holders—even if in our day it is so impractical as to be tragic. If a man plants himself firmly upon the rock of his property ownership, he has an independence, and a sense of secure equality with other individuals similarly situated, which indeed does make him, as Jefferson believed, the truly anointed member of a democratic community. Now on what rock does the highly paid corporate executive stand, with his expense account, his stock options, his pension plan, deferred compensation, and death benefits? He stands on the rock of his acceptability to his board of directors and other superiors in a bureaucratic hierarchy. No rock at all; so he buries himself in work, in the immediate presence of power and priveleged consumption.

We should not confuse standard of living with accumulation. The thirty thousand corporate executives earning $60,000 or more a year (as reported by Fortune a few years ago), and indeed all the managers, have excellent and even magnificent standards of living. Mr. J. A. Livingston, a perceptive financial writer for the Philadelphia Bulletin, thinks that the "tax-sheltered managerial elite" is "an overprivileged class in a democratic society." But they are workers and spenders, not accumulators. They don't build family financial empires any longer—the estate and income tax laws, and the corporate bureaucratic organization of wealth, have seen to that. Somebody could doubtless still build a temporary empire by merchandising a frozen daiquiri that can be drunk under water. But such events no longer characterize the system.

Free enterprise, motored by that hallowed value, individual initiative, and based on private property for real, has become a minority sector of the economy; still noisy, exhilarating, and important, but no longer the big show. Also, it is quite significant that two of the more substantial success stories of recent times—Reynolds Metals and Kaiser Aluminum—each involves government beneficence as well as individual initiative.

Perhaps this point that the important managers are mostly not important accumulators can best be made by recalling what the old days were like—before the Pecora investigation and New Deal securities legislation, for instance. Describing the business system in the heyday of American capitalist accumulation, in "The Theory of Business Enterprise," Thorstein Veblen devotes several choice pages to the "accumulation of wealth" by corporate executives. His point was that the corporation men made their fortunes by trading in the stock of the corporations they managed. To this end, their purpose was served by a "discrepancy . . . between the actual and the putative earning-capacity of the corporation's capital." So the directorate gave out "partial information, as well as misinformation" to create such discrepancies. If this was not sufficient, some actual mismanagement could be indulged, if desired, to depress the stock. In those days—what the liberal muckrakers called the "robber baron" period—great fortunes could be and were accumulated.

And today? Apart from taxes, Section 16(b) of the Securities Exchange Act of 1934 imposes an absolute liability in favor of the corporation with respect to any insider's short-swing profits in such transactions (which are a matter of public record). Where statutes are not sufficient, the revolution in the corporate common law effected by the brilliant practitioners of minority-stockholder litigation insures that the managers remain housebroken, as they have been for some decades. This does not imply that insider information is not valuable today; one should not underemphasize the extent to which the corporate world has learned to live with restricting legislation and litigation; but the fact remains that control of a corporation is not the paved highway to an accumulation of great wealth which it once was. Now it is, by and large, just a very good job, in terms of both power and material welfare. But the power is based on position, not ownership; and the material advantages are standard-of-living advantages—nothing really important in the way of accumulation. (Not more than enough to support one wife and a lazy son or two after one's death.)

OWN YOUR OWN JOB

Top corporate executives, and other important managers, typically have choice

long-term employment contracts as well as many lucrative fringe benefits. The contracts and benefits afford them substantial security, but they do not amount to owning the job—any more than union seniority and grievance procedures mean the assembly-line worker owns his job. We would like to possess these important things because, in a way, everything depends on them. Some of us want and need the security that a sense of ownership gives so much that we kid ourselves into the belief that we do indeed own what we need to own. For example, a woman who needs to feel that she possesses her husband will literally think and feel a property right in him. This happens to be a property right that, to a considerable degree, the courts will recognize. But they have not come around to accepting much of the ownership quality in our job tenure.

It will come, however, because insofar as we move away from private property and are bureaucratized, we become defined as a society of jobholders—all of us, from the quarter-million-a-year executive to the subsistence laborer. In a certain fundamental sense, both are proletarians: an increasingly comfortable proletarianization is America's gift to the modern world.

The issue is: We can belong to the job as proletarians, or the job can belong to us as individuals. (I don't think Sweden is going to give us a middleway on this issue.) As jobs come more and more to be owned by the jobholder, there will develop an increasingly elaborate structure of rights and duties with regard to jobs as property: a system of law will develop, just as happened in the epoch of bourgeois property after the transcendence of feudal forms. I think this is a more likely outcome than that the human race should manage to dispense with the sense of ownership and property entirely—dispense, that is, with identity in depth between self and thing.

Meanwhile, union members are as much concerned with seniority rights as with wage demands, the secretary home-furnishes her office niche, and the medium-level white-collar worker measures the size and newness of "his" desk against all comers. (Note that many advertisements for new typewriters, postage-meter machines, etc., are directed to the officeworker rather than to the boss.) And also meanwhile, what the junior and senior managers "have"is simply their qualifications to be managers. "Qualification" takes in a great deal—in some corporations it includes the character and social standing of one's wife. It is this compulsion to qualify that has created W. H. Whyte's "organization man" and David Riesman's "other directed" group man. It is obvious that their dominance as social types is tied to the decline of private property.

THE HUNGRY GIANTS

What are the aims of the big corporations that dominate our national life? They are bureaucracies, so they have, at least in the first instance, the purposes of any bureaucratic structure: (1) to maintain itself, (2) to grow bigger, and (3) incidentally to accomplish the function that justifies its existence. The profit motive of corporations—their basic vestigial connection with capitalism proper—subserves all three of these bureaucratic purposes, but especially the second. Corporations are, after all, mainly a means of accumulating and maintaining wealth in an organized form: they are the only remaining legal form of a perpetuity, apart from the sovereign state itself. But there is no perpetuity in the ownership or the control of corporations.

The difference between an economic organization like General Motors or A.T. & T. and a $10 million or even $50 million corporation is not the simple additive one of size. At some point a change in quantity becomes a change in quality, and a new property form is created. Moreover, a smaller corporation may drag along or fail, and only a limited number of people are hurt; but the giants cannot be allowed to fail, and indeed they cannot be allowed for long to function at much below their optimum capacity. National production and the fate of a people would be decisively affected.

Little corporations get bigger—by accumulation, by merger, and simply because we have an expanding economy. At a certain point they transcend their original nature and then two crucial economic events occur simultaneously: There has been a new addition of X million dollars to the sphere of quasi-public or unprivate property and a subtraction of the same amount from the private-property, free-enterprise sector. Note these facts: Between 1949 and 1954, the number of mergers tripled. In recent years, two-thirds of all mergers have been of small companies into larger ones with assets of over $10 million. In this sense, as well as more obvious ones, the quasi-public giants are destroying free enterprise and private property. The tax law, as well as many other economic factors, has contributed to the formation of mergers. The tax-free reorganization sections of the tax code, which allow for the nonrecognition of gain or loss in certain major corporate transactions including mergers, provides positive encouragement to the growth of bigness.

Also, bigness is bigger than any balance sheet will reveal—since many smaller companies are organized in constellations around the giants. There are undoubtedly a number of auto-parts manufacturers and other suppliers that might just as well constitute themselves as divisions of General Motors, for all the make-believe independence their freedom entails. (Some giants have purposefully organized their industries in this way as a defense against the antitrust laws, as well as a means of keeping the unions in line.)

The problem of bigness has been with us since the building of the railroads a century ago, and of course it was a great political issue in the trust-busting era around the turn of the century. From that day till this, the liberal view has been to prevent or disperse the concentration of economic power, rather than to accept it and control it. This has been the impulse behind a considerable amount of fundamental legislation—the Sherman and Clayton Acts, the Robinson-Patman Act, resale price maintenance, the setting up of the Federal Trade Commission, etc. Whatever else may be said of this great effort to preserve capitalism in its classic image, it must at least be pointed out that it has failed. It may have slowed down or in some cases deflected the basic trend, and it certainly made a lot of lawyers rich; but after 50 years of this sort of thing our economy is more than ever dominated by big corporations. If the program is justified as a form of public subsidy to free enterprise in the form of small business, similar to our approach to the farmers, then it is perhaps acceptable. But as a comprehensive program or theory, it is mostly irrelevant to U.S. society.

This liberal attitude is based as solidly on the atavistic myths—of free enterprise and private property—as any NAM speech is. Each group is working a different side of a street that runs through a ghost town.

Marx and Veblen among others were quite right after all in one fundamental insight; industrialism was found eventually to burst out of the straitjacket of early capitalist forms of property—if not into socialism, then into Americanism. An industrial system, as distinct from an ideology or way of doing business, has a dynamic of its own, which is just simply to be itself, to produce efficiently. As long as a society can afford not to produce—is able to deny the industrial dynamic—it can join any property system and any economic ideology it may whimsically desire with the actual system of industry. But when production becomes imperative, any form of property and any ideological element may be required to give way. Give way in fact, of course, not necessarily in name. Which accounts for many of the misnamed facts in our industrial picture.

THE END OF CAPITALISM

The end of capitalism in America as a recognizable entity results from three major historical events—the great depression, the Second World War, and this endless cold war involving continuous competition in production with the Soviet Union. Many good Democrats feel that the New Deal saved capitalism, but that is putting things wrong end up: corporate concentration saved (and imperceptibly transcended) capitalism, while the New Deal merely saved the corporations, by making it possible for them to produce again. That remains one of the primary functions of our Federal Government—to keep saving the corporations. It is unnecessary to refer in detail to the numerous means the Government has used to bolster purchasing power, or to help organize corporations among themselves. To indicate the scope of the latter, Mr. Berle asserts that "roughly two-thirds of American industry and much of American finance is controlled by a formal or informal Federal industrial plan."

Not only do corporations regulate themselves through Government agencies and similar devices, but it is a fact—to be obscured only by conventional thinking—that the very existence of an A.T. & T. or a GM or an RCA is in itself a form of economic planning on a national industrial scale: True, such planning has no broad or socially debated purpose, and is subject to no exterior responsibility other than the brute verdict of events—but still it is that rationalized economic planning so dear to the hearts of older socialists. (It seems an amusing irony that the creepiest part of creeping socialism should be its daily augmentation by the corporate managers.)

So, among other things, the imperatives of production result in an accelerated corporate rationalization of the economy. Let us state these imperatives seriatim, so as to recognize their overwhelming force:

Thou shalt not allow another great depression.

Thou shalt produce fully and efficiently.

Thou shalt compete globally with the Soviet Union—a competition whose key terms are not merely tons of steel and numbers of automobiles but the purposeful organization of production and the rate of industrial growth.

Finally, thou shalt raise and spread the American standard of living.

Almost everything unique about our system results from the action of these imperatives. Since they cannot be expected to diminish, it is fair to assume that we will continue to change in the direction already marked out. We may all see the day again (as with the NRA) when the president of, say, General Motors insists on more socialist control over industry. After all, what's good for the country may also be good for General Motors—at least for the people of General Motors, if not for the thing itself.

So that's our unnamed property system, still woodenly or deceitfully miscalled private. But is all this a word game? No. The issue is, first, to recognize the existence of this crucial power now held by corporate and other managers, and then to request them to justify it to us. Power must be legitimated, otherwise any talk of law itself, much less democratic citizenship, becomes absurdly irrelevant. There are two somewhat contradictory legitimations of corporate power current today, one obscurely explicit

and the other largely implied: (1) it doesn't exist, and (2) it works.

The claim that it doesn't exist derives entirely from the word "private": corporations are private property, and thus are assimilated to an older system of justifications. This view leads one to the truly remarkable proposition that the personality of a young executive (and that of his fiance) is not private, but the multibillion-dollar telephone system is.

The legitimation of corporate power because it "works" amounts to what is probably the lowest level of ideology yet reached by man in his brief but painful rise from the prelingual slime. To coin a lawyer-like phrase, it is unanswerable, contemptible, and irrelevant—and is to be understood as meaning nothing more than "You got yours, Jack." As long as Jack accepts the statement, it is indeed unanswerable—and we are well on our way to accepting unlegitimated power at the very center of our civilization. The worst effect of the lack of legitimation is, as C. Wright Mills screamingly asserts, that ideology and then ideas and finally mind itself become irrelevant to national life. And this is profoundly frightening.

The subject of politics is power. Probably the main reason there is no longer anything recognizably like significant political activity in the United States is that those who would engage in it have failed or refused to confront the facts of national power. They don't or won't see where it is. Let us hope that this situation is transitory, that like the genteel poor we were temporarily embarrassed by insufficient ideological funds.

The most deeply disturbing aspect of our situation is that nobody is holding a gun to our head: We are free to engage in politics—and indeed we were as a Nation created free in order to do so. But to pick up our birthright requires at least a significant number of us to indicate with reasonable frankness and accuracy what the basic national power is, where it is, and who the stewards of it are. If the subject of politics is power, the means is ideological discussion, argument, and conflict. Now in this grand activity many things and many qualities are useful, but one is absolutely indispensable—namely, vital ideology itself. And that's our problem: Our ideologies have become so irrelevant to the facts of life that it is all the ordinary citizen can do to stay awake while the great debate about our fathers' world goes on.

The Increase of Pornography: A Cause for Immediate Concern

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. OLIVER. Mr. Speaker, one of the most obnoxious practices of our age has greatly expanded its operations in recent years. I refer to the practice of sending obscene literature through the mails.

As a result of my membership on the Post Office and Civil Service Committee, I have been indoctrinated to a full realization of the operations and ramifications of these purveyors of filth. This practice is a real and immediate threat to our Nation because it strikes primarily at the younger people whose minds are in the formative stage. Of course, the effects are not equal on all of our younger people. Some, because of their character, beliefs, and ideals, perfunctorily dismiss material of this nature and no appreciable harm is done. But police records indicate pornography leaves its impact on a growing number of cases every near. Law officials all over the country report that in recent years many crimes of violence have ben triggered by this pernicious material, and the rate is increasing rapidly.

In my mind, this problem, because of its pernicious effect on the impressionable minds of our youngsters and the resulting decay of the moral fiber of this Nation, is one of the most pressing facing us as a Nation today.

It is encouraging to note that community leaders are joining the efforts of postal officials and law enforcement agencies in their effort to stamp out this illicit trade. The religious leaders of all faiths, long the protectors of the spiritual welfare of our Nation, have declared all-out war against the smut merchants. Their patriotism and courage are to be commended.

Rabbi Samuel Zaitchik, of Lynn, Mass., a dedicated fighter against pornography, in a recent radio address carried the fight against the purveyors of filth into many homes in the New England area. In my opinion, Rabbi Zaitchik's remarks should be read by every man, woman, and child in America. In this connection, I am pleased to insert the message of Rabbi Zaitchik:

Dear friends, tonight I should like to speak to you about words—words spoken, words written, words read. For the past 20 years there has been a great deal of scientific investigation into words—their symbolic meaning, as means of communication, the relationship between words and prejudice, words and behavior, words and morality. There are many branches to this science of semantics—but it is generally agreed that in addition to the influences of heredity, environment, cultural background and economic status—our personalities, our political and social outlooks, our mental health, are greatly affected by our patterns of language, by the words that we speak, that we hear, that we read. In short, it has been demonstrated that it is not always the word that follows the thought, that expresses the thought; quite often it is the opposite—the thought follows the word, the word itself creates the point of view. It is not always that our speech reflects our behavior; quite often it is our behavior that reflects the words that we use. Many studies have been made of bigoted people, and it has often been found that the bigot began not with hatred but with words, with use of labels that he had to justify with hatred. A child repeats a bigoted phrase, repeats the phrase without actually feeling any emotion, hardly knowing its meaning—repeats it enough times until he must believe the words he has uttered. We are, in short, often enslaved by the tyranny of words.

But my subject tonight is not prejudice. My subject tonight is words—words as pornography, words as obscenity. I am not speaking of honest treatment of psychosexual behavior, in fiction, in scholarly scientific studies, in poetry, in drama. These works must be judged according to their artistic value, the integrity of their purpose, and the taste of the individual reader or viewer. I am speaking of words written by people who have either degenerated to the level of their words, or to whom the dollar remains green and delightful even after immersion in mud and slime—words written and peddled by rogues and degenerates and words read by our children, our teenagers, and adults.

Of children and high-schoolers, there is little I need say. We have all heard of tragedies, of broken lives, of distorted personalities resulting from communication between the purveyors of smut and our youth. Everywhere, on street corners, outside our schools, or hiding behind abominable desks or more abominable advertisements, we find these men who begin their day with worship of the impure soul, who laugh at purity of mind and body, whose misbegotten dollars are engraved "Pay to the Order of Twisted Minds."

Of the harmful and often calamitous effects on our children we all agree. But there is sometimes heard a vague justification in respect to adult readers, something hinting at the salutary effect of an occasional aphrodisiac. One might first point out the danger, always present, of such material falling into the hands of curious youngsters, and the resultant confusion, loss of respect, distortion of values. But more important is the danger of our becoming slaves to the tyranny of these words that we read. We may insist again and again that what we read and what we view do not touch our personal lives, our standards of morality—but the truth is that too often if we read enough filth, view enough filth, some of it will rub off on us. When perversity and adultery and indescribable abominations are repeated and repeated and repeated—we begin to think of these things as common, as almost acceptable by the broadminded modernist, as normal biological urges, as sins that cannot be too serious because so many commit them. The ringing God-given "Thou shalt not commit adultery" too often becomes "Thou shalt—because thy body must." We have seen such results only too often in our newspapers.

It may be said that this danger, too, is relatively unimportant, that those few who are so affected by pornographic material would probably have fallen under any circumstances. This may be true—but we must never become too proud to say "There, but for the grace of God, go I."

But there is a third danger, and this is one that cannot be minimized by any decent, thinking individual—and that is this: that the avalanche of pornography and smut while it may not succeed in burying us as individuals, is weakening the foundation of our society. And it is an avalanche become powerful because it has become part of the greater and more destructive avalanche of our present-day psychology of fun. We have become, so many of us, fun-worshipers. In theater, in club, in popular novels, in private get-togethers, we are swept up by this phychology of fun. Not of joy in life, but of fun in life. Not the joy of happy people meeting in warm fellowship, but the fun of wild parties. Not the joy of achievement, but the fun of luxury-spending. Not the joy of quiet contentment, but the fun of sensual comforts. Not the joy of happy, compatible marriage, but the fun of sexual excitement made convenient by marriage. Not the joy of love, but the fun of lust. The pornography, the obscenity, the amorality, and immorality in word, in film, in picture, is perhaps in the final analysis a result of the psychology of fun. For such a psychology tends to go lower and lower seeking satisfaction, relief, seeking an ultimate in the depths. And it can never find it because the answer to life, the meaning of life, the joy of life, the purpose of life, is to be found not in the depths, but in the heights of spirit. We are too many of us slaves to the word "fun." And too many of us have tightened our chains by our reading and viewing of material that belongs in the at-

mosphere of fun. Let us do what we can to force ourselves from the bondage. Words can enslave and words can free. Let us bankrupt the smut peddlers and rogues by rejecting their output. Let us demand beauty, honesty, integrity, and purity in our various media of communications and we will have them. Let us teach our children the delight of the purity of word, the sanctity of the word. Speak purely, read purely, and you will think with purity. Speak with dignity, and your thinking will be dignified. Speak the language of the joy of life, of purpose in life, of achievement in life, and your children will find joy and purpose and achievement. Then we will not fear the smut-peddlers and the rogues. Our children will have been innoculated against their virus. "And these words which I have commanded thee this day shall be upon thine heart. And thou shalt teach them diligently unto thy children." The pure word, the honest word, the word dignifies life, not degrades it. The rabbis say that one of the reasons the temple was destroyed was that the word had lost its sanctity. Our civilization, our democracy is too in peril. It is time that we join to meet this peril.

Gold and the Dollar

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. BUTLER. Mr. President, as a member of the Finance and Joint Economic Committees, I have been following developments affecting our gold and monetary reserves with considerable interest.

Last March I had the privilege of addressing the Amen Corner, a distinguished group of Pittsburgh business and professional men, with reference to some of these problems. At that time, I said:

American citizens are not permitted to convert paper dollars into gold; however, foreigners have this opportunity. In recent years we have been providing them with dollar resources to enable them to draw on our gold balances. Unless we maintain competitive prices in world markets and bring about a balance in terms of our international payments our economy is headed for serious trouble.

In 1948 U.S. gold stocks reached a postwar high of $24.6 billion. At the end of last year they stood at $20.6 billion, a decline of $4 billion. The reduction in 1958 alone totaled $2.3 billion. In fact, the monthly figures show a falling gold stock for every month since January 1958. While a $20 billion gold stock provides an adequate base for our currency, it must be self-evident that a decline of about 10 percent a year can no longer continue without completely destroying our own economic system. This, perhaps, is the best way for us to fully appreciate the impact of unsound economic policies, since an excess of demands for dollar payments abroad over purchases from us will sooner or later be reflected in our monetary reserves.

One of our country's most eminent economists, Dr. Roy L. Reierson, vice president and chief economist of the Bankers Trust Co., of New York, after an extended visit to Western Europe, has recently related his views on gold and the dollar.

In his statement he forcefully reaffirms my own conviction that one of the first tasks which will face the 2d session of the 86th Congress is to deal with the problem of removing the interest rate ceiling on Treasury bond issues. I found Dr. Reierson's address of such great interest that I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOLD AND THE DOLLAR

(Address by Dr. Roy L. Reierson, vice president and chief economist, Bankers Trust Co.)

The outlook for the gold price and the situation of the U.S. dollar, two closely related topics, have been under recurrent discussion abroad for a decade and more. In the first few years after World War II, the discussion centered on the huge concentration of gold in the United States and the dollar shortage in the rest of the world. Lately, with gold holdings beginning to be more evenly distributed, emphasis has been on a possible inadequacy of the U.S. gold reserve, the weakness of the dollar, and the prospect for a change in the dollar price of gold.

Questions of this kind evoke keener and much more persistent interest in foreign financial centers than in the United States. However, this should not be surprising; developments concerning a key international currency such as the dollar naturally attract worldwide attention, the more so as foreign central banks and others are large holders of dollar balances. In the European financial markets, any story on gold and the dollar is followed avidly, and this is particularly the case in London, reflecting the presence there of an international market in gold, the interest of the bullion dealers in this topic, the importance of South Africa and the sterling area as a gold producer, and the large number of gold mining stocks traded on the London Exchange. Statements by U.S. Government officials or by Members of Congress that in any way seem to have a bearing on the outlook for the gold price are widely publicized, and the press usually plays up prominently the somber forecasts of a dollar devaluation that occasionally emanate from certain commentators or self-styled experts in the United States.

FOREIGN FEARS

Concern over the dollar apparently reached a peak in the spring of 1958, when the business recession in the United States, the prospect of a huge Federal deficit, and a large outflow of gold all led to a rash of questioning and uncertainty. Many people then contended that the United States might find it necessary to devalue the dollar as a result. Later, as the American business recovery began to take hold, gold losses declined and these expectations gradually diminished. At present, few informed observers hold any change in the relationship of the dollar to gold to be imminent, and even those who are convinced that the United States will raise the gold price within the next 3 to 5 years appear to be in the minority.

This, however, does not mean that foreign observers have relaxed their scrutiny of economic, financial, and political developments in the United States. On the contrary, while confidence in the dollar has been partly restored, financial observers abroad are nonetheless keeping a close and careful watch over the American scene, and are still uneary over some of the trends in this country. Of particular concern is the course of prices and the developments that seem to be keeping inflationary pressures alive. A year ago, there was apprehension over the inflationary implications of the budget deficit then shaping up; later, uneasiness centered on the large spending programs before Congress. The administration's success in forestalling a spending spree was undoubtedly a factor in allaying foreign fears for the dollar in the recent past.

However, many Europeans now are again disturbed, this time because of the unwillingness of congressional leadership to remove the interest rate ceiling on Treasury bond issues, since it forces the Treasury to rely on short-term financing, with all the inflationary implications of such a practice, and because it implies a preference for chronic easy credit and low interest rates. In Western Europe, the financially erudite are aware from personal observation how the practice of pegging interest rates at artificially low levels contributes to inflationary trends and to pressure on the balance of payments; they are convinced that the adoption of such practices by the United States would have similar consequences over here.

Financial circles abroad are concerned with the inflation problem in this country primarily, of course, because of the effects on the U.S. balance of international payments. There is talk that American industry runs the risk of pricing itself out of the world market, the more so as industrial commodity prices as well as living costs failed to ease in the 1957–58 recession and have again been advancing for some time. Simultaneously, imports have soared while exports have declined. Thus, it is considered likely that the balance of payments position of the United States may continue adverse for some time to come and that this will continue to drain the U.S. gold stock.

DEVALUATION PROSPECTS: FOR AND AGAINST

This unfavorable outlook for the balance of payments seems to be the mainstay of the case made by those who believe the United States will eventually find it necessary to raise the gold price above its present $35 an ounce—that is to say, devalue the dollar. The competitive position of American industry in foreign markets will probably continue to worsen, it is said, as rising capital investment and expanding markets in other countries lead to further increases in productivity abroad. In addition, there is the need for continuing large Government programs of foreign grants and credits and the prospect of increasing foreign investment by U.S. business corporations and financial agencies. Thus, it is said, pressure on the balance of payments must be expected to persist over the long term.

At some point, it is argued, the United States will become concerned over the persistent loss of gold; the gold outflow will feed on itself, and the authorities will have to impose an embargo on gold, which in effect would lead to a sharp rise in the gold price at home and abroad. The risk of such a course of events will become particularly acute, it is held, when the American economy experiences another and perhaps more drastic recession, since this is likely to create a favorable climate for currency devaluation as a means for stimulating recovery.

A more substantial body of opinion, however, stresses that U.S. Government officials of both political parties are firmly on record as opposing a change in the gold price, and that the United States cannot, in the foreseeable future, be pressed into a position where it must devalue against its will. Despite a gold outflow of almost $3 billion in the past 1½ years and the recent payment of a gold subscription of $344 million to the International Monetary Fund, the U.S. gold reserve is still huge, comprising close to one-

half of the monetary gold stocks of the free world, and the United States is thus in position to withstand a gold outflow of $1 to $2 billion a year for some time to come. In addition, the gold reserve coverage of Federal Reserve deposit and note liabilities, currently at about 40 percent, still exceeds the statutory requirement of 25 percent by a sizable margin; moreover, in the event of sustained pressure, the statutory requirement could well be lowered without unsettling the financial system. Finally, in the event of emergency, there is a further bulwark in the resources of the international financial institutions, including especially the International Monetary Fund.

PROBLEM OF THE GOLD PRICE

In any event, few Europeans would expect the United States to be able to devalue the dollar unilaterally as a means of bringing the domestic price level in line with world markets. It is generally agreed that other exporting countries would not stand idly by. Rather, the more prevalent belief is that inflationary tendencies and an increasingly troublesome balance of payments problem would make the United States amenable to an increase in the price of gold in which other leading countries would join. In effect, this would be a currency devaluation on an international or practically worldwide scale, leaving the exchange relationships between the dollar and other key currencies substantially unaltered.

The contention that the gold price should be raised in the United States and elsewhere is one of long standing in certain financial circles abroad, particularly in areas with a large gold output. As such, it has cropped up repeatedly since the end of World War II, and has been advanced on various occasions long before the start of the current gold outflow from the United States in early 1958. A major argument propounded in favor of a higher gold price is that world liquidity is being squeezed by the failure of the monetary gold stock to expand in line with higher output, and that the monetary value of gold hence needs to be raised in order to meet the increased requirements for gold reserves on the part of a growing world economy. Also, the cost of mining gold has advanced considerably so that a higher price is needed if gold production is to be maintained and encouraged.

Here, too, however, this line of thinking is by no means universally accepted. An important, thoughtful, and very considerable body of opinion points out that the decline in the U.S. gold stock represents no more than a correction of the former "maldistribution" of gold, and that even today the amount of gold held by the United States is probably disproportionately large compared to the volume of trade and investment activity around the world. More importantly, it is emphasized that a general increase in the gold price would create a serious inflationary potential on an international scale. The problem troubling most industrialized countries in the postwar era has been not a shortage but a surfeit of liquidity, which has contributed to the worldwide uptrend in the price level over the years; only fairly recently have a good many countries been able, through credit policies and other means, to come to grips with this problem. A higher valuation of gold reserves would create, for the treasuries of the various countries, a "profit" which, as a practical matter, it would be difficult to sterilize.

Rather, the prospects would be for such a paper profit to be expended for various purposes, with consequent inflationary effects; also, under conditions of generally active business, an international devaluation of currencies could not fail to lead to higher prices in world commodity markets. The international financial organizations, it is pointed out, provide ways and means to economize on the international use of gold without releasing such an inflationary potential. Finally, a rise in the gold price in the United States and other countries important in world trade would provide a windfall enhancement to the international purchasing power of the Soviet gold output and the Soviet gold stock, which is of unknown size but is believed to be fairly substantial.

On balance, the opponents of a general increase in the gold price seem to have the better of the argument, certainly there are more adherents to this school of thought, which appears to include most financial experts in Western Europe. However, it cannot be denied that the sponsors of a higher gold price internationally count among their number not only some vocal advocates but also some very keen and acute observers.

A REALISTIC APPRAISAL

Against this background of conflicting views and forecasts, it is essential to retain perspective and seek a balanced realistic appraisal of the current standing of the U.S. dollar. To some extent the indubitable decline in the singular esteem in which the dollar was held abroad until a few years ago reflects the material economic improvement of Western Europe, which has strengthened the position of the various currencies involved; this development has been an aim of our foreign economic policy since the end of World War II and is to the benefit of the entire world economy. In addition, of course, the U.S. balance of payments has taken an unfavorable turn which raises some important questions regarding the conduct of our economic affairs. Nevertheless, and without belittling these problems, fears of an imminent dollar crisis appear without substantial foundation.

There is little evidence of any widespread loss of confidence in the dollar. Even in 1958, when American gold losses for a time were running at an exceptionally rapid rate, foreign holdings of short-term dollar assets increased by over $1 billion. So far in 1959, despite a further, albeit slower, gold outflow, another $1 billion and more has been added to these assets, which now aggregate some $16 billion. Both the size of these holdings and their rising trend suggest no real apprehension abroad that a change in the American gold price is at hand.

Several astute Europeans have observed that perhaps the greatest risk in the current situation is a loss of confidence in the dollar on the part of Americans themselves, accompanied by a large-scale movement out of the dollar into foreign currencies or securities, or into gold. So far, however, there is no sign that any such movement has developed or is in the offing. To be sure, it is a matter of common knowledge that American interest in foreign equities has increased considerably in recent years, but the motivating forces seem to be not distrust of the dollar but rather a desire to share in the attractive growth prospects of the European economies and the feeling that more attractive investment values are available in Europe than in the high-priced American market. From time to time, major financial centers abroad receive inquiries from U.S. sources concerning the acquisition of gold, but such inquiries appear to be sporadic and are not followed by action to any significant extent. Thus, there are no indications abroad of any important flight from the dollar.

Nor is the U.S. dollar the only major currency exposed to monetary pressures and an inflationary trend. In some quarters, there is anxiety concerning the future of sterling in the event of a Labor victory in the forthcoming election; despite the stated decision of Labor to defend sterling, the budgetary and other economic policies expected of a Labor government appear to raise doubts about the outlook for sterling over the long term. Caution is apparent also in the appraisal of the French franc; the fiscal and inflationary history of France has been so disappointing for so long a time that more than the past few months of successful reform will be required to reestablish solid international confidence in the country's currency. Political uncertainties also cast a shadow over various other currencies in Western Europe.

While these considerations may help retain perspective, it would be a disservice to deny that the record of the United States in recent years has not been as favorable as those of some major foreign countries. Most European countries have made striking progress toward monetary stability and have moved successfully toward convertibility. Here at home, on the other hand, we have made far too little progress toward containing inflationary tendencies. As of today, to speak of a dollar problem would be exaggerated and extreme, but unless we face up to our situation in the same earnest fashion as our friends abroad, we shall be incurring the risk of sliding into more serious difficulties as time moves on.

RECOGNIZING THE CONSEQUENCES

In summarizing these trends, it seems fair to conclude that the U.S. dollar remains the leading currency of the free world, and there is no visible prospect so far of the dollar being superseded by any other currency. However, instead of being the dominant free currency unit, the dollar is now one among several key currencies in the international economy. Moreover, whereas in the early postwar era economic weakness abroad made the dollar appear strong regardless of the policies we followed at home, U.S. economic policy today must be based on the assumption that the major countries of Western Europe will continue to proceed along the path that has proved so successful in restoring the health of their currencies in recent years.

Today, for the first time in decades, the United States is beginning to feel the discipline of an adverse balance of international payments. For many years, the effects of the outflow of funds as a result of large Governments grants, loans, and expenditures abroad, together with a sustained movement of American dollars into foreign investment, were cushioned by, among others, a large export surplus. Now, however, the export surplus has dwindled, and American industry faces increasing competition from foreign producers, equipped with modern plants and enjoying substantial advantages in labor costs. Moreover, the factors at work suggest that the balance of payments may continue unfavorable for an extended period, with consequent further pressure on our gold reserve.

Assuredly, our gold reserves are still tremendous, and further losses need not be a matter of serious concern, either to foreign creditors or to Americans, provided we follow sensible policies here at home and adopt appropriate action which will redress our balance of payments situation. At the same time, as bankers to the free world, we cannot ignore the point of view of our political and economic partners, and the holders of dollar assets. They have a large stake—economic and political as well as financial—in the soundness of the dollar. Prudence and commonsense dictate that they continue to observe closely current developments in the United States and express themselves freely on matters that arouse their concern.

The actions required to sustain confidence in the U.S. dollar are so well known that no extended discussion is necessary. In essence, the task is to keep stable the purchasing power of our currency. This means a fiscal policy which will achieve substantial budget surpluses in periods of active business to offset the large budget deficits that inevitably appear during economic declines. It means abstaining from the temptation toward an easy money bias, with the inevitable stimulus toward inflationary credit expansion. Equally important is that

Treasury debt management be so conducted as to avoid the inflationary increase in liquidity resulting from a progressive shortening and monetization of the debt, which is the exact opposite of the policies now imposed on the Treasury in consequence of the refusal of Congress to raise the interest rate ceiling on new bond issues. Last, but certainly not least among these major essentials, are wage practices designed to restrain perpetual increases in production costs, and pricing policies that will enable passing on to consumers part of the benefits of rising producivity in the form of lower prices. In this fashion, we shall not only be fortifying our prospects for sustained economic expansion at home, but shall also be enhancing our competitive ability in world markets.

In our international economic policies, too, we shall need to take cognizance of the changed situation regarding our balance of payments. To some extent, our exports are still curtailed by trade restrictions, including the remaining special barriers against shipments from the dollar area. With the improvement of Western European exchange reserves, such restrictions can no longer be justified, and we should certainly press vigorously for their removal.

At the same time, we shall have to be on guard against the pressures already building up to erect greater trade barriers here at home. In view of the rising tide of imports, it is not surprising that many American companies are urging greater protection from foreign competition, and some of the labor unions are also demonstrating a greater inclination toward protectionism. However, if we in the United States try to cope with foreign competition by quotas, higher tariffs, informal arrangements, and other restrictive practices, we shall not only be raising the cost of goods to the consumer but shall be encouraging a renewed trend toward trade restraints on a worldwide scale; on balance, this will do us considerably more harm than good.

Finally, it is essential that we reappraise our policies of Government loans and grants for foreign countries. In the light of our current balance of payments, ambitious plans for increased foreign aid are unrealistic; likewise, the time has come to reexamine our governmental policies with respect to encouraging private investment abroad. Increased investments add to the strain on the balance of payments at the time the tranafers are being made; moreover, if the investment consists of establishing productive facilities abroad, it poses the prospect of further inroads being made upon our already meager export surplus once these facilities come into production.

Unfortunately, there are few signs as yet that we are giving these problems the attention they deserve. Having enjoyed a comfortable foreign trade position for a great many years, it is perhaps understandable that we are reluctant to adapt ourselves to a less favorable environment. The discipline of the balance of payments may have to become much more stringent before we agree to accept the implications of the current state of affairs in the world economy.

The Challenge of Pornography

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. OLIVER. Mr. Speaker, the sale of pornography in the United States has become a half billion dollar annual business; a frightening business which threatens the very moral fiber of our society.

Apathy is our greatest enemy. Too often we Americans tend to ignore the sordid, hoping that with time the situation will correct itself. Once the American people are aroused, they have a reputation for tackling and completing even the most difficult tasks. But the basic problem is convincing the public that a threat actually does exist.

We must open our eyes to the existence of this problem. But even more, we must resolve to extinguish the insidious danger it presents to our society, particularly to our youth. If we are honest with ourselves, we must admit that many Americans are either openly or inadvertently contributing to the continuance of this dangerous cancer. Simply by our toleration of this smut, we unwittingly aid its growth. We cannot afford to be bystanders, but must join in the crusade to eradicate this offensive material.

The Reverend James H. Burns, director of the department of pastoral services and social relations of the Massachusetts Council of Churches, effectively pictured the complacency of the American people with regard to this vital issue in a recent radio address. By including his remarks in the RECORD, I hope in some small way to help jar our country into launching an effective program to eliminate this filth from our mails and our newsstands.

Reverend Burns' remarks follow:

This I know: Pursuit of material things, indulgence in filthy things, and hatefulness cause us to lose goodness and holiness from our lives.

In the Gospel according to Dr. Luke, in the second chapter the last 11 verses, he tells the wonderful story about Jesus, Joseph and Mary visiting the temple in Jerusalem during the Feast of the Passover. He tells us they were accustomed to going to the temple each year. This is evidence Mary was a very pious person because women were not required to attend the feast. Children were not required—only when a boy became 13 years of age was he expected to attend the religious feasts.

Many children in Sunday school have worried about part of this story. Because the boy, Jesus, 12 years of age was left behind in a big city. His mother and father (Joseph and Mary) went away and left him it seems and children have worried about this. Actually, the family, the friends and neighbors of Joseph and Mary from Nazareth stayed perhaps 2 days of the feast and started home as was their custom. Many people stayed through only the first 2 days of the feast. Today when we have a celebration of an anniversary there is always a high point such as the anniversary banquet. Although, the celebration may last a week or more, now as then, some come only for the most important event and others leave immediately after that high point in the celebration. As they started out of Jerusalem—most certainly Jesus was along—but before they even got out the north gate of the city he decided to stay the rest of the week. How many boys 14, 15, 16 years of age are quite certain they can look out for themselves? Joseph and Mary discovered he wasn't along only at the end of the day because they traveled in a great company, talking, laughing, making deals, doing business, visiting friends, taking a nap, having a picnic while all parents took care of all the children. It was only at the end of the day when there was a counting of noses that Joseph and Mary discovered Jesus was not there. They had somehow lost him. They immediately checked among their relatives and friends. He wasn't there. It was nighttime so nothing could be done until the next day. Then they retraced their steps the way they had come. They went to the places where they had stopped. They went to the houses of neighbors and friends along the way, and asked, "Have you seen Jesus—have you seen Jesus?" and they didn't find him. They returned to Jerusalem and that was the end of the second day. The next morning they went to the temple, to the church, and they said, "Have you seen Jesus—is Jesus here?" and he was there. He was among the doctors and the teachers. He was listening to them and asking them questions and they were amazed at his understanding and his answers.

Children sometimes ask questions, but they don't want answers. They ask a hundred questions and wait for no answers. At other times children ask penetrating questions. They ask them in such a way the adult answers with more wisdom and more information and more knowledge than he knew he had. Some teachers have this wonderful skill. Instead of asking questions which show up how stupid we are, they ask questions which bring out of the student information and knowledge he was unaware he had learned.

Jesus was asking these questions and as we ask our friends, our relatives, our acquaintances, and other people if they have seen Jesus, we need to ask questions in this very same way.

They were a little surprised and even a little annoyed to find Him in the temple and He said: "Wist ye not that I must be about my Father's business?" This is to say: "Wouldn't you know I would be in the church?" They didn't understand what He was saying, but He grew in wisdom and in stature and in favor with God and man.

How like Joseph and Mary most of us are. We go along life's way. We are with our friends doing many of the same things they are doing. Our friends and relatives and we are busy with life's business. It is only at a time when our family is together, suddenly we realize goodness and beauty and holiness are gone. They have gone from our family. Something has been lost. We don't know when we lost it—even as Joseph and Mary didn't know when they lost Jesus. We have lost Jesus from our lives when goodness, beauty, and holiness have departed. We should do as Joseph and Mary. We should search for Him among our teachers, our friends, our relatives, our neighbors. And even as they said, "Have you seen Jesus?" we need to ask our relatives and friends, "How do you have, how do you find, how do you hold in your lives goodness and beauty and holiness?" All too often they won't be able to tell us. We need then to do as Joseph and Mary, retrace our steps along life's pathway, the way we have come, and see if we can find where we lost Him. Along the way we will say: "Where did we lose Jesus? Have you seen Him?" We will hunt for His goodness and beauty and holiness. We may not find Him along that path. Finally, we will go back to the church. We will find Him there. Not that every person in the church is good or beautiful or holy in his behavior, but God in Christ Jesus, His spirit is in the church. We will be, most of us, so much like Joseph and Mary we, too, will be surprised when we find Him. We looked for Him in the church and we will be surprised to find Him there. Also, we will be a little annoyed we found Him there. His spirit will say to us: "But wouldn't you know you would find me in the church." We won't fully understand, but as we attend his spirit we, too, will grow in wisdom, stature, and in favor with God and man.

But the question comes early: "Just how do we lose Jesus with His goodness, and beauty, and holiness from our lives?" There are three major categories:

First, through our anxieties. The sociologists and psychologists tell us this is the age of anxiety. More people of all ages, of all nations, of all walks of life are more anxious in this generation than any time in the history of the word. We became so burdened with anxiety, we are overwhelmed with what someone has called, C.D.T.'s—not D.T.'s. We are all familiar with the condition an alcoholic may attain called delirium tremens. C.D.T.'s are something else.

We can be overwhelmed with the cares, the difficulties and the troubles of everyday life, of every hour of it. Jesus told of the widow who lost a coin and searched for it. He told a story about the lost sheep and the shepherd leaving the 99 to search for the 1 sheep. He told a story of the lost son and his being found (the Prodigal Son). Actually, our C.D.T.'s, our anxieties so overwhelm us we get busy searching for the coin—the money whether it is lost or not. We just don't happen to have it. We are so busy searching for it we forget to hunt for the lost sheep. C.D.T.'s overwhelm us and we lose Jesus from our lives.

Next, there is guilt. All of us feel guilty. We feel guilty because of the things we do which we ought not to have done and because of things we should have done which we have left undone. But, also, we feel guilty because of things which go on in our society over which we seem to have little personal control. In the program heard an hour ago the description of "Pornography, the Business of Evil," the very fact that such a business in such dimensions can exist in our country, in our State and in our cities constitutes a burden of guilt for all of us. We know in our hearts, if we all did our part such a filthy business would be stopped instantly. We know full well this business is doing untold harm to the lives of both young people and adults. Since we have not driven this filthy business—out of business—we all feel partly responsible; that is, a little guilty. Some of us actually, personally make use of the evil materials supplied by the smut merchants. In our hearts, we know we have sinned and in us somewhere are feelings of guilt. The more we allow indulgence in filthy things or indulge in filthy things ourselves, the more certain we are to lose goodness, beauty, and holiness from our lives. Through sin and guilt we lose Jesus. We may have lost Him without knowing it. Forgiveness found through repentance and restoration is the one certain way to find Jesus again.

Next, there is hatefulness. Sometimes nice people are hateful. We all know that we have hateful thoughts about ourselves and about other people. It was Tallulah Bankhead, the famous actress, who was quoted as saying from time to time: "I never wear a shoulder strap bag." She would go on with the conversation until someone would be unable to contain himself and say: "Well, now, why don't you wear a shoulder strap bag?" She would archly say: "Oh, it would interfere with the chip on my shoulder."

We need to examine ourselves and see whether we are growing wings on our shoulders or perhaps, without our knowing it, we have grown chips on our shoulders and we have lost Jesus. Without our knowing it goodness and beauty and holiness have gone from our lives.

Because of our anxieties and because of our guilts and because of our hatefulness, we can lose Jesus from our lives. If we lose Him, let us then do as Joseph and Mary; examine to see how serious the loss is and then search for Him among our friends, our relatives, our neighbors. If we can't find His spirit there, then we retrace our lives, study our lives, see what has happened. At what point did we lose Him? Where did we get involved in some evil, dirty thing in which we knew we should not be involved? Where have we let ourselves be unnecessarily anxious and concerned about material things? Where have we let ourselves be hateful when there was no need to be hateful?

If we cannot find Him along the path as we retrace our way, then let us go back to the church and we will find Him there. In spite of our surprise He will be there waiting for us. This I know, pursuit of material things, indugence in filthy deeds, and hatefulness can make us lose goodness, and holiness from our lives. But if we find Him we, as He, can grow in wisdom and stature, and in favor with God and man.

Report by Congressman William H. Avery to the 1st Congressional District of Kansas on the 86th Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. AVERY. Mr. Speaker, following my usual custom, I am submitting a report to the 1st Congressional District on the 1st session of the 86th Congress. In a report of this nature it is only possible to present the accomplishments of the session and workload of the office in brief outline form.

This was the longest session of the House of Representatives since 1789 except 1940 and the war years, including the first session on Labor Day in 17 years. More than 25,000 pages were used in the CONGRESSIONAL RECORD to cover business transacted. Almost 14,000 bills and measures were introduced.

Regarding my congressional and committee activity, the following is a brief statistical summary:

One hundred percent voting attendance record.

Answered 88 of 89 quorum calls for 98.8 percent record.

Attended 75 sessions of Interstate and Foreign Commerce Committee for a 99 percent record.

Five hundred and thirty-seven bills referred to and/or considered by Interstate and Foreign Commerce Committee.

Attended all meetings of the Small Business Committee.

One huhdred percent attendance as Private Calendar Committee ranking minority member.

Introduced amendment to limit Commodity Credit loans to any one farmer to $50,000. Avery proposal adopted on floor of the House by a rollcall vote.

Studied 250 private bills as member of Private Calendar Committee.

One of two Congressmen selected to appear on special panel at National Watershed Congress.

Held over 100 conferences with officials in Government agencies on cases for constituents.

To give you some idea of our office operation, for the period of January 4 to October 1, 1959:

Received 6,960 first-class letters from district for an average of 30 per working day.

In total received and answered 17,800 pieces of mail.

Mailed out 40,220 pieces of mail, of which 23,950 was first-class mail.

Processed cases with VA for veterans from every county in district.

Handled over 600 matters dealing with Agriculture Department.

Five hundred and forty-five individuals visited the office in Washington.

Received 100 newspapers per week from district, 15 per week from elsewhere.

Assisted in many types of cases for constituents, such as, immigration, Coast Guard, patents and trademarks, small business, civil service, Bureau of Employees Compensation, passports, and problems of servicemen.

One of the most significant activities of your office in Washington was the inaugural of the "Week in Washington" special nonpartisan educational project for college juniors to see government firsthand. The following schools participated: Kansas University, Kansas State University, Washburn University, St. Benedict's College, and Mt. St. Scholastica College.

The schools select the students with only two requirements—they must be residents of Kansas and in the top half of their class. The schools are instructed the political background of the applicants is not to be considered in the selection.

Upon notification of the student selected, a work project is assigned by this office. The project is an actual job which is for the work routine of the office and in the public interest. The job requires several hours each day for a period of no less than 1 month. For example, one of the projects was a public opinion poll and research survey on Federal issues. In consideration for this work the student is retained on the payroll for a sum not to exceed $150. The money received is applied by the student to his travel expenses. The student is responsible for all expenses.

While in Washington the students visit Congress, committee hearings, both national committees, and historic sites. Appointments were arranged with members of both political parties—each student prepared three questions and asked each person these questions. In general, it is our desire to have the students attempt to obtain as concise a picture as possible of Government and politics at the national level.

To date four students have participated in the project. There are only four other such programs in existence on Capitol Hill.

The following is a brief summary of the appropriations and Federal activity for our district:

Flood control projects, $21,137,025.

Military construction, $2,584,000.

Repair and construction of Federal buildings, $881,700.

Equipment improvements and repairs to post office facilities, $574,447.

Turning to the topic of legislative activity during this session, I am submitting for your information and interest a listing of my vote on major legislative actions before the House. An attempt has been made to make the listing as complete as possible. In the event you should desire additional information regarding any particular vote or legislation, I will be most happy to attempt to furnish such. The listing includes voice votes as well as recorded votes.

First. Introduced and urged passage of amendment to limit commodity credit loans to $50,000. Avery proposal adopted by rollcall vote. During debate in the House your Congressman stated it was never the intention of Congress to subsidize corporation farms. Yet without some limitation the Agriculture Secretary is powerless to refuse to grant support loans to any producer who planted within his acreage allotment. Under this practice some loans have exceeded $1 million.

Second. Voted for the Landrum-Griffin labor-management reform bill, is now public law. This is one of the highlights of the session. Senator McCLELLAN's investigations of racketeering and corrupt practices in certain labor unions had clearly shown the need for some kind of strong corrective legislation to protect the rights of individual workers.

Third. Supported resolution opposing seating of Communist Chinese regime in the United Nations, resolution passed by House.

Fourth. Supported continuing the Federal highway programs by means of a 1-cent-a-gallon gasoline tax increase to avoid deficit spending, became public law. Under the Interstate Highway System there are 803 miles authorized in Kansas, with some $20 million allocated for Kansas. To fail to extend the program on a sound fiscal basis could have resulted in economic detriment to our State.

Fifth. Voted for bill to promote increased research for finding new industrial uses for farm products, passed House, pending in Senate. Your Congressman testified before Agriculture Committee in support of this measure stating:

Agriculture must speed up its research efforts in developing more uses for farm commodities. The bill would not create any new so-called Government agency. It calls for the Secretary of Agriculture to utilize the land-grant colleges. Such an approach would permit the facilities at Kansas State to be used.

Sixth. Voted against a greatly expanded Federal aid to airports program on basis of fiscal responsibility. Program was extended at present rate.

Seventh. Voted for veterans' pension plan, enacted as public law.

Eighth. Supported the President's veto of two public works appropriation bills objectionable because of the inclusion of unbudgeted projects costing more than $800 million. The second veto was overridden.

Ninth. Voted for bill to deny passports to persons furthering international communism and whose presence

Tenth. Voted against increasing appropriations by $500 million above administration request for Federal water pollution control, passed House, pending in Senate.

Eleventh. Voted for extension of Public Law 480 to enable us to exchange our agricultural surplus for foreign currencies and make food available to hungry people at home and abroad, is now public law.

Twelfth. Supported the President's request to raise interest rates on Government savings bonds. Also supported his request for authority to raise interest rate on long-term Government bonds. Congress refused to vote the latter request, increase of interest rates on savings bonds now public law.

Thirteenth. Voted to extend the law permitting adoption of eligible foreign orphans, enacted as public law.

Fourteenth. Voted to exempt bona fide news programs from law requiring radio and TV stations to give equal time to all political candidates, is now public law. Presented testimony in support of bill.

Fifteenth. Supported President's veto of bill to give Administrator of REA authority to approve or disapprove loans without concurrence of Secretary of Agriculture, veto sustained.

Sixteenth. Voted for health benefits program for Federal employees, is now public law.

Seventeenth. Supported extension of corporate liquor, cigarette, and automobile excise tax rates, is now public law.

Eighteenth. Voted to extend the life of the Civil Rights Commission for 2 years, passed Congress, is now public law.

Nineteenth. Supported the President's request for funds for the mutual security program, or foreign aid, is now public law.

Twentieth. Voted for the third housing bill satisfactory to the President after voting against two previous vetoed measures loaded with excessive spending programs, third bill enacted as public law.

Twenty-first. Voted for statehood for Hawaii, is now public law.

Twenty-second. Supported legislation to strengthen authority of Post Office Department to curb use of mails for distribution of obscene or fraudulent matter, passed, House, pending in Senate.

Twenty-third. Voted for extension of law granting assistance to schools in areas affected by Federal activities, enacted as public law.

Twenty-fourth. Supported increase in benefits under Railroad Retirement Act, is now public law.

Twenty-fifth. Supported added authority to Small Business Administration to make loans, is now public law.

Twenty-sixth. Supported bill to extend Bankhead-Jones Act authorizing refinancing of loans on family-size farms, enacted as public law.

During the recess, I will be in the district. While your office in Washington will be open to take care of your inquir-
abroad would endanger American security, is now public law.
ies, we will also have an office in the Hotel Jayhawk in Topeka. I will attempt to be there in person as much as possible. However, I intend to travel extensively throughout the district and as a result will not be in the office at all times. I feel it is important to travel extensively in every county in the district to see as many people as possible, to renew acquaintances, and to discuss problems. My schedule now calls for about a speech a day in every county until mid-December.

Please contact me at any time if you feel "Your Office in Washington" can be of assistance. Also, I would enjoy hearing from you at any time regarding legislative matters which are of interest to you. Your views and comments are important. Knowing what you think will better enable me to represent you effectively in Congress.

The Voting Record of Senators

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, on Monday, September 14, 1959, there appeared on the front page of the New York Times an article by John D. Morris, implemented by a number of tables recording the votes of Members of the Senate.

This article provoked considerable discussion on the floor of the Senate and a number of mistakes were set forth with reference to how Members actually voted on certain matters and how they were recorded according to the article on page C–24 of the New York Times issue.

I am sure that not only the New York Times but its very excellent staff regrets these errors and is anxious that they be corrected. Accordingly they have been corrected in the New York Times, and I ask unanimous consent that this corrected article be made a part of my remarks for the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE VOTING RECORD OF SENATORS

Following is a table listing the detailed record of the 12 most significant votes in the Senate in the 1st session of the 86th Congress just ended. This tabulation corrects a partly erroneous table that appeared in the New York Times on Monday. All Senators are recorded:

Symbols: PF—Paired for; PA—Paired against; Blank indicates not recorded

[Members may pair with others, usually absent, to cancel each other out and not affect the result. See below for explanation of numbered issues]

Senator, party, and State	1	2	3	4	5	6	7	8	9	10	11	12
AIKEN (Republican, Vermont)	Yea	Yea		Nay	Yea	Nay	Yea	Nay	Yea	Nay	Nay	Nay.

[1] Sworn in Aug. 24, 1959.

1. Senate rules. Jan. 12, 1959. Douglas (Democrat, Illinois) amendment to enable a majority of the Senate membership (50 Senators) to limit debate 15 days after 16 Senators file a closure motion. Rejected: Yea, 28; nay, 67. Democrats: Yea, 20; nay, 43. Republicans: Yea, 8; nay, 24.

2. Airport construction. Feb. 6, 1959. Passage of 1st Senate bill. Passed: Yea, 63; nay, 22. Democrats: Yea, 51; nay, 5. Republicans: Yea, 12; nay, 17.

3. Hawaii statehood. Mar. 11, 1959. Passage of bill. Passed: Yea, 76; nay, 15. Democrats: Yea, 46; nay, 14. Republicans: Yea, 30; nay, 1.

4. Depressed areas. Mar. 23, 1959. Passage of bill. Passed: Yea, 49; nay, 46. Democrats: Yea, 45; nay, 16. Republicans: Yea, 4; nay, 30.

5. Labor reform. Apr. 22, 1959. McClellan (Democrat, Arkansas) amendment to add to the bill a new section providing a bill of rights with criminal penalties to protect union members against unfair actions by their unions. Agreed to: Yea, 47; nay, 46. Democrats: Yea, 15; nay, 44. Republicans: Yea, 32; nay, 2.

6. Rural Electrification Administration. Apr. 28, 1959. Johnson (Democrat, Texas) motion to pass the bill over the President's veto (⅔ vote required). Passed: Yea, 64; nay, 29. Democrats: Yea, 58; nay, 1. Republicans: Yea, 6; nay, 28.

7. Nomination of Lewis L. Strauss. June 19, 1959. Rejected: Yea, 46; nay, 49. Democrats: Yea, 15; nay, 47. Republicans: Yea, 31; nay, 2.

8. Wheat. June 22, 1959. Johnson (Democrat, Texas) motion to accept the House version. Agreed to: Yea, 44; nay, 40. Democrats: Yea, 41; nay, 12. Republicans: Yea, 3; nay, 28.

9. Foreign aid authorization. July 1, 1959. Aiken (Republican, Vermont) motion on a parliamentary point of order that would have allowed the Development Loan Fund to be financed by Treasury borrowing rather than annual appropriations. Rejected: Yea, 42; nay, 48. Democrats: Yea, 35; nay, 24. Republicans: Yea, 7; nay, 24.

10. Housing. Aug. 12, 1959. Passage of the bill over the President's veto (⅔ majority required). Failed to pass: Yea, 55; nay, 40. Democrats: Yea, 53; nay, 10. Republicans: Yea, 2; nay, 30.

11. Housing (2d bill). Sept. 4, 1959. Passage of the bill over the President's veto (⅔ majority required). Failed to pass: Yea, 58; nay, 36. Democrats: Yea, 52; nay, 9. Republicans: Yea, 6; nay, 27.

12. Public works appropriation. Sept. 10, 1959. Passage of the bill over the President's veto (⅔ majority required). Passed: Yea, 72; nay, 23. Democrats: Yea, 60; nay, 2. Republicans: Yea, 12; nay, 21.

Accomplishments for Alaska in the 1st Session of the 86th Congress

EXTENSION OF REMARKS

OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. GRUENING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared on the accomplishments of the 1st session of the 86th Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As the 1st session of the 86th Congress comes to an end, I would like to review, for the benefit of my constituents, some of its accomplishments.

This has been an historic session. It has been a long session and, despite disappointments resulting mainly from the use of the Presidential veto to cancel out programs which were for the public good, on the whole a productive session of great accomplishment.

The 1st session of the 86th Congress holds for Alaskans a very special interest, for it is the first session in history in which my fellow citizens in the 49th State have had voting representation in the Congress. It is the first session in which Alaska has had representation in the Senate.

Alaska became a State on January 3, 1959. The session of Congress which began 4 days later, and which is now ending, has fulfilled substantially Alaskans' hopes for the achievement which could be realized under statehood.

We have not reached every goal we set ourselves. We have not solved in 8½ months all of Alaska's problems which could be solved by legislation; but the experience of Alaska in this first session of Congress after statehood has been a happy one. The accomplishments have been so numerous and so substantial that even those of us who have worked most closely with the Alaska legislation which has been considered in this Congress are suprised when we look over the list.

The report which I am about to make is a personal one. It will be my review of what has occurred in this 1st session of the 86th Congress which I feel will be of interest to Alaskans. But I want to emphasize that the results which have been achieved have not been gained by the efforts of any one man. They are instead the achievements of a hard working, a dedicated, and—most important of all—a united delegation.

Alaskans have been fortunate, Mr. President, in this first Congress in which they have had voting representation, in that the two Senators and the Representative elected to come to Washington are men who are politically, personally, and temperamentally in a position to work together. There is nothing so effective as a united team, and Alaska has had one. I have never seen men work more devotedly and more intelligently than have my colleagues, the distinguished senior Senator from Alaska, BOB BARTLETT, and our State's Member in the other body, RALPH RIVERS, in laboring in this session of Congress for laws which would be good for their fellow Alaskans.

I would like to pay tribute too to the leadership of the Senate for its broad and sympathetic understanding of the many needs of a new State. Both the senior Senator from Alaska [Mr. BARTLETT] and I have had daily testimony to the desire of the majority leader, of the assistant majority leader, of the chairmen of the committees, and others to see that Alaska gets off to a good start as a State.

The combination of a united team from Alaska, working with leadership of the same party, has proved to be unbeatable.

Alaska had many problems when its citizens started down the statehood path at the opening of this session of Congress. It has not so many now. Here is the story of what has been achieved.

ALASKA OMNIBUS ACT

This legislation, which has become Public Law 86–70, is of major importance to Alaska. It was enacted for the purpose of insuring effective transition of Alaska from a Territory to a State. Its provisions include:

1. Transitional grants of Federal funds to the State, authorized to be appropriated over the next 5 years in a total amount of $28,500,000. An appropriation of $10,500,000, representing the transitional grant authorized for the 1960 fiscal year was included in the Supplemental Appropriation Act for 1960 (Public Law 86–213);

2. Provisions for transfers of Federal functions and property no longer needed for those functions to the State government;

3. Amendment of numerous Federal grant-in-aid statutes to authorize Alaska participation as a State, on an equal basis with the other States;

4. Amendment of many other acts to conform with Alaska's status as a State.

Two of this act's provisions which are of special interest to Alaskans have to do with transfer to the State of the Federal airports at Anchorage and Fairbanks (with means provided for extension of their runways to accommodate jet aircraft) and inclusion of Alaska in the major programs of the Federal Aid Highway Act on a basis of full equality starting July 1, 1960. It is also provided in the Alaska Omnibus Act that the State will take over administration of fish and wildlife resources January 1, 1960.

ALASKA OIL AND GAS LEASE ACREAGE INCREASE

The Congress passed H.R. 6940, a bill which, had it not been vetoed by the President, would have increased permissible acreage holdings of oil and gas land from the present limitation of 300,000 acres under option and lease to a total of 600,000 acres for each individual owner. I was a cosponsor of a Senate bill with identical provisions.

The action of the President in vetoing this bill undoubtedly gives to the Alaska delegation in Congress the distinction of having introduced legislation which failed of final enactment due to the most shocking and completely unjustified veto of all the many vetoes ever exercised by the administration. Except as a political gesture, there is no explanation for the action of the President, nor of the Interior Department, in recommending the veto. Means will be sought to achieve the goals of H.R. 6940 in the second session.

ALASKA COAL LEASE ACREAGE LIMITATION INCREASE

The Alaska delegation introduced, and obtained passage of H.R. 6939, which will give Alaska equality with the other States with respect to limitations on acreage which may be held under lease by individuals on public lands containing coal deposits. The law (Public Law 86–252) will now permit lessees in Alaska, as in other States, to hold a total acreage of 10,240 acres, with the possibility of obtaining, in the discretion of the Secretary of the Interior, an additional 5,120 acres. The law represents an increase of a possible 12,800 acres which may be held by individual coal operators over the previous total allowed of 2,560 acres. The prior legislation, which was unduly discriminatory to Alaskan lessees, was repealed by this law. I am proud to have been a cosponsor of this constructive change.

ALASKA OIL AND GAS LAND SELECTION EXTENSION

This important law (Public Law 86–173), of which I was a cosponsor, amends the Alaska Statehood Act to allow the State an additional 5 years within which it may select, as part of the entitlement of approximately 103 million acres under statehood, Federal land which has been placed under oil and gas leases. Under provisions of the Statehood Act, the State was limited in its selection of leased lands to those lands which were under lease at the time of enactment of that act.

FEDERAL AIRPORT ASSISTANCE

The importance to Alaska of air transportation and the fact that airport needs will not be met adequately by legislation enacted early in this session extending provisions of the Federal Airport Aid Act for an additional 2 years was recognized by the Congress by the enactment of Public Law 86–295, which authorizes the Federal Aviation Administrator to allocate discretionary funds to Alaska and Hawaii for the improvement of airports.

Under the present law, as extended by Public Law 86–72, 25 percent of funds authorized are placed in a discretionary fund which the administrator may allocate to the participating States on the basis of priorities of need for special assistance for particular projects. Alaska and Hawaii were not authorized to participate in allocations of the discretionary fund under the general airport aid legislation. This law, which I cosponsored, will permit discretionary allocations to them.

I should mention that I consider the action which the Congress has taken in this

matter to be but a first step toward full equality for Alaska, which by every right should participate in airport aid programs to the same extent as the older States.

FORTY-NINE STAR FLAG

Public Law 86-18, enacted from a bill of which I was a cosponsor, authorized the Architect of the Capitol to present to the State of Alaska the official flag with 49 stars first flown over the west front of the Capitol on the Fourth of July, 1959. The flag will be duly presented to the Alaska congressional delegation by the Architect of the Capitol for transfer to Governor Egan.

RECLAMATION INVESTIGATIONS

I cosponsored also S. 1514, which passed the Senate, which would remove an existing limitation of $250,000 on the amount of money which may be spent annually by the Bureau of Reclamation in making investigations of water resource development projects, including hydroelectric projects, in the State of Alaska. Action in the House of Representatives is hoped for in the 2d session of the 86th Congress next year.

WATER RESOURCES STUDY COMMISSION

Another bill which has passed the Senate would authorize establishment of a special study commission to investigate and report on land and water resources of the State of Alaska. The Commission would be composed of 14 members, appointed by the President, and would be required to report its findings within 7 years after appointment. I am a cosponsor of S. 2628, so providing. We hope for action on it in the House next year.

FEDERAL ASSISTANCE FOR HIGHWAYS

This important legislation (Public Law 86-342) provides for increases in excise taxes earmarked for the highway trust fund which finances construction of Federal aid highways and the Interstate Highway System. Included in provisions of the law is a section which authorizes the Secretary of Commerce to study the need for extending the Interstate Highway System to include mileage in Alaska and Hawaii. Under existing legislation, neither of the new States obtains Federal assistance for construction of roads under the interstate highway program.

The highway finance law also provides for use of emergency relief funds for repair or reconstruction of forest highways, forest development roads and trails, park roads and trails, and Indian reservation roads, whether or not they are part of a Federal aid highway system.

FEDERAL HOME LOAN BANK DIRECTORS

S. 2517, which passed the Senate, provides for election of two additional directors of the Federal Home Loan Bank Board district which includes Alaska and Hawaii. By increasing the number of district directors from 11 to 13, the two new States can be represented on the Board, without reduction in membership of older States.

ALASKA MAIL SERVICE

S. 1849, which I introduced for myself and Senator BARTLETT, would improve mail service for the Aleutian Islands by providing that mail boats serving the area would be required to be based in Alaska, and would not allow them to make stops at other than Alaska ports. This restriction on the mail boat run for the Aleutians would insure provision of more efficient service for the localities served by the powerboat operator to whom contracts for mail service are granted by the Post Office Department. The bill passed the Senate August 3.

WATER CARRIER REGULATION

S. 1507, which was introduced by the chairman of the Interstate and Foreign Commerce Committee by request, would provide for regulation, by the Interstate Commerce Commission, of water carriers operating within the State of Alaska and coastal water carriers operating between Alaska and other United States ports. No action was taken on it in this session.

ALASKA RAILROAD REGULATION

S. 1508, which provides for regulation of the Alaska Railroad by the Interstate Commerce Commission, was reported with amendments by the Senate Interstate and Foreign Commerce Committee and no further action has been taken on it.

INCORPORATION OF THE ALASKA RAILROAD

S. 2514 would repeal existing legislation governing operation of the Alaska Railroad, and would provide for a new form of management. Under provisions of the bill the Alaska Railroad would function as a government corporation. No action has yet been taken on this bill, of which I am a cosponsor.

GRANDFATHER RIGHTS

The Senate has passed S. 1509, which authorizes certain "grandfather rights" for motor and inland water air carriers in Alaska which come under the jurisdiction of the Interstate Commerce Commission as of the time of passage of the Statehood Act. Action is awaited on this bill in the House.

ALASKA RAIL AND HIGHWAY COMMISSION

The Congress passed, and the President signed into law, Public Law 86-178, which will extend the life of the Alaska Rail and Highway Commission. The law was changed to provide that at least one member of the Commission must be a resident of Alaska. The Commission is required to make a final report by June 1, 1961, on the cost of constructing rail and highway facilities along routes determined most feasible and beneficial by the Commission. An appropriation for the Commission of $200,000 was included in the Second Supplemental Appropriation Act for 1959 (Public Law 86-30).

TRANSPORTATION VIA CANADIAN VESSELS

Public Law 86-126 reenacts previous legislation authorizing for another year the transportation of passengers and cargo by Canadian vessels to ports in southeastern Alaska.

OTHER TRANSPORTATION MEASURES

S. 2451 would require common carriers serving Alaska to establish through routes and joint rates. No action was taken on it. Similarly, no action was taken on S. 2452, which would permit—as contrasted to require—common carriers serving Alaska to establish through routes and joint rates.

APPROPRIATIONS

The gains which we were able to make in this session of Congress in obtaining appropriations needed to carry forward Federal development projects in Alaska can best be understood, I think, by reference to a brief table which I have prepared:

Appropriations requested for Federal Government programs of importance to Alaska

	Requested		Appropriated	
Public works (H.R. 7509; vetoed; not overridden)	By the administration: Nothing for any item.			
(See Budget presentation to Senate Appropriations Committee for additional requests for which no appropriation approved.)	By the Alaska delegation in Congress:			
	Rampart Canyon (investigation)	$100,000	Rampart Canyon (examination and survey)	$50,000
	Dillingham Harbor	406,000	Dillingham Harbor	406,000
	Naknek River	21,000	Naknek River [1]	21,000
	Seldovia Harbor	816,000	Seldovia Harbor [1] (channel work)	245,000
Public works (H.R. 9105; veto overridden, Public Law 86-234).			Same as appropriated in H.R. 7509, each item reduced by 2½ percent	
Supplemental, 1960 (H.R. 7978; Public Law 86-213)	Arctic Health Research Center	226,500	Senate appropriation (omitted in conference)	100,000
	Fire presuppression program, Bureau of Land Management, Department of Interior	250,000	Fire presuppression program, Bureau of Land Management, Department of Interior	250,000
	Arctic Health Research Center	226,500	Arctic Health Research Center	
Departments of Labor; and Health, Education, and Welfare (H.R. 6769, Public Law 86-158).	Water pollution control program	45,000,000	Water pollution control program	45,000,000
	Bureau of Labor Statistics (for Consumer Price Index studies in Alaska)	175,000	Bureau of Labor Statistics (for Consumer Price Index studies in Alaska)	100,000

[1] Eligible for selection under a lump-sum appropriation for small authorized projects.

This summary of action on appropriation measures does not include appropriations for Federal programs in Alaska which are contained in other appropriation measures, but for which the Alaska delegation made no special request. Such appropriations for programs in Alaska are contained in the Appropriation Act for the Department of Interior, for the Department of Defense, and in the military construction appropriations bill, as well as in the appropriations for all other Federal departments and agencies performing work of the Government in Alaska.

GRADE A FRESH MILK

In addition to this salutary congressional action on requests for appropriations needed for Alaska, Senator BARTLETT and I were successful in obtaining action in the Senate which has resulted in the issuance of a directive by the Secretary of Defense requiring the purchase of fresh grade A milk from Alaskan dairymen for consumption by military personnel stationed in our State. In testifying before the Senate Appropriations Committee, we brought attention to the fact that in Alaska servicemen were being served reconstituted grade C milk despite the local availability of fresh grade A milk. The report of the Senate committee included a statement directing the Department of Defense to serve fresh, grade A milk to servicemen stationed in all the States, including Alaska, unless an undue disparity should exist between local prices for fresh milk as compared with other milk products. This directive of the committee was strengthened by a colloquy on the floor of the Senate at the time that body acted on the appropriation measure. Senator CHAVEZ, chairman of the Department of Defense Subcommittee of the Appropriations Committee, emphasized

that the committee "feels that, even if it costs a little more money, the soldier * * * should be given grade A milk. We did not want any grade B, C, or D milk given to the personnel if it were possible to get grade A milk."

The various measures which I have described up to this point consist for the most part of bills which have gone all the way, or a substantial way, through the legislative mill. In addition, there are a number of bills which I introduced, either for myself or as a cosponsor, which are still awaiting action in Senate committees in the 2d session of the 86th Congress, which will convene next January.

HOMESTEADERS

One of the most important of these, in my estimation, is S. 1670, my bill to enable homesteaders on the Kenai Peninsula and elsewhere in Alaska to obtain oil and gas rights as well as surface rights to lands they have homesteaded. These homesteaders have in effect been deprived of mineral rights which otherwise would have been theirs by the happenstance that oil was discovered on the Kenai Peninsula in July of 1957, bringing into play a statute which reserves oil and gas rights on homesteads to the Federal Government. The homesteaders who would be given relief by the terms of my bill are those who already have valid existing rights at the time of the oil discovery. I regret to report that S. 1670 has been opposed by the Secretary of the Interior, despite what many interpreted as a pledge by him to seek remedial legislation. My bill, still in committee, will have hearings on the Kenai Peninsula in Alaska this fall.

ALASKA HIGHWAY PAVING

Among bills which I have sponsored in the field of transportation, one would authorize negotiations with Canada looking toward paving of the Alaska highway at joint expense. This bill, S. 1125, was introduced by the junior Senator from Oregon, Senator NEUBERGER, whose interest in Alaska has been deep and abiding.

FERRIES, APPROACH ROADS

S. 2661 would amend existing Federal highway aid legislation to provide for Federal assistance in the construction of approach roads to public or privately owned ferries in Alaska (as well as any other States having a similar need). There are sections of my State—southeastern Alaska primarily—where the ruggedness of the terrain is such that highways cannot be built, or cannot be built except at excessive cost. The ferries which in that circumstance provide the only feasible way for automobiles to be moved are deserving of Federal assistance, I contend, to the same extent as are roadways. The ferries in such locations are in essence "floating highways" connecting links of standard roadway.

CONSTRUCTION SUBSIDIES FOR FERRIES

Another related measure, S. 1956, would authorize the Federal Government to pay construction subsidies for vessels used as ferries on a proposed ferry transportation network in southeastern Alaska.

EXEMPTION FROM INSPECTION

S. 2669 would exempt from Coast Guard inspection certain small vessels essential for water transportation in southeastern Alaska. These vessels, serving the population along the protected coast, now enjoy such exemption, but the authority for it will expire next March unless S. 2669 is enacted.

GOLD

My bill, S. 590, provides for free marketing of gold and directs the Secretary of the Treasury to pay $70 per fine ounce for all gold mined domestically and tendered to the Treasury. This would double the existing price of $35 an ounce and would stimulate the gold mining industry in the mining States.

TIN

Similarly, S. 1957 would authorize the Secretary of the Interior to make incentive payments to producers of tin.

DISPOSAL OF PUBLIC LAND

S. 1411 would amend an act of August 1, 1956, to provide for the disposal of public lands within highway, telephone, and pipeline withdrawals in Alaska by clarifying the words "restored lands" as used in the act, as including certain lands at Big Delta and Tok Junction.

WITHDRAWALS OF PUBLIC LAND

S. 2587 would extend to all public land withdrawals proposals of the Federal Government the provision of law now applicable to land withdrawals for defense purposes which would require a specific act of Congress for the withdrawal of lands in areas in excess of 5,000 acres for use for any Federal purpose.

SALMON

S. 502 would prohibit the importation of salmon taken on the high seas by nationals of any country that permits fishing for salmon by gill nets in areas inhabited by large quantities of immature North American salmon.

COST OF LIVING ALLOWANCES

S. 176 would authorize payment of cost of living allowances for employees of the Federal Government assigned to Alaska in amounts exceeding the present limit of 25 percent of the basic rate of compensation. My objective is that the allowance paid should reflect the actual added cost of living and not be arbitrarily limited.

LEAVE BENEFITS

S. 973 would permit officers and employees of the Federal Government to accumulate a maximum of 45 days annual leave rather than the 30 days now permitted. This would reestablish the leave privileges in effect prior to the achievement of statehood.

VETERANS

S. 2201 would provide for reestablishment of authorization available to the Veterans' Administration prior to the achievement of statehood under which the Veterans' Administrator could arrange for hospitalization of veterans with non-service-connected disabilities by contracting with private hospitals in Alaska.

TRANSFER OF SURPLUS PROPERTY

In my capacity as chairman of the Donable Property Subcommittee of the Senate Committee on Government Operations, I am especially interested in studying the effects of existing surplus property legislation on the State of Alaska. In order to meet apparent needs of the State, I have introduced S. 2442, a reenactment of legislation previously in effect, under which the Federal Government was authorized to transfer surplus property to Alaska, without reference to other restrictions of present law which limit such transfers (as donations) to activities organized for purposes of education, public health, and civil defense.

During the adjournment period the Donable Property Subcommittee, under my direction, will make a special study of the disposition of surplus property in Alaska with a view to obtaining early and favorable action on this bill at the next session of Congress.

EXPORT RAIL RATES

S. 1673 would authorize the General Services Administration to appeal decisions of regulatory bodies in the Federal courts. The purpose of the bill is to allow GSA, without reference to the Department of Justice, to appeal adverse decisions of the Interstate Commerce Commission which are considered to be adverse to the interests of Alaska. Such a decision was rendered in a case in which export rates were sought from the transcontinental railroads on shipments destined for Alaska. Low export rates such as are denied Alaska shippers are enjoyed on rail movements of cargo destined ultimately for foreign and Hawaii destinations. The provisions of S. 1673 would also extend to other types of regulatory action affecting the GSA.

JUDICIARY

S. 2705 would provide for the appointment of an additional Federal district judge for Alaska, the one judge specified by the Statehood Act being deemed inadequate to handle Federal cases in that extensive jurisdiction.

Many bills of interest to Alaskans, either because the citizens of my State would like to see them enacted, or fear they will be, have been introduced by other Senators. I would like to discuss a few of these briefly.

ARCTIC WILDLIFE RANGE

One bill which was introduced at this session of Congress was opposed by me when it was the subject of a hearing before the Senate Interstate and Foreign Commerce Committee. This bill, S. 1899, would establish an Arctic Wildlife Range in Alaska. It would, if enacted, result in the withdrawal of some 9 million acres from northeastern Alaska to be used as a wildlife refuge. There has been no action on this bill.

AIR TRANSPORTATION OF MAIL

S. 2042, which Senator MONRONEY introduced, and which was reported by the Senate Post Office and Civil Service Committee, would authorize the Postmaster General to negotiate contracts with air carriers for the transportation of mail of classes other than air mail. This would greatly improve mail service to Alaska from the other States.

ALASKA COMMUNICATIONS SYSTEM

In the House of Representatives, a bill has been introduced to authorize the Secretary of Defense to dispose of the Alaska Communications System by negotiation. No action has been taken on H.R. 4879.

BRANDED GOODS

The Alaska delegation has gone to considerable lengths to persuade the Secretary of Defense that procurement officers of the Department in Alaska should procure branded goods from Alaska suppliers. The problem was solved by a combination of the effect of passage of the Statehood Act and the passage of the Defense Department Appropriation Act for 1960. The latter carries a provision which has been regularly included in it for many years which prohibits payment of transportation costs of items to be sold at commissaries in the United States. Alaska was not, formerly, considered to be a part of the United States; hence the prohibition did not apply. With this act now signed by the President, Alaska suppliers will be in the same position as those in other States. Under prior authorizations the Defense Department bought branded goods in other States and paid the cost of transportation to Alaska, thus undercutting Alaska merchants.

MAJOR LEGISLATION

Mr. President, my presentation to this point has concerned itself with actions taken by this Congress on bills of particular and specific interest to Alaskans. As citizens of the Nation, Alaskans also participate in the benefits of all general legislation for the people of the United States. In some respects the Congress was frustrated in this session in its attempts to legislate for the people of the United States and to meet the needs of this growing Nation. The frustration came from the use of the veto by the Executive. Vetoes struck down, and set at naught, many pieces of badly needed legislation.

The remedy, in a democracy, lies at the polls. After 1960, with a President from the Democratic Party occupying the White House, we can resume that progress on housing, airport construction, public power,

navigation improvement and developmental programs generally which has been the hallmark of Democratic administrations.

Some progress, despite to "no new starts" philosophy and practice by the Republican administration, was made through major legislation enacted at this session.

HOUSING

After two attempts at passage of housing legislation which met with Presidential vetoes, the Congress finally passed a third housing bill which extends and amends basic housing legislation and meets immediate needs of the housing program.

Of particular interest to Alaska is an amendment to section 214 of the National Housing Act, which authorizes the FHA to insure mortgages on housing in Alaska, Guam, and Hawaii in amounts up to 50 percent higher than is authorized elsewhere. The 1959 amendment will allow the administration to apply the 50 percent additional allowance to mortgages insured in maximum amounts as determined under other provisions of the National Housing Act which permit upward adjustments of insurable mortgage amounts required in high-cost areas.

Another of the many amendments enacted by the new law is section 413 which will authorize the use of 20 percent of capital grants for urban renewal to be applied to the redevelopment of nonresidential areas for nonresidential purposes where local public agencies determine that such redevelopment is necessary for the proper development of the community.

I was a cosponsor of the first housing bill introduced at this session of Congress, which contained far more liberal measures with respect to Federal assistance to States for housing programs than the bill which has now become law as Public Law 86–372.

STATEHOOD FOR HAWAII

Hawaii was admitted as the 50th State under provisions of Public Law 86–3. I am proud to have been a cosponsor of this legislation which has brought full membership in the family of States to the last organized territory of the United States.

LABOR-MANAGEMENT REFORM

Congress acted to safeguard the rights of union members and the public against unfair and unethical practices of labor unions and management. Public Law 86–257 has yet to prove its efficacy and fairness in practice.

AIRPORT CONSTRUCTION

The program under which the States receive Federal assistance for construction and improvement of airports was extended for an additional 2 years. Alaska continues to receive funds allocated on the same basis, with the same matching requirements, as applied to her as a territory. Alaska's share for the 1960 and 1961 fiscal years will be $1,350,000 from the funds to be allocated under the regular matching programs, in addition to such other funds as may be made available to Alaska from the discretionary fund in which the State will share under terms of the special bill enacted upon introduction by the Alaska Senators.

VETERANS' LEGISLATION

The GI Assistance Act of 1959 (S. 1138), of which I was a cosponsor, would extend the GI bill of rights for Federal assistance for education, vocational rehabilitation, and for house and farm loans to post-Korean war veterans. This bill passed the Senate July 21. It awaits House action.

A new veterans' pension bill which makes numerous changes in pension rates for veterans and dependents of veterans with nonservice-connected disabilities was enacted as Public Law 86–211.

YOUTH CONSERVATION

S. 812 would establish a Youth Conservation Corps to provide an opportunity for healthful training and employment for young men in connection with carrying out planned conservation programs. This bill, of which I am a cosponsor, passed the Senate August 13.

AREA REDEVELOPMENT

Another bill of which I am a cosponsor, S. 722, would provide Federal assistance for areas of the United States in which there is a substantial amount of unemployment. It passed the Senate March 23.

HEALTH INSURANCE

Public Law 86–382 provides for a federally administered program of health insurance for Federal Government employees. The law authorizes payroll deductions and an equal contribution by the Federal Government to the cost of approved health insurance programs. I am proud to be a cosponsor of related legislation, which has not yet passed, to extend the same health insurance benefits to retired Government employees. That bill is S. 2575.

MUTUAL SECURITY

An extension, with amendments, of basic mutual security legislation was enacted in the form of Public Law 86–148, carrying with it an authorization for funds for assistance to other countries.

As you know, I led an attempt to amend the legislation to require the International Cooperation Administration, which administers the program, to submit firm budgets for expenditures of funds it requests from Congress. The Gruening amendment to the authorization legislation was not adopted. However, I am gratified that the mutual security appropriation law, enacted in the closing hours of the session, contains a provision similar to the one I earlier recommended. Under the amendment, the ICA will be required to report to the Congress any deviations from justification data submitted by the agency to obtain appropriations from Congress.

PUBLIC BUILDINGS ACT

This legislation (Public Law 86–249) provides authorization for construction of Federal public buildings by the General Services Administration. It is expected, under procedures established by this law, that it will be possible for the Government to construct Federal buildings authorized by previous legislation (but for which funds were never provided) at Anchorage, Juneau, and Seward in Alaska.

FLUORSPAR INDUSTRY

Senate Resolution 162, of which I was a cosponsor, requires the Tariff Commission to make a special study of the effects of fluorspar imports on the domestic fluorspar industry with a view toward determining whether import restrictions should be applied in the interests of protection of the domestic industry. Fluorspar is one of Alaska's mineral resources.

LEAD AND ZINC INDUSTRY

Senate Resolution 163, which I also cosponsored, requires the Tariff Commission to make a study of the effects of lead and zinc imports on the domestic industry, with a view to determining whether import restrictions should be applied for its protection.

INDIAN HEALTH FACILITIES

Public Law 86–121, co-sponsored by me, authorizes the Surgeon General of the U.S. Public Health Service to construct sanitation facilities for Indian homes, communities and lands. It applies to Alaska villages.

OTHER ENACTMENTS

The first session also enacted a crash program to attack cancer, heart disease and other killing and crippling diseases. It extended the Civil Rights Commission, liberalized railroad retirement and passed comprehensive legislation to attack the problem of water pollution.

This Congress cut more than $1,850 million from President Eisenhower's appropriation requests, effectively refuting by action the accusation so often made that it consisted mainly of irresponsible spenders. Congress not only took the President at his word in his repeated calls for fiscal integrity and the balanced budget; it went him one better and spent considerably less than he had requested. To the credit of the Congress, let it be recorded also that the sums voted for public works, internal development and the strengthening of our national economy were above his requests. The economies were taken elsewhere.

THE SECOND HALF

The 86th Congress finds itself at what in a football game would be called half time. Ahead of us in the second session, when more touchdowns will be made, I am confident that, with the same attention to business and devotion to the interests of all the people, we can in 1960 write another proud chapter in American history.

The Democratic Web of Inflation

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, President Eisenhower recently defined inflation as being—"when you take a market basket full of money to the grocery store and bring back your pocketbook filled with groceries."

The distinguished Democratic chairman of the House Appropriations Committee [Mr. CANNON] had this to say about the impact of the Democratic-controlled 86th Congress on inflation:

We cannot escape the responsibility for the situation as we find it today. Congress spent the money and increased the national debt and brought on the inflation. The responsibility is right here on this floor. We cannot offer an alibi. We cannot pass the buck. * * * Congress did it and let no one try to make the people back home believe any different. * * * this Congress has doubled the cost of breakfast, doubled the cost of school clothing. * * * Congress has increased the cost of living, of every family in the district of every Member of this House.

Bear in mind the chairman of the House Appropriations Committee was talking about a Congress in which the Democratic Party has a majority of 283 to 153 in the House and a majority of 65 to 35 in the Senate—a margin in each House of almost 2 Democrats for every 1 Republican.

Regrettably these remarks are applicable not only to the 86th Congress. Mr. CANNON's remarks are equally applicable to previous Democratic-controlled Congresses such as the 85th and 84th Congresses, the 82d and 81st Congresses, the Democratic-controlled Congresses from the 79th through the 73d Congress.

In the last 27 years the Democratic Party has had control of the Congress in 23 years and has approved deficit spending budgets or deficiency appropriations resulting in deficits in 20 of those years. The average annual deficit in those 20 years of Democratic deficits was $13.5 billion.

Fiscal year 1951 was the only year in the last 27 years in which a budgetary surplus occurred while the Congress and the Executive were under the exclusive control of the Democratic Party. We will all recall that this unusual Democratic surplus happened under revenue circumstances of the highest individual, corporate, and excess profits tax rates in our Nation's history and while our defense spending for the Korean war was mired in bureaucratic indecision after 5 years of Truman neglect of our Nation's military preparedness.

The other 2 fiscal years, 1956 and 1957, in which budgetary surpluses occurred while a Democratic-controlled Congress was in power, can in almost exclusive measure be attributed to the diligent endeavors of the Eisenhower administration to place our Federal Government on a pay-as-you-go basis. It should also be remembered that these surpluses were realized after economic growth had been stimulated by a $7.5 billion tax reduction program accomplished by the Republican administration and the Republican 83d Congress when a budget surplus was at hand.

Since the last Republican Congress in 1953–54, we have had 5 years of Democratic legislative control. The record documents the inescapable conclusion that without the Republican administration and the Republican minority in Congress to serve as a bulwark for the protection of our Nation's fiscal and monetary integrity, the American people would today be caught in a web of disastrous inflation spun by the Democratic Party. The Democratic Party has used its control of the Congress in the past 5 years to try to return this Nation to the discredited spending practices of the voter-repudiated Democratic fair deal. The Democratic Party in seeking to undermine the budget-balancing endeavors of the Republican administration has kept our Nation from making the progress we otherwise would have made in bringing order to our Nation's fiscal and monetary affairs.

Since the advent of the Eisenhower administration in January 1953 certain political demagogues have consistently carped at the administration's fiscal and monetary policy. In essence they have claimed that on the fiscal side we have spent too little and on the monetary side we have inflated not enough. Either these advocates of spend more and pay later are dissatisfied that our tax rates are too low or that our $290 billion public debt should be higher; this conclusion is evident from their relentless clamor for more spending, more Federal bureaucracy with less States' rights, and more erosion in the purchasing power of the dollar.

Criticism by the irresponsible demagogues with respect to the Eisenhower administration's endeavors to protect the purchasing power of the citizen's dollar is not seriously heeded by most thinking people. Unfortunately in recent weeks responsible House Members in positions of Democratic leadership have begun to parrot the left wing line of budget buffoonery. Our Nation's economic strength demands that inflation and its causes be effectively dealt with by all thoughtful citizens regardless of party. It is only in this way that we can curb inflation, foster meaningful economic growth for our Nation, and preserve the vitality of our free-enterprise system.

Mr. Speaker, in the remainder of my remarks I would like to restate briefly the recent criticism of the administration's monetary and fiscal policies, examine into the validity of that criticism, review the fiscal accomplishments of the Eisenhower administration, and then examine inflation's causes and its impact upon our economy.

In essence, the criticism is that the monetary policies of the administration are inconsistent with its fiscal policies in that so-called tight money thwarts economic growth and that when inflationary deficit financing is added, the combination results in rising prices without achieving full employment. The charge is also made that the administration is responsible for deficit financing and loose fiscal policy. Now that we have stated the charge, let us examine the facts. Let us see what political party is responsible for loose fiscal policy—high taxes, deficit spending, and mounting debt.

For convenient reference I will at this point in my remarks include as table 1 a summary of budget totals and public debt for the period 1933–59:

TABLE 1.—*Budget totals and public debt 1933–59*

[In millions of dollars]

Fiscal year	Budget receipts	Budget expenditures	Surplus (+) or deficit (−)	Public debt at end of year
1933	2,021	4,623	−2,602	22,539
1934	3,064	6,694	−3,630	27,053
1935	3,730	6,521	−2,791	28,701
1936	4,069	8,493	−4,425	33,779
1937	4,979	7,756	−2,777	36,425
1938	5,615	6,792	−1,177	37,165
1939	4,996	8,858	−3,862	40,440
1940	5,144	9,062	−3,918	42,968
1941	7,103	13,262	−6,159	48,961
1942	12,555	34,046	−21,490	72,422
1943	21,987	79,407	−57,420	136,696
1944	43,635	95,059	−51,423	201,003
1945	44,478	98,416	−53,941	235,682
1946	39,771	60,448	−20,676	269,422
1947	39,786	39,032	+754	268,286
1948	41,498	33,069	+8,419	252,292
1949	37,696	39,507	−1,811	252,770
1950	36,495	39,617	−3,122	257,357
1951	47,508	44,058	+3,510	255,222
1952	61,391	65,408	−4,017	259,105
1953	64,825	74,274	−9,449	266,071
1954	64,655	67,772	−3,117	271,260
1955	60,390	64,570	−4,180	274,374
1956	66,165	65,540	+1,626	272,753
1957	71,029	69,433	+1,596	270,537
1958	69,117	71,936	−2,819	276,242
1959	68,158	80,699	−12,541	706,841

NOTE.—The change in the public debt from year to year is not necessarily the same as the budget surplus or deficit. It reflects also changes in the Treasury's cash balances, the effect of certain trust fund transactions, and direct borrowing from the public by certain Government enterprises.

In evaluating the data in table 1, it should be remembered that the House was under control of the Democratic Party in the 72d Congress and that actions of the Democratic 73d Congress acted to increase the deficit in fiscal year 1933. Similarly the Democratic 81st Congress by action on Truman requested deficiency appropriations was responsible for the final deficit figure of $1.8 billion in 1949. On the other hand, the Republican Party and the Republican 80th Congress deserve major credit for the economies instituted that led to the budgetary surplus of $754 million in fiscal year 1947.

Turning now to the taxing side of the budget ledger, we find that since the advent of the personal income tax in 1913—approximately 47 years ago—the Democratic Party has controlled the Congress for 31 years and the Republican Party for 16 years. In the 31 years of Democratic control our Nation had 20 major Democratic tax increases. The Republican Party, on the other hand, in its 16 years of stewardship as the majority party in Congress has enacted nine major Republican income tax decreases.

The most noteworthy of these Republican tax decreases occurred during the Republican 80th Congress, when an annual tax saving of $5 billion was given to the American people, and during the Republican 83d Congress, when an annual tax reduction of $7.5 billion occurred. Without these Republican tax reductions made possible by Republican economy, the Democratic imposed tax burdens on our Nation's economy by now might well have snuffed out of existence our free enterprise system and brought on Government regimentation of our economic life.

Democratic tax policy has traditionally been dedicated to broadening the tax base and increasing the tax rates so that under the Democratic Party we have reached the point of taxation according to inability to pay.

Turning now to the expenditure side of the budget ledger, we find that a succession of record high Democratic tax increases was inadequate to finance even greater Democratic spending so that in the period of the New and Fair Deals the public debt was increased by approximately $250 billion. With respect to spending, the Democratic Party's record has been characterized by promises of frugality and performances of profligacy.

In connection with this review of the Democratic Party's record of fiscal extravagance it is interesting to note that the distinguished majority leader of the House when he was a member of the House Committee on Ways and Means joined in signing supplemental views in the committee report accompanying the revenue bill of 1932 to the House, in which he said:

> From this brief statement [with reference to the fiscal position of the Federal Government] it is unmistakably evident that we cannot afford to have an unbalanced budget for 3 consecutive years, and that the committee is warranted in its position that the best interests of the country require that the budget for 1933 be balanced.

I sincerely regret that the gentleman's party did not give more heed to this perceptive observation by their very able and patriotic colleague. After he

made that comment, Democratic majorities in the Congress proceeded in 13 successive years to approve budgetary deficits which were brought to a halt only in 1947 when a Republican Congress was in power. It should be noted that the largest budgetary surplus in the history of our Nation was realized during the Republican 80th Congress in 1948 in the amount of $8.4 billion. Budget expenditures which were reduced in the Republican 80th Congress began a Democratic rise in the 81st Congress which was not reversed until the Republican Party returned to control of the Congress in 1953.

Examining further the record of more recent history we find the following with respect to budget expenditures: In the last Truman budget year the Democratic Congress approved expenditures of $74.3 billion. Fiscal years 1954 and 1955 were Eisenhower budget years in which the President had a Republican Congress to work with and we find a record of declining expenditures in each of those years in the amount of $67.8 billion and $64.6 billion, respectively. With the advent of Democratic control of Congress in calendar year 1955, the Republican trend of declining Federal expenditures was reversed and budget expenditures again began to rise so that for the years indicated expenditures were: fiscal year 1956, $66.5 billion; fiscal year 1957, $69.4 billion; fiscal year 1958, $71.9 billion; and fiscal year 1959, $80.7 billion.

A portent of future spending levels is found in the pattern of new obligational authorizations enacted in preceding years. New obligational authority is an authorization enacted by the Congress prescribing obligations to be incurred by Federal agencies for the payment of money. As these advance spending authorization levels rise and also become current, they exert virtually unmanageable upward pressures on expenditure levels. As our review of the expenditure record has revealed that the Democratic Party is the party of the spenders, so does a review of the new obligational authority record reveal that the Democratic Party is hopelessly committed to rising spending in future years. There follows a summary of new obligational authority voted by the Congress for the period 1952 through 1959:

Fiscal year:	*Amount (billions)*
1952	$91.4
1953	80.3
1954	62.8
1955	57.1
1956	63.2
1957	70.2
1958	76.3
1959	81.4

It is to be noted that the decline in future spending authorizations began in 1953 when the Republican administration and the Republican Congress took office in January 1953 and began to restore order out of the fiscal chaos left by the Truman-Democratic Party. Fiscal year 1955 was the last budget prepared by the Republican Congress and the new obligational authority began to rise in 1956 under a Democratic Congress.

The rising levels of budget expenditures and new obligational authorizations under a Democratic-controlled Congress are directly attributable to the politically motivated conviction of the Democratic Party that the Federal Government can spend the taxpayer's dollar for governmental schemes better than the taxpayer can spend his money to provide for his family's living and educational needs. This fact can be documented by observing that in the 84th Congress the Democrats provided for nearly 200 new or increased spending programs largely imposing Federal-aid on the States. The 85th Congress and the 1st session of the 86th Congress have produced similar records of usurpation of authority by the Federal Government to the detriment of the functioning of our State and local governments and the pocketbooks and liberties of our citizens.

A further demonstration of the extravagaint spending proclivities of the Democratic Party is found in a review of some of the reckless spending bills introduced in the House and Senate by Democratic Members of the Congress in the 1st session of the 86th Congress. Only a partial list of 22 such bills introduced in the House has an estimated 5-year price tag of $152.3 billion. It should be remembered that these "antitaxpayer" proposals are in addition to the regular spending levels that would be required by the so-called typical budget. This raises the somewhat rhetorical question, "In the light of this record how can it be sincerely contended that it is the administration that is responsible for the loose fiscal policies extant today in our Federal affairs?"

The Democratic majority in the 86th Congress did not merely content itself with introducing spending bills. That Democratic majority worked desperately to bust the budget for 1960 and make more difficult budget balances in future years. Table 2 shows the expenditures that were avoided because of Presidential vetoes, bills defeated, and bills on which action was delayed.

Table 2

[In millions]

	Ultimate additional authorized net spending[1]	Expenditure effect on 1960 budget
BILLS DEFEATED		
S. 722, area redevelopment (1960-63)	$337	$10
S. 12, grants to States for educational TV	50	5
S.J. Res. 41, international medical research	50	10
S. 812, Youth Conservation Corps	375	25
S. 1138, peacetime ex-serviceman's readjustment benefits (1960-73)	3,500	10
PENDING IN CONFERENCE		
H.R. 3610, water pollution grants (based on Senate action) (10 years)	300	30
Total	4,612	90
BILLS VETOED BY PRESIDENT		
Housing programs in excess of those finally enacted	531	
Total	5,143	110

[1] Passage of these bills would have added $110 million to 1960 expenditures and considerably more in the next few fiscal years. This would have produced a deficit of $15 million for 1960 rather than the $95 million surplus.

Unfortunately the Democratic budget-busters did succeed in adding additional expenditures to the budget proposals of the President for fiscal year 1960. The budget message for fiscal year 1960 submitted to the Congress in January 1959 called for an expenditure level of $77 billion; it is now estimated fiscal year 1960 expenditures will total $78.9 billion. Table 3 presents a summary analysis of the net fiscal impact of legislative action on the budget in the 1st session of the 86th Congress:

Table 3

The net fiscal impact of all congressional actions in the first session of this Congress upon the President's budget recommendations submitted for fiscal year 1960 is as follows:

1. Net expenditures [1] for fiscal year 1960 were increased by $597 million.
2. Net expenditures over a period of future years after fiscal year 1960 were increased an additional $11.5 billion.
3. Pending legislation passed by one or both Houses of Congress and now awaiting further congressional action in January would cost in future fiscal years an additional several billion dollars beyond the President's requests.[2]

SUMMARY

[In millions]

	Expenditure effect in 1960	Expenditure effect over period of years
A. Actual congressional reductions in President's requests	−$81	−$1,033
B. Increases through "back door financing"	+110	+231
C. Other increases:		
1. In appropriation acts	+25	+2,233
2. In new substantive legislation	+45	+10,125
3. Nonapproval of revenue proposals	+498	+540
Total effect of all congressional actions on President's budget	+597	[3] +12,096
Deduct 1960 expenditure effect		597
Increase after 1960		11,499

[1] Spending required by congressional action over President's requests, plus revenues requested by President but not granted.

[2] These bills include the following: Peacetime ex-servicemen's readjustment benefits (S. 1138), Youth Conservation Corps (S. 812), international medical research (S.J. Res. 41), grants to States for educational television (S. 12), area redevelopment (S. 722), and water pollution (H.R. 3610).

[3] Of this amount $258 million is in loans repayable over a period of years.

Thus, it is apparent that the Democratic budget-busters not only adversely affected the 1960 budget but they have made balanced budgets more difficult of attainment for years to come by enacting Government programs that America's taxpayers cannot afford.

To demonstrate the implications of the spending actions of the Democratic-controlled Congresses under the Eisenhower administration, it can be pointed out that if the spending levels in the period 1956–60 had been held to the 1955 budget level approved by the last Republican Congress, the citizens of our Nation would have saved $44.4 billion for an average of almost $9 billion per year.

Mr. Speaker, despite unthinking contentions to the contrary, in evaluating responsibility for fiscal policy, it must be remembered that no expenditure can be made by the executive branch of the Government without such expenditure first having been authorized by the Congress. Such an authorization may take the form of an appropriation, either current or permanent, or an authority to spend from debt receipts. Therefore,

it is clearly a basic truth under our form of government that the amount of expenditure in any year is determined by the action of the Congress. It is also clear that if we have spent too much or been "fiscally loose," it is the Congress that must accept the responsibility for the fact and the consequence. It serves no useful purpose to attempt to shift the blame to where it does not belong.

The Democratic Party must assume sole responsibility for 93.4 percent of our national debt. In 1953 the debt stood at $266 billion. Under the present administration, hamstrung in its endeavors to foster fiscal responsibility by three Democratic Congresses, the debt has risen approximately $19 billion. On June 30, 1933, the debt was $22.5 billion, which was $1.5 billion less than the $24 billion debt left by the Woodrow Wilson Democratic administration. Therefore, the Democratic administrations of Wilson, Roosevelt, and Truman are responsible for the entire national debt incurred prior to 1953. That Democratic total is $266 billion, or 94.3 percent of the total public indebtedness. The Democratic Party must also assume a pro rata share of the responsibility for the cost of maintaining that debt. Democratic responsibility for the debt arises from that party's undeviating commitment to deficit financing and governmental spending in excess of an expenditure level that can be sustained by our national resources.

Mr. Speaker, this review of the fiscal facts of our Nation clearly shows that it is the Democratic Party that has led our Nation down the path of fiscal folly of extravagant spending, mounting indebtedness, and inflation-eroded dollars. From these facts it is inescapably clear that the Democratic Party in a search for an inflation scapegoat should have ended its hunt at its own front door.

Mr. Speaker, thus far I have reviewed the record of our two great political parties in providing fiscal leadership. The record has proved that the Republican Party when in control of Congress has slashed spending and given meaningful tax reduction to the American people within the framework of a balanced budget that provided a surplus to be used for urgent debt reduction. On the other hand that same record has proved the Democratic Party to be the party of rising taxes, rising spending, and rising public debt. We have also determined that the record of loose fiscal policy that has prevailed during most of the last 27 years must be attributed to the actions of the Democratic majority in the Congress because of its predominant control over the Federal Government's taxing and spending.

Mr. Speaker, I will now turn to a refutation of the charge that the Eisenhower administration's fiscal and monetary policies have not been conducive to economic growth. In reviewing the accomplishments of the Eisenhower Republican administration since January 1953, it might be well for us to review briefly the fiscal position of the United States at the time the Eisenhower administration took office and see what the Republican Party has done to establish order out of Democratic fiscal chaos.

The following is a brief recitation of the fiscal problems irresponsibly left by the previous Democratic administration when the Republican Party came to power in January of 1953:

First. The Federal debt equaled 89 percent of our annual national income. Because of the stringent fiscal policies of the Republican administration and the prosperity that our Nation has experienced under that administration, the national debt today equals 79 percent of the Nation's annual national income.

Second. The Democratic Party had approved budget deficits of almost $10 billion in each of the fiscal years 1953 and 1954. By instituting Republican frugality the Democratic-proposed deficit for 1954 was reduced by more than $6 billion. In addition to these Democratic planned deficits, the outgoing Democratic administration had also left $80 billion in unpaid obligations that had to be met by the Republican administration.

Third. The Democratic caused spiral of inflation had reduced the purchasing power of the dollar from 100 cents in 1939 to 77 cents in 1945, and that purchasing power declined to 52 cents by 1952.

Straightening out the Truman-Democratic messes of war in Korea, budget deficits, and runaway inflation were the most urgent matters for correction by the Republican administration and the Republican Congress in 1953. In dealing with these problems, the Republican Party did not overlook the need to foster economic growth.

America's progress under the leadership of the Republican Party has been the greatest in the history of the world. Contrasting economic events of the past 6 years with comparable data for the Truman era we find the following astounding accomplishments:

First. Employment and family income: In 1959 the average number of gainfully employed stood at 65.3 million persons compared to 61 million in 1952. Average annual family income after taxes which was $4,570 in 1952 increased 24 percent to an average level of $5,675 by 1958. The average family purchased 12.5 percent more in goods and services in real terms in 1958 than in 1952. In the same period farm income per worker increased 13.1 percent.

Second. Housing: From January 1953 through August 1959 6.7 million American families moved into new nonfarm homes; nearly 32 million families now own their own homes or nearly 22 percent more than in 1952.

Third. Cost of living: The success of the Eisenhower administration in curbing the Truman-Democratic runaway inflation has brought stability to the cost of living and because public confidence has been restored in our Government's determination to safeguard the purchasing power of the dollar, an incentive to more saving has resulted. The average annual increase in the cost of living for the 6 year period 1953–58 was 1.4 percent contrasted with an average annual increase of 5.8 percent during the 8 years of the Truman administration. The average per capita savings has increased 12 percent over what it was in 1952.

Fourth. Capital investment: Business capital expenditures for new plant and equipment averaged $21 billion a year during the 8 years of the Democratic administration and $35 billion during the 6 years of the present Republican administration. These capital outlays increased 24.6 percent in 1958 over 1952.

Fifth. Small business: A record total of 4.6 million business firms was reached in the second quarter of 1959. New business incorporations showed a remarkable growth in 1958 and 1959. The administration has effectively worked to abolish Federal enterprises competing with private business.

Sixth. Fiscal data: Federal taxes in terms of net budget receipts from all sources amounted to 22.2 percent of national income in 1952, as compared with 18.8 percent in 1958. Budget expenditures in fiscal year 1959 were 17.4 percent of gross national product, as compared with 19.3 percent in fiscal year 1952. The average relationship of budget expenditures to gross national product during the 8 calendar years of the last Democratic administration was 19.6 percent compared with a relationship of 17.3 percent during the 6 calendar years of the Eisenhower administration. The public debt per capita was $1,688 in December 1952 as compared with $1,612 in December 1958.

A comparison of allocation of interest payments on the public debt by groups of recipients is set forth in table 4:

TABLE 4.—*Estimated distribution of the interest on the public debt, calendar years 1946, 1952, and 1958*

[In billions of dollars]

	1946	1952	1958
Individuals:			
Savings bonds	$0.8	$1.5	$1.4
Other Federal securities	.5	.3	.4
Total	1.3	1.8	1.8
Commercial banks	1.4	1.3	1.6
Mutual savings banks	.3	.2	.2
Insurance companies	.6	.4	.3
Nonfinancial corporations	.2	.4	.5
State and local governments	.2	.2	.4
Miscellaneous investors	.2	.2	.4
Federal Reserve banks	.1	.4	.7
Government investment accounts	.7	1.2	1.5
Total interest expenditures	5.0	6.1	7.4
Addenda: Percent interest expenditure of national income	2.8	2.1	2.0

Mr. Speaker, this brief recitation of a few of the highlights of the economic accomplishments under the Republican Party clearly demonstrates public confidence in the policies and public approval of the principles for which the Republican Party stands. These attainments are conclusive proof of the wisdom and foresight of Republican leadership.

Mr. Speaker, Democratic deficit spending and the inflation it creates are the gravest threat to the vitality of our free enterprise system. There can be no peaceful coexistence between inflation and economic opportunity.

Inflation is the most dangerous domestic economic problem confronting our Nation in our endeavors to keep fully defended against international commu-

nism. Inflation occurs when the total volume of money expenditures increases more rapidly than the supply of goods and services bought and sold. Man's resistance to the limitation of his environment create the subjective basis for inflationary pressures. Rising prices are merely the symptom and not the cause of inflation. While I do not profess great learning in the science of economics, an empirical examination of present-day circumstances clearly points the finger of blame for inflation on the spending proclivities of government. For example, in the period from 1948—our low point achieved under the Republican 80th Congress—to 1957, Government purchases of goods and services rose more than 200 percent, while private expenditures rose 71 percent.

The increase in Government spending was partly the result of rising prices, but even after making adjustment for this factor, real Government purchases rose by more than 100 percent. This Government spending has caused the governments on the Federal, State, and local levels to take in government revenues one-third of the net national income which suggests that we are well on the road to socializing the income of the people.

It is the inescapable conclusion that what policy the Government takes with respect to spending, taxing, and debt management will be a major factor in determining an inflationary or deflationary course of events. Therefore, one of the first lines of defense against inflation is to control the spending activities of the Congress—to discipline ourselves so as to avoid promises that cannot be kept and to abstain from overloading the economy. It is the Congress that must face up to the uncomfortable political decisions that are demanded by the stern facts of life.

Inflation has no constructive relationship to economic progress. Inflation is not a cause of national growth. Inflation perpetuates and aggravates the hardship and disaster that accompany the cycle of boom and bust. As Mr. Raymond Moley has recently described it, as quoted from page 52 of House Report No. 1148, 86th Congress:

> Inflation is the prescription for bureaucratic tyranny * * * thwarts the individual's means of self-help and personal security by withering his savings and the value of his income * * * transforms the normal transactions of business into speculative gambles, especially for small business * * * spawns demagogs to make the processes of politics and Government a compound of false promises, deceptions, hidden taxes, and worthless benefits * * * rots the fabric of constitutional government. * * * The Nation's credit is the final, ultimate sacrifice. This means economic disaster * * * eagerly awaited by communism.

It is by the restraint of inflation and by the creation of an economic environment providing an incentive to save that we pay the minimum price for economic progress. As the late Prof. Sumner Slichter wrote in the Harvard Business Review for September-October 1957:

> The greatest danger confronting the economy today is that political pressure will force the abandonment of credit restraint. The result would be an acceleration of price increases.

Mr. Speaker, the high level of Government spending approved and virtually forced by the Congress is the strongest evil nurturing inflation today. High levels of Government spending even with a balanced budget during a period of strong business activity are inflationary because a large part of such expenditures go for purposes that neither make more goods or services available nor add to productive capacity. Steps the Congress might take to return to individual control any significant portion of the funds now used by the Federal Government would be steps in the right direction. Failing this, the combined pressures of taxation and personal debt upon disposable income will create irresistible demands for inflation and will reduce to a trickle savings, the lifeblood of productivity. While the easy availability of money for spending is not a sufficient cause of inflation, it is a necessary condition. Stabilization of our Nation's cost of living must be a primary aim of Federal economic policy.

Mr. Speaker, we have demonstrated that spending approved by the Democratic Party during the periods of their control of the Congress and of the administration have created the principal cause of inflation in the United States. The active money supply has been expanded from $36 billion at the end of 1939 to $138 billion at the end of 1958—an increase of 283 percent. We have noted that in the 13 years of a Democratic administration in the period 1939–58 the purchasing power of the dollar dropped 48 cents. The average drop in the value of the dollar during the 8 Truman Democratic years was more than 3 cents per year.

Table 5 sets forth the wholesale price index for the period 1932–58 to demonstrate the impact of inflation on the price level.

TABLE 5.—*Wholesale price index, 1932–58, all commodities*

(1947–49—100)

Year:	Average
1932	42.1
1933	42.8
1934	48.7
1935	52.0
1936	52.5
1937	56.1
1938	51.1
1939	50.1
1940	51.1
1941	56.8
1942	64.2
1943	67.0
1944	67.6
1945	68.8
1946	78.7
1947	96.4
1948	104.4
1949	99.2
1950	103.1
1951	114.8
1952	111.6
1953	110.1
1954	110.3
1955	110.7
1956	114.3
1957	117.6
1958	119.2

An analysis of the wholesale price index by the administration during which price level increases occurred is set forth in table 6:

TABLE 6.—*Wholesale price index*

(1947–49—100)

1932	42.1
1944	67.6
Rise under Roosevelt	[1] 25.5
1944	67.6
1952	111.6
Rise under Truman	[2] 44.0
1952	111.6
June 1959	119.5
Rise under Eisenhower	[3] 7.9

[1] 60.6 percent gain over 13 years.
[2] 65.1 percent gain over 8 years.
[3] 7.1 percent over 7 years, counting 1959.

It will be noted that of the increase of 77.4 points, 25.5 points occurred during the Roosevelt administration, 44 points occurred during the Truman administration, and 7.9 points occurred during the Eisenhower administration. It may be concluded from these tables that the Republican Party has not totally succeeded in stopping inflation, but the inflation would be considerably worse if the Democratic Party were returned to control of both the Executive and the Congress. It is also to be noted that during the period from 1953 through 1955 when we had the beneficial effect of the Republican Party in control of both the Executive and the Congress, we had a sustained period of stability in the price level.

Despite the relentless efforts of the Democratic Party to build an "expending economy" instead of an expanding economy, the Republican administration has succeeded in pursuing fiscal policies that have lent forces of stability to the price levels to mitigate at least in part the deficit fiscal policies approved by the Democratic controlled Congresses.

Rising interest rates just like rising prices are symptoms of inflation. There can be no question that the Democratic created budgetary deficits have put upward pressures on price levels and interest rates.

The record peacetime deficit of $12.5 billion voted by the Congress for fiscal year 1959 has regenerated the fires of inflation as well as raised the level of the public indebtedness to a new record high. In approving this unprecedented peacetime budget the Democratic Party claimed it was overcoming a recessionary trend in our economy, but it is significant to note that the upturn in the economy occurred in April 1958—long before any of these spending programs took effect. But even if such spending had been necessary for fiscal year 1959, a point that I do not concede, the argument of a recession cure cannot be used with respect to the spending level in the 1960 budget. And yet the Democratic Party in the Congress continued its spending ways. As was pointed out earlier in my remarks, the Congress increased net expenditures in 1960 by almost $600 million over the 1960 budget and added $11.5 billion more spending for the years after fiscal 1960.

The Democratic Party has pursued this reckless use of the appropriation process in an effort to curry voter favor. By substituting dollar politics for party principle the Democratic Party seeks to gain the favor of the American people even though it is at the expense of the stability of our monetary structure. As my distinguished committee chairman and colleague [Mr. MILLS] recently said with respect to the difficulty of controlling appropriations in the face of increasing spending authorizations:

It is certainly true * * * that you cannot make authorizations for programs that will cost so much money and then expect through the process of appropriations to materially reduce those authorizations.

The President of the United States in stressing the need for a balanced budget said:

By avoiding a deficit, it will help prevent further increases in the cost of living and the unfair tax that inflation imposes on personal savings and incomes.

In the first session of the 86th Congress the Democratic Party voted to increase authorizations and to increase spending not only in fiscal year 1960 but in future years as well. I would also point out to my Democratic colleagues that you cannot consistently vote to override Presidential vetoes of profligate spending bills and then turn around and criticize the administration for loose fiscal policies.

An example of confused Democratic fiscal and monetary inconsistency arose in the first session of the 86th Congress during the consideration of the President's request for legislation to facilitate economical and efficient public debt management. In regard to this legislation the Democrat Majority in the Congress refused to approve the President's request which was universally supported by informed economists and fiscal authors as being in the interest of sound debt management. The result of this Democratic refusal to act is inevitably going to be the creation of further inflationary pressures to the detriment of citizens living on fixed incomes, wage earners, farmers, consumers, small business—indeed, every segment of our American economy.

In an effort to shift the blame for this irresponsible Democratic failure to act, Democratic spokesmen have endeavored to blame the administration for rising interest costs. One of the arguments they advanced is that interest rates in the immediate post World War II period did not advance appreciably. They present tables demonstrating this fact. They omit from their argument the fact that during much of this time the Federal Reserve was pegging the price of Government bonds with disastrous inflationary consequences. They omit from their tables precipitous decline in the purchasing power of the dollar in the period from 1946 through 1952, and also a listing of average annual yields on municipal bonds for a similar period. In table 7 I provide that data for the period 1946–58:

TABLE 7.—*Average annual purchasing power of the dollar,[1] 1946–58, with 1946 as 100*

	Cents
1946	100.0
1947	87.3
1948	81.1
1949	81.9
1950	81.1
1951	75.1
1952	73.5
1953	72.9
1954	72.6
1955	72.8
1956	71.8
1957	69.4

1955	2.18
1956	2.51
1957	3.10
1958	2.92

Office of the Secretary of the Treasury, September 25, 1959, Debt Analysis Staff.

Source: Moody's Municipal and Government Manual.

Mr. Speaker, there is no doubt that the Congress could, for a time, artificially keep the interest rates payable on the public debt at a prescribed level by requiring the Federal Reserve to support Government bond prices, but fortunately for the economic survival of our Nation, the Congress has not seen fit to enact legislation requiring the Federal Reserve to take such a disastrous inflationary course.

President Eisenhower cited the failure of the Congress to enact legislation that he had requested dealing with the public debt as being the "foremost disappointment" in the legislative record of this past session of Congress. He went on to say:

This refusal, by forcing the Treasury to rely exclusively on inflationary short-term borrowing, may reduce the contribution to price stability that a balanced budget helps to provide and could make most difficult the maintenance of confidence both at home and abroad in our determination to manage our fiscal affairs soundly.

The Cabinet Committee on Price Stability for Economic Growth had this to say with respect to the actions by recent Congresses on budgetary authorizations and spending:

The committee has noted an alarming tendency in the Congress to work toward only an illusory balance in the budget, by substituting for current appropriation commitments for later years which will make it exceedingly difficult to avoid future deficits.

Thus, we have the Democratic controlled Congress acting in opposition to debt reduction, committing our Nation to continued levels of high spending, and refusing to give authority to the Executive to engage in proper debt management practices.

Mr. Speaker, tax reduction, expenditure reduction, and debt reduction are things which we have discussed a great deal and done very little about. The only positive actions that have been accomplished in the direction of these meritorious objectives in recent decades have been taken when we have had a Republican majority in the Congress of the United States.

In the conduct of our Nation's fiscal and monetary affairs as in other things, the past is prolog. The American people if they want more inflation, more taxes, and more public debt should support the Democratic Party. If on the other hand the American people believe in pay-as-you-go government, in a sound dollar, and in less onerous tax burdens, the Republican Party must be restored to majority control of the Congress of the United States.

My statements today have not been political arguments but are instead a recitation of fiscal facts. In the contest between free enterprise and communism, the economic strength of our Nation is as essential as our military strength. I submit, Mr. Speaker, that the means to both economic and military strength lies in placing our Nation's future in the hands of the Republican Party. The Democratic web of inflation must be broken so that national growth can flourish under the Republican Party free of inflation's lure.

Princeton and Westminster, Mass., Celebrate Their 200th Anniversaries

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. PHILBIN. Mr. Speaker, October of this year marks the 200th anniversary of the incorporation of two outstanding communities in my district: the towns of Princeton and Westminster, Mass., with histories that actually go farther back in time than the 200 years of progress which were celebrated this summer with impressive exercises.

Both Princeton and Westminster are located in an area of Massachusetts which was settled by pioneer colonists in the very earliest days of American history. Courageous bands of early settlers, many descendants of which still reside there, carved out of the wilderness a civilization, a tradition, a way of life, and a history which live to this day in the heritage which is so fortunately ours.

The early settlers of Princeton and Westminster helped to establish for all America the basic institutions of democratic government and helped to forge a record of magnificent achievement that lives to this day. It is fitting, Mr. Speak-

er, that we of the present should make note of the struggles and bitter sacrifices of this pioneer people so that we and our posterity may benefit from the remarkable legacy of accomplishment they have left us.

Mr. Speaker, in recognition of the anniversary celebrations of Princeton and Westminster, I introduced House Resolution 395 on September 12, the full text of which follows:

HOUSE RESOLUTION 395

Whereas the year 1959 marks the two hundredth anniversary of the incorporation of the towns of Princeton and Westminster, Massachusetts; and

Whereas from the time of settlement the people of Princeton and Westminster have figured conspicuously in the founding and growth of this Nation; and

Whereas the observances of the bicentennial anniversaries of Princeton and Westminster were celebrated with impressive community ceremonies which attracted many visitors this summer to central Massachusetts; and

Whereas the anniversary celebration in Princeton will come to an end with the town bicentennial address and community dinner on October 20, 1959: Now, therefore, be it

Resolved, That the House of Representatives extends its greetings and felicitations to the people of Princeton and Westminster, Massachusetts, on the occasion of the two hundredth anniversary of these communities and the House of Representatives further expresses its appreciation for the splendid services rendered to the Nation by the citizens of Princeton and Westminster during the past two hundred years.

This resolution pays humble, but profoundly felt tribute to the communities of Princeton and Westminster on their 200th anniversaries and I know that my colleagues in the House join me in extending congratulations and best wishes to the people of Princeton and Westminster on this great event, so fittingly observed by both towns in separate summer-long celebrations which come to an end in October.

It is not possible for me to recite in this brief address the histories of Princeton and Westminster, but I would like to bring to the attention of my colleagues in the House some of the highlights and accomplishments of these two progressive communities which are part of the Third Congressional District, which I have the great honor to represent in the Congress.

The founding of Westminster was one of the indirect results of King Philip's War of 1675. Veterans of this war in 1685 petitioned the General Court of Massachusetts for a grant of land which had been promised them. The petition was approved and a tract 8 miles square in the Nipmug country was granted the petitioners. Unfortunately, the tract was not located nor surveyed and the land lay dormant until June 1727, when the descendents of the Narragansett soldiers petitioned anew for land. The grant was approved and in 1728 there was reported to the General Court "a plan of a town to the contents of 5 miles square exclusive of the ponds near Rutland and Lunenburg." This tract became the town of Westminster.

Actual settlement of Westminster did not begin until 1737 when Fairbanks Moor of Lancaster erected a frame home for his wife and family of five children. He was joined in the same year by Joseph Holden and his family of Watertown and before winter came both families were settled in their new homes.

Westminster grew slowly because the times were troubled. War between France and England brought the threat of Indian warfare from the powerful tribes which joined the French. The threats of war, actual fighting and only few ominous periods of peace did little to encourage the growth of frontier settlements. Despite these hazards, Westminster saw its population increase from about 130 in 1750 to 350 in 1760. This comparatively rapid growth for a frontier town resulted in independent corporate existence for Westminster in 1759. John Holden and 31 other residents petitioned the general court and on October 20 of that year the district of Westminster come into being. In 1770, Westminster obtained full town powers from the general court.

The early history of Princeton is similar to that of Westminster. Originally a part of Rutland, the town was made a district by the general court in 1759, to which the name of Prince Town was given. The first settler in that area of Rutland which was to become later Princeton was Joshua Wilder who built there in 1734.

Benjamin Houghton and others petitioned the general court on June 8, 1758, to form a new district, but this petition was denied. The following year another petition was presented and, finally, on October 12, 1759, the House passed an act incorporating the area "into a separate district by the name of Prince Town."

Like Westminster, the early settlers of Princeton fought in the French and Indian War. In the Revolutionary War, the Princeton company of minutemen marched toward Lexington and Concord on April 19, 1775, and the town continued to furnish men, arms and money until victory was won. A direct descendant of Jonas Beaman, one of these minutemen, is the general chairman of Princeton's bicentennial celebration. He is P. Alden Beaman, to whom great credit is due for the sucess of the Princeton observance. Another outstanding leader descended from this illustrious family, is John Beaman, a friend and contemporary of mine at Harvard.

In early stagecoach days, Princeton gained fame as a summer resort. Catering to the summer visitor became one of the important activities of the town. Oddly enough, the advent of the automobile which brought famed summer resorts closer to the people began to see the decline of Princeton's many attractive hotels and summer boardinghouses.

John Greenleaf Whittier, on a visit to Princeton's famed Mount Wachusett in the 1860s, was inspired by the peace and beauty of this rural setting to pen these words:

So twilight deepened 'round us. Still and black
The great woods climbed the mountain at our back;
And on their skirts, where yet the lingering day
On the shorn greenness of the clearing lay,
The brown old farmhouse like a bird's nest hung.

The quiet charm of Mount Wachusett, which so impressed Whittier in its pastoral setting, still lives with us today, Mr. Speaker, so much so that my friend, O. J. Whittemore, Jr., of Boylston Avenue, Princeton, was prompted to write me earlier this year, requesting the issuance of a special commemorative stamp, depicting Mount Wachusett, in honor of Princeton's 200th anniversary.

This proposal received my wholehearted support, and on February 18 of this year I introduced H.R. 4734, calling for the issuance of such a stamp. In addition, I sought the help of the Postmaster General in the authorization of the stamp. Under leave to extend my remarks in the RECORD, I include the text of H.R. 4734 and the reply I received from the Post Office Department on the Princeton stamp:

H.R. 4734

A bill to provide for the issuance for a special postage stamp to commemorate the two hundredth anniversary of the founding of Princeton, Massachusetts

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Postmaster General is authorized and directed to issue a special postage stamp to commemorate the two hundredth anniversary of the founding of Princeton, Massachusetts. Such special postage stamp shall have as design a view of famed Mount Wachusett, a central Massachusetts landmark, and shall be issued in such denomination and for such period beginning October 20, 1959, as the Postmaster General may determine, and shall be placed on sale in Princeton, Massachusetts, one day before it is made available to the public elsewhere.

FEBRUARY 24, 1959.

Hon. PHILIP J. PHILBIN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN PHILBIN: The Postmaster General has asked me to thank you for your letter of February 9 and the enclosed one from Mr. O. J. Whittemore, Jr., Princeton, Mass., requesting that a special stamp be issued this year to commemorate the 200th anniversary of the founding of Princeton, Mass.

The importance of this anniversary to the residents of Princeton is readily appreciated but it is now too late to consider a commemorative stamp for this event. As you will note from the enclosed booklet, requests for commemorative stamps should be submitted preferably 18 months in advance of the proposed date of issuance. Too, the members of the Citizens' Stamp Advisory Committee feel that celebrations honoring anniversaries of cities and towns do not have widespread national appeal and significance and, therefore, do not meet the established criteria for commemorative issues.

We do, however, appreciate your interest in our philatelic program and regret that our reply cannot be more favorable.

With kindest personal regards.

Cordially yours,

L. ROHE WALTER,
Special Assistant to the Postmaster General.

Mr. Speaker, Mount Wachusett may again become the famed resort area of not too long ago. At present, there is considerable enthusiasm to make of this area a ski resort with lifts, trails, and open slopes.

A major ski development on Mount Wachusett would attract thousands of ski enthusiasts to the central Massachu-

setts area. From its summit, 2,006 feet above sea level, the north slope of Mount Wachusett has a vertical drop of nearly 800 feet, in contrast to the vertical drop of about 600 feet at famed Hogback in Vermont. The Mount Wachusett drop could provide fine ski trails, ranging from a half mile to a mile and a half.

On weekends, the Hogback ski area attracts anywhere from 2,000 to 3,000 ski enthusiasts. If the facilities at Hogback can be matched, and perhaps made better, at Mount Wachusett, this famed natural asset of central Massachusetts may enter an entirely new era of recreational activity, thus attracting many new visitors to the area.

First time visitors to Princeton were many this past summer as a result of the community's bicentennial observance. The program of events began last May with an Old Folks Concert sponsored by the Adult and Senior Youth Choir of the Princeton Congregational Church under the direction of Mrs. Robert Erickson. Other bicentennial activities included the following:

June 7, a rope pull between the bearded men of Princeton and the bearded men of Westminster. The growing of beards by men in both towns began early this year so that by the time summer came there was a distinct frontier atmosphere to many of the bicentennial events.

July 3, food sale sponsored by the Princeton Historical Society on the village green with Mrs. Norman M. Howe as chairman.

July 9, Ye Old Prince Town Fair, sponsored by the Friendship Club, in the vestry of the First Congregational Christian Church with Mrs. H. Chester Morse as chairman.

July 18, 200th anniversary grand parade, Firemen's Muster and Field Day with Paul S. Lantz and H. Merritt Woodward as cochairmen.

August 6, visitation to old homes sponsored by the Princeton Historical Society and the Garden Club with Miss Marjorie Inman as chairman.

August 16, Mountain Holiday Fair sponsored by the Prince of Peace Mission with Joseph O'Connor and Allen C. Ikalainen as cochairmen.

September 5, bicentennial dance with Everett P. Webster as chairman.

The bicentennial observance will come to a close on October 20 with an anniversary address and dinner. P. Alden Beaman is the chairman for this final event of the Princeton celebration.

The July 18 event attracted an estimated 10,000 visitors to Princeton. Highlights included the morning parade, soap box derby, firemen's muster and the beard judging contest. Willie H. Mason of Worcester Road was winner of the beard competition from a field of about 40 members of the Hirsute Hillbillies Society of Princeton. Runners up were Erwin R. Speckman, of Brooks Station Road and Clarence J. Cusson, of Main Street.

The grand parade in the morning was led by Paul Lantz, general chairman of the day's program, accompanied by Cub Scout Jeffrey Kemp, 10, son of Mr. and Mrs. Richard S. Kemp, of Worcester Road, and Brownie Marcia Wambach, 8, daughter of Mr. and Mrs. Clyde Wambach, of Esty Road.

Among the bands in the line of march were the 590th Air Force Band, the Royalaires from the Greendale American Legion Post, of Worcester, the Italian-American Drum and Bugle Corps, of Worcester, the Leicester Drum and Bugle Corps, and the Grafton Community Band.

Many outstanding community floats appeared in the parade. The winners of prizes were:

East Princeton Village Improvement Society with a re-creation of the Redemption Rock scene of early Princeton history, showing Mary Rowlandson being redeemed from her Indian captors, which event has become a classic of colonial literature; Princeton Boy Scout Troop 1 with a camp scene; Wiggins and Wolcott, local builders, with a log cabin scene.

The Princeton PTA won a special honorable mention with its float bearing Miss Roslyn Mason, daughter of Mr. and Mrs. Rockwood P. Mason of Mountain Road, the Princeton Bicentennial Queen, and her court. The court comprised the Misses Fae Niemi, Susan Woodward, Barbara Stein and Diane Robertson.

In the firemen's muster sponsored by the Wachusett District Firemen's Muster Association, Sterling retained its title by tieing its own record of 46 seconds in the "bed race" and setting a new record of 16.6 seconds in the pump run.

The day's program ended with a community bean supper and square dance on the common.

Highlight of the Westminster anniversary celebration was a huge parade on August 8 with 100 marching units. About 20,000 visitors helped to make this day one of the best ever in the history of the town.

The bicentennial parade was reported to be one of the largest parades ever conducted in the area. The day's events ended with a huge display of fireworks in the evening. Earlier in the evening a band concert was given by the 8th Air Force band from Westover Air Force Base.

The Gardner State Hospital with its float, "The Battle Against Mental Illness," won first honors in the morning parade. Other prizewinners were the bearded "Hillbillies of Princeton" with their float depicting a log cabin; St. Edward the Confessor Church with a float depicting a family in church with the inscription, "The family that prays together stays together." Honor awards were also made to the Westminster PTA for its float depicting an old fashioned schoolhouse, and the Baptist Church with a float built around the cross.

Awards to business organizations went to the following:

Old Mill, first prize; C. L. Smith, boxmaker, second prize, and Grahn, the florist, third prize. Johnson & Sons poultry farm received an honorable mention.

First prize in the single entry division was awarded to Charles L. Smith, 82, owner of the C. L. Smith box factory, who entered two horse-drawn shays, both featured in the 1909 parade when Westminster celebrated its 150th anniversary.

Heading the parade of more than 100 floats, marching units and single entries was a division of mounted State police. Wesley Battles was the grand marshal, Byron Smith, Federal flag bearer, and Mrs. Janet Battles Terrett, State flag bearer. Color guards were Bud Smith and Andrew Michaud, followed by the Westminster band and the official cars.

In the first car, an antique Rolls Royce driven by its owner, Leo Moulter, the passengers were George Dawley, Fred Chalmers, and Stanley Whitney, distinguished elder citizens of the town, and Preston Baker, chairman of the board of selectmen. The second car, a 1959 Rolls Royce driven by Lionel Trinque, had Mrs. Naomi Carpenter and Selectmen Lennard Salo and Daniel O'Hearn as passengers.

Among the bands were the famous Shriners Oriental Band of Boston, the Simplex Band of Gardner, St. Joseph Cadets of Fitchburg, and the Shirley Drum Corps.

Chairman of the Westminster bicentennial observance, which comes to an end in October, is Frank Onischuk.

Mr. Speaker, Princeton and Westminster can be proud indeed of their anniversary observances which were conducted with simplicity and dignity. Their programs provided entertainment for thousands of visitors while giving to the townspeople the opportunity to relive some of the great events of years gone by. Truly, these programs were impressive and interesting and the community leaders deserve the warm thanks of all for a difficult job exceptionally well done.

God willing, may Princeton and Westminster continue to grow and develop their peerless American heritage in helping to build a greater, stronger, more prosperous, happy and peaceful Nation. And may the noble example of the noble sons and daughters of these historic Massachusetts towns long continue to inspire the American people and preserve our blessed heritage.

Salute to Dr. Adenauer

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CELLER. Mr. Speaker, Nikita Khrushchev arrives in the United States on September 15, on the day leaders of the free world will be congratulating Dr. Konrad Adenauer on his 10th anniversary as chancellor of free Germany. For many Americans, this coincidence will revive memories of the decade that began with the Berlin airlift and brought the free world

to the Berlin ultimatum earlier in the year. It will also focus American attention on the sharply divergent postwar roads traveled by the former partners in the Molotov-Ribbentrop pact.

Many memories of evil doings by both the Soviets until Stalin and by the Nazis under Hitler come to mind, but in this 20th century atomic era, we must face forward to ways of peace and understanding and not look backward upon the horrors of misunderstanding and war.

In Germany, an indomitable old man who survived the Hitler terror to reach an age that richly entitled him to honorable retirement instead took up the heavy burdens of government leadership and led his people in one of history's remarkable episodes of moral, political, and economic regeneration.

In his 10 years at the helm of free Germany, Konrad Adenauer opened a new chapter in European history by promulgating the doctrine that Franco-German amity and cooperation were indispensable cornerstones in developing a structure of European unity and security. His refusal to yield before the most menacing threats of the Soviets when he cast his nation's lot with NATO, his steadfast friendship and collaboration with the late John Foster Dulles, and his insistence on free elections as the only honorable formula for a just all-German solution made him the No. 1 target of Kremlin invective and propaganda that sought to depict him as bent on revenge for Germany's defeat in World War II.

The contrasting postwar histories of communism under Stalin and Khrushchev and the Federal Republic of Germany under Konrad Adenauer were vividly recalled to millions of Americans when the coincidence of Dr. Adenauer's 10th anniversary and Khrushchev's arrival in the United States was singled out for comment by leading Members of Congress, some of whom made no secret of their distaste for the Khrushchev visit.

Still fresh in American recollection as the Khrushchev arrival draws near is the observation of Konrad Adenauer in a letter of August 30, responding to another of the ballistic missives Khrushchev regularly hurls at the German Chancellor. Wrote Dr. Adenauer:

> The truly decisive question, which will determine the whole future of all of us, is that of all-out armament with conventional and nuclear weapons. It is devouring immeasurable sums, which would otherwise benefit the social and cultural advancement of mankind. Moreover, it is creating an atmosphere of tension such as precedes the outbreak of a devastating storm in nature.

It was against the background of this invitation to Khrushchev to accompany his professions of peaceful intentions with observable deeds, an invitation that had been repeatedly extended through the years by Dr. Adenauer, the late John Foster Dulles, and the leadership of the entire free world, that the United States took time out from its preparations for the reception of Nikita Khrushchev to pay tribute to the gallant old man of Bonn.

From President Eisenhower came a tribute to Dr. Adenauer for helping his country rise "out of the chaos of war to a position of influence and responsibility." The full text of the President's message read:

> His Excellency Dr. KONRAD ADENAUER,
> *Chancellor of the Federal Republic of Germany, Bonn:*
>
> On the 10th anniversary of the assumption of your duties as Chancellor of the Federal Republic of Germany, I send most cordial personal greetings. On behalf of the American people I congratulate you for your historic contribution not only to the affairs of your own country but to those of the European community as a whole. Through your dedication and inspiring leadership, the Federal Republic has risen out of the chaos of war to a position of influence and responsibility in the community of free nations. Moreover, there has been developed in Germany a government guided by the principles of democracy and motivated by a sincere desire to play a positive role in the great movement toward European cooperation and integration. Your effective work in developing understanding between our two peoples has also been a contribution of major significance. It was a most valued and enjoyable opportunity to confer with you in Bonn recently, and I wish you many more productive years in the interests of your own country and those of the free world.
>
> With assurances of my continued esteem and friendship.
>
> DWIGHT D. EISENHOWER.

Vice President NIXON hailed "this dedicated statesman and leader who has had such a vital part in guiding the physical and spiritual reconstruction of Germany and in restoring her to a position of honor in the community of nations."

Tributes to Dr. Adenauer were sounded by the leaders of both parties of both Houses of Congress, in some cases with pointed references to the Khrushchev tour of the United States. Senator STYLES BRIDGES, Republican, New Hampshire, took the floor of the Senate on September 11 to call attention to the coincidence of Chancellor Adenauer's anniversary and Khrushchev's arrival date in the United States. Senator BRIDGES placed special emphasis on "the great courage and wisdom of Chancellor Adenauer in his fight against what initially appeared to be the overwhelming odds in favor of communism in Germany." He told the Senate that Dr. Adenauer's achievement was all the more praiseworthy "because his government was born out of a nation that had lived for years under the totalitarian philosophy of Hitler and today it stands as one of the foremost nations living under the free principles of democracy."

On September 11, in the House of Representatives, I, who had ever been a relentless foe of the old Nazi regime in Germany, rose to hail the achievements of Chancellor Adenauer, Foreign Minister Brentano, Economics Minister Erhard, and their colleagues "in reestablishing West Germany as a liberal nation in the liberal world, dedicated to the principles of individual freedom and democracy."

I called for U.S. insistence that "East and West Germany be made one Germany." I reaffirmed the determination of the American people "to assure the world that we will never let Berlin down; that Berlin, now an island in a Communist sea, must be integrated into a unified Germany."

Secretary Herter has praised the German Chancellor for "a decade of fruitful endeavor for Germany and the free world." He added:

> In the face of great odds you have guided the material and spiritual restoration of your nation on the path to peace and freedom.

In a concluding sentence, Secretary Herter declared:

> I shall continue to rely on your close and friendly cooperation as we seek to realize our common objectives.

Typical of the American press reactions to the Adenauer anniversary has been editorial comment such as that contained in the Chicago Daily News. Noting that September 15 marks Dr. Adenauer's 10th year as Chancellor of the German Federal Republic, the Daily News said:

> At 83, he is among the world's great statesmen, and the flourishing condition of his country is a tribute to the quality of his leadership. The Chancellor's devotion to freedom cost him dearly in the days of the Hitler dictatorship, which he spent in hiding when not in jail. In the world of today it is heartening to find this dedication to liberty triumphant in the end.

Credit for one of "the great achievements of this decade" was given to Dr. Adenauer by Representative BOYLE, Democratic, of Illinois, in an address to the House of Representatives on September 13. The Illinois Congressman took note of "the miracle of German economic recovery." But he saw even more significance in "the acceptance and development of political as well as economic freedom." He voiced particular praise of Dr. Adenauer and his colleagues for the Government support given to the establishment of good intergroup relations in the Federal Republic. He observed:

> Churches are flourishing in Western Germany. They have been particularly active in promoting German-Jewish relations to atone for the horrible crimes of the Hitler regime.
>
> The Government—
>
> He said—
>
> has led the way in exemplary execution of the restitution and indemnification payments to victims of Nazi barbarism, and most German parties have supported the laws calling for the payment of large sums to the State of Israel.

Finally, Congressman BOYLE pointed out:

> This year again German Brotherhood Week was under the patronage of President Heuss.

Congressman BOYLE's comments were warmly seconded by Representative REUSS, Democrat, of Wisconsin, who asserted:

> Thanks to the leadership of men like Adenauer and Heuss, and the responsible stature of the other party leaders, the Federal Republic is firmly a partner of the Western alliance. The chances of the continued growth of democracy in Germany are the

best they have ever been in that country's history.

These and similar statements in the Congress proved to be the preface to an outpouring of tributes to Dr. Adenauer that came from the most notable civic, political, and religious leaders of the United States.

The Archbishop of New York, Cardinal Spellman, has marked Dr. Adenauer's anniversary with a message hailing the German Chancellor for "the preservation of peace in his country and throughout the world."

Gen. Lucius Clay and Gen. John J. McCloy, each of whom represented the United States in the crucial German aftermath of World War II, and hence have had a close look at the achievements of Adenauer's leadership in Germany, were among the first to mark the Chancellors' 10th anniversary.

General Clay declared:

Chancellor Adenauer's leadership in the rebuilding of democracy in West Germany, in bringing West Germany into the free world, and in trying to create a new French-German relationship based on understanding and trust have contributed much to the growing strength of the free world and to his stature as a statesman.

General McCloy asserted that Dr. Adenauer "has emerged as one of the world's leading statesmen in a particularly trying period filled with domestic and international problems of the greatest magnitude." He praised the Chancellor's "warm spirit of Western European unity based upon a new and broad understanding with France." His contributions to his own country and the free world, General McCloy said, "mark him as an international figure as well as the leader of his country."

Adlai E. Stevenson saw in Dr. Adenauer a man who will "leave a lasting impression on this generation." He praised the German Chancellor for the peaceful, prosperous, free, and friendly Germany he has helped create.

Senator HUBERT HUMPHREY, one of Nikita Khrushchev's more recent debating adversaries, praised Dr. Adenauer for a caliber of leadership under which "German democracy and freedom have flourished." Senator HUMPHREY went on to say pointedly:

Chancellor Adenauer's unyielding opposition to Soviet pressure and Soviet threats deserve to have the gratitude of the free world.

The roster of distinguished Americans who came forth voicing recognition of Chancellor Adenauer's achievements in this decade of office included:

Senator WILEY, Republican, Wisconsin, who praised the German leader's outstanding service.

Representative CHARLES HALLECK, Republican, Indiana, minority leader, House of Representatives, who paid his respects to Dr. Adenauer for a decade of distinguished leadership.

Maj. Gen. Julius Klein, retired, who saw in Dr. Adenauer "a leading spokesman against Soviet aggression and a courageous advocate of democracy."

Representative THOMAS E. MORGAN, Democrat, Pennsylvania, chairman of the House Committee on Foreign Affairs, praised Dr. Adenauer "as one of the great and outstanding statesmen of our time."

Governor Stratton, of Illinois, took note of "the reconstruction, progress, and production of Germany under the leadership of Chancellor Konrad Adenauer" and said this was a "dramatic demonstration of the ability of a free people, working under a free government, to improve their standards." He added that Chancellor Adenauer's leadership was "an inspiration to freedom-loving people throughout the world."

Senator THOMAS J. DODD, Democrat, Connecticut, one of the major figures in the postwar trials at Nuremberg declared that under Chancellor Adenauer's direction "democracy has been firmly reestablished in Germany." He added that Dr. Adenauer personally "has been a bastion of strength in the West by his unwavering steadfastness, courage, and dedication to the cause of freedom, during the difficult times of the past decade."

Senator PAUL H. DOUGLAS, Democrat, Illinois, asserted that Chancellor Adenauer's service took in "an outstanding contribution not only to his own country but also the essential unity and cooperation of the free nations."

Finally, Dr. Adenauer has found great favor with our American people, who all wish him good health and happiness. And I would like to quote an expression: "While the candle still burns I can do some mending."

Dr. Adenauer's candle of life still burns and he can still do much good work, not only for Germany, but for the peace of the world.

An Address to the Polish Army Veterans Association of North America

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BRADEMAS. Mr. Speaker, I should like to include in the CONGRESSIONAL RECORD the text of an address which I was privileged to deliver on September 6, 1959, in South Bend, Ind., to the Polish Army Veterans Association of North America.

The address follows:

I am honored indeed to have been invited to address the delegates attending the 29th annual convention of the First District of the Polish Army Veterans Association of North America.

The citizens of South Bend, Ind., are proud that we are able to act as hosts to members of your great organization from eight States—Indiana, Illinois, Wisconsin, Iowa, Nebraska, Kansas, Minnesota, and California.

It is particularly appropriate that we should be meeting in the month of September 1959, because it was just 20 years ago that the brave people of Poland suffered the cruel invasion of Hitler's armies. The invasion marked the beginning of the most terrible war that mankind has ever known, a war in which over 6 million Poles sacrificed their lives.

Only a few days ago, speaking from the Chamber of the Parliament of Poland in Warsaw, my good friend and distinguished colleague in the House of Representatives, the Honorable THADDEUS MACHROWICZ, spoke of the terrible days of September 1939. Congressman MACHROWICZ, who was born in Poland and was an officer in the Polish Army during World War I, addressed the opening session of the Interparliamentary Union meeting in Warsaw. He spoke in Polish with great feeling and emotion about the bravery and sacrifices of Poles in World War II. His speech was received, according to those who heard him, with a tremendous ovation.

The same spirit of dedication to country and love of human freedom which motivated Congressman MACHROWICZ caused some 20,000 Americans during World War I to organize an army at Niagara-on-the-Falls, Ontario, Canada, to join the army of Polish Gen. Jozef Haller in France and to fight on the Allied side with great courage and sacrifice.

Most of you are veterans of that remarkable experience, and some of you are Americans of Polish extraction who fought in World War II.

As we think about that first bond forged between the nations of Poland and the United States in World War I, we must recall how the Polish people, tragically divided among the sovereignties of Prussia, Russia, and Austria-Hungary, were forced to fight brother against brother.

The triumphant campaigns of General Haller's army, however, helped to shape into reality the free and united Poland envisioned by President Woodrow Wilson in the 13th of his famous 14 points.

As President Wilson's Secretary of War, Newton D. Baker, said, "The American contingent of the Polish Army is made up of men moved by the inspiration of the principles involved on the Allied side of the conflict, and their presence on the Western Front represents their adherence to America as the country of their adoption and to Poland, free and self-governing, as the country of their extraction."

It was a cause of inspiration to those who loved freedom throughout the world when, in March of 1920, the Polish Army, one-fourth of its men having recently crossed the Atlantic from America, closed its campaigns at Putsk on the Baltic by reclaiming the sea from which Poland had been cut off for over 200 years.

Poland stood united and free.

Poland had shown that, although impoverished and weak, she was ready to fight to achieve her political independence.

There are, indeed, few nations of the world who feel such a fervent love of country as the Poles. Only a Polish poet would describe his land, as did the great Adam Mickiewicz, as "the Christ among nations."

This deep patriotism, born in part of a profound religious feeling, is a spirit with which we are familiar in the United States. Ever since the days of Pulaski and Kosciusko, the contributions of persons of Polish origin have been felt in every area of American life. We see these contributions in the sciences, the arts, and in the work of many of my distinguished colleagues in Congress of Polish descent, men such as Senator MUSKIE, of Maine; Congressmen MACHROWICZ, LESINSKI, and DINGELL, of Michigan; KLUCZYNSKI, PUCINSKI, and DERWINSKI, of Illinois; ZABLOCKI and O'KONSKI, of Wisconsin, and DULSKI, of New York.

Right here in South Bend, Ind., we are familiar with the fine work of Americans of Polish origin. At the turn of the century, one-fifth of the population of our city was Polish-American, and today many of the outstanding leaders in our community are of Polish background.

The peoples of the United States and of Poland have therefore many links that bind

our destinies together. Both our peoples love freedom. Both love peace. It was General Haller himself who once said, "I have never known a fighting man in all of Poland who was not at heart a man of peace."

We do not know now what will be the future for Poland. We hope that the future will bring both freedom and peace. What we do know is that the deep religious faith of the Polish people and their burning love of country will not die.

I can think of no better way to conclude my remarks to you who are members of the Polish Army Veterans Association of North America than to read to you some moving lines written this month by a great American newspaper man, Ralph McGill.

Mr. McGill's essay is entitled "The Cardinal's Sermon."

He writes:

"A news story sets you to thinking.

"It is from a town in Poland.

"It is Czestachowa. It is an old city on the Warta River. It is on a rail junction. It is a busy town, manufacturing textiles, paper, steel, leather.

"Here is a capsule history. In 1655 the Swedes attacked in an invasion of Poland and Russia. This time a group of Pauline Fathers held out in a monastery. They delayed things long enough for the main Polish Army to seize the invaders. In 1705 the Swedes tried again. And failed. The Russians succeeded in 1772. The Prussians took it in 1793. In 1914 the Germans captured it. They did it again in 1939.

"It is a city which has known centuries of misery, suffering, cruelties, disappointments, grief and not much joy.

"The other day it was in the news. Some 100,000 Poles came there to celebrate the anniversary of that victory over the Swedes. It was, as it had to be, a patriotic and religious ceremony. After all, it was a monastery that withstood the seige. Cardinal Wyszinski was there. Thin and pale, he preached a sermon and assisted in a Mass. The hymn and the chants mingled with the industrial sound of the nearby steel plants.

"Now, you must understand Poland is Communist. Mr. Gomulka, a tough, dedicated Communist, is head of it. But he is a Pole. So is the cardinal. Poland is communistic, but it is not Russian. So, the cardinal said in his sermon: 'Governments come and go, but the families and the church remain.'

"No believer," writes McGill, "be he Jew, Roman Catholic, Protestant, or Moslem, can fail to be thrilled by the pale, thin cardinal standing there in Poland proclaiming his faith and that of his people."

Long after governments have passed which deny the dignity and freedom of man, the faith of Cardinal Wyszinski, the faith of the people of Poland, will endure.

Russell Bryant, Editor, Italy News Herald, Italy, Tex., Writes of Soviet Achievement

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial written by my good friend, Mr. Russell Bryant, editor and publisher of the Italy News Herald, Italy, Tex.

I have always enjoyed reading Mr. Bryant's editorials, as it has always been obvious that he has given serious and profound thought to his subject before placing it in print.

The following editorial concerns the reported Soviet rocket hitting the moon and contains some level-headed thinking on the part of Mr. Bryant. I wish to commend it to the Members of this body. The editorial follows:

SO THEY HIT THE MOON

Apparently timed to make an impact on thinking in the United States and the world as their Premier began his tour of this country, the Russians fired a rocket that hit the moon during the weekend.

The night the rocket was on its way to the moon we were on a moonlight boat trip on Lake Austin. There was no perceptible sign of worry on the face of the man in the moon. Since the report of the successful landing of 800 pounds of earthly contrivance on the moon we have looked at it each night and can see no change in its appearance.

Rather than be impressed by the accomplishment, it appears to us that the negative result is more noteworthy. Rather than being impressed by the might of Russia, as exemplified in this moon shot, we are reminded of how puny they are in the universal scheme of things. After years of research, trial and effort, and expenditure of inestimable rubles they hit the moon—and the result had less effect then a common housefly settling on the bald pate of Mr. Khrushchev or any of the rest of us devoid of cranial vegetation.

If Mr. Khrushchev wants to really impress the world then why does he not try to do something with his own vast wilderness rather than reach into outer space? Russia is far larger, far older, and far richer in natural resources than the United States, yet on more than one occasion we have had to help them overcome famine, and during World War II only contributions from our hastily devised arsenal enabled them to throw off the crushing weight of Hitler's powerful invading forces.

Even this meager invasion of the moon that gives the Russians such a feeling of accomplishment cannot really be acknowledged as a Russian achievement. The basic knowledge for their rocket development came from German scientists captured by the Russians after our troops were held up in their march across Germany to permit the Russians some semblance of participation in the capitulation of Germany.

Since the end of World War II our noses here in the United States have been kept pretty well to the grindstone as we have had to pay taxes to keep a ready Military Establishment for ourselves and our allies because of Russia's belligerent attitude. Heretofore we have stripped our forces and equipment to only a token force between conflicts. Despite this heavy burden, we have continued to make almost unlimited advancement in domestic fields of necessity and luxury, and few there are of us who have known want except as a result of our own indolence.

If Mr. Khrushchev really wants to make an impression on the United States and the world—if he really wants his trip to this country to be of advantage to his people—he can do it very easily by forgetting his shot to the moon and minutely observe how a free people go about their business; by noticing that our greatest individual concern is the betterment of ourselves, rather than being a slave of the state; how the humanitarianism in us leads us to share with the less fortunate, at home and abroad; how the least to the greatest of us have no demand on other peoples of the earth than that we live and let live as each desires.

If he will observe these things and return to his own country determined to explore and develop his own frontiers, rather than those in space; if he will free his own people and their neighboring countries now held in subjugation by Russia, and allow them their right to select their own form of government and their leaders; if he will make available to the Russian people the right to claim the fruits of their labors; if he will spend the money now going into armaments on tools, implements, food, houses, and clothing—thus permitting us to do more of the same—then, if he will do all these things, he will have done more to relieve those world tensions he worries about than any one other thing. The peace he so loudly longs for will be a reality and he will be looked upon by all people, everywhere, as one of the world's greatest leaders of all times.

We will concede, Mr. Khrushchev, that you hit the moon, but we insist that you can make a much more lasting and more beneficial impact on the greatest planet of all—the earth—if you will but concentrate your thought and endeavor to making it a more pleasant, profitable, and peaceful place for all of us to live.

That, Mr. Khrushchev, is a moon worth shooting at.

Investment in Man: An Economist's View

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HART. Mr. President, Prof. Theodore W. Shultz, writing in the Social Service Review of June 1959, has set forth a most provocative and stimulating article on the "Investment in Man: An Economist's View." I ask unanimous consent that selected excerpts from his article be printed in the Appendix of the RECORD setting forth the economic wealth which we as a Nation have in the trained and skilled manpower of our people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INVESTMENT IN MAN: AN ECONOMIST'S VIEW[1]

(By Theodore W. Schultz)

My plan is first to comment on the state of our knowledge about investments that people make in themselves and, then, to consider briefly the reluctance that we have in thinking about human wealth, and to give reasons why modern economists have shied away from it. I plan, then, to show how wholly new and important questions can be examined, once we acknowledge the role of human wealth, and how a number of big puzzles in our economic data may be solved. I venture to suggest a human wealth hypothesis and to note that estimates from two recent studies are consistent with it.

It is a simple truth that people invest in themselves. They do it as individuals and as families and through their national and local communities. In making these invest-

[1] Delivered as the fourth Sidney A. and Julia Teller lecture, School of Social Service Administration, University of Chicago, February 19, 1959.

ments, there are many different combinations of family and community arrangements. Our knowledge, however, of the comparative advantages of having either the family, or the community, or combinations of the two, make these investments is very limited. Much of the income that is used in making these investments in ourselves is classified as consumption. Much of the human effort that enters is thought of as leisure, although education, which is one of these investments, is mainly hard work, as any student will say. No doubt most education rates high in serving both consumption and production. This should give it a special priority. But we go on counting expenditures for education as if they were only consumption. Then, by some strange twist, when we look at the vast expenditures that the U.S.S.R. has been pouring into education, we fail to see that many millions of families of that country have valued them highly as consumption and may well have looked upon their level of living as having risen accordingly.

THE NEGLECT OF THE STUDY OF HUMAN WEALTH

People are, also, an important part of the wealth of nations. Moreover, as people invest in themselves they can augment the amount of human wealth; in many countries this form of wealth, measured by what it renders to production, is now vastly larger than all other forms taken together. But our knowledge about national wealth is almost wholly restricted to the nonhuman components, that is, to reproducible physical capital and land. The study of human wealth is everywhere neglected, notwithstanding its importance and notwithstanding the fact that people all about us are investing in themselves.

NEW ECONOMIC HORIZONS

Once we are of a mind that it is meaningful to examine the role that investments in man perform in an economy, a wholly new set of questions becomes relevant and important. Underdeveloped countries everywhere want to accelerate their economic growth. Most of them are strongly committed to programs of constructing new dams and power facilities, roads and harbors, factories, and, above all, steel mills. Meanwhile, in many of these countries, few additional resources are being made available for training and education. The relevant and important question is clearly indicated: Are these countries making an optimum allocation of the resources at their command? To arrive at a valid answer we must use a concept of capital that includes both human and nonhuman wealth. To consider only the latter, as is almost everywhere the case, can give only misleading results. No wonder, therefore, that poor countries are in general being badly misled. There can be little doubt that they are presently allocating their resources in ways that are far from what would be required to achieve an optimum rate of growth. Harberger's study, concentrating on Chile, strongly supports this view, for he finds that technical advances are the key factor in achieving rapid development and that additional expenditures to improve the quality of the (technically trained) labor force are of primary importance in attaining this end.[3]

To consider a somewhat narrower question: Has India in recent years spent too much on irrigation and all too little on training her cultivators on how best to use the additional water? From reports that I get, this has been happening. The error appears to be a very costly one. In Iraq, where the Government has been obtaining huge amounts of revenue from oil, the Development Board, according to Yudelman,[5] will have spent close to $1,400 million by 1960—virtually all on flood control, irrigation, drainage, and other physical structures and only a pittance on training and education to prepare farmers and others in the use of these new facilities. Yudelman concludes that this one-sided allocation represents a most serious error in the efforts of Iraq to achieve agricultural development.

But these are the mistakes of poor countries, especially those in which there are massive governmental programs. Although we may be giving some of these countries bad economic advice, presumably this does not impair our economy. We are always ready to take comfort in our long gradual development, in the open and decentralized character of our economy, and in our large and impressive investments in what I am calling human wealth. There is, however, no room for complacency. We, too, are constantly confronted by the same allocative problem, that is, how much or how little to invest in nonhuman wealth relative to what we put into ourselves. How well or how badly we are doing on this score is subject to debate. But what is not debatable is the fact that there is little or no economic analysis to draw upon because these aspects of this problem have been almost wholly neglected.

In terms of both consumption and economic growth, I have little doubt that in recent years we have been allocating altogether too many of our resources to automobiles and roads compared to what we have allocated to education. But this is an opinion; let me consider situations in which there is some evidence. Negroes on the average earn only a fraction as much as do white workers. May not much and even most of this vast discrepancy in earnings be a direct consequence of the lower productivity of Negroes arising from the deplorably bad education that they have been obtaining? Morton Zeman's study of "White and Non-White Income Differentials in the United States"[6] strongly supports an affirmative answer. The very low earnings of many of the migrant farmworkers may also rest primarily on this factor.

To take still another of the serious income inequalities marked against our national record, namely, the chronic poverty of so many of the rural areas in and about the Appalachian country consisting largely of whites: Is this poverty, also, rooted mainly in the relatively small investments that people in these areas have seen fit and have been able to make in themselves? Tang,[8] in a recent study of two groups of counties in the southern Piedmont region, has found that whereas they started from an equal income position at about the turn of the century, farm people in his developed counties have gained importantly in farm income per worker relative to those in his underdeveloped counties. This divergency in farm income per farmworker has become increasingly larger over time. Even the prosperous and full employment conditions that prevailed between 1940 and 1950 did not change this trend toward increasing income disparity.[9] Tang's findings are not inconsistent with the industrialization hypothesis that he sought to test. A preliminary examination of his data would seem to indicate that they are also consistent with another hypothesis, namely, one based on education and related investments in people as the principal explanatory variable.

The central puzzle is in our economic growth as it is revealed in the many estimates that indicate a large and increasing divergency between the rise in income and in the resources that we use to produce the additional income. Our income has been going up much the faster of the two. For example, between 1889 and 1919 the rate of increase of labor and tangible capital combined was only 67 percent as large as that of income (both are for the private sector of the domestic economy).[7] Even so, between 1919 and 1957 the rate of increase of man-hours worked and of tangible capital, taken together, was down to a mere 32 percent of the rate at which our income rose. It is hard to believe, but wonderful if true, and if true, why? That is the puzzle.

A HUMAN WEALTH HYPOTHESIS

What is it that we have been doing that has given us a rate of economic growth that is three times as large as the rate of increase of labor and capital? My hypothesis is that the explanation is to be found in the large and rapid accumulation of human wealth that is being excluded from our conventional measures of "man-hours worked" and of tangible capital.

The preliminary results from two studies lend support to this hypothesis. The first of these is based on a study that I have made of the formation of human capital, represented by education beyond the eighth grade. This form of capital not only has become very large but has been increasing much more rapidly than has the formation of conventional nonhuman capital.[9] In estimating the gross capital formation entailed in a high school education, I found that in current prices it cost the U.S. economy $127 per student in 1900, and $1,493 in 1956. My estimates for college and university education are $385 for 1900 and $3,580 for 1956; most of these costs are of the nature of opportunity costs because they consist of earnings that students have foregone while they were in school studying. The national totals for all public and private schools must suffice for now; they show that only $180 million of this capital (gross) was formed in 1900, whereas in 1956 it had become no less than $22,700 million. To compare this increase with that of nonhuman capital, I need burden you with only the percentage that one was of the other in each of the two years: In 1900, the formation of this kind of capital, i.e., represented by high school, college, and university education, was only 4 percent of that of all physical capital; by 1956 it had risen to 28 percent of that of physical capital. This dramatic rise in the relative position of this one form of human capital, as I have measured it, nevertheless, substantially underestimates the real relative increase because I am here relying on gross capital formation figures and it is the net figures that count. There are many indications that the net figures have gone up even more because, whereas the useful life of physical capital has been declining, that of human capital has been increasing.

The other study tells us something about the rates of return on this form of human capital. Here I draw on some of the esti-

[9] My paper carries the title, "Gross Capital Formation Represented by High School, College, and University Education in the United States, 1900 to 1956" (AER Paper No. 5807, Department of Economics, University of Chicago, April 29, 1958).

mates that Becker* reported in a recent lecture. He has found that, as of 1950, males were earning a 14.8 percent return on what they had privately invested in acquiring their high school, college, and university education, measured by their opportunity costs (earnings foregone while in school) and their direct costs (tuitions, books, etc.). When the other costs, those not borne by students or their families directly, are added to these private costs, this rate of return was still no less than 11 percent. How does this compare with the rate of return that owners of property were obtaining? Compared to that of corporations before taxes, it is probably not very different. What about the rate of return on all nonhuman wealth, namely, on the approximately $1,000 billion of national wealth, as estimated by Goldsmith? This figure includes all land (agricultural, forestry, and urban), producer and consumer durables, apartment buildings and private residences, government structures, inventories, livestock, monetary metals, and net foreign assets. It is hard to believe that the 11 percent return on this human capital did not exceed by a wide margin the rate of return that was being realized on this huge stock of nonhuman wealth.

It should be pointed out that in both Becker's and my study none of the private or public costs of this education was charged to consumption or to other important goals. This means that we have overestimated the relevant costs of this kind of capital formation because a very substantial part is incurred for these other purposes and it should be attributed to them.

It should be evident that this has been a very preliminary treatment of the investments that we are making in ourselves. Education beyond the eighth grade is only one of the forms that this kind of capital formation takes, albeit a large and increasing form. Elementary education, which we take for granted, may rate even higher in what it renders to an economy. How else, for example, can one explain the early remarkable achievements in agriculture in Japan? Many poor countries are neglecting their elementary education relative to what they are spending on physical plants and equipment; moreover, the cost of this form of education is relatively low because of the low opportunity costs of taking students at that age away from other useful work.

On-the-job training is another way of accumulating some of this human capital. Still another goes back to measures that increase the strength and energy of a people and improve their health and vitality. New, useful knowledge is undoubtedly of strategic importance both in changing the nature of the useful skills that are of most value and in altering and improving the quality of the physical plant and equipment that we employ. I have not touched on the very important question of how we perpetuate this human capital in the home and through institutions other than through organized education.

I have tried to show that the state of our knowledge of investment in man is very meager. Our values and beliefs have hindered us greatly in thinking clearly about it. Economists too have missed seeing the important role that the increasing stock of human capital has come to play in the economy. A concept of capital restricted to tangible property will not do. A much more comprehensive concept of capital is required—one that will include human capital. Once we take this more comprehensive view, the central puzzle in our estimates of economic growth looks solvable; the human wealth hypothesis appears to gain support from studies now under way and it may go a long way in explaining the kind of economic growth that we have been achieving and that poor countries everywhere would like to understand with a view of using this experience to improve their economic lot. Finally, even though this approach to the investment in man were to put us on the right track, much hard thinking and research remain to be done.

*Gary S. Becker, professor at Columbia University, in a lecture given before the Economic Development Workshop at the University of Chicago, Feb. 5, 1959. In this lecture he drew on a major study that he has been making of the economics of education for the National Bureau of Economics Research.

Canada Progresses While the United States Marks Time in Oceanographic Development

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. OLIVER. Mr. Speaker, in the cold war struggle with Russia, it should be remembered that the race for scientific supremacy is composed of many phases. A glance at recent newspapers might lead the casual observer to draw the erroneous conclusion that the entire scientific battle is being waged in outer space. However, many scientific experts feel that the Nation which first unlocks the secrets of the ocean depths holds the key to future survival.

In oceanographic research, our country is lagging far behind the U.S.S.R. The National Academy of Sciences Committee on Oceanography has recommended a $651 million, 10-year program, designed to enable the United States to catch and surpass the Soviet Union in this vital field by 1970. It is imperative that action be taken to implement this program immediately. Our country cannot afford the luxury of further delay.

I am pleased to note that the Canadian Government has embarked upon an intensive program of oceanographic development, one which we would do well to emulate. Construction of a new oceanographic institute and the initiation of a multimillion dollar ship-construction program are encouraging developments. There has always been effective coordination between Canadian and American oceanographers. I am sure that this cooperation will continue in the future, but unless our Government provides adequate funds to finance modernization of our oceanographic fleet and research facilities the United States will not be able to keep pace with future technological developments.

I feel confident, however, that in 1960 Congress will formulate a comprehensive program for oceanographic development. If we wish to compete successfully with Soviet oceanographers, we can afford to do nothing less.

I would like to insert in the RECORD a statement made by Edmund Morris, Canadian Member of Parliament, concerning recent Canadian oceanographic developments:

Canada, which possesses the longest coastline of any country in the world, is taking steps to expand oceanography in the department of mines and technical surveys to fill the gaping need for oceanographic data on its coastal waters for defense and research assessment purposes.

It is setting up on the east coast, in Bedford Basin near Halifax, a $3 million oceanographic institute, which will have the facilities to allow studies in any phase of the science. The new institute will take 5 years to complete and, when in operation, will have a staff of some 300 oceanographers, hydrographers, submarine geologists, and other scientific personnel, plus supporting staff, and an operating fleet of 10 oceanographic vessels.

A multimillion-dollar shipbuilding program has already been set underway to provide the fleet of oceanographic vessels. The first of these vessels, the $7 million C.G.S. *Hudson*, is expected to be commissioned in 1961.

The establishment of the institute, which is to be known as the Bedford Institute of Oceanography, is announced today, on the eve of Dartmouth Natal Day.

Specifically, the new institute will turn an oceanographic spotlight on Canada's Atlantic and subarctic coasts to study the physical characteristics of the waters and underlying seabed. The resultant data is needed for antisubmarine defense to ascertain the resources potential of the country's continental shelf in these regions and to assist navigation.

It will also permit the overdue expansion of the Atlantic and subarctic sections of the Canadian Hydrographic Service. These sections will be moved from Ottawa to Bedford Basin, which will greatly facilitate hydrographic operations in eastern and northern areas. In addition, it will house the regional office of the Geological Survey of Canada.

The whole project will mean the building up, near Dartmouth, of a strong center of marine science. It includes liaison with the Fisheries Research Board, the Atlantic Oceanographic Group, which will be housed in the new Institute, and with Dalhousie University which is setting up—with the help of a National Research Council grant—an Institute of Oceanography for the training of scientists, many of whom will be employed by the new Federal Institute. It will also be the headquarters of the polar group of oceanographers, hydrographers, geologists, and other scientists, working in the icebound sections of the far Arctic. They will carry out a broad program of oceanographic research on the rim of the Arctic Basin.

Canada possesses little knowledge of the oceans which surround it. Except for a specialized program in oceanography by the Fisheries Research Board over the years, oceanography in Canada has been a neglected science, mainly because of the size of the job to be done and the great expense entailed in doing it.

Today, however, the knowledge derived from oceanographic research is vitally needed by government and industry for purposes of defense, commerce, and science. In the face of the growing danger of ballistic-missile-carrying submarines, a detailed knowledge of the characteristics of the water and of the seabed is necessary for the development and operation of adequate instruments of detection.

Knowledge gained from oceanography is required, too, to ascertain the resource potential of the country's continental shelves. This is especially important today because

of the conclusions arrived at by the Geneva Convention of 1958 that the resources of the continental shelves belong to the adjacent nation. On the east coast, Canada's continental shelf extends 100 to 200 miles out into the Atlantic Ocean.

An extensive program of work is envisaged in the new project. Oceanographers and hydrographers will study and map the topography of the ocean floor and measure the movements, temperature, density and chemical properties of the water at various depths.

They will study the separate and distinct layers of water of which the oceans are comprised, and each of which has its own characteristics. Modern methods of submarine detection depend on the transmission of sound in water, which requires a detailed knowledge of these characteristics.

Geologists will study bottom sediments and cores taken from the ocean floor. Such studies will yield valuable data on the life of the earth's crust, changes in climate, vegetation, volcanic activity, etc., enable geologists to recreate the history of mountainous formations on land because, in the depths of the ocean, the temperature remains practically unchanged, there is no erosion and little movement of water; and reveal possible mineral resource wealth on the shelf.

Geophysicists will use magnetometers, gravimeters, and seismic equipment to diagnose the structures underlying the floor.

The new institute will be a combined laboratory and office building, with separate depots, shops, and storage facilities. The scientific personnel will carry out investigations and research in modernly equipped laboratories. It will provide all needed store facilities for its fleet in the way of docking and berthing facilities, and routine repair and maintenance services. The institute is so planned, moreover, to permit the expansion of these facilities, if needed, to meet the requirements of a growing fleet.

The heart of the new project will lie of course in its fleet of oceanographic and hydrographic ships. The ship-building program will add additional ships until the requirements are met for new ships and for the replacement of old and chartered ones now in use by the Canadian Hydrographic Service. The new C.G.S. *Hudson* and all new vessels will be combined oceanographic and and hydrographic ships, equipped with laboratory and other facilities for survey and research work. They will be capable of working in any season of the year, while the larger ships, like the *Hudson*, could work anywhere in the world. All vessels will be strengthened for work in the Arctic.

The expansion in the charting activities of the department's Canadian Hydrographic Service is long overdue. Many factors, including defense needs, the entry of Newfoundland into confederation, and resource development and exploratory and other activity in the Arctic, have greatly increased demand for charts and information on the coastline and waters involved.

Since its establishment in 1883, the service has been operating on a scale far out of proportion to the size of the task to be done. Canada possesses some 120,000 miles of coastline. The greater part of this coastline, much of which is extremely complex and shoal studded, has not yet been charted. The uncharted areas include almost all of the Arctic Archipelago, the northern mainland coast, Hudson Bay, and the Labrador coast.

As a start on the expansion of its hydrographic activities, the department has added the chartered ship M.V. *Theta* to its fleet. It is carrying out tidal current, and oceanographic surveys in Cabot and Hudson Straits. Included in the fleet are the C.G.S. *Baffin*, which is charting in Hudson Strait; the C.G.S. *Kapuskasing*, which is sounding off the east coast of Newfoundland; the C.G.S. *Cartier*, engaged in charting work in the region of Cape Bald and Chaleur Bay in New Brunswick; and the C.G.S. *Acadia*, which is doing similar work on the northeast coast of Prince Edward Island. By 1960 the service hopes to add * * * two additional ships for oceanographic work, and by 1962 the first ship under the new program, C.G.S. *Hudson*, will be added to the fleet.

In setting up the Bedford Institute of Oceanography, Canada is taking cognisance of the importance of the fast-growing science of oceanography and of the value of the contribution it can make in the unraveling of the scientific mysteries of the country's last frontiers—its coastal waves.

Antarctic Map Brought Up to Date

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. WILEY. Mr. President, in a recent issue of the Christian Science Monitor there appeared an article by Albert E. Norman, with relation to Antarctica.

In the years ahead, the Great White Continent may well be of increasing importance for strategical, scientific, and other purposes.

Today, far too little is known of Antarctica. Each bit of additional knowledge is, therefore, extremely important.

Believing that this fine article, entitled "Antarctic Map Brought Up to Date," warrants the attention of my colleagues, I request unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANTARCTIC MAP BROUGHT UP TO DATE

(By Albert E. Norman)

Australia has moved fast to beat the Soviet Union in producing an up-to-date map of Australian Antarctic territory. The Soviet Government never has recognized the Australian or any other claim to national sovereignty in Antarctica. While the Australian Government said it would be pleased to extend permission for Soviet bases to be located in Australian Antarctic territory for scientific purposes, Moscow did not recognize this invitation and simply moved in its ships and men.

Once they were snugly dug in at their Mirny base, Soviet explorers began air mapping the entire 3,650 coast of Australia's 2,500,000-square mile Antarctic claim, using radio-controlled aircraft.

It was then that the Australian Government realized that the Kremlin intended to publish a map of Soviet Antarctica, without too much regard to the long history of Australian exploration in the region, extending back almost 50 years.

A Soviet map of this large section of the Antarctic, dotted with Soviet place names, very probably would have been extremely useful if produced at the forthcoming 12-nation international conference, sponsored by the United States to decide the future of all Antarctica.

Since the United States did not recognize any claims to national sovereignty in the Antarctic, it would have been difficult for Australia, in face of a well developed Soviet map, to show that this document represented territory claimed by Australia.

One of the recognized tests of sovereignty claims under international law was evidence of effective occupation and administration. This evidence could be further supported when backed by extensive exploration documented with detailed maps.

For the past few years, Australia has maintained permanent bases at Mawson and Davis in Australian Antarctic territory, thus reinforcing its claims to occupation and administration. At the same time, it has made extensive exploration and conducted scientific and weather research programs, quite apart from its efforts under the recent International Geophysical Year program.

In the past 3 years, Australian aircraft have flown 151,500 miles in the Antarctic and have taken 21,000 photographs which included a photographic coverage of about three-quarters of the 3,650-mile coast line of Australian Antarctic territory. These operations have been confined to the brief summer seasons when the weather was suitable.

Numerous overland expeditions have been made by Australian teams, sometimes of no more than four men, traveling light and supported by aircraft. In this way, fairly deep penetrations of the hinterland have been made, bringing to light new mountain ranges and other features. One such discovery was a system towering 12,000 feet, named Mount Menzies for Australia's Prime Minister, Robert G. Menzies.

One of the most interesting Australian expeditions this year succeeded in landing on the uncharted coast of Oates Land, at the eastern end of Australian Antarctic territory. This was the first recorded landing on this heavily icepacked coast which had defied all previous attempts. But Soviet explorers since have claimed the "first ever" landing in this part of the Australian territory.

Piloted by Squadron Leader Douglas Leckie of the Australian Air Force, in a floatplane from the ship, Philip Law, leader of the expedition, made several wide sweeps of the coast before the expedition landed. Later he reported: "I can say that no important rock features now remain undiscovered on the Oates Land coast or on any part of the coast of Australian Antarctic territory."

Soviet scientists have announced that they planned to use specially equipped turboprop aircraft, flying at 50,000 feet, in mapping the Antarctic. The United States has a mapping project in the wind which would call for complete mapping of the huge polar continent in 6 years.

Meanwhile, Antarctic exploration continues. That means more and more new information keeps coming into the mapmakers' hands in Australia. Not content with getting out the latest map that so surprised Moscow, Australian official mapmakers have another scheduled for publication next year. Their operative motto seemed to me: "The only thing better than an up-to-date map of the Antarctic was a more up-to-date one."

Gen. Jack Person: A Credit to his Country

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PORTER. Mr. Speaker, in the area I represent, the Fourth Congressional District of Oregon, there are presently 15 active authorized public works projects under the supervision of the Civil Works Division of the Army Corps

of Engineers. There are also seven navigation studies and five flood control studies authorized in the district at the present time. A number of proposed projects will undoubtedly be authorized after the Congress has had time to study in detail the recently completed Engineer revision of the so-called 308 Report. In addition, there are 12 completed navigation and flood control projects in my district, all of them requiring various degrees of annual maintenance.

I say this, Mr. Speaker, to emphasize the importance to me and my constituents of the Corps of Engineers. The Corps, in its function of carrying out the congressionally authorized program to harness the vast natural water resources of the Nation, has become an important economic factor in southwestern Oregon. In fact, the Corps has become so important to the area I represent in Congress that I consider one of my most critical jobs in Washington is to act as liaison between my constituents and the Corps.

For that reason, I have felt particularly fortunate over the past 3 years that the man who has headed the civil works functions for the Corps of Engineers has been a man not only of great technical ability but a man of such pleasant personality that my relations with him have been among the best I have experienced since coming to the national capital.

The man of whom I speak is Brig. Gen. John L. Person, known as Jack Person to his friends. After almost 3 years as Assistant Chief of Engineers for Civil Works, General Person retired from the Army on June 30 of this year, completing 30 years of capable service to his country. What the Army has lost, the city of Louisville, Ky., has gained. General Person now holds the position of executive consultant to the Metropolitan Sewer District at Louisville. So he has not retired from the engineering profession, just from the Engineers.

General Person is a product of the U.S. Military Academy and the Massachusetts Institute of Technology, and he has had a distinguished career with the Corps of Engineers, serving in a great variety of important positions in various parts of the country and overseas. On the day of his retirement General Person was awarded the Distinguished Service Medal by the President of the United States, certainly the least his country could do in appreciation for a career of service which reflected the greatest possible credit on the Army and, in particular, on the Corps of Engineers.

The medal was awarded "for exceptionally meritorious service in a duty of great responsibility" to quote from the citation which accompanied it. The citation went on to say that—

Brigadier General Person distinguished himself by eminently meritorious service to the Government in a succession of key positions of great responsibility during the period June 1946 to June 1959.

The citation correctly termed him "an officer of rare and exceptional ability," and it concluded with these well-deserved words of praise:

His outstanding service in all of his assignments constitutes a major contribution to the national welfare, to the development of the natural resources of the United States and to the strengthening of the national defense. General Person's long and distinguished career represents significant achievement in the most cherished traditions of the U.S. Army, and reflects the utmost credit upon himself and the military service.

I could not agree more. Jack Person has had a full life so far—and he is not yet 53 years old. I wish him the best of luck in the future and I am sure he has many years of fine service ahead of him in his new position. But I know he is sorely missed by his many friends in Washington, D.C.

On September 1 General Person was succeeded in office as Assistant Chief of Engineers for Civil Works by Brig. Gen. William F. Cassidy, who came to the post from a tour of duty as senior logistics adviser to the army of the Republic of Korea. I am looking forward to meeting General Cassidy, and I am sure I can expect the meeting to be the beginning of another pleasant relationship with a top career officer of the U.S. Army Corps of Engineers.

Classroom and Teacher Shortages

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. METCALF. Mr. Speaker, a few weeks ago a new school year opened to the same tune of classroom shortages and teacher shortages, which impair the education of at least one out of every four schoolchildren.

This continuing crisis facing the American public school system inspired a series of meetings of representatives of a broad range of national organizations who realize that the time has come to do something about our current school situation.

The meetings were attended by representatives of many of the organizations listed below:

American Association of University Professors.
American Association of University Women.
American Home Economics Association.
American Library Association.
American Parents Committee.
American Veterans Committee.
Americans for Democratic Action.
Associations for Childhood Education International.
General Federation of Womens Clubs.
National Council of Jewish Women.
National Education Association.
National Farmers Union.
Textile Workers Union of America.
United Church Women.

The other listed organizations have asked that they also be associated with the following summary, which I would call a primer outlining the needs of elementary and secondary education:

EDUCATION LEGISLATION AND OUR CHILDREN'S FUTURE

The educators of America have made a magnificent contribution to the growth of this Nation.

Between 1870 and 1955, while our population was increasing four times, our public school attendance increased 80 times. From 1900 to 1955 the population of America nearly doubled, but the number of college graduates multiplied 11 times and the number of doctoral degrees 22 times. We have twice as many teachers as we had in 1910 but require 10 times as many college teachers as we did 50 years ago.

Today almost 47 million Americans are attending school—almost 1 out of every 4 people in this country—and 2 million Americans are teaching them in more than 150,000 institutions.

The number of boys and girls attending elementary and secondary schools grew from less than 17 million in 1900 to some 43 million today. College enrollments in the same period rose 15 fold, from 238,000 to almost 4 million.

While we have been increasing the quantity of education we have also been increasing the quality. More than anything else our American educational system is carrying out the American dream of equality of opportunity.

Some of the interest in education and especially in higher education is due to our recent years of prosperity, some to the GI bill which permitted thousands of ex-service men and women, who otherwise would have been unable to go to college, to complete their education.

But there is a more fundamental reason for this growth. College attendance grew even during the depression of the thirties. The chief characteristic of a complex modern society is the insatiable demand for educated people. It is not just technologists and scientists that we need, we need more and more gifted teachers, professional men and scholars.

Despite the heroic efforts our people are making, our educational crisis continues.

THE BUILT-IN CRISIS

On January 28 of this year the U.S. Office of Education announced that this Nation needed an additional 140,500 classrooms to adequately house the boys and girls of America attending the public schools. This is in spite of almost record construction in the 1957–58 school year, when 71,600 classrooms were built. From the fall of 1957 until the end of January 1959, the classroom shortage had been reduced only 1,800.

In August 1959 Secretary Arthur S. Flemming, of the Department of Health, Education, and Welfare, told a news conference that the present shortage was 140,000 classrooms, a reduction of 500 in 7 months.

The reduction in the 2 years prior to his press conference, then, was 2,300, or less than 1,200 a year. At that rate it would be almost 117 years before we have an educational plant adequate to house our schoolchildren. And it is unlikely that the States and local communities will be able even to maintain the pace of 71,000 classrooms a year.

Even if they could, we would still fall behind the phenomenal increase in the number of new schoolchildren each year. According to the Office of Education, America's primary and secondary school enrollment has reached an alltime high for the 15th consecutive year. The increase this year was 1,750,000. If you divide this figure by 27½, the present national average of pupils per classroom, this increase alone would require nearly 64,000 new classrooms. If you add to this 64,000 the 22,000 classrooms needed each year to replace those which are—or should be—abandoned, you have a total of 86,000 classrooms—including libraries, adequately staffed and stocked—needed this year to house the increase and replace facilities which are outmoded, unsafe, or both.

NATION SHORT 195,000 TEACHERS

At the same time, U.S. Commissioner of Education Lawrence G. Derthick announced that a total of 1,563,000 teachers will be needed in both public and nonpublic schools in the coming year, whereas the number presently qualified is 1,368,000. This is a deficit of 195,000 teachers.

The continued shortage of qualified teachers tells the story of the Nation's failure to give members of this profession financial and community standing sufficient to attract them into the field and to keep them in it.

The shortage of teachers is even worse than figures indicate, because teaching in our schools today are at least 92,337 persons with substandard certificates to teach.

A RHETORICAL QUESTION AND ANSWER

At the recent news conference, Secretary Flemming asked reporters rhetorically: "What does this continuing neglect by the Federal Government of this classroom shortage mean in terms of the actual loss of educational opportunity?"

He answered his own question this way: "When there aren't enough classrooms there are generally more pupils per teacher. Educational facilities are crowded. Half-day and split sessions are imposed. There are fewer hours for children in school. Parents, teachers, children are subjected to constant frustration. A crowded classroom robs every child in that room—not just those who make up the statistical enrollment for the school."

According to Secretary Flemming, the education of 10 million American youngsters is being impaired in varying degrees by the classroom shortage.

He said recent reports on public-school enrollment show there were 1,843,000 pupils in excess of normal school capacity last year. These excess students were added to an estimated 6 million in crowded urban elementary schools alone and another 2 million or so in obsolete or inadequate buildings to arrive at the total of 10 million.

These figures are extremely conservative—because they do not include either urban high schools or rural schools.

Thirty pupils make up the desirable maximum class size. If a class has 40 or 50 pupils, then the education of every child is being impaired—not just that of the additional 10 or 20 pupils. And even though the class size may be within the desirable limits, the youngsters are being short-changed if their teacher is substandard.

SOCIETY ALSO IS ROBBED

Not only the child but all of society is robbed by inadequate school facilities and a shortage of qualified teachers. The products of our schools are responsible for this country's livelihood through the maximum development of all the Nation's human resources, an adequate long-range defenes plan based on fuller development and use of top brain power, and greater economic growth which can come through well-educated producers and consumers.

Our national defense, on which we spend more than one-half of every tax dollar, is handicapped by substandard education. Some States have done, continue to do, an outstanding job on classroom construction and recruiting and retaining qualified teachers. What is their interest in schools in other States One of the statistical tables, part of the hearing record of the House Education Committee, provides part of the answer—and illustrates that the classroom shortage is a national problem, and that quality teaching is more important than guided missiles or jet planes. It is the percentage of selective service registrants disqualified because of mental tests in the various States. Such disqualification ranges from 3.5 percent in Montana to almost 50 percent in Mississippi. This means that the States, in which the educational system is more nearly adequate, must make up the draft deficit for those States where the educational plants have run down.

NO. 1 PROBLEM

Securing a major increase in financial support is today's No. 1 school problem. The broadly representative White House Conference on Education estimated in 1955 that between 25 and 30-billion dollars would have to be spent on school construction alone in the next 10 years to bring our school plants up to standard. That Conference also concluded that "the people of the United States must make a greater effort through their local, State, and Federal Governments to improve the education of our youth."

Since that time, State and local governments have made a greater effort while the contribution of the Federal Government, the largest tax collector, has remained at a constant average of 4 percent. Even this 4 percent is distributed inequitably among the States, and goes not for general aid to education but for specialized programs such as construction, operation and maintenance of schools in federally impacted areas, Indian and vocational education.

In recent years, local and State debt has been increasing faster than the Federal debt. Since 1945, the Federal debt has risen less than 10 percent, while the total debt of the States has gone up 500 percent, and the local debt has risen 300 percent.

Across the Nation, school district after school district is reaching the point of exhaustion, exhaustion of debt capacity, exhaustion of ability of local taxpayers to bear the heavy tax burden on local property that good schools and teachers necessitate. The decline of a net gain of 1,800 classrooms in 1958 to a net gain of 500 in 1959 is the first sign of the growing inability to continue to build schools at a rate of more than 71,000 classrooms per year.

OLDER THAN THE CONSTITUTION

Federal assistance to education is not new. It is older than our Federal Constitution. Under the Articles of Confederation, 3 years before our Federal Constitution was ratified, the old Northwest Ordinance of 1785 was enacted. The ordinance specified that in the new lands of our Nation "there shall be reserved the lot No. 16 of every township for the maintenance of public schools within said township." This Federal law was responsible for the establishment of public schools in many States and for many years provided a major portion of their financial support. It is important to note that the establishment of this Federal grant did not interfere with the discretionary right of the individual States to use the money derived therefrom as the State determined it should best be used. Federal aid, without Federal control is thus one of the oldest traditions of public education.

Succeeding public laws for vocational education, federally affected areas, and national defense education are among those currently providing Federal help in special areas. No responsible official has ever charged that there has been Federal control of education in any of these programs.

Mr. Speaker, many of us in Congress are willing to cooperate in any plan to meet the crisis in our classrooms. I appreciate the letters I have received from those who are really interested in solving our most important domestic problem. So do my colleagues in the House.

Petition Concerning Alcoholic Beverages

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. COOPER. Mr. President, I ask unanimous consent that the following petition, together with the names of those who signed it, be included in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

Hon. JOHN SHERMAN COOPER,
Hon. THRUSTON B. MORTON,
Members of the U.S. Senate,
Senate Office Building,
Washington, D.C.:

We, the undersigned citizens of Lexington, Ky., hereby petition each of you to support

the Lane bill, H.R. 169, and the Williams bill, H.R. 1075, the purpose of which is to prohibit serving of alcoholic beverages on airplanes while in flight, also the Siler bill, H.R. 2221, to prohibit transportation in interstate commerce of alcoholic beverage advertising and its broadcasting over the air.

Mrs. John A. Guilfeil, Lexington, Ky.; Mr. Bobby Halsey, Mrs. Audrey Martin, Richmond, Ky.; Mrs. Richard G. Chrisman, Mrs. O. W. James, Lexington, Ky.; Mrs. J. A. Brown, Richmond, Ky.; Osborne James, Mrs. Mitchell Coffey, Mrs. D. R. Donovan, Mrs. L. E. Gooch, Mrs. Orville T. Reynolds, Mrs. Wiedon Welsh, Mrs. C. G. Welsh, Mrs. W. R. Flynn, Mrs. Warren Marshall, Mrs. James Dalton, James Yonts, Mrs. Stanley Couchman, Margaret Tucker, B. L. Murphy, Mrs. B. L. Murphy, Besse B. Barker, Ethel Vance, Mrs. Herbert Ashcraft, Mrs. Charles Corroll, Joe R. Baker, Lexington, Ky.

Mrs. Al Smitha, Grace Gentry Lamb, Miss Sue Barker, Mrs. Lee Hazelwood, Mrs. Frank Creger, Herbert Ashcraft, Royce Robey, John Littral, Mrs. Chas. Baesler, Jr., Chas. Baesler, Jr., S. B. Kelley, R. T. Martin, Alice Corbins, Mrs. J. M. Kemper, Mrs. J. L. Busby, Mr. Hubert Ashley, Mrs. Hubert Ashley, Lloyd Mahanes, Mrs. F. S. Eldridge, Mrs. Henry Birch, Mrs. W. R. Denny, Mrs. E. L. Dodson, Mrs. H. A. Raech, Mrs. E. D. Hinkle, Mrs. J. L. Williams, Laura Music, Mrs. S. H. Hart, Sam Hart, Mrs. J. D. Shields, Mrs. R. B. Gibbs, Mrs. Frank Stone, Jr., Mrs. T. Foley, Mrs. Robert Agee, Mrs. Forest Whittaker, Mrs. Betty Lambert, Mrs. L. Hardy, Mrs. J. H. Hanks, Mrs. Cliff Arnall, Mrs. R. C. Carr, Mrs. Goadlett, Mrs. W. H. Sturgill, Mrs. W. Ethington, Mrs. Grace Tate, Mrs. Darnell Moore, Mrs. Norman Sipe, Mrs. R. C. Mitchell, Mrs. F. A. Stephens, Mrs. L. L. Dunn, Mrs. George Taylor, Lexington, Ky.

Resolution of National Tire Dealers' and Retreaders' Association

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WOLF. Mr. Speaker, the National Tire Dealers' and Retreaders' Association, at its annual conference in Washington, D.C., on September 14, 1959, adopted a resolution which called on the Congress of the United States to enact legislation to establish a national standard for chemical and physical properties of tires offered by the major American rubber manufacturers. I am taking this occasion to call this resolution to the attention of the Congress:

RESOLUTION AT THE ANNUAL CONFERENCE SEPTEMBER 14, 1959, WASHINGTON, D.C., NATIONAL TIRE DEALERS' AND RETREADERS' ASSOCIATION

Whereas there exists no accepted national standard applying to the chemical and physical properties of tires offered by the major American rubber manufacturers; and

Whereas, in lieu of such a standard, the rubber manufacturers have designated their products by names providing no basis for public identification as to relative quality; and

Whereas such meaningless designations cause harm to the public by leading many to purchase products inferior in quality to that required for specific safety and economy of vehicular operation, and to the tire dealers by depriving them of a standard for the honest promotion of premium and first line grade tires which cannot now equitably compete against the misleading claims advanced on behalf of low-priced items: Now, therefore, be it

Resolved, That the members of the National Tire Dealers' and Retreaders' Association, in annual conference assembled this 14th day of September 1959, hereby petition the Congress of the United States to enact legislation establishing a uniform national code for the alphabetical classification of tires according to their chemical content, rubber content, tensile strength of cord, shock break point of carcass, tread compound and abrasive wear, and such other properties as are known to bear upon their durability and operating strength under specified conditions of use, and requiring all manufacturers to mold the appropriate classification letters into the walls of the tires they produce; and be it further

Resolved, That copies of this resolution be sent to every Member of the Senate and House of Representatives of the United States and to all tire trade publications, together with an appropriate appeal for their assistance in securing the speedy introduction and enactment of the legislation herein proposed.

The Catholic Register

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SAYLOR. Mr. Speaker, October 14 is an important milestone in the life of an important publication. It marks the completion of a quarter-century of service to the Altoona-Johnstown Diocese by the Catholic Register.

The Catholic Register was initiated under the late Bishop John J. McCort, second ordinary of the Altoona-Johnstown Diocese. It serves 152,918 Catholics in these eight counties of central Pennsylvania: Blair, Cambrai, Centre, Clinton, Huntington, Bedford, Somerset, and Fulton.

The Right Reverend Monsignor Thomas E. Madden, chancellor of the Altoona-Johnstown Diocese, was named first editor and continued in that position until January 1, 1943, at which time the Reverend Vincent A. Luther—now principal of Altoona Catholic High School—was appointed editor. He served in this capacity until Rev. Francis Reed Hoy was appointed editor by the late Bishop Richard T. Guilfoyle on September 24, 1943. Father Hoy remained as editor until his death on February 9, 1959.

The Most Reverend Howard J. Carroll, D.D., present ordinary of the Altoona-Johnstown See, appointed the Reverend Edward W. O'Malley, then assistant editor, to succeed Father Hoy. Under his direction the Catholic Register observes its 25th anniversary, and to him, fellow members of the staff, and clergymen and lay leaders throughout the diocese go the best wishes of friends of all faiths for continued growth in an era when religion faces one of its greatest tests in world history.

In May 1957 His Holiness Pope Pius XII included these observations in a message to the Catholic Press Association of the United States:

In these days and in a country where freedom of the press is established by law, it should not be necessary to insist on the importance of a Catholic press. The power of the written word is being challenged today by other modern arts of communication; yet none will deny the heavy pressure still exercised by the press on molding habits of thought, that would first weaken, then subvert the principles of Christian belief and correct moral conduct.

The very freedom possessed, as you know full well, increases the danger, which only an enlightened and courageous public opinion can avert or lessen. Your associated newspapers, magazines and reviews, both weekly and quarterly, as well as the increasing number of books authored by Catholics, have the noble and truly patriotic task and ambition to help that public opinion to find and hold to the path of truth and justice and, let us say it simply and honestly, holy living. If you succeed in this, you will have made a momentous contribution to the peace, prosperity, and power for good of your beloved country.

The Catholic Register is a beacon along the path of trust, justice, and holy living. To parishioners in its circulation area it fills a vital religious need. To the communities it provides a powerful moral force. To all of us it supplies a wholesome view and attitude which cannot help but contribute generously to the betterment of our society.

Automobile Excise Tax: Temporary or Permanent?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RABAUT. Mr. Speaker, the history of the automobile excise tax in this country is not a very long one. However, its future may very well become a long one indeed. For this tax, which was originally conceived as a temporary measure to bolster the national coffers during the depression, has been continually extended and extended. It has, in fact, been extended so many times that the use of the word "temporary" has begun to seem facetious.

The grounds on which the yearly or biyearly proponents of futher extension base their arguments is that the revenue realized from the excise tax is essential to the national economy and cannot be done without. The amount involved is something approximating $2 billion. Certainly this is a large sum of money. But if, in fact, this amount is not done without some year soon, we should at least stop fooling the people and ourselves that this tax is a temporary thing soon to be eliminated. We should at least be honest and admit that the tax base of the Nation does now and

will continue ever to include this excise as an integral part. To contribute to the dubious aura of temporariness this tax has been changed several times. It has been raised. It has been lowered. Always these changes have been accompanied with claims that the whole thing is temporary so a temporary change matters but little.

The latest move in this little game is the provision in the new highway bill which has the effect of making any reduction in the excise tax impossible until after 1965. This is but the most recent step further along the road to permanency for this "temporary" tax. Where is this trend going to stop? If it does not stop shortly, Mr. Webster's definitions of the words "temporary" and "permanent" will also have to be changed.

The Nation Owes More Than Some Realize to Mr. Dulles' Firmness

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. COOPER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD an editorial from the Saturday Evening Post of June 27, 1959, entitled "The Nation Owes More Than Some Realize to Mr. Dulles' Firmness."

I do this at the request of Mr. Robert L. Porter, of Atlanta, Ga., a friend and admirer of former Secretary of State John Foster Dulles.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATION OWES MORE THAN SOME REALIZE TO MR. DULLES' FIRMNESS

The tributes to John Foster Dulles make it hard to believe that it is only a couple of years since the late Secretary of State was under heavy attack. Senator WAYNE MORSE declared that Mr. Dulles' "usefulness in his position has long since passed." A year before that Adlai Stevenson urged President Eisenhower to "fire Dulles," whom Adlai accused of "saber-rattling, threats of atomic war, and disregard of our allies." Liberal columnists regularly took off after Dulles, charging him with inflexibility, war-mongering, and other diplomatic errors.

Nevertheless, until cancer tragically intervened, Mr. Dulles steadily survived the calumnies of his critics. He survived, in our opinion, not because Mr. Eisenhower liked him and depended on his advice, but because most of the time Dulles was right. Politically and semantically his "brink-of-war" remark looked like the end. But, despite the yells of protest which greeted that unfortunate phrase, the fact is that any American policy short of surrender to the Reds may fairly be said to take us to the "brink of war." As the late Secretary said on a later occasion, "We have to go on living on the edge of an awful abyss from which we could so readily be rescued if only the Soviet Union did not insist upon retaining for itself the possibility of massive surprise attack."

The same sensitive souls who pretended to believe that Dulles created a "brink of war" when he had realistically recognized that there was one were equally disturbed by his description of Goa, which is on the edge of India, but belongs to Portugal, as a "Portuguese province." How tactless to make such a remark when Nehru was claiming Goa for India. At a press conference Mr. Dulles was asked if the United States regarded Goa as a Portuguese province. His answer was, "As far as I know, all the world regards it as a Portuguese province. It has been Portuguese, I think, for about 400 years." That was the right answer.

Mr. Dulles weathered these storms and a more serious hurricane during the Red Chinese bombardment of Quemoy and Matsu. Many people thought our support of the Chinese Nationalists was another trip to the brink of war. Dire consequences were predicted. Mr. Dulles took the sensible view that, while nobody would advocate going to war for Matsu, the question was, How do you prevent a retreat at the initial point of a thrust from gathering a momentum which will go on from there? Had the advocates of bold and imaginative retreat from these threatened areas had their way, the country might have learned the answer to that question the hard way.

There have been times during the last 10 years when this country could plausibly have moved back from the firing line, made some sort of phony deal with the Communists to secure them in their ill-gotten gains and, by doing so, made Soviet world conquest a present reality. That this hasn't happened is due in no small degree to the character and analytical skill of John Foster Dulles. As one of his colleagues in the State Department put it, "Foster's critics want him to find some way for this country to give the Communists what they want, and because he won't do it they call him 'inflexible.'" Since Mr. Dulles' death, even his critics express admiration for his steadfastness, persisted in after lesser men, similarly afflicted would have quit the field.

In at least one respect the late Secretary of State was more imaginative than his detractors. He was capable of imagining a relaxation of the Communist threat. "There is nothing 'inevitable' about communism," he said in a speech last year, "except that it, too, is bound to change." He foresaw a day when the Communist leaders would see the futility of threats in international dealings, "would be more concerned with the welfare of their own people and less concerned with exploiting other people for expansionist purposes."

To some that prophecy may suggest a departure from Mr. Dulles' characteristic realism. However, a man who could so rightly discern the dangers to our survival and summon the will and courage to deal with them cannot be ignored when he envisions a promise of brighter days ahead.

Of few men can it be more truly said that he gave his life for his country.

Summer Commencement Address of Dr. Harold C. Case, President of Boston University

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, Dr. Harold C. Case, president of Boston University, delivered the commencement address at the university's annual summer commencement exercises on August 22, 1959.

In extension of my remarks I include his thought-provoking address, entitled "The Real Cost of Freedom," as follows:

In the middle of the night recently, a brooding silence was over the New Hampshire countryside—crickets chirped, winds sighed in the trees, and every night sound was part of the symphony of nature, emphasizing quietness and promoting sleep.

Suddenly a shattering boom, followed by a series of staccato blasts, precipitated all sleepers into half-dazed waking. The houses shook, windows rattled, and disturbed listeners lay awake and wondered about the cause. Next morning the never-sleeping newspapers reported that these were sonic booms caused by jet planes breaking the sound barrier. They explained that any inconvenience or discomfort experienced by civilians was a small price to pay for national protection.

I am not an expert in military affairs; therefore, I do not know whether or not a lead in speed will guarantee or even help to underwrite the future of freedom. But this much I do know—no increase in miles-per-hour, from Mach I to Mach II, or even IV, will make us better people, more deserving of freedom, or more ready to sacrifice for it.

I recall my first transcontinental flight. It was in a DC-3 plane. The scheduled flying time from New York to Los Angeles was 21 hours. That was two decades ago. A few weeks ago I flew the same route by jet plane in 4 hours, 24 minutes. I walked into the baggage-receiving area in the Los Angeles airport, and while waiting for luggage, I listened to the conversation around me. I discovered that people arrive, after flying 600 miles per hour, with the same problems and thoughts and fears and loves and hates they had at 175 miles per hour. Breaking the sound barrier has nothing to do with making better people, or creating human beings who are more worthy of their heritage and more capable of perpetuating it.

If we could break the thought barrier, we might hope for a better outcome.

Let us make no mistake about it. There is a great struggle going on in American education today, and its outcome may determine the future of American democracy.

It has to do with the question of the use of our enormous resources for the benefit of the individual in this Nation, and throughout the world, or for the creation of a mass society in which the person is primarily a resource for the state, and the mass is the goal, instead of the individual.

This is the issue of quantity versus quality.

The unifying element in our diversity is quality. Today, no person, institution, agency, profession, enterprise, or organization can afford to countenance shoddiness in its philosophy, its goals, its programs, or its persons. The artisan and the artist alike must be nurtured in the same tradition of high quality.

In a university this means carefully formulated objectives, very high standards, gifted students and inspiring teachers meeting each other in an atmosphere in which the mind's adventure is respected.

The desire to know, apparent in every normal child, is often stifled in the higher reaches of education. We need to recreate in students the winsome wonder of learning and knowing, and the sheer delight in stern self-discipline, instead of an unprincipled struggle for grades and for professorial approval. Instilling the powerful desire to learn is basic to all of the future of great

scholarship, and to the preservation of freedom.

Our age demands the habit of looking steadily into the future in terms of new problems emerging, and new knowledge needed to meet and solve them. Education then will use the past as a means for peering ahead, distilling history into eternal verities, providing meaning and magnanimity for progress.

Students must find release for their minds from conventional ways of achieving results, so that they can take a fresh approach to their problems. In the creative approach to an engineering course at M.I.T., students were confronted with a length of galvanized pipe fastened to the floor. In the bottom was a ping-pong ball. On a table were pliers, wrenches, string, a length of rope, a bottle of glue, and a rusty bucket full of muddy water. These students were asked to remove the ping-pong ball from the pipe without lifting the pipe from the floor. After study of the problem, each student, working alone, solved the problem by pouring the muddy water into the pipe and floating the ball to the top.

Another section of the class faced the identical problem, except that the rusty bucket of muddy water was replaced by a cut glass pitcher of ice water. Not a single student solved the problem. None could think of crystal pitchers as pouring spouts, nor of ice water as a float for a ping-pong ball.

Detachment—for originality—is essential, if we are not to drift into a society of mimics.

Consider also that freedom depends on the ability to make much out of little. Some people believe that greatness consists in possessing things—but richness of human living depends on the opposite. In spite of our electronic civilization, our myriad inventions, and our fascinating luxuries, the elemental issues of life are relatively simple.

Food, air to breathe, books, family, dependable friends, meaningful conversation, self-respecting work, knowledge of being useful to one's fellows—these are the rootage. The equipment is lush over growth, and it is neither satisfying nor strength giving.

When you look death in the face, or behold your first-born child, or gaze upon the wonder of a wise senior citizen, you feel ashamed for the artificiality of your environment, and long for reality.

Moreover, in the exercise of our capacity to care intensely and consistently for something or someone beyond ourselves, we discover who we are.

If youth, or the aged, continue to care more about themselves than others, design their lives for comfort, not for efficiency; for getting, not giving; if they grow soft from much pampering, and learn in order to get a job, not in order to know; then no speeding planes nor any soaring satellites, nor any other ingenious device to protect our borders from attack can save us, for we shall have deteriorated within.

Freedom will cost us the price of humility, of dedication, of hard work, of uncomplaining discipline, for the moral value of education lies in this discovery of a world which lies beyond the material, social, and political power by which the world is run, and which can give guidance to the forces at work.

Reduce man to a creature of environment, projected from the accident of birth by impersonal forces to the fatality of death, by jealous chance, and he is quite ready to surrender freedom, rights, and stature. He is already a slave at heart, and no tyrant matters much to him.

Faith is not a matter of convenience. It is a test of survival. Faith will not be restored in a dynamic sense in the West because people find it to be expedient, but only if they find it to be true.

If one believes that the fullness, the plenitude of the good, the true, and the beautiful are in God, he can manage any experience in life. Here is the fundamental root of Western freedom, the metaphysical sense of the infinite value of each person before God, and the infinite respect each man owes to his neighbor, in promoting his well-being and fulfillment.

The restoration of mutual love must precede both health of society and enrichment of individual life.

We stand now staring into outer space with mingled feelings of hope and apprehension. A remote universe has become intimate. The millions of miles which gave us a feeling of security have become items in astronomers' calculations. We know that our world will never again have its old, narrow dimensions. But every advance toward interplanetary communication calls for greatness, here.

I ask of you continuing intellectual adventure, unadorned integrity, a depth of conviction, and a quality of self-discipline beyond the average of the conventional, for in these costly, but rewarding, enterprises you can find the qualities necessary for recreating a democratic, humane society for making freedom permanent. This worth whatever it costs.

The Rural Development Program

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. COOPER. Mr. President, the rural development program to improve opportunities and incomes in depressed rural areas throughout the Nation received signal recognition recently when a delegation of top-level Canadian agriculture officials started a two-week tour of program areas in four States.

Thirty States are now going forward with this important program. Leaders in rural communities and trading centers participating report a host of agricultural, industrial, and educational activities which are raising incomes and helping families on small farms help themselves.

In particular, I wish to call attention to the fact that Dr. J. F. Booth, Director of Economics Division, Canada Department of Agriculture, who heads the Canadian group, and his three colleagues visiting U.S. Rural Development areas are here at the behest of the Special Senate Committee on Land Use of the Canadian Parliament. This is proof that the rural development program has gained the attention and interest of many people beyond the U.S. areas which are pioneering this work.

I ask unanimous consent that the following press releases on the Canadians' visit be included in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the press releases were ordered printed in the RECORD, as follows:

SENIOR CANADIAN AGRICULTURE OFFICIALS TOUR U.S. RURAL DEVELOPMENT PROGRAM AREAS

The following is the text of a press release issued today by the Canada Department of Agriculture:

"A group of senior officials of the Canada Department of Agriculture have begun a 2-week tour of sections of the United States to examine and report on U.S. rural development programs.

"The tour stems from a recommendation in July of the Special Senate Committee on Land Use, which was concerned with problems of the low-income farmer in Canada.

"The group is headed by Dr. J. F. Booth, Director of Economics Division, Canada Department of Agriculture. He is accompanied by R. A. Stutt, specialist in land economics, who has been Technical Consultant to the Senate committee; A. E. Barrett, Assistant to the Director General Research; and S. F. Shields, Regional Director, Prairie Farm Rehabilitation Administration, Swift Current, Saskatchewan, who is in charge of resettlement work for that organization.

"The Canadian experts will fly from Washington, D.C., to Kentucky Wednesday, and then on to Wisconsin at the end of the week. They plan to be in Minnesota on September 23 and in Michigan on the 26th, returning to Ottawa, September 29.

"The group will view demonstration projects in these States, the basic aim of which is to help raise the income levels of operators of small farms. Officials of the United States Department of Agriculture are acting as guides to the Canadians and have cooperated fully in the development of the program. State college officials are arranging for transportation for the Canadian delegation to rural development projects."

The following 30 States are participating in the U.S. rural development program: Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Mexico, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, Washington, West Virginia, and Wisconsin.

Puerto Rico is also participating.

CANADIAN OFFICIALS COMPLETE WASHINGTON PHASE OF RURAL DEVELOPMENT TOUR

A group of senior officials of the Canada Department of Agriculture left Washington today for a 2-week tour of U.S. rural development program areas, after conferences with Federal agency representatives working on the program.

The tour stems from a recommendation in July of a Special Senate Committee on Land Use of the Canadian Parliament, which was studying problems of low income farmers in Canada.

Dr. J. F. Booth, director of economics division, Canada Department of Agriculture, heads the group. He is accompanied by R. A. Stutt, specialist in land economics, who has been technical consultant to the Senate committee; A. E. Barrett, assistant to the director general research; and S. F. Shields, regional director, Prairie Farm Rehabilitation Administration, Swift Current, Saskatchewan, who is in charge of resettlement work for that organization.

In orientation meetings September 15 and 16 members of the Canadian delegation discussed with Federal officials the planning and operation of U.S. rural development programs and similar efforts to broaden opportunities in disadvantaged farming areas. Representatives of five Federal departments and the Small Business Administration were present at the meetings, of which Paul V. Kepner, deputy administrator, Federal Extension Service, was chairman.

Commenting on the tour of rural development areas, which begins today, Dr. Booth said that the group hopes to become acquainted with State and local officials working in the program, and to view techniques and methods being used to promote economic development in these areas.

"We in Canada want to benefit by your experience in the United States," he said, "and to draw on this experience in order to improve our own efforts in low income farm-

ing communities. We are very much impressed with scope and variety of services being provided through U.S. agencies."

Following is an itinerary of the delegation's visit: September 16 leave Washington, arrive in Lexington, Ky.; September 20 leave Lexington, arrive Madison, Wis.; September 23, leave Eau Claire, Wis., arrive St. Paul, Minn.; September 26, leave Duluth, Minn., arrive Marquette, Mich.; September 29, leave Sault Sainte Marie, Mich., for Ottawa.

The following 30 States and Puerto Rico are participating in the U.S. rural development program: Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Mexico, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, Washington, West Virginia, and Wisconsin.

DAV Services in Georgia

EXTENSION OF REMARKS
OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mrs. BLITCH. Mr. Speaker, it is with a deep sense of gratitude that I present an exceptional record of vital rehabilitation services freely extended to thousands of Georgia citizens. Those who have benefited directly or indirectly from these splendid humanitarian services, owe much to the source which made it possible.

DAV SETUP

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Georgia, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have either been wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran very substantially. Its immediate past national commander is another judge, Judge David B. Williams, of Concord, Mass. Its present national commander is Bill H. Fribley, of Crestline, Kans., a member of the Kansas Legislature. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer N. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less, well-informed claimants.

DAV SETUP IN GEORGIA

In Georgia the DAV maintains an office located in the VA regional office, 441-449 West Peachtree Street NE., Atlanta 8, Ga. The DAV staffs this office with two national service officers and two clerks. Mr. Roy E. Bevel is the national service officer in charge.

Each of the DAV chapters in Georgia has a service officer who volunteers his energy and time in making initial contacts with veterans or members of their families, assisting them in completing routine and initial steps for claims and forwarding same on to the national service officer in Atlanta for processing and followthrough.

The department commander is Mr. W. L. Jackson, Post Office Box 3047, Macon, Ga., and the department adjutant is Mr. Ralph E. White, 1310 Lakeview Drive, Macon, Ga. The immediate past department commander is Mr. Bill Todd, 121 Central Avenue SW., Atlanta 3, Ga., serving for 3 consecutive years.

In Georgia the VA maintains three hospitals and one domiciliary; one 300-bed general-medical hospital at Atlanta; one 1,329-bed neuropsychiatric hospital at Augusta; one 421-bed general medical and tuberculosis hospital at Augusta; one 500-bed general medical at Dublin, and one 640-bed domiciliary at Thomasville, Ga. All of these beds are not filled by Georgia residents; many of them are veterans from almost every State in the Union who go or are sent to the Southeast because of climate conditions.

During the last fiscal year, the VA paid out $110,822,574 for its veterans program in Georgia, including $28,478,464 disability compensation to its 35,890 service-disabled veterans. These Federal expenditures in Georgia furnish substantial purchasing powers in all communities. Only about 8½ percent—3,033—are members of the 45 DAV chapters in Georgia.

SERVICES EXTENDED

This 8½ percent is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Georgia veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	73,943
Claims folders reviewed	61,619
Appearances before rating boards	32,149
Compensation increases obtained	2,303
Service connections obtained	586
Nonservice pensions	824
Death benefits obtained	133
Total monetary benefits obtained	$1,713,911.20

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years they reported 83,611 claims handled in such district offices, including monetary benefits of $20,850,335.32, and in the central office, they handle 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Georgia veterans, their dependents, and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized service and advice, consideration, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

PROSECUTION OF CLAIMS

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death, or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the

laws administered by it only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what action for additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skills, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case of those claimants who have not given their powers of attorney to any such special advocant.

Another fact not generally known is that under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1.7 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Georgia, with a consequent loss of about $476,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Georgia to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

COST OF DAV SERVICE

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income of its idento-tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they have previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's idento-tag department, 4,756 of whom, during the last 8 years, were Georgia residents.

FINANCING DAV SERVICES

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as well as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years the DAV has also relied on appropriations from its separately incorporated trustees, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all service claimants—DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by benefits in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

DAV MEMEORIAL HONOR ROLL

A special type of memorial trust fund orignated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $5 per DAV member.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation service in Georgia by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington 4, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100 if born after January 1, 1922; $75 for those born between January 1, 1902 and 1922; and $50 for those born before January 1, 1902, or World War I veterans, payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations, and various religious, fraternal, or civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations—United Spanish War Veterans, the VFW, the American Legion, the AMVETS, and the DAV. All of America's disabled defenders who are receiving disability compensation have greatly benefited by their own official voice—the DAV.

United States Spends $7 Million on Guard Buildings

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD the following article from the January 28, 1959, issue of the Louisville Courier-Journal, indicating that armories and other National Guard buildings and installations constructed in the Commonwealth of Kentucky during the past 3 years totals over $7 million.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES SPENDS $7 MILLION ON GUARD BUILDINGS

FRANKFORT, KY., January 27.—Kentucky has benefited from $7,185,287 in Federal funds for new armories and other National Guard buildings and installations in the past 3 years.

This was reported to Governor Chandler Tuesday by Maj. Gen. J. J. B. Williams, State adjutant general.

Williams told a cabinet meeting the amount was 25 times more than the State had received previously in a similar period.

WORTH $40 MILLION

The new buildings house much of the approximately $40 million worth of equipment which the Federal Government has turned over to the Kentucky National Guard. The equipment includes airplanes, tanks, cannon, jeeps, and firearms.

The $7,185,287, representing funds either received by or allocated to the State, finance major projects such as:

1. The Kentucky Air National Guard headquarters at Standiford Field, Louisville, a $5 million investment. It includes a hangar, base supply warehouse, vehicle-repair shop, crash- and fire-truck station, rocket-storage building, jet-fuel underground storage and dispensing system, and operations-and-training building. All have been completed except the operations-and-training building, which is under construction.

2. The Frankfort military center, a $1 million project. It includes an armory, centralized field maintenance shop, maintenance shop for artillery, airplanes, and helicopters; an office for the U.S. property officer for Kentucky, and a property warehouse.

The Federal Government only recently approved the spending of $270,000 for the warehouse.

INCLUDES BUECHEL

3. New armories at Livermore, Buechel, Frankfort, Olive Hill, Jackson, Carrollton, and Tompkinsville. All have been built or are under construction except at Tompkinsville. Construction of the Tompkinsville armory will begin as soon as weather permits.

All the building at Standiford Field was financed 100 percent by Federal funds. The Federal Government contributes 75 percent of the money for armories, the State 25 percent.

Williams said the Federal Government is providing Kentucky with 15 B–57 two-engine jet airplanes for tactical reconnaissance. Ten planes have already been received. The State still has a few F–86 Sabre jets, which will be placed in storage in another State.

Proposal of a Control Measure on Poisons and Pesticides

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WOLF. Mr. Speaker, in view of the great need in America to protect the various species of our wildlife, the National Trappers Association of America is to be commended on its very timely proposal of a control measure on poisons and pesticides. The text of this proposed legislation follows:

NATIONAL TRAPPERS ASSOCIATION OF AMERICA

We of the National Trappers Association of America propose that—

"Be it enacted by the Congress of the United States of America, That it shall be unlawful for any person or persons to knowingly and willfully, place or cause to be placed, any poison, explosive, or chemical in such a manner as to be fatal or injurious to any bird, fish, or mammal within the boundaries of the United States of America except as hereinafter provided.

"EXCEPTIONS AND PROVISIONS MADE

"1. This act shall not prohibit killing of animals for humane reasons by gun or gas chamber.

"2. This act shall not prohibit use of firearms commonly fired from hand or shoulder.

"3. This act shall not prohibit use of chemicals that are proven to be selective for purposes of conservation by State Conservation agencies or agencies under jurisdiction of the U.S. Department of Interior.

"4. This act shall permit use of pesticides only after a safe level of application has been established by authorized research.

"5. This act shall provide that pesticide containers be labeled by the manufacturer with recommendations for safe levels of application as effects all vertbrate animals as may be determined by research and including residual dangers.

"6. This act shall prohibit the sale or use of any chemical or poison known to be a progressive killer. For purposes of this act 'Progressive Killer' shall mean any substance which causes it's victim to be poison to any other bird, fish or mammal by internal consumption, contact or by breathing of fumes.

"7. This act shall provide that research shall be done by Federal and State conservation agencies and persons deemed qualified by such agencies. Cost of research shall be provided for by a tax on pesticides in amount deemed advisable by Congress. Payments made for research work shall not exceed those for similar services.

"8. False reports by any person engaged in such research shall be deemed a violation of this act.

"9. Any violation of this act shall be punishable by a fine of not to exceed $500 or 30 days in jail or both and not less than $25 for a first offense and an additional penalty of $25 for each subsequent conviction.

ALFRED L. COOK,
Chairman, Conservation Committee.
URBANA, IOWA.

Integrity in Government

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CASE of New Jersey. Mr. President, early in the 1st session of the 86th Congress I introduced a bill to protect integrity in governmental processes. Senator NEUBERGER, of Oregon, joined with me in sponsoring the measure.

The major purposes of the bill are four: First, to require all top officials in the legislative as well as the executive branch to make an annual report of their income, including gifts of substantial value; second, to require a detailed report of travel expenditures by congressional committees, including those incurred by staff, as well as by the members themselves, of a committee; third, to provide that any communication, oral or written, concerning a particular case made by a Member of Congress to an administrative agency be made part of the public record of that case; and, fourth, to establish a commission on legislative standards to study and make recommendations concerning the problems of legislative-executive relations in such matters as the proper representation of constituent interest and the prevention of improper influence.

I do not contend the bill is perfect, but it does represent, I believe, a constructive approach to certain problems which deeply involve the public interest. It is my hope, therefore, that next year the Rules Committee, to which the bill was referred, will hold hearings early in the session and that the Congress will take affirmative action in this area. In this connection, Mr. President, I would like to insert in the RECORD a sampling of comments on the bill I have received from political scientists and others actively concerned with the field of government.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

ST. PETER'S COLLEGE,
Jersey City, N.J., September 12, 1959.
Senator CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: I have received the copy of your bill to promote public confidence in the integrity of Congress and the executive branch which you sent me, and thank you for your kindness. I fully agree with you that the requirement of publicity is the best way to deal with the problem of private pressure on public men, distasteful though it undoubtedly is in many ways. I also like your provision for a Commission on Legislative Standards. In general, I think that laws on this subject should confine their specific and rigid requirements to those points about which there can be little dispute. Further refinements are best left to a commission which can work out norms more precisely as it accumulates experience.

Sincerely yours,
FRANCIS P. CANAVAN, S.J.

NEW YORK UNIVERSITY,
GRADUATE SCHOOL OF PUBLIC ADMINISTRATION AND SOCIAL SERVICE,
New York, N.Y., September 24, 1959.
Hon. CLIFFORD P. CASE,
U.S. Senator,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: I appreciate your thoughtfulness in sending me a copy of the bill you are proposing for the promotion of confidence in the legislative and executive branches of Government. I find it especially significant because it attempts to strike at the roots of unjust, arbitrary government—graft and corruption. I am sure that opponents of the bill will argue that its enactment would make public service less desirable. Let me assure you that the vast majority of present employees and of prospective employees will readily accept the basic principles of the bill—the disclosures of gifts and fees—in the hope that it will eliminate the favored position of those few careerists who utilize their employment as means of gouging the public or enriching themselves at the expense of the public.

You have undertaken a most worthwhile endeavor and I wish you every success.

Sincerely,
MARTIN B. DWORKIS,
Professor of Public Administration.

PRINCETON, N.J., *September 16, 1959.*
Hon. CLIFFORD P. CASE,
Senator from New Jersey,
Washington, D.C.

DEAR SENATOR CASE: I read with great interest the material you sent me recently pertaining to the promotion of public confidence in integrity of Congress and executive branch. I am sure you are to be congratulated upon the vital purpose and the skillful drafting of this bill which ought to receive the support of every good citizen.

In a rather perfunctory reading of this bill 4223 I noted, however, a few may be minor points which might possibly warrant consideration.

Article 1 of the bill refers to the listing of gifts received by an official or by him and his spouse jointly. * * * Would it not be advisable to insert a clause to the effect that a gift * * * given to the wife of an official on the strength of a social connection derived from the official position of her husband would come under the provisions of the bill? This might help to plug a hole of some possible significance.

Paragraph (e) contains an excellent provision concerning the recording of oral and written communications. This covers a wide ground and one certainly most difficult to supervise and to enforce. Here the following point comes to my mind. The bill refers to communications made to the agency or to an officer thereof but perhaps it does not make it quite clear enough that such communications may be made to the official in question not necessarily within the agency but outside of it, within the setting of social intercourse. I realize that the kind of communication made, for instance, at social gatherings is much harder to pin

down, but it should be made absolutely clear that it may be no less incorrect than telephone calls which reach an official at his desk. Though I admit that this kind of contact may be covered by the present version of the bill, a little specification on this point may do no harm.

Thank you for having given me the opportunity to see this fine piece of legislative work.

Very sincerely yours,

ROBERT A. KANN.

TEMPLE UNIVERSITY,
Philadelphia, Pa., September 12, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: I greatly appreciate receiving a copy of a bill introduced by you to "promote public confidence in the integrity of Congress and the executive branch."

I can think of no more important area in which you could concern yourself. As a former professor of political science, I was continually amazed and alarmed at the readiness with which young people who came into my classes expressed the attitude that politicians were either corrupt or corruptible. The saying most often expressed to me was, "If he isn't rotten when he goes in, he will be when he comes out." No one need tell you how devastating this attitude is in many respects.

The reestablishment of respect for persons in public office is consequently a matter of prime importance. It will take more than legislation, of which you are aware. Your bill, in my judgment sound in all respects, would certainly be most helpful.

Sincerely yours,

JOHN ANTHONY BROWN,
Assistant to the President for Development.

WOODROW WILSON SCHOOL OF
PUBLIC AND INTERNATIONAL AFFAIRS,
PRINCETON UNIVERSITY,
Princeton, N.J., September 13, 1958.

Senator CLIFFORD P. CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: I have read with great interest and appreciation your bill "to promote public confidence in the integrity of Congress and the executive branch." As the first, I believe, to recommend this approach to the problem (see my testimony before the Buchanan Committee on Lobbying in 1950), I naturally support the intent of your legislation.

But I am convinced that the greatest area of need is not in the disclosure of outside sources of income. The great need is for the public absorbtion of the fundamental costs of running our two political parties. If the heavy costs of campaigning could be reduced for the parties and for individual candidates, much of the pressure for special favors could be effectively countered. It is possible that the American Heritage Foundation campaign will answer some of the problems. My guess is that ultimately the Congress will have to appropriate sufficient money to sustain the basic operating expenses of our two national committees, and a fixed schedule of political TV; and will have to give the franking privilege for say two or three mailings a campaign to all legitimate candidates for national office. I wish that you and Senator CLARK could join in sponsoring bipartisan legislation to move ahead in this vital area of reform.

In the meantime, I am happy that you are planning to press for S. 4223 in the next session of Congress.

Very sincerely yours,

STEPHEN K. BAILEY,
Professor of Public Affairs.

UNIVERSITY OF VIRGINIA,
DEPARTMENT OF POLITICAL SCIENCE,
Charlottesville, September 19, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: It is with a great deal of pleasure that I answer your letter of September 15 with reference to your bill "to promote public confidence in the integrity of Congress and the executive branch."

It is becoming increasingly difficult of late to attempt to inculcate in students the respect for their national officials that I deem most necessary if our Nation is to survive in this period of conflict between two divergent ideologies. The sources of this difficulty are numerous and diverse. There can be no question but that the combination of wars—hot and cold—that have faced our youngsters since their birth has had a deleterious effect on them. Boys and girls entering college today have never known a period when they could assess such ideas as the brotherhood of man, or the community of world interests. Yet this, I believe, is not the only, nor even the most significant, cause for the lack of citizen respect for our national officials. Our students today are shocked as more and more incidents of indiscretion are disclosed. The indiscretions fall with equal weight on the executive and legislative branches of the Federal Government and are not limited to one or the other of the two major parties. For generations now, citizens have come to expect State governments and State officials to be slightly less than honorable. They wonder, for example, why a man will spend thousands of dollars to secure election to an office that pays a mere pittance in salary. The distressing thing is that now students have transferred this feeling to our National Government. We can hardly decry the lack of moral standards among our children when all about them they see their elders accepting what must be termed graft regardless of how we try to sweeten the word.

In conclusion, Senator, you have my fullest support for your bill. * * * I would hope, further, that your bill would be labeled "a bill to cause a rebirth in public confidence in the integrity of Congress and the executive branch." The confidence once was there; it is not there today.

Sincerely yours,

FRANK K. GIBSON,
Assistant Professor.

NEW YORK UNIVERSITY,
New York, N.Y., September 26, 1958.

Hon. CLIFFORD P. CASE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: Thank you for sending me a copy of your bill "to promote public confidence in the integrity of Congress and the executive branch," together with your remarks in its behalf. The bill, it seems to me, is directed at one of the genuine yet delicate problems of government in a democracy.

It seems to me of the greatest importance that every effort be made to dispel the corrosive and inaccurate public attitude toward politicians. The passage of a bill such as yours may well serve to contribute to this desirable objective. The whole Nation indubitably has a serious stake in such an improvement of the climate of opinion.

My personal feeling is that disclosure of information acts as a much more efficient deterrent to abuses than prohibition of certain activities with criminal penalties. We can rely here on the evidence of the operation of the Florida law on campaign contributions and expenditures. My correspondents in that State tell me that the requirements to publish full information is having a salutary effect upon the tone of politics there in a way seldom seen in other States where absolute limits on amounts of money which may be contributed or expended, and often totally unrealistic limits, are set by law.

Please let me know at any time if there is any way in which I can be of service to you.

With all good wishes.

Sincerely yours,

RHOTEN A. SMITH,
Professor of Politics.

SYRACUSE UNIVERSITY,
MAXWELL GRADUATE SCHOOL OF
CITIZENSHIP AND PUBLIC AFFAIRS,
Syracuse, N.Y., September 16, 1958.

DEAR MR. CASE: I have studied with great interest the text of your bill and the introductory statement. I have connected your initiative with Senator FULBRIGHT'S article that appeared in New York Times magazine on September 14, because both in a sense are related to the problem of fundamental values in our democratic society.

I fully support your initiative for I realize that there is an urgent need to strengthen the trust of the American people in their political leader. I see two main reasons for such measures as the one you propose. Firstly, we face a long-term emergency brought about by a triple revolution: the technological, the awakening of the underdeveloped countries, and the Communist. The United States is surrounded by a quickly changing world; thus we are bound to live in an era of permanent crisis. Secondly, a democracy can successfully survive the oft-repeated shock of crises only if its people rally round their leaders and trust them. The lesson of the French Fourth Republic should not escape our attention. Your measure will help in dissociating the word "politician" from its frequent use as an epithet, because it provides the citizen with the means of checking on the morality of his representatives to whom he has entrusted political power. It has a wider educational meaning because it promotes the ideal of public service and opposes it by implication to the image of a "smart" man.

I hope that the Congress will son pass your bill.

With kindest personal regards,

Sincerely yours,

W. W. KULSKI.

COLGATE UNIVERSITY,
Hamilton, N.Y., September 30, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: I am grateful to you for sending me a copy of the CONGRESSIONAL RECORD containing your statement and the text of the bill to promote public confidence in the integrity of Congress and the executive branch. It is as you say, of utmost importance that we do everything possible to insure that the public has the highest degree of confidence in its legislative and executive officials. This confidence, unfortunately, has been shaken at numerous times in the past. After each of these incidents it has taken a long period to restore full public confidence in our officials.

It seems to me that the bill which you have introduced although it may not prevent all incidents in the future, will go far to restoring public confidence and I hope it may be enacted. I also hope that it will not be weakened by any crippling amendments. It seems to me that each of the provisions that you have included, is important and unless all are enacted there will be serious holes

through which difficulties in the future may arise.

Very sincerely yours,

RODNEY L. MOTT.

UNIVERSITY OF COLORADO,
Boulder, Colo., September 16, 1958.

Senator CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: Thank you for your letter of September 10 in which you enclosed the statement from the CONGRESSIONAL RECORD concerning your bill "to promote public confidence in the integrity of Congress and the executive branch." I wish to congratulate you concerning the introduction of this bill and I sincerely hope that, at the next session of Congress, you and your colleagues will be able to get this or a very similar bill passed into law. You are of course, completely correct in assuming that such a law should be passed both for the purpose of helping to maintain public confidence in our Government and to help public officials maintain the most careful relations with private persons and groups. You may be assured that you have my heartiest support in this project, and I believe that almost all political scientists and other persons knowledgeable about and interested in Government will applaud and support your efforts. If I can be of any direct assistance to you in this matter, please call on me.

Sincerely yours,

CURTIS W. MARTIN,
Chairman,
Department of Political Science.

VASSAR COLLEGE,
DEPARTMENT OF POLITICAL SCIENCE,
Poughkeepsie, N.Y., November 19, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senator From New Jersey,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: It was with great interest that I read your proposed bill designed to improve the public service. You are to be commended for trying to solve the difficult problem of maintaining a high ethical level among administrators and legislators.

The bill, as you point out, does cover a great deal of territory. I share your reluctance at the prospect of an invasion of privacy through the public disclosure of income and of dealings in securities, commodities, and real property. There is already considerable reluctance on the part of high calibre people to become involved in public service because of the risks of having their actions misinterpreted on their motives impugned. On balance, however, the public interest demands that the action of public officials be above suspicion, and publicity is probably the best way of assuring probity. Also, as you point out, legislators and administrators will find it easier to reject gifts if there is a policy of making such gifts a matter of public record.

The second aim of your bill—to make all communications to regulatory agencies a part of the public record of cases before them—is laudatory, but I wonder whether the aim can be achieved in this manner. Might not the effect of this provision be that persons who already have informal access to members or staffs of regulatory agencies may obtain even more of an advantage because they hardly need to communicate in any formal sense while less favored persons will be held strictly to the letter of the law requiring public disclosure of communications? In order to try to avoid this sort of thing, would you consider the inclusion of stiff penalties in the Administrative Procedure Act for violation of the communications provision?

As to your final point, I think that the establishment of a Commission on Legislative Standards is a fine idea.

Very sincerely yours,

LLOYD D. MUSOLF,
Associate Professor of Political Science.

ADEL, IOWA, *September 17, 1958.*

Hon. CLIFFORD P. CASE,
U.S. Senator,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: Thank you for the text of your bill "to promote public confidence in the integrity of Congress and the executive branch" and your introductory statement.

I certainly have no suggestions for modification of the bill or of your plan to press for early consideration when Congress reconvenes.

My general reaction is favorable to the point of enthusiasm. My comments (which you invite) will therefore require restraint lest they become windy and tedious.

I think your proposal is execellent, and that the reasons you state are the right ones.

You say there are probably loopholes in your bill. Experience of course suggests that in new legislative approaches these do prove to exist. But what I've marveled at as I've read your bill is its thoroughness. This I applaud, and for the reason that you briefly but adequately state.

I agree with you that action is necessary, and think you are entirely right in holding that "it would be far more effective to turn the spotlight of publicity on all gifts and favors than to attempt to draw a line between those which are proper and improper."

Behind it all, of course, is the objective—the very important objective of dispelling "the cynical view of politics and public service." This prevalent cynical view I have long deplored. It may be less general, or at least less deep, than it used to be. But it still is prevalent and its effects are mischievous, could be dangerous.

A career in politics ought to be considered one of the highest—indeed probably the highest. For the task of the politician in our kind of society is to make the institutions of freedom work. Our greatest values are involved. Ethical standards in which the people have confidence are obviously vital.

And I conclude about where I started—with expression of the conviction that you are entirely right in relying on openness, upon public disclosure, as the most practical way of reducing public distrust and suspicion.

I should not want to predict early passage of your bill as it is. The scope is large, as you say. I consider that a great merit. It is an important service to look at the need as a whole and to face all the realities in considering therapeutic action.

Sincerely,

W. W. WAYMACK.

PACE COLLEGE,
New York, N.Y., September 16, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SIR: Thank you for your letter of September 10, inclosing information on your bill to promote public confidence in the Congress and the executive branch. I should like to take advantage of your invitation to comment on it and will do so in my capacity as associate professor of social sciences at Pace, where I give courses in government, public administration, economics, and international relations.

A reexamination of the conflict of interest principle and the substitution of a code of conduct for the guidance of public employees were two of the conclusions reached at a seminar conducted by a fellow political scientist, Stephen K. Bailey, at Princeton in 1956. It seems to me that your bill embodies these thoughts and fulfills a need in this area, particularly as regards the Congress. The executive branch, by order of the President, seems to have set up rules which help to solve the conflict of interest problem. Your bill providing for public disclosure would go a long way toward giving information upon which an informed electorate can render its decision.

So much for a general statement. To turn to the specific provisions of the bill, I am puzzled as to why January 1960, was selected as the termination date of your proposed Commission on Legislative Standards. Would the short period of time until that date, assuming the Commission is established in early 1959, be adequate enough to set it up, to study the conflict of interest problem, to hold meetings and to go over the mass of documents it would need? If the solution to the problem requires much time perhaps a permanent commission should be established, otherwise it may not accomplish its objectives.

Several other questions suggest themselves about the Commission on Legislative Standards. Could it subpena a Senator or or Member of the House with his personal records? The proposed bill says that it is to get any information it wants from any agency. Suppose that a security problem was involved and the agency refused information to the Commission on that ground, who would decide?

In my opinion your bill will go a long way toward upholding the principle of public disclosure as an aid to good government and it will abate the conflict of interest dilemma. I intend to follow the progress of S. 4223 and hope that it becomes enacted into law.

Sincerely,

JOHN C. SHERRY, Ph.D.,
Associate Professor, Social Sciences.
WALDWICK, N.J.

AMARILLO COLLEGE,
Amarillo, Tex., September 23, 1955.

Senator CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: Thank you very much for your letter of September 10 covering to me the reprint of your comments printed in the CONGRESSIONAL RECORD on the "Promotion of Public Confidence in the Integrity of Congress and the Executive Branch."

I share with you the conviction that something along this line is greatly needed. Many a devoted public servant has been smeared by the altogether too prevalent assumption that all people who work for the Government of the United States are crooks. To be sure, an occasional public figure proves faithless, but in my considered judgment the integrity of Members of the Congress and administrators in the executive branch of the Government is on the average much higher than is that of people in most other walks of life.

Sincerely,

JOSEPH M. RAY,
President.

KALAMAZOO, MICH., *October 1, 1958.*

Senator CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: I thank you for your letter of September 10, 1958, and the inclusion of a copy of your bill S. 4223. I gave the included document a close reading and concur in the opinion that it deserves the highest degree of public support, and that it should be reintroduced during the coming session of Congress.

I can see that the existence of such a law would make the occurrence of the unfortunate Adams-Goldfine incident impossible, or if that is too strong a statement, it would at least place the principals in an unequivocal position as to where they stand in regard to the law.

It could also have a salutary effect on the independent regulatory commissions. I have had the recent opportunity to be in close touch with experts in the field of mass communications research, and I can assure you, Senator CASE, that their attitude toward the

work of the Federal Communications Commission is a highly cynical one. The same attitude is duplicated within areas of the radio-television industry where executives express wishes for greater regularity in the proceedings of the FCC. The present situation renders the decisions of the FCC highly unpredictable.

I note with satisfaction that the provisions of your bill would cover legislators as well as other government officials and thus end the charges of a double standard in regards to legislators.

The establishment of a Commission of Legislative Standards for the purpose of supervision of such a law is again essential to render the proposed legislation effective.

The one criticism that I have to offer concerns the setting of an arbitrary $12,500 salary minimum to be covered by the provisions of such a law. While I do appreciate the importance of clear wording, I feel that $12,500 is a much too high minimum. In certain sensitive areas even secretaries can be very influential in securing access to highly placed officials in strategic moments. Mr. Goldfine certainly proved that he was highly aware of that fact. On the other hand, officials who receive remuneration above the minimum mentioned may be far removed from the places which affect the great issues of public policy. In view of this, the Commission on Legislative Standards could, perhaps, devise a list which would include or exclude officials along functional lines. I realize that the proposed Commission already has the authority to propose supplementary legislation, but the inclusion of the above idea in the original draft might improve the law from the point of view of administrative workability.

Sincerely,

GEORGE KLEIN,
Instructor,
Western Michigan University.

TEMPLE UNIVERSITY,
Philadelphia, Pa., September 29, 1958.

Senator CLIFFORD P. CASE,
U.S. Senator From New Jersey, Senate Office Building, Washington, D.C.

DEAR SENATOR CASE: Your proposed bill on the promotion of public confidence in integrity of Congress and the executive branch has been read carefully by me.

I approve this bill as a necessary step to safeguard the executive and legislative branch of our Government against itself—against the great pressures that have been asserted against them by all types of interest groups. This bill is a natural outgrowth of the regulation of lobbying and corrupt practices in election campaigns. It will go far to end the evil which big Government has brought with it. It will go far to restore confidence in our legislators and in governmental officials. It will protect these legislators and officials against their false friends. It will permit a greater concentration on progress aimed at the benefit of all segments of our Nation—rather than special groups.

It is a forward step.

Sincerely yours,

WILLIAM J. MCKENNA,
Assistant Professor of Economics.

CRARYVILLE, N.Y., *October 14, 1958.*

Hon. CLIFFORD P. CASE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: Many thanks for honoring me with your letter of September 12 and for the copy of the bill (S. 4223) you have introduced together with your clearly worded explanatory remarks. A great many American citizens, I am certain, have wondered for some time why such safeguards for the public interest have not been enacted into law, and I am confident that if the voters, adequately informed, were given the opportunity to express their opinions in a referendum they would vote overwhelmingly their approval of your bill. Perhaps under the spur of what has transpired since Congress adjourned there will be a greater appreciation of what the spotlight of publicity can accomplish and you may succeed in getting your bill through the next session of Congress. That will be quite an accomplishment.

As I read the definiteness of section 2, "shall be made a part of the public record," and in section 3, "shall be published in the CONGRESSIONAL RECORD," I am wondering if in section 1(e) with the wording "under such reasonable regulations as he shall prescribe" there might be opened an opportunity for some Comptroller General to prescribe such regulations as to defeat the purpose of the entire section. Could the words quoted above be omitted to make the provision for public inspection as definite as provided in sections 2 and 3? In regard to section 4, of course, it would be impossible to foresee all the "problems of conflicts of interest" the study will reveal but I imagine you must be certain that one of them will be as you state so clearly "the difficult determination of the line between adequate representation of constituent interest and attempted influence."

As a resident of New Jersey at the time of your election to the Senate I took pride in supporting you and I have never regretted it. Many of my friends join me in admiring your intellectual honesty, courage, and thoughtful leadership.

With appreciation and best wishes.

Sincerely,

E. SCHUYLER PALMER.

WESTMINSTER COLLEGE,
New Wilmington, Pa.,

Hon. CLIFFORD CASE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: * * *. I was delighted to receive your note of September 12 and also the enclosure of your remarks explaining your bill designed to promote public confidence in integrity of Congress and the executive branch.

As you suggest, it is an extremely vexed and difficult question, certain aspects of which have operated as a kind of twilight zone free from all public scrutiny. I hope that idea can be reintroduced into the forthcoming session of the new Congress.

Very truly yours,

CHARLES P. EDWARDS,
Associate Professor of Political Science.

GLEN ROCK, N.J., *September 20, 1958.*

Senator CLIFFORD CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: Thanks for your letter of 10 September. I appreciate your sending me a copy of your remarks and proposed bill (S. 4223).

My first reaction would be to concentrate on the establishment of the Commission. Such a commission shall concentrate on study aspects as indicated in the proposed bill. Accordingly, I would recommend leaving details noted at the outset to developments and outcomes of studies pursued and conclusions reached by the Commission after 3 to 5 years of pure study and hearings.

In a word at this stage of the matter I would not advise concentrating on data requirements from Members of Congress. I am not saying that this should not be done but rather it should await a bit of Commission history.

Keep up the good work. I admire your many stands on principles rather than pure party.

Cordially,

EUGENE T. FERRARO, Ph. D.

NEW HAVEN, CONN.,
November 3, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: I found your bill, "to promote public confidence in the integrity of Congress and the executive branch," enclosed in your letter of September 10, 1958, very interesting indeed. I share the goals of such proposals as yours, and in general, I admire the principles which have shaped the provisions of the bill. I agree in particular that public disclosure of gifts and income received by public officials will act as a brake on attempts to influence officials with money and goods. It also does much more credit to the honesty and public spirit of almost all Members of Congress and the executive branch than would an attempt to set specific bounds of propriety.

It would be unfortunate if the requirement of disclosure tended to limit legitimate informal contacts between the regulated and the officials and legislators who do the regulating. For instance, while the public interest should be the basis of decisions for Members and officials of the Federal Communications Commission, it is also important that they maintain close and friendly relations with the communications industries and especially with key figures in it. This is important both for the technical and business education of public officials and for the public education of businessmen. Increased understanding and knowledge of the real problems on both sides of the fence can have only beneficial results.

Thus, while fixing the monetary limits of propriety is undesirable, it is also undesirable to leave the effect of the provision so uncertain that officials might restrict useful informal contacts for fear of censure. This pitfall could be avoided by making it clear in the bill that the intent of the disclosure requirement is not to discourage the informal contacts necessary to the American legislative and administrative process, and that such contacts should be positively encouraged in many cases.

As for section 2, the principle of publicity for all communications regarding cases pending before Government agencies is an excellent one, with great deterrent potential. In theory, I suppose the principle could be extended to matters before Congress—but this seems both impractical and unlikely. The total effect of this provision is quite uncertain, although I am sure that it will force everyone involved at least to justify attempts to influence in terms of the public interest. What effect will it have on the patterns of action and influence of Members of Congress or of the President's staff in their informal relations with, for instance, regulatory commissions? Offhand, it seems likely that section 2 would strengthen the hand of agencies dealing wth attempts by presidential assistants or by Members of Congress to influence them. I hope section 2 will eliminate only those influences from Congress or the Office of the President which are clearly not in the public interest.

The establishment of a Commission on Legislative Standards is a good idea. Although I doubt that it is wise or practical in the long run to specify restrictive procedures in these matters, I am sure that it is useful to focus the attention of Congress and the public on the ramifications of this very ticklish problem.

Sincerely,

RUFUS P. BROWNING.

THE UNIVERSITY OF CHICAGO,
Chicago, Ill., September 15, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: Thank you for inviting me to comment on S. 4223. I wish

I could do so in some more substantive way than to simply add my hope that you are successful in the undertaking. That legislation of this type is needed, there can be no doubt. Of even greater importance, I am sure that you join me in condemning the circumstances that make it necessary.

I question just how realistic this action really is, but certainly the concerted effort which you mention and of which this is a part cannot help but have a salutary effect. Once a start is made the gaps which you mention may yield to pressure and close themselves.

I heartily commend your efforts and as heartily regret my own unhelpfulness. If it is convenient I would like to be kept informed of your progress.

Sincerely,

DONALD E. MCCLINTOCK,
Assistant Director, the Center for Programs in the Mass Media.

CENTRAL YMCA,
Harrisburg, Pa., September 15, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: Thank you for your letter of September 12 and the reprint of the CONGRESSIONAL RECORD.

I should like to give more detailed consideration to S. 4223, but at present I am unable to do so.

You may be assured that I do approve of the bill as you explained it while introducing it. Politicians have for some time in this country been held in rather low esteem, yet it would seem to me that after the clergy they should be held in the highest esteem. The enactment of your measure would go a long way toward restoring respect for those in the public service and respect for government in general.

Did not Senator NEUBERGER join you in sponsoring this measure?

I am afraid that there is little hope for passage of the bill, but I wish you all success.

Sincerely yours,

GIBSON GRAY.

CALIFORNIA INSTITUTE OF TECHNOLOGY,
Pasadena, Calif., September 23, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senator from New Jersey,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: Thank you for sending your proposal to promote public confidence in high Government officials. I share your fears for invasion of privacy in the lives of Government officials, but nonetheless feel your bill would help meet the persistent and too often justified suspicion citizens have of their elected and appointed rulers.

I hope your bill has good sailing, but am most pessimistic about it, because it will surely be opposed by the very legislators and administrators who might get unfavorable publicity in consequence. Nevertheless, something of the sort must eventually be enacted—I hope at the same time the salaries of officials are raised to a level appropriate to the unparalleled responsibilities they bear.

Sincerely yours,

JAMES C. DAVIES,
Associate Professor of Political Science.

SEPTEMBER 24, 1958.

Hon. CLIFFORD P. CASE,
Senate Office Building,
Washington, D.C.

DEAR MR. CASE: Thank you for the copy of your bill "to promote public confidence in the integrity of Congress and the executive branch."

I have only one question. Does not the application of the provisions to persons compensated in excess of $12,500 per annum exclude the senior clerks of the major committees whose salaries are, according to my recollection, about $8,000 or $10,000? I would suggest that such sensitive personnel in the Congress be included under the provisions of the bill.

Sincerely,

ALFRED JUNZ,
Lecturer in Political Science, Hunter College, New York, N.Y.

WAYNE STATE UNIVERSITY,
COLLEGE OF LIBERAL ARTS,
DEPARTMENT OF POLITICAL SCIENCE,
Detroit, Mich., October 21, 1958.

Hon. CLIFFORD CASE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: It was most thoughtful of you to send to me the text of your bill S. 4223 and the supporting statement which you submitted with it.

It seems to me that the basic problem which is present here cannot only be described as a continuing one in American political life, but has been accentuated, even aggravated by at least three major developments of the past half century. Of course these in turn had their roots in internal developments within our society.

These seem to me to be (1) the changing character of the pattern of ownership—i.e., from direct personal or real property predominantly, to the phase of large stockholding with managerial control in turn to stock holding in some instances with much less or even scant direct control in the corporate directional sense. Patently this renders less clear the scope of impact of the traditional conflict of interest statute, (2) the great transformation of the public desire for service from their legislator from an occasional instance to the point where for some members this is their preferred sphere of activity. This trend as you are certainly aware has hit the area administration and the administrative official and possibly is a necessary development, designed to keep in adaptation a type of governmental operation, (3) the population increase and the complexities of modern life in themselves have deepened this sense of necessary reliance upon what Government may do at many levels. Lastly it is to be noted that as long as there are people looking for favors, there will be some who will succumb to bribery and will become manipulators, whatever their positions in life.

Your proposed solutions are worthy of deep consideration although I cannot presently say that they are necessarily better than others which may be advanced. It is my suggestion that you might well also for the more grievous aspects involving members of the Chambers of Congress and their personal involvers revert to the early use of the contempt process. Your attention is to be directed to the Randall-Whitney situation of 1795, and the Anderson-Williams (I believe it is Williams) situation of 1818, and the extensive debates thereon within the annals of Congress. This is familiar to me as a phase of a protracted study of congressional contempt now awaiting hoped for publication. Should I be able to clarify any of these points or to help you in any way in this matter be assured of my interest and willingness.

Most sincerely,

CHARLES W. SCHULL,
Professor.

NEW YORK, N.Y., *September 12, 1958.*

Hon. CLIFFORD P. CASE,
U.S. Senate, Washington, D.C.

DEAR SENATOR CASE: I greatly appreciate the tearsheet from the CONGRESSIONAL RECORD which provides the substance of your proposed bill to promote public confidence in the integrity of Members of Congress and of the Executive.

Like you, I am loath to violate the privacy of individuals, and that certainly includes Members of Congress. But recent events have made it quite clear that it is of considerable importance to establish criteria which will assist the public official in determining the proper boundary line between doing his duty to a constituent on the one hand and becoming so indebted to an individual that he becomes that individual's lobbyist in the Government. I think this is the objective to be sought in the proposed legislation; the objective is not to reveal dishonesty or misconduct. The run of public officials are certainly as honest as the rest of the community and probably more so.

On the whole, I think that your proposed bill will achieve that purpose although I am inclined to think that, in the first section, you are demanding more detail than is necessary—so much, in fact, that it may prove to become a rather serious reporting burden for the individual Congressman. I certainly wish you well in your efforts to secure some effective legislation of this type.

Yours very sincerely,

ARNOLD J. ZURCHER.

STETSON UNIVERSITY,
De Land, Fla., September 22, 1958.

Hon. CLIFFORD P. CASE,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR: I appreciate your letter of September 10. I am heartily in favor of your bill "to promote public confidence in the integrity of Congress and the executive branch." I can see no reason why the persons to whom this would apply should not file such statements. If such declarations had been made in the past, I feel sure it would have avoided considerable embarrassment and some bad mistakes.

At the same time, I have long felt it unfortunate that Members of Congress do not—according to what I hear—receive large enough salaries to enable them to live at the level that seems to be demanded without encountering some financial difficulties. Perhaps the point has been exaggerated, but I wonder if it is true that a number of good men refuse to run for the Senate or House of Representatives because of the inadequacy of the salary.

Respectfully yours,

GILBERT L. LYCAN.

Congressman Curtis' Remarks on Action on President's Budget

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CANNON. Mr. Speaker, much of the data included in the tabulations inserted in the CONGRESSIONAL RECORD of September 10—pages 17475–6—and in the RECORD of September 11—pages 17622–3—by the gentleman from Missouri [Mr. CURTIS] is misleading, inaccurate, and carries connotations and inferences not borne out by the facts.

In the RECORD of the 10th, page 17475, he included what he termed "three sets of corrections for table I on appropria-

tions, a revised table II which compares like periods of time in the President's request with corresponding actions of the Congress, and lastly, a table III which includes $1,683,900,000 in spending increases not requested by the President and blithely skipped over by the other two tables."

"CORRECTION A IN TABLE I AS OF SEPTEMBER 8, 1959"

Its implications are grossly misleading. Table I on the back of the CONGRESSIONAL RECORD of September 8, to which he refers, is clearly labeled as covering the appropriation bills for the 1st session of the 86th Congress. The body of that table clearly segregates the 1959 fiscal supplemental bill from the 1960 supplemental and regular bills. In no wise does it purport to deal solely with fiscal 1960; it is a session table, not a fiscal year table. Yet, Mr. CURTIS, in his "correction A," directly infers otherwise because he gives to "correction A" the title "Amounts for other than the fiscal year 1960 included in table I." Congress operates on a session basis and entertains any and all budget requests from the President regardless of the fiscal year to which they pertain. Format of table is no different in substance from previous years.

But, more importantly, Mr. CURTIS uses erroneous figures in his "correction A." He shows the President's budget estimate for the Development Loan Fund under mutual security as $500 million and the amount agreed to by conferees as $590 million, with the result that Congress is shown to have increased the President's budget request by $90 million. This is so far from the truth as to be ridiculous. The President's budget estimate was $700 million for fiscal year 1960 and an additional $500 million for 1961. Congress refused to appropriate any of the $500 million for 1961—yet Mr. CURTIS says $590 million was appropriated. Furthermore, table I to which Mr. CURTIS refers could not have shown, and did not show, any amount having been agreed to by the conferees for the very simple reason that the bill had not even reached the conferees. In fact, it had not even passed the Senate on the date to which he refers. But he, nevertheless, lists $590 million as having been agreed to. The fact is, Congress finally appropriated $550 million against the President's total request of $1,200 million, of which he proposed $700 million for fiscal 1960.

"CORRECTION B IN TABLE I AS OF SEPTEMBER 8, 1959"

"Correction B" is entitled "Authorizations to expend from public debt receipts in appropriation bills that are not included in table I." Table I is an appropriations table and is so labeled and under the rulings of the House these authorizations to expend from debt receipts have been held not to be an appropriation and, therefore, traditionally have not been included in "appropriation" totals. But, if Mr. CURTIS insists on amending table I to include these—and I did the same thing in my extension of remarks of September 15, page A8236—then he ought to list all such items. But he did not. He failed to include the similar public debt authorization items carried in the District of Columbia appropriation bill. So his "correction B," like "correction A," also needs to be corrected.

"CORRECTION C IN TABLE I AS OF SEPTEMBER 8, 1959"

This one he labels "Reported reductions in 1960 annual appropriation acts which will probably have to be restored in future sessions." This is a favorite charge of the opposition. Note use of the word "probably." The President said a similar thing in September 1957 right after Congress had cut his fiscal 1958 budget by approximately $5.7 billion. He indicated that much of the cut was phony and would have to be restored in deficiency bills in the next session. The truth is, as we conclusively documented on the floor when the first deficiency bill of the next session was brought in—February 25, 1958, page 2765, permanent RECORD—that less than 5 percent of the $5.7 billion cut had to be restored the next session and most of that was on mandatory items such as public assistance grants and veterans pension items not subject to precise determination in advance.

Mr. CURTIS now indulges in the same sort of thing. He has not the slightest idea whether any of those amounts which he lists in "correction C" will have to be restored and neither does anyone else. In any event, they are only nominal in amount.

"CORRECTED TABLE II" (NEW OBLIGATIONAL AUTHORITY PROVIDED OUTSIDE THE APPROPRIATION PROCESS)

In this table he seeks to "correct" table II appearing on the back page of the RECORD. But all he has done is to so confuse the situation by the use of inaccurate data that this "corrected table II" probably needs more extensive correction than any other. This "corrected table II" shows that the Congress increased the President's requests on "backdoor" bills by $606 million. That is so far from the truth as to be absolutely absurd.

The first thing he does is to show a $500 million increase by the Congress over the President's request in S. 57, the Housing Act of 1959. Then, he lists S. 2539, the second Housing Act of 1959, but he does not add the figures to arrive at the $606 million alleged increase. And he should not have added the figures on S. 57 in the totals, because the table in the RECORD which he seeks to correct clearly shows that both S. 57 and S. 2539 had been vetoed.

The third-try housing bill, S. 2654, carried no such increases as Mr. CURTIS lists in his table. In my remarks of September 15, page A8237, the correct situation is shown in the last entry on the "backdoor" table.

Incidentally, his most severe castigation was reserved for table II on the back of the RECORD. It is the fact that as of the date the table to which he addresses himself was prepared, for the bills shown it was literally correct in its comparisons of what the Congress had enacted as against what the President had requested. And it showed a reduction, as of that date, of $799 million. What it did not show, and evidently this is the one thing Mr. CURTIS really objected to although his remarks leave the impression the entire table was inaccurate, is that on the airport and housing bills the table did not compare the President's request and amounts made available for similar time periods. But, nevertheless, the table as presented was literally correct. It was not final for the session because the session was not then concluded.

"TABLE III" INSERTED BY MR. CURTIS (P. 17476, RECORD OF SEPTEMBER 10)

Mr. CURTIS identifies this table as one which "includes $1,683,900,000 in spending increases not requested by the President and blithely skipped over by the other two tables." In the first place, neither of the two tables in question, by their headings or otherwise, purported to represent the complete record of what had happened or what was happening to all of the President's budget proposals. Neither of those two tables purported in any way, shape, or form, to deal with budgetary revenue proposals, for example, and of course neither of them in any wise purported to deal with authorizations for appropriations which may or may not later materialize into actual requests. Congress frequently authorizes programs but does not supply the appropriation to carry them out.

For example, Mr. CURTIS lists one item, "All other authorizations for appropriations," showing an increase of $65,400,000 by Congress over the President's requests. He says this will "affect spending in 1960 and future years." How does he know? How does anyone know? Maybe the President will never ask for the money and even if he does, the Congress may well deny it.

Another item in this table is not accurate, or at least it is out of date. He lists an item from S. 57, the Housing Act of 1959, although as of the date of his remarks both that bill and the second housing bill had been vetoed and were in the process of being replaced, by a third housing bill containing lower amounts.

A third item on this table shows an increase of $36 million over the President's request relating to forest and public land highways. This is a duplicate entry because the action taken is already accounted for in table I on appropriations under the Commerce Department appropriation bill.

The insertion of this type of table is informative and useful to the Members and to the country, but not unless it is correct. This one is not correct in at least these three particulars.

REMARKS IN RECORD OF SEPTEMBER 11 (PP. 17622–17623)

In these remarks, Mr. CURTIS drags a number of red herrings across the scene. He confuses and confounds and makes mountains out of molehills.

For example, in the middle column, page 17622, he seems to impart some sinister motive to changes made in the headings of certain columns of the appropriation table appearing on the back of the CONGRESSIONAL RECORD. He tries

to make a big point of the fact that columns formerly headed, for example, "Budget estimates" were changed to read "President's budget estimates." These changes were clarifying and to make a point of them is childish indeed. It can be taken as indicative of the shallowness of most of his arguments.

Furthermore, in these same remarks, in the right hand column of page 17622, he indicates that table II—the back door table—on the back of the CONGRESSIONAL RECORD was, subsequent to July 6, prepared by an employee of the House Space and Astronautics Committee whereas previously it had been prepared by others. The chairman of that House committee has since stated on the floor that the table was not being prepared by anyone employed by the House Space Committee. More inaccuracy, and indicative of the trivia used to discredit and confuse.

"ALL AGREE IKE'S BUDGET WAS CUT"

This is the heading of a Scripps-Howard news story appearing in the Washington Daily News of Thursday, September 17, the first paragraph of which reads as follows:

They all agree, Republicans and Democrats of both House and Senate, that the 1st session of the 86th Congress cut the President's budget by $1,881,410,093.

This news story later refers to some controversy as to precisely how much was provided by the Congress outside the appropriations process—through "back door" bills. I undertook to show the true facts on new authority to obligate the Government provided in back door appropriation bills by inserting a table on page A8237, RECORD of September 15. So far as can be authoritatively determined, it is accurate and furthermore it is fair and honest in its comparisons with the President's requests. I am certain its authenticity can not be successfully challenged. It shows that, on a comparable basis, Congress in these back door bills did exceed the President's requests by some $231 million identified.

Mr. CURTIS—and he ought to enlist the aid of other colleagues of the House—would be performing a distinct public service if he would indulge less in obfuscation and devote his time to calling attention to the evils of back door spending which impairs effective congressional control of the purse strings. The left hand ought to know what the right hand is doing when it comes to handling the public funds. Mr. CURTIS could render valuable assistance in trying to stop this practice. But, all he has done here is to further confuse by disseminating inaccurate and misleading data.

MISLEADING BUDGETS

Incidentally, if Mr. CURTIS wants a lesson in obfuscation and budgetary legerdemain, or wants to complain about it, he should turn to the President's budget for fiscal 1956, submitted in January 1955. That was one of the most extraordinary documents ever submitted to the Congress. In black and white, it said that the Defense Department was going to cut its own budget by $1¾ billion. They did not specify where they were going to cut, but they said they were going to cut. It was only entered as a one-line item, "Unallocated reduction," which was to be allocated as the year proceeded. The truth is that they not only never did allocate it but they spent the $1¾ billion and $41 million besides. If there ever was a case of positive intent to mislead the people, there it was in the budget the President sent down to Congress in January 1955.

Another historic example: On the day the President submitted the fiscal 1958 budget in January 1957, the President's own Cabinet rebelled against it and demanded that Congress cut it. The Secretary of the Treasury himself came out and said it should be cut, hoped it would be cut, and he urged the Congress to cut it. Later in the session, the President sent a secret letter to every department and in substance told them that, regardless of what the budget said or regardless of what the Congress had provided, they were to cut their budgets back to the previous year's level as a minimum. At the same time, the departments were still defending the higher budget then pending before the Congress and every penny requested when many of them knew they were going to have to cut their appropriations once they were granted.

Lincoln Sesquicentennial Commission

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me concerning the activities of the Lincoln Sesquicentennial Commission.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As Chairman of the Lincoln Sesquicentennial Commission, which was established in 1957 by Public Law 85–262, I recently distributed to Members of the Senate and the House of Representatives a packet of materials and memorandums reporting, in brief survey, the activities of the Commission to date in connection with the commemoration of the 150th anniversary of the birth of Abraham Lincoln, the 16th President of the United States.

The members of the Commission have approached the observance with a basic premise in mind—that there should be participation in the observance by all the people of our country, from all walks of life, of all ages, and that the observance should extend beyond our shores to the peoples of the world. Our effort was based upon the assumption that the people needed only to be reminded of the observance, and that they would undertake participation through their own initiative. We have followed this approach in all aspects of the undertaking—in cooperation with State sesquicentennial commissions, educational institutions, churches, the press, broadcasting media, the motion pictures, unions, and numerous clubs, societies, and associations.

At the outset, the staff of the Lincoln Sesquicentennial Commission prepared a basic publication, a handbook, which spelled out in broad terms the objectives intended by the Congress, which offered a brief chronology of the life of Mr. Lincoln, reprinted some of the more famous quotations from his public statements and private communications, and presented specific suggestions for the participation of individuals and organizations throughout the Nation.

I am glad to say that there has been a groundswell of enthusiasm for the observance of Lincoln's birth. Newspapers, magazines, radio and television stations, churches, schools, union organizations, industries, and others have turned their attention to Mr. Lincoln and his life with such spontaneity and enthusiasm that one working closely with the Commission soon had the feeling that Abraham Lincoln walked again in this land.

The Commission itself, of course, has undertaken many specific programs. The Commission published a booklet, entitled "The Lincoln Ideals," and asked newspapers and broadcasters to offer this booklet without cost to readers, listeners, and viewers of Lincoln programs who would write to: Lincoln, Box 1959, Washington, D.C. Letters have come from every State in the Union, including the new States of Alaska and Hawaii, and whether by a wandering broadcast signal or by word of mouth the news reached people in many foreign lands, for the Commission has received requests in at least 30 different languages for "The Lincoln Ideals." Filling these orders alone has been a large task, and I am told that the Commission has printed and distributed over 150,000 of these booklets.

The Commission published also a smaller pamphlet under the title of "Abraham Lincoln Said." The press run on this piece has now reached 250,000. Over 100,000 have been given to visitors at the Lincoln Memorial in Washington, and 35,000 have been distributed on sightseeing buses here and elsewhere. Fourteen airlines, both domestic and overseas, are supplying this booklet to their passengers. Many State fairs cooperated also, exhibiting special Lincoln material and distributing the "Abraham Lincoln Said" pamphlet.

The Commission has distributed to newspapers throughout the Nation condensed quotations from Mr. Lincoln, under the title of "Lincoln Line-A-Days." These have been widely used, in some cases with line drawings illustrating the daily quotation.

The Commission has so far published four issues of the Lincoln Sesquicentennial Intelligencer. The first issue was four pages, the second contained six, and the last two have required eight pages to report sesquicentennial activities even in brief fashion. The Intelligencer is mailed to news media, associations, schools, union and industrial organizations, scholars, collectors and people in Government.

One of the most gratifying developments has been the enthusiasm with which State commission and State historical societies have devoted themselves to the sesquicentennial observance. These State commissions are active in 25 States throughout the Nation, and all of them have reported to the national Commission their activities and the response of the people of their States—which has been reported in the Intelligencer.

The Commission has initiated a special school campaign in cooperation with the National Education Association, and the results of this program have been most gratifying.

I am sure that Members of Congress will never forget the joint session of Congress held last February 12, when Mr. Carl Sandburg, one of the Commission's honorary members, and Mr. Fredric March spoke in an historic and moving ceremony.

The U.S. Information Agency has been working on Lincoln Year projects since January, and has sent a great volume of material throughout the world—for the name of Lincoln is known, and held in respect, in every country in the world.

There are many indications of the interest in this commemorative program, and I shall mention a very simple one. As nearly everyone has noticed, a new Lincoln penny was minted this year. The Director of the Mint, Mr. William Brett, told me that by some presently unpredictable date in 1960, more of these coins will have been minted than any other coin in the history of the Nation.

It has not been a surprise to learn that the name "Lincoln" is still magic in our land, and that the principles and ideals for which he stood hold the interest of the people of the world.

Mr. Lincoln had many qualities which can well be recalled in these days. He believed in frugality. On February 21, 1856, Mr. Lincoln wrote to a Mr. George P. Floyd of Quincy, Ill., as follows:

"DEAR SIR: I have just received yours of the 16th, with check on Flagg and Savage for $25. You must think I am a high-priced man. You are too liberal with your money.

"Fifteen dollars is enough for the job. I send you a receipt for $15 and return to you a $10 bill.

"Yours truly,

"A. LINCOLN."

The Committees on Appropriations of the House and Senate, while understanding the value of the work of the Commission, have very properly limited appropriations for its work to the minimum they believed appropriate. I am glad to say that the Commission has respected the desire of the Congress that it be economical in its expenditures. The Commission returned to the Federal Treasury $3,735.87 of the 1958 appropriation of $37,500, and $32,520.73 of its 1959 appropriation of $350,000. I can assure the Senate that some additional amounts of the 1959 appropriation will be returned following certain fiscal adjustments in the Commission's program. The Commission's appropriation for 1960 was reduced to $145,000; it will exercise the same care in the expenditure of these funds, and will endeavor to return a part of this appropriation to the Treasury.

I would like to express my personal appreciation for the work of my colleagues on the Commission, those appointed by the President of the United States, by the Speaker of the House of Representatives, and by the President of the Senate, and for the excellent support given us by the 77 honorary members of the Commission. I insert at this point the names of all those who are serving now, and who have served as members of the Commission.

The Commission has extensive plans for additional projects in the concluding months of Lincoln Year. A full report of these and the preceding events in the observance will be contained in the Commission's final report to the Congress.

PRESENT MEMBERS OF THE LINCOLN SESQUICENTENNIAL COMMISSION

The President of the United States, ex officio.
The President of the Senate, ex officio.
The Speaker of the House of Representatives, ex officio.
Hon. JOHN SHERMAN COOPER, U.S. Senate, Chairman.
Miss Bertha S. Adkins, Vice Chairman.
Hon. LEO E. ALLEN, Member of Congress.
Mr. Victor M. Birley.
Dr. Ralph J. Bunche.
Hon. FRANK CHELF, Member of Congress.
Hon. FRANK CHURCH, U.S. Senate.
Hon. WINFIELD K. DENTON, Member of Congress.
Dr. John S. Dickey.
Hon. WILLIAM G. BRAY, Member of Congress.
Hon. EVERETT M. DIRKSEN, U.S. Senate.
Hon. PAUL H. DOUGLAS, U.S. Senate.
Mr. John B. Fisher.
Hon. PETER F. MACK, Jr., Member of Congress.
Dr. R. Gerald McMurtry.
Dr. L. Quincy Mumford.
Hon. HOMER CAPEHART, U.S. Senate.
Rev. Paul C. Reinert.
Mr. Walter N. Rothschild.
Hon. William G. Stratton.
Dr. William T. Townsend.
Mr. Conrad L. Wirth.
Hon. RALPH YARBOROUGH, U.S. Senate.
Hon. EUGENE SILER, Member of Congress.
Hon. Sinclair Weeks.

FORMER MEMBERS OF THE LINCOLN SESQUICENTENNIAL COMMISSION

Hon. F. Jay Nimtz.
Hon. William E. Jenner.
Hon. John M. Robsion, Jr.
Mr. Jouett Ross Todd.

Congress Adjourns, Congressmen Migrate Homeward

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BRADEMAS. Mr. Speaker, last month the Wall Street Journal carried an article by its able Washington correspondent, Mr. Paul Duke, entitled "Congress Off and Running—for Re-election, Business Meetings, Vacations, and Home."

I should like to introduce into the CONGRESSIONAL RECORD an excerpt from this article.

The excerpt follows:

Representative JOHN BRADEMAS, one of 63 first-term Democrats who either ousted Republican incumbents or defeated GOP candidates in 1958, will scramble back to Indiana's Third District to begin a 3-month speaking schedule.

He is already scheduled to address a teachers' convention; school classes; a League of Women Voters meeting; an Odd Fellows convention; a YWCA conference; Catholic, Jewish, and Protestant groups; chambers of commerce, several Democratic rallies and dinners; and a group of Army enlistees doing missile work at South Bend.

In addition, the 32-year-old, one-time Rhodes scholar—a political science professor before going to Congress—plans to shake as many hands as possible at courthouse and street meetings with constituents.

Mr. BRADEMAS is thinking of setting up a mobile office in a Studebaker station wagon (Studebakers are made in South Bend, his hometown) for his tours across the four-county farm and factory district. And he is considering calling on his older political friends, Senators HUMPHREY, of Minnesota; and KENNEDY, of Massachusetts; to join him in a television film conversation for showing at rallies.

A "liberal" Democrat, Mr. BRADEMAS hopes to smooth over relations with organized labor, which wholeheartily supported his election last fall but which differed with his stand on labor reform.

The Teamsters Union singled him out for criticism because he supported legislation stronger than labor leaders wanted, though not as strong as the bill that eventually passed.

"I don't think I've been hurt badly," declares Mr. BRADEMAS. "I made it clear from the outset I was for labor reform and made no bones about it. Anyway, I doubt that it'll be any issue in 1960."

Statement by Senator Wiley on His Activities During the 1st Session of the 86th Congress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. WILEY. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD a review of highlights, including my own activities, during the 1st session of the 86th Congress.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

SENATOR WILEY'S RECORD IN THE 1ST SESSION OF THE 86TH CONGRESS

Upon adjournment of the Congress—as senior Senator of Wisconsin—I am taking this opportunity to review the highlights of legislative action during the session.

The résumé will include (1) measures which I sponsored, cosponsored, or supported; and (2) it will include efforts to oppose legislation which I felt against the best interests of Wisconsin and the Nation.

A brief review cannot, of course, touch upon all the issues raised in this session of Congress.

This effort, however, is to hit the high spots and provide a general idea of my overall record.

STRENGTHENING OUR NATIONAL DEFENSE

Nationally, the maintenance of a strong defense is still a real challenge before the American people.

The worldwide Communist conspiracy—pursuing its goals of world domination, and controlling about a billion people and vast volumes of natural and strategic resources—continues to be a real threat to our security. Consequently, it is vital that we support a strong U.S. defense—and strengthen efforts to create an ever-stronger free-world alliance—to act as a deterrent to aggression by the Communists.

During the session, I supported, for the most part, the administration's recommendations for expansion of our Army, Navy, and Air Force; procurement of modern aircraft, warships, missiles, and submarines; carrying forward our space exploration programs—with its significance, not only for scientific and military purposes, but also for progress in such fields as weather forecasting and control, communications, transportation, and other activities; extension of the draft; expanding our scientific research and development program; and other measures to provide us with protection in our battle for survival with the Communist world.

MAINTAINING A STRONG ECONOMY

Strengthening our economy, too, is a major challenge. Unless we remain strong and healthy economically, we will not be able to support the needed defenses, nor to meet

the competition by the Communists, in the economic, ideological, scientific, and other fields. Economic progress is needed, too, to further improve the standards of living for our people.

To promote economic activity, measures were enacted to improve and expand our airport construction program; expand the housing program; establish a Commission on Unemployment Problems, to deal with the various aspects of unemployment, which adversely affect the economy; clarify the conditions under which States can tax firms dealing with interstate commerce; and other measures.

During the session, also, a strong constructive effort was made to balance the Federal budget—so as not to increase the burden on the American taxpayer, as well as to keep inflationary pressures at a minimum.

CURBING ABUSES IN THE LABOR-MANAGEMENT FIELD

During its brief lifetime, the Select Committee on Improper Activities in the Labor or Management Field, probing into the field of labor and management, revealed strong evidence of abuses in the labor-management field.

The 86th Congress—courageously and constructively, I believe—enacted legislation designed to curb such abuses.

We recognize, of course, that new laws are only as effective as their enforcement. The task now is to put the new statute, Public Law 86-257, into effect as effectively and quickly as possible.

The purpose of the law is not to unnecessarily hamstring either the unions or management. Rather, the aim is to protect the rights of the workers, preserve the legitimate interests of both union and management, as well as to protect the interests of the public.

VETERANS LEGISLATION

Over the years, the Nation has designed a program of veterans benefits to meet the needs of patriots who have served in our country's armed forces.

In view of the sacrifices of our veterans, it is particularly important, I strongly feel, to maintain a fair system of benefits.

During the session of Congress, a wide variety of proposals were made for further modifying and/or improving such benefits.

However, the major piece of legislation enacted was: Public Law 86-211 to (a) increase non-service-connected pensions to veterans; (b) establish payments on a revised scale, perhaps on need; and (c) equalize pensions of World War II and the Korean war widows, with those of World War I.

The pending legislation relating to pensions, housing, medical care, and other veteran interests will be subject to further consideration next session.

PROTECTION OF CIVIL RIGHTS

As ranking Republican of the Senate Judiciary Committee, I am naturally deeply interested in assuring the protection of the constitutional rights of all our citizens—regardless of race, creed, or national origin. Having cosponsored legislation passed during the 85th Congress—the first major civil rights legislation enacted in 80 years—I again supported such efforts during this Congress. The best that could be obtained was the extension of the Civil Rights Commission, which is carrying on studies and investigations in this field. The purpose is ultimately to strengthen our laws so as to assure preservation of the precious privileges and rights of all our citizens under the Constitution.

COMPLETION OF ST. LAWRENCE SEAWAY

In 1954, the enactment of the Wiley-Dondero law authorized the United States to participate in deepening and modernizing the St. Lawrence Seaway. In June 1959 we witnessed the completion of that project. The seaway is now a reality.

During the 50-year effort to get legislative approval of the seaway, strong opposition was voiced by the Atlantic coast ports, the eastern railroads and about 200 other organizations. With the seaway completed, we who supported the project felt that the fight was finished.

Unfortunately, this now appears not to be true. During the 86th Congress, for example, the fight was renewed. How? During the enactment of a law to extend the Public Law 480 program for shipment of surplus farm commodities overseas, an effort was made to tack on an amendment which would have virtually killed off substantial proportion of such traffic through the seaway. The purpose of the amendment was to require that shipment of surplus farm commodities from the Midwest—for example, through Milwaukee, Green Bay, or other lake ports—would, instead, be required to come through gulf or Atlantic coast ports.

Fortunately, we were successful in defeating this ill-advised effort.

Despite this victory, however, the attack should serve to warn us that, in all likelihood, there will be successive efforts in the years ahead to cripple the seaway.

IMPROVING THE GREAT LAKES CONNECTING CHANNELS

The early completion of work to deepen and improve the Great Lakes connecting channels, too, is of high priority. As yet, these channels between the lakes west of Lake Erie will not handle deep draft vessels. According to schedule, the earliest date at which this work can be completed is 1962.

During this past session, as in previous sessions, it has required a fight to get approval of sufficient funds for deepening and improving these channels. Fortunately, we succeeded in getting approval of about $26.9 million for the fiscal year 1960. The job now is to get adequate funds in years ahead to enable the Corps of Engineers to finish the deepening and improving work by the target date of 1962.

RIVERS AND HARBORS

With the completion of the Seaway, a next major step is the further deepening and improving of our ports and harbors. During this session, it was possible to get approval of additional money for Federal participation in providing for expansion of our port facilities for handling increased volumes of traffic. The harbor projects include Bad River, Bayfield Harbor, Eau Galle River, Saxon Harbor, Two Rivers Harbor.

OPPOSING WATER STEAL BILL

During the past session of Congress, a new effort was made to enact legislation to authorize diversion of dangerously large volumes of water from Lake Michigan.

Although such action has been defeated—either by opposition in Congress or by the President's veto—in previous years, the proponents continue to attempt to push such ill-advised legislation through Congress.

Although the bill again passed the House of Representatives, it was possible—after a long and arduous debate in the Senate—to have the bill recommitted to the Foreign Relations Committee. The purpose of this move is to assure consideration of the international problems created by such legislation, since the diversion bill proposes to take water from the Great Lakes which serve as the common boundary between the United States and Canada.

We can expect that the supporters of this bill will be pushing it again in the next session of Congress.

GREAT LAKES BASIN COMPACT

As the Great Lakes States attempt to further develop their resources, it has been felt that the establishment of a Great Lakes Basin compact would help to speed the development and utilization of the industrial, commercial, cultural, residential and other resources of the area.

Fortunately, it was again possible to get the bill, S. 548, passed by the Senate. As last year, however, it was regrettably bottled up in the House of Representatives.

ICE AGE NATIONAL PARK FOR WISCONSIN

During this session, too, I introduced legislation to establish an ice age national park in Wisconsin. The purpose of this was to preserve the beauty of the unique topographical features of the 500-mile-long moraine area. The moraines include formations of rock, gravel, sand, hills, and valleys—sculptured by glacial action—and are of tremendous geological, scientific, biological and scenic significance. These moraines are unsurpassed anywhere in the United States. A study is being made upon the feasibility of establishing such a park by the Department of the Interior. Unfortunately, this has delayed action on the legislation for a considerable length of time. However, I shall again be urging that the Congress take action for the establishment of a moraine national park in Wisconsin during the next session.

OTHER LEGISLATION SPONSORED OR COSPONSORED BY SENATOR WILEY

Senate Resolution 19 would establish a standing Committee on Veterans' Affairs in the U.S. Senate.

Senate Concurrent Resolution 7 extends best wishes of Congress to the American Dental Association. (Passed on February 9, 1959.)

Senate Concurrent Resolution 10 favors congressional recognition of the National Railroad Museum to be located at Green Bay, Wis.

Senate Joint Resolution 66 provides for the centennial celebration of the establishment of the land grant colleges and State universities and the establishment of the Department of Agriculture.

S. 11, to strengthen the Robinson-Patman Act provisions relating to the burden of rebutting prima facie cases of unlawful price discriminations.

S. 50, to provide for Hawaiian statehood; signed into law on March 18, 1959, and now Public Law 86-3.

S. 265, to establish a Commission on Country Life. The purpose of this bill would be to design long-range programs for brightening the outlook in agriculture.

S. 730 would establish a U.S. Foreign Service Academy to "sharpen up" our Foreign Service program.

S. 764, to establish a Richard E. Byrd Antarctic Commission to better protect U.S. rights in Antarctica.

S. 895, to provide a public defender for indegent defendants in U.S. courts.

S. 910, to authorize payments in lieu of taxes to local governments for Federal nontax-paying property.

S. 988, to establish uniform milk sanitation standards to protect the public health.

S. 1003, to compel production of documentary material in antitrust cases. A bill with similar objectives, S. 716, passed the Senate on July 29, 1959.

S. 1019 extends to Farmers Home Administration operating loan program to bona fide fur farmers.

S. 1123, to establish a National Wilderness Preservation System.

S. 1021, to provide for a fairer apportionment of funds to aid the States in wildlife restoration under the Pittman-Robertson Act.

S. 1289, to increase and extend special milk program for children; enacted as Public Law 86-163.

S. 1315, to incorporate the Blue Star Mothers. Passed Senate April 29, 1959. Referred to the House District of Columbia Committee.

S. 1365, for better disposal to certain welfare agencies of surplus property.

S. 1380, to establish the Patent Office as an independent agency.

S. 1383, to require competitive bidding on Armed Forces contracts.

S. 1395, to provide for an adequate supply of turkeys to consumers, to maintain an orderly marketing condition and to promote the consumption of turkeys.

S. 1459, to establish a Dairy Research Laboratory at Madison, Wis.—in the heart of dairyland.

S. 1885, to establish a Hoover-type commission on Federal taxation for a top-to-bottom overhaul of the system.

S. 2004, to eliminate termination date for non-quota immigrant visas for certain alien orphans.

S. 2080, to establish a National Economic Council for Security and Progress, which would plan and coordinate programs to meet the Communist challeng in the economic sphere.

S. 2123, to provide mandatory sentences in certain cases for mailing, importing, or transporting obscene material.

S. 2188, to establish a Citizens Council for the Advocacy of Freedom, to counter the Communist's ideological offensive on a world-wide basis.

S. 2168. I strongly opposed this bill, aimed at substituting oleomargerine or margerine for butter in the rations of the U.S. Navy.

S. 2242, to make a study for feasible means of deicing the Great Lakes and St. Lawrence Seaway for the ultimate purpose of opening this great tradeway to year-around navigation.

S. 2315, to deny passports to supporters of the International Communist movement.

The More Things Seem To Change in the Cold War, the More They Remain the Same

---

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered to the national strategy seminar, National War College, July 22, 1959:

THE BASIC THEMES

(By Hon. WALTER H. JUDD, of Minnesota)

General Armstrong, gentlemen, Dr. Kramer's kind remarks recall the years I worked in China as a doctor. In 1930, when I spent 8 months in an area under the Chinese Communists, they were then a little band of supposedly domestic revolutionaries, so-called agrarian reformers, controlling only two mountainous counties. From that time to this I have been a salesman for one idea: that Communists act like Communists. Unfortunately, I have been an unsuccessful salesman, as has almost everybody else who has tried to sell this idea. People insist on believing that they will act like nationalists, that Communist governments operate in terms of national interests. Therefore, if we offer a Communist government in Moscow something that would satisfy the legitimate interests of the Russian people, as Russians, we hope the Communist government there will be influenced or attracted thereby. Or the same in China. It is not so.

A very important official in Washington once said to me that he wasn't too concerned about Red China because he was sure that the interests the Chinese Communists have as Chinese would lead them into conflict with the Soviet Union. I had to say, rather unwisely, I suppose, "This proves, sir, only that you don't know anything about communism." He didn't like it.

The Chinese Communists do not act like Chinese. They were borne Chinese; they speak Chinese; they look like Chinese; but they are not Chinese. They have rejected every value and principle of Chinese culture and thought.

Chinese Communists act like Communists. They are not Chinese patriots; they are part of a world revolution.

We also imagine that Communists act like capitalists. If we will offer them some trade and some profits then they will think in terms of what we consider to be their legitimate interests, their material profits, and we can do business with them. But they don't operate in terms of profits. They are not capitalists.

And they are not Democrats. They are not interested in the well-being and the wishes of the people in the sense that democratically minded people are.

And they are not Christians. We always appeal to them on the basis of Christian, humanitarian motivations. But they are not Christians; they are not humanitarians. This is not to say they are bad people; they are Communists. They are good people, according to Communist standards.

We insist on projecting our values into the minds of people who reject and denounce those values, people who say the values are bad, even when men live up to them: and then we are upset when they don't live by our values. Why do we expect it?

All this is an unintended prelude to what I want to talk about this morning. People say, what a changing world ours is almost from moment to moment. I heard the 8 o'clock news on my car radio this morning. There was speculation about what Mr. Khrushchev had said yesterday. Didn't this hint a basic change in Soviet policy? Always we talk about changes that supposedly are taking place.

Of course, there are great changes in weapons; there are changes in machines; there are changes in means of communication, transportation, gadgets. But have there been many changes in human beings? What is done with the new gadgets is determined by what human beings think and feel, what is in their minds; their vanities, their ambitions, their urges, their follies, their foibles. These remain pretty much the same. In the end it is the human heart, the human being, that is our big problem. Not the machine, but the men who control it.

Looking at our world situation today, sometimes I think that the more things seem to have changed, the more they remain the same.

I

The first thing that remains the same, I have already mentioned: There still is in the world a Communist conspiracy, operated, directed from the Kremlin in Moscow with substations here and there. It has not changed.

Its objective remains the same—world conquest.

It is also still true that we are its main target. Why? Because we are all that stands between it and world conquest. When they are apparently aiming at Quemoy, or at Lebanon, or at something like West Berlin, we are the real target.

When a football player grabs the ball and starts to run, it is a touchdown that he is after on every play. If he can't get a touchdown, at least he hopes he can get a first down, or a few yards. If, at Geneva, they can't get the world by tricking us, maybe they can get a first down by disintegrating the West; or at least they may be able to get West Berlin. And if they can't get that, maybe they can get three or four yards—a thinning out of our forces in West Berlin—an acceptance of East Germany. If not that, at least they can hold the ground they have. They know they can hold that because we have told them in advance that we are not going to try to take anything away from them.

We are like a team that would stand on its 40-yard line and say to the opposing team, "Now, if you try to go through us, we will hold. We will fight back to stop you. But don't worry, we want to have good relations with you; if one of your fellows should drop the ball, we assure you that we will not grab it and run to your goal line. We are just holding on our 40-yard line."

Nobody ever yet won a football game that way. We can't win this kind of a world contest by just being on the defensive. No wonder they want to have conferences. They can't lose. And they can win.

But why we should want to go, I don't know; because we can't win; we aren't trying to win. And we can lose.

If you let me take the offensive and try here, try there, without any fear of defeat or even of reprisal, because you have assured me ahead of time that you are never going to try to score on me, then on one of my probings sooner or later I will break through and win.

Our maximum is just to maintain the status quo. Please, Mr. Khrushchev, be nice enough to give some more assurances like the ones you made before, which you didn't keep. I don't know what will give greater value to a new promise than the old one had. But we almost plaintively plead with them to give us another settlement, to let us hold just what we got at the last settlement.

The status quo is our maximum; it is their minimum. They can't lose; we can't win.

Their objective remains the same. No one can show the slightest evidence of any change in it.

Furthermore, the objective must remain the same. It can't change. They can no more have communism without this fixed, unchanging objective of world conquest than you could have Judaism without the Ten Commandments, or Christianity without the Sermon on the Mount. This objective is the heart of communism as the Ten Commandments are the heart of Judaism. We want communism without communism.

Why must it remain the same? The Communists will explain that to you over and over again, as they did to me in south China 29 years ago when I had some of them as my patients; and again in 1937 and 1938 in north China, when I had another batch of them as patients, including Lin Piao, later the commander of the Fourth Field Army which killed a lot of our boys in Korea. They spent endless hours explaining this. They don't apologize about communism. They boast of it. This is what they believe. They think we are stupid not to see that it is bound to win.

This objective of world domination must remain the same because their great goal is peace, defined in their terms. In order to get peace, they have got to abolish private property, and the capitalistic system which is based on private property. They believe that as long as anyone has captialism, there will always be wars, because capitalism, based on the belief that individuals have a right to hold property as their own, develops selfishness in man, develops aggrandizing, acquisitive tendencies in man. Men try to get what doesn't belong to them. Then, of course, there are wars.

So they have to abolish the capitalistic system if there is to be peace. But they can't abolish the capitalistic system unless

first they conquer the world. That is why the objective of world conquest cannot change. And since we are all that stands between them and world conquest, we are the main target. If we can be confused or lulled into slumber, or divided or separated from our allies; if they can weaken us, they soon will have the rest of the world. Then they can destroy the capitalistic system and the institution of private property. Then they can take children away from their parents so that the parents won't have the opportunity to teach them that they have rights of their own—just because they are human beings.

Then they can brainwash the youth, as they call it; bring them up just as Pavlov brought up dogs, really. He demonstrated that by strict control of the environment of young dogs, he could condition them to make automatic, predictable, unvarying responses. The dogs didn't decide Yes or No according to their own individual wills. They always gave the same answer to the same stimulus.

You and I believe that man has the capacity to make moral judgments. He has a free will. He can say "Yes" or "No," according to what we call his conscience. Communists say we believe these things only because we have been taught them by our parents or our teachers or our religious leaders, by our Declaration of Independence, and so on. But it isn't really so; we would not imagine we have the capacity to make individual decisions as men if we had not been taught that. And if we are not taught a belief in private property as a right, then we won't have an acquisitive urge to get it.

Human beings trained and conditioned by them, without the crazy notion of individual rights that we have been taught, will be cooperative and will think in terms of the masses. Nobody will want anything for himself. And then, of course, policemen won't be needed. And a government will not be needed. And the state will wither away, and men will have the perfect society with peace.

We object that they can't go against human nature. They say they aren't trying to go against human nature; that there isn't any such thing as human nature. Human nature is what you make it. We make it acquisitive and selfish. They are going to make it selfless.

So it is to get peace, and no government at all, that they must first have an all-powerful government—in the Kremlin. It must be all-powerful now in order to conquer the world and get rid of capitalism and these false ideas from the past—and then abolish itself.

It all sounds so convincing. You sit and listen to them in their enthusiasm and sometimes you wonder whether after all we are right, or they.

Of course, this line appeals to the youth in all countries because it promises quick and final answers. Young people everywhere are idealistic, they care about poverty, disease, squalor. They want to improve conditions. They care about the needs of men. Communism offers such attractive solutions.

So, naturally, their first target ideologically in any country is the mind of youth. By the time they get around to uprisings of soldiers, laborers, or peasants, they already have it in the bag. They have already enlisted the youth and trained them long and hard in the Communist faith and methods, as you are, I hope, being trained here, but in a different philosophy.

We say there is a North Star in the world. You don't have to chart your course by it if you don't want to; but there is a North Star. They say that there isn't any North Star. There are no such things as right and wrong, good and evil.

We say you can go with the grain in the wood, or you can go against the grain. But it is better to find the natural grain and go with it. They say there isn't any natural grain; they can make man and the world what they want them to be.

Look around you, gentlemen. Superficially examined, you can find an awful lot in the world that appears to be on their side.

So the Communist objective remains the same. It has to remain the same.

Their strategy also remains the same. It too is fixed. It is permanent revolution.

They are at war, first of all, with their own people. There would be a better chance of our getting along with them, making real peace with them, if they would first make peace with their own people, both in Russia and in China. But permanent revolution is an inherent part of communism. It is a way of life.

The tactics also remain the same—complete fluidity. Everything depends on the situation. One approach to the rich, another to the poor. One to the majority, another to the minority. One to the white, another to the black or to some other race. One to the nativeborn, one to the immigrant. One to the rural fellow, one to the city dweller. This is not just duplicity, this is smart tactics.

When they are winning, they are hard, tough, relentless. At Dien Bien Phu, the French asked for a truce for 24 hours to evacuate the wounded. The Communists, of course, wouldn't give them a truce. Not because they are cruel, but because their objective is victory. They are not humanitarians.

When they are losing, they are soft smiling, seductive. When they were losing in Korea, they said, "Let's have a truce." truce is the military equivalent of the politisue tactically.

In the Chinese Communist catechism, which the youth are taught, there is a very illuminating sentence by Chou En-lai: "A truce is the military equivalent of the opliticaI tactic of coalition."

In politics, if you have enough votes to win, you don't ask for a coalition, you hold an election. But if you don't have enough votes you don't have an election as the way to get to power, you call for a coalition. For example, in Germany today, because they couldn't win an election, they urge a coalition of East and West Germany.

In politics, a coalition. In war, a truce. Not as a means of getting peace but as a means of getting victory. To them a truce is not a peace move; it is a military tactic.

If they haven't enough military strength to win, don't fight. Get around the table and maybe you can, by stalling, pretended negotiation, etc., get there what they couldn't win on the battlefield. When they couldn't win on the battlefield in Korea, they proposed a truce—not to end the struggle, which was our naive notion, but to win the struggle. End the fighting in Korea, where they couldn't win, to shift to Vietnam, where they could win. They really won in both places that way.

At the end of the war in China when Chiang Kai-shek had the upper hand, had the Communists surrounded in the Northwest, for the first time was in a position to defeat them, they said, "We want a truce; we want a truce." We listened to them and forced the Generalissimo into a cease-fire. Four times in one year, 1946, we induced him to order a cease-fire. We put an embargo on 30-caliber ammunition for the 30-caliber rifles we had supplied to his best troops. The morale of Chiang's armed forces and of the Chinese people was destroyed. You can't build any military force or a football team up to a morale peak ready for battle four times in one year, call the game off, and then be able to get the morale up again.

Soldiers and people both said, "Is communism an enemy or isn't it? If it is an enemy, let's fight it. If our leaders are going to have tea with them, then it must not be an enemy. Why die? Let's make terms."

Our American Ambassador to China was ostentatiously sent up to Yenan and hobnobbed with the Communists, putting both the enemy, and the Government of China, our ally, on an equal basis. Chiang Kai-shek was finished, of course, with his own people. They knew he could not make it if we were not really going to help him win. If we had treated the English, French, Italians, or Greeks after the war, the way we treated the Chinese, not one of them could have made it either.

We didn't give the Chinese proper aid to try to help them win. We tried to force them into a coalition with the Reds—because we didn't understand communism.

In Greece, the policy we followed was right. Mr. Truman deserves great credit for it. In 1947, he said, "It must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures." Absolutely right.

We didn't go into Greece and say, "Listen, you ought to arrange a coalition with the Communists. You mustn't have a civil war. You mustn't have bloodshed. You must have a truce." Instead, we said, "We will help you only if you resist a coalition with the Communists and fight them instead." And we helped them build up their forces for that purpose.

Even so, we didn't make much headway until, 6 months later, we sent over General Van Fleet and authorized him to "advise and train at all levels." I fought, bled, and lost in efforts to get those same six words into the directive of our military mission in China in 1947. It never was done. On the contrary, our military mission in China was forbidden by us to advise and train the troops. They couldn't go within 50 miles of the battle lines. They couldn't go out with the forces in the field. They had to sit in Nanking and work out a logistic system on paper.

In Europe, we said, "We will help you only if you keep the Communists out of your government." In China, we said, "We will help you only if you take the Communists into your government."

In Europe, we said, "You must oppose the Communists." In China, we said, "You must appease the Communists."

In Europe, we said, "You must win the civil war." In China we said, "You must not win the civil war; you must have a coalition."

Our policy in Europe was right. It succeeded. Our policy in China was wrong. It failed, of course.

Why did we follow opposite policies on the opposite sides of the globe? Partly because somebody didn't discover that the planet no longer has four separate strategic areas; the Western Hemisphere, North Atlantic, Mediterranean, the Far East. The planet now is one strategic area. A major breakthrough in any one of the four will have disastrous repercussions on the others.

The first T, then, is truce, in any area where they are in trouble, in order to shift to some other area where they may be stronger.

The second T tactic is talk.

People say you never lose anything by talking. You don't? It was during 2 years of talk at Panmunjom that they got the H-bomb. It was during 2 years of talk on disarmament, our hopes lifted one day and dashed the next, all shadow boxing, that they got sputnik. Then they said, no more talks on disarmaments. The talks had served

their purpose. There have not been any serious talks since.

Trade is another. Lenin said, "You can always count on the cupidity of the capitalists." So whenever they get in a jam they offer some trade.

This is an old one. You remember that in 1933 the Communist regime in Russia was at almost its lowest ebb. They were in great trouble at home. Litvinov came here and said, "You have a depression. There is mass unemployment in the United States. Don't you want to put your people back to work? Why don't you recognize the Soviet Union, and have a vast expansion of trade?"

So we recognized them, for that and other reasons. Did our trade go up? No; it went down. We have never had as much trade with the Soviet Union a single year since 1933, when we recognized it, as we had had each of the 5 years before we recognized it. We had much better economic relations with them before we had official relations with them.

Because Communists are not capitalists. They don't trade for commercial reasons, to satisfy the needs of people, to improve their lot, to build better relations, to make a living in the process, and in the end to develop peace. Trade is a weapon for conquest, just like a bomb.

Mr. Mikoyan came over here in January. He obviously had a maximum objective. He hoped he could get some $2 billion worth of credit from the United States, so that they could use our money to buy our goods and machines, and then we would kid ourselves that we had sold them something.

I don't know whether he really thought he could get that. Probably not. But it couldn't do any harm to try. And if he didn't make any headway on that, at least he could make some headway at confusing us and softening us up.

To try to accomplish that, he used the next T—trust. He said, "Why don't you trust us? Why are you so suspicious?"

Most Americans are decent; they were caught in their consciences. They thought, "Well, it is kind of mean of us. Maybe we should trust them more."

Why didn't we insist that they first give us just one good reason to trust them?

I have a friend who was a great football player at Minnesota in the years when we had great football teams there. Three years ago this fall he said to me—this was when the Communists were in one of their periods of turning on the charm and the talk and the soft, smiling, seductive tactics, "Now they are allowing some Americans to come into Russia, they are raising the Iron Curtain. WALTER, you are just playing the same old tune I have heard you play for 20 years. Why don't you change the tune? We ought to give them the benefit of the doubt, believe the best of them, have faith in them, trust them."

I said to him, "How much is two times two?"

He said, "Four."

I said, "Why don't you change that answer? It is the same old tune you have been playing for 20 years. I am getting tired of that tune. Why don't we make it two times two is five, for a while?"

There are some things in arithmetic you can't argue about. And there are some things in communism you can't argue about.

I said to him, "Let's go out to the football game." The first game was coming up the succeeding Saturday—"I don't know much about football. You explain it to me. I think I can hear you say, 'Now, WALTER, keep your eye on the quarterback. He is the key man. Watch how skillfully he fakes a hand-off to the right—to confuse or mislead the other team, and then he will run or pass or something else to the left.'

"When you tell me that, I am going to say, 'How dirty can you be, imputing all those evil motives to that nice, clean-looking young Minnesota quarterback? You ought to believe the best of that boy. You ought to trust him. You ought to give him the benefit of the doubt. You are suggesting that he would trick that other team, that he would mislead them, deceive them. You ought to have faith in him."

I said, "You will say to me, 'WALTER, haven't you ever read the football manual? Don't you know that football is based on two things: power and deception? If you have enough power, you go through. If you don't have enough power, you use tricks. And that boy is the quarterback only because he is the very best man on the team at deceiving the other side.'

"When you make that speech to me, I will say to you, 'Haven't you ever read the Communist textbooks? Don't you know that communism is based on two things: power and deception?' " No, we haven't read. That is the trouble. We don't read. He thinks I ought to read the football manual, but he won't read the Communist manual. Just as a lot of people wouldn't read Hitler's manual. He wrote it all out—Mein Kampf—so everybody would be sure to know, but we wouldn't pay attention to his rule book; we insisted we could do business with him—on our terms.

Likewise, we insist that Communists are going to play by our rule book. No; they are going to play by their rule book; and their rules are power and deception.

Mikoyan is not their number two man because he is good at telling the truth. It is because he is good at deceiving the opponent. He is a smart quarterback, that is all.

If they haven't enough power to go through Turkey, they shoot a forward pass over Turkey to Nasser or Iraq. If they can't drive through Western Europe where we are standing firm, they try an end run across North Africa from Suez through Algeria to Morocco. If they can't get through Vietnam just now, they shoot a forward pass over Vietnam to Sukarno in Indonesia. He isn't sure he is the eligible receiver as yet, but the Commie pass is there for him to gather in if at any moment his confidence in us is shaken.

I hope you will forgive me for being so elementary. I work in a place now where I have to be elementary.

The only thing important in all this is that two times two is still four. We will never get anywhere with all the complicated speculation of commentators about supposed changes in Communist plans and purposes. All the little shades of offers and counteroffers at Berlin or Geneva or elsewhere don't make sense until we know by heart the rules by which the enemy plays.

This is not to condemn; this is just to recognize facts.

Mr. Mikoyan asked, "Why are you so negative? Why don't you take a more positive attitude?"

Some here said, "Well, he may be right; perhaps we shouldn't be so negative."

Why didn't we come back and say, "Who is it that is negative?" How many times have they used the veto at the United Nations? Eighty-seven times. How many times have we used it? Zero.

Then he said, "Well, what is the difference between our troops going into Budapest and your troops going into Lebanon?"

A lot of our people thought, "Well, he probably has got something there." No, he didn't have a thing there.

Why were our troops in Lebanon? Because nine countries within one 24-hour period said we had to come within 48 hours, and they included Greece, Turkey, Iran, Jordan, Lebanon, Saudi Arabia, Israel, Tunisia, and Morocco—or the Middle East from Morocco to Pakistan would be gone.

We went into Lebanon at their request. Did anybody request the Russian Communists to come into Budapest?

Second, what happened while we were there? Not a Lebanese lost his life. Twenty-seven thousand Hungarians were killed by the Reds in Budapest in a week.

Third, are we still in Lebanon? No, we got out just as soon as our mission was accomplished. Have they gotten out of Budapest? No, indeed. Every Hungarian would give almost anything except his honor to get them out.

Yet this man had the gall—not the gall but the skill in deception—to get up and say with a straight face, "What is the difference between Lebanon and Hungary?" And some Americans were stricken in their consciences.

Then he said, "How would you feel"—and you hear this repeated again and again by American clergymen, professors, statesmen, Congressmen, etc.—"How would you feel if we Russians had bases in Canada and Mexico, the way you have bases all around us, encircling the Soviet bloc?"

We tend to say, "Well, by George, that is right. You can't really blame them for being scared."

But there isn't a shred of validity to that argument if you take a good look at it. Why do we have bases around them? Because the threatened countries asked us to build them. When did we build the bases? After the end of World War II, we had come home and scrapped all our oversea bases, scrapped everything, until the Reds started their moves in Greece and Turkey and started the Berlin blockade and took over Czechoslovakia. It was then that we had to rebuild bases at the request of those people, in order to defend them and us against Soviet expansionism. Our bases are the consequence, not the cause of Soviet actions.

Have you known any Mexicans or Canadians asking Russians to come over and build bases in Canada and Mexico to defend them against the United States? If we were imposing our will upon Canada and Mexico the way the Communists are upon Czechoslovakia, and now in Tibet, or wherever it may be, the Reds ought to be building bases in Mexico and Canada to defend those peoples against the United States. But we are not threatening or forcing our will on our neighbors.

And yet these same old Communist themes, hammered out over and over again, continue to chip away the resolve of the American people and their confidence in their own cause.

We are prisoners of our decencies. We are victims, if I may put it that way, of our codes of sportsmanship. If a man on our football team clips, even though the penalty makes us lose the game, we don't yell; he violated the rules. But Communists don't have our rules. It is not dirty on their part when they deceive; it is just madness on our own part when we refuse to recognize that Communists act like Communists.

Fire doesn't freeze like ice; fire burns like fire. Ice doesn't burn like fire; ice freezes like ice.

Communism doesn't act like nationalism, capitalism, democracy, Christianity, humanitarianism. It acts like communism.

Truce, talk, trade, trust—all in order to get time. Time—for them to work and to get us to relax.

We have always given them the time. Whenever and wherever we had them over a barrel and they asked for time, we gave it to them.

Change the game from football to boxing. About the eighth round you see one of the contenders suddenly get very affectionate

with his opponent. He just embraces him so lovingly.

Now, you don't have difficulty understanding a clinch. You know it doesn't mean that he has given up his desire to win the boxing match. You know that he is in trouble and his clinch is an effort to hang on, to get time until his head can clear, so that he can win, not so that he can lose.

Every time the Communists get into a little difficulty, they clinch. And we say, "Now they are changing; they have decided to give up communism and they are going to be democrats and we can do business with them."

But the more things seem to change, the more they remain the same.

II

What else besides the Communist conspiracy remains the same? The cold war; we have to resist the conspiracy.

Some people act as if the cold war is something that Mr. Acheson first or Mr. Dulles later thought up as a good policy for us to follow. I can assure you there isn't anybody in our country, or at least in the Congress, who likes the cold war. It is not a policy of choice; it is a policy of necessity.

What are the alternatives? One is surrender; do you want that? The other alternative is hot war. Do you want that? With those as the only alternatives, we have no choice except the cold war.

III

But we can't continue the cold war indefinitely. For one reason, it costs too much.

This noon at 12 o'clock we are going to vote—I hope we will adopt it—on the conference report on the mutual security bill. My committee has been working on that bill for more than 4 months, every day. There is almost $3.6 billion in it. Who wants to appropriate that for allies plus $40 billion for our own Armed Forces? No one. Yet if we don't spend more and more for our own defenses and those of other free countries, we invite insecurity—and disaster. But if we do spend more and more for arms and aid, and our currency continues to go down in value, we invite inflation—and disaster.

Either way, disaster. How would you vote?

This is why Mr. Khrushchev has said, "We will bury you." He thinks they are already far enough along so that possibility is in sight. I don't know. But I know there comes a point in a disease beyond which a patient can't be pulled back. Yet as a doctor I don't quit. I have seen many patients that looked hopeless, but we kept on working. Every once in a while a miracle can take place and we save them in spite of the odds. Sometimes the other side too makes mistakes that can save us.

Looked at superficially, they seem to have the edge today, with us in a box. We can't continue the cold war indefinitely. It costs too much and besides, we haven't enough patience; we get frustrated; we want quick answers. Some day we are likely to say "Yes" here or there, in order to get apparent relief from the tensions, and fall into their trap. We cannot escape the cold war.

IV

Another fact that remains unchanged is that we can't call the cold war off except on their terms; and their terms are surrender.

Mr. Roosevelt tried to call it off. He went to Teheran and made agreements; he went to Yalta and made agreements. Out of them came the division of Poland, and the division of Korea, giving the Communists North Korea and Manchuria. Many of our problems in the East and West today came out of those two conferences. We were trying to call the struggle off by giving them what would satisfy their national interests. But Communists don't operate in terms of national interests; they operate in terms of an international conspiracy.

Mr. Truman tried to call the cold war off. He went to Potsdam and there agreed to divide Germany and give them East Germany, in order to reassure them that they wouldn't have anything to fear on their west. The result is what we are wrestling with at Geneva now.

Mr. Eisenhower tried to call it off. He went to Geneva and tried his best to get a settlement. He succeeded in certain things.

No. 1: At that conference we didn't give away anything that did not belong to us; and that was a precedent.

No. 2: A lot of people in Europe thought that we were about to drop atomic bombs, that we were itching to start an atomic war. They had been fed that line. He convinced them that it was not so. People relaxed inside, our Allies and friends.

No. 3: The Communists didn't succeed in splitting the West, as they had hoped they might be able to do.

No. 4: He hit upon that inspired proposal of aerial inspections. "You come and take a look at us; we will give you our table of organization and let you see our armaments and fortifications if you will let us see yours."

I say this was inspired first because it was right and second, because it was smart. Whatever they answered, we were bound to win. If they said, "Yes," then we could inspect and photograph their installations, and learn a lot that we don't know. They would inspect and photograph ours and not learn anything that they don't know already.

If they said, "No," then it would be clear that they were the ones blocking peace, not we.

All these were gains. What was the loss? The big loss that outweighed the gains?

Mr. Eisenhower, in his eagerness to end the cold war convinced them (I think most of our own people demanded that he try to convince them) that they didn't need to be afraid of us—as if their aggressiveness and truculence are based on fear of us, rather than on Communist objectives. He assured them that they had nothing to fear from us; that we would never fight unless we were attacked. That is all they wanted to know.

Mr. Khrushchev went back from Geneva, called all his boys together and had one sentence for them: "We have nothing to fear from Eisenhower." Two weeks later he started operations in the Middle East, the armament of Egypt, and so on.

The mess in the Middle East came right out of Geneva. We went there to try to end the struggle; they went there to try to win the struggle to see how soft we were and where to make the next move with least danger to themselves. Yet some are today passionately urging further similar conferences with them.

We have lost every conference at the summit since the first one in 1918–19 when Woodrow Wilson tried it. Don't misunderstand me. A conference at the summit to finalize, to sign and seal, and to dramatize agreements already worked out can have great value. The conference at San Francisco in 1951, the signing of the Japanese Peace Treaty, was such. But if it is a conference to negotiate in public, it is fantastic to put faith in such a procedure with such an adversary.

"Open covenants, openly arrived at," Mr. Wilson said. This was the big mistake that jeopardised the rest of his magnificent career.

Open covenants, yes. Once they are arrived at, they have to be submitted openly to legislatures and to world public opinion, for rejection or acceptance. But they can't be openly arrived at.

I will bet that when you were negotiating with a certain lady to try to persuade her to throw in her lot with you for life, it was not in public.

As soon as she agreed, you rushed back to the fraternity and shouted "Boy, she said yes." Open covenants, yes; but not openly arrived at.

Nothing really important is negotiated in public. The steelworkers today are not negotiating in public. Neither side could make a concession in public because its own people would tear it to pieces. But if they do the negotiating in private, each can make concessions. When they announce the agreement, there is a protest, but the quid pro quos are visible and it is accepted.

We go to the summit to try to get a bona fide settlement. They go there to try to appeal to our people over the heads of our governments, to divide and weaken our leaders by appealing to the hearts and desires of the people, their hopes and fears. There is no change in the fact that the Communists terms are surrender.

Of course, they don't demand surrender all at once. They are willing to to take it island by island, city by city, ally by ally, position by position, and principle by principle.

And they don't demand surrender under the name surrender. They know that would be too difficult. They are perfectly willing to take it under some other name. For example, disengagement is one of the popular names for surrender.

We disengaged ourselves in Korea, you remember. It would be too difficult to hold on to the tip of that peninsula. Avoid trouble; disengage, we were told. So we withdrew our forces and thereby invited the Communists to come in—as they did.

Then we woke up to the fact it wasn't just the tip of Korea that was at stake; it was Japan, the confidence of the people of Asia in us, and the confidence of the people of the world in the United Nations collective security system. We had to go back in, not to save that tip of Korea, but to save our position in the Pacific and the world.

The Communists were angry at our reversal. I don't blame them. We had pulled out and given them a green light to come in. Naturally it did not occur to them that we would give up something we were interested in keeping. Then after we had invited them in, we turned around and drove them out—which was the first time we had ever double crossed the Kremlin.

Another name for surrender—Mr. Lippmann uses this one almost every week—is a realistic readjustment. We aren't doing too well on the 40-yard line, so we should realistically readjust on our 30-yard line. Well, we may have to do it, but let's not kid ourselves that it is an advance. It is a retreat.

Another term is a new approach. This is an intriguing one. We must have a new approach. We must be more flexible. Just why do we need a new approach if we are right?

There are five things I have told my 3 daughters all the years. One is that the first word for a girl is "no." Whatever the proposal, "no." You can change it later from "no" to "yes" and no harm is done. But if you have first said "yes" sometimes you can't change it back to "no." So the first word is "no."

The Communists know that. They have won victory after victory with one word: "Nyet." But we seem to have lost that word. Almost we pursue them, urging them to be nice enough to let us make another concession.

We make a new approach. They say, "no." So we make another new approach. They say, "no." We make another concession, and say, "This is our last offer." They say, "no." Then after a few days or weeks, we will make still another offer. No wonder they are confident that by being adamant,

we will eventually whittle away our whole position—which equals surrender.

Why can't we also say "no," no matter how many times, until there is a real concession by them?

They say, "It is an abnormal situation to have your troops in Berlin." Why don't we reply, "Not as abnormal as for you to have your troops in Budapest."

They say, "We want Berlin to be a free city." Why not reply, "Gladly, when you agree to all Germany's being a free country."

They will also be glad to take our surrender under the name "peaceful coexistence." Peaceful coexistence is another fake move by their quarterback to give the impression that the world revolution has been called off. But note that they don't call it peace. They call it peaceful coexistence. That is smart. Peace means a settlement. Peaceful coexistence means: "Please, won't you be nice enough to let us Communists coexist peacefully as long as you are stronger, until we can become stronger?"

Then it will mean peaceful submission by us.

The Chinese have a saying that the only way you can get unity with a tiger is inside the tiger.

Fortunately, there are two other ways you can get peaceful coexistence with a tiger. One is to have him in a cage—containment. The other is to be strong enough to compel peaceful coexistence; which means you have got to have a chair to hold him off, and a whip to divert his attention, and a gun to shoot if necessary.

We can have peaceful coexistence with communism, if we are strong enough to compel peaceful coexistence—until it is weakened from within by its own inhumanities.

But the term "peaceful coexistence" to them doesn't mean coexistence by a genuine settlement. It means coexistence by our peaceful submission—achieved by them by the threat of force, if possible; or by the use of force, if necessary whenever they can become strong enough or we weak enough so that they think they can win.

Here is a book, "The Black Book on Red China," by Edward Hunter, the man who first organized our information about brainwashing in China. Hunter has a chapter on the "Code Language." A word means one think to us but another thing to them. They can make a foreign language, in effect, out of our words: people, masses, peace, aggression, liberal, reliable. You ought to get the book and go down through the list of terms.

Lenin is reported to have said that the first steps in preparing a people for takeover are to debase its vocabulary and to debauch its currency. These are the two means by which people communicate with each other: words and money. If you destroy the integrity, the honesty of both, there is no way people can communicate. How can you negotiate when they don't mean by good English words the same things we mean by those words? The Communist pros know what we mean by our words; we don't know what they mean. We are helpless, like a ship without a rudder.

Another example is the phrase, "relax tensions." They say we must relax tensions—meaning give up our opposition to their further expansion. No; we must never relax tensions, until the causes of the tensions are removed. We must maintain tensions against whatever oppresses human beings and is aimed at destruction of ourselves. The problem is how to maintain tensions against tyrants without burning up from tension within.

I was trained in medicine in the period when we didn't know much about typhoid fever except that the patient had a very high fever. It seemed a good idea to bring the fever down—relax the tension. A standard treatment, when the temperature got above a certain level, was to put the patients in ice cold water. It frequently killed the patient, but it brought the fever down.

Relaxing tensions is a code word for peaceful surrender.

Well, if the conspiracy remains the same; and the conflict remains the same; and we cannot continue the conflict—the cold war—indefinitely; and it still is true that we cannot call it off except on their terms, and their terms are surrender; what else remains the same?

V

It is still true that we have to win this struggle. And win the cold war is what we have never really tried to do.

Why haven't we tried to win the cold war? For two main reasons, I think. First, the fear that if we were to win the cold war, it might precipitate the hot war. If we push them back into a corner, they may cut loose with their bombs.

Now, that is a genuine hazard. But look at the alternative.

I wish more people in politics and newspaper writers and so on, had to study surgery. Surgeons have to make that kind of dangerous decision every day. A lady comes in with a malignant tumor in her breast. We tell the husband we shall have to remove the breast. He protests. "Doctor, it may take her life; it is mutilating. It is cruel, bloody. It is too dangerous."

We say, "The alternative is to do nothing, and that is more dangerous. She may die if we operate, she is certain to die if we don't operate."

Therefore, we follow the course which may lead, it is true, to a somewhat earlier death; but it more probably may prevent her death. To do nothing has greater risk, and no hope. To operate has less risk and some hope.

So, although it means taking the patient's life in our hands, we do not hesitate to choose the course of less risk and greater hope.

There is an inescapable risk in living on the same planet with this kind of a conspiracy, gentlemen. You can't drive your car back downtown through the traffic without risk. You can sit at home and perhaps live a little longer, but what kind of a life?

There is risk of hot war if we try to win the cold war, but there is also hope, both of freedom and of peace. And no other course gives hope.

A second reason why we haven't really tried to win is this: We have had a feeling that if we can just avoid a shooting war, we Americans will, of course, always win any other kind of war. This is not something we have thought out; it just flows from our typical American self-assurance.

We, of course, will always win any economic struggle. We haven't argued that, We just sort of know it in our bones. Are we so sure now?

We, of course, will win any educational struggle. Are we so sure? Last year in a big high school in my city of Minneapolis, there were 400 graduates and the top 5 honor students all came to this country from DP camps since the war. Are they smarter than our youngsters? No; they work harder; they appreciate their opportunity. We can win the educational struggle, if we work harder. But it isn't automatic.

We have taken for granted that we, of course, will always win any scientific struggle. Sputnik punctured that conceit.

If you are from out of town, you may not have heard the story that went around Washington after our Atlas satellite went up last Christmas with the President's voice coming back. The story was that as sputnik and our Atlas moved in their orbits, they ran across each other and Atlas said in English, "Good morning," and sputnik said in Russian, "Good morning."

They went around a few more days and they came across each other again. Atlas said in English, "How are you?" and Sputnik answered in Russian, "How are you?"

They went around a few more days before they came close again. This time Atlas said, "Now, nobody is listening any longer, let's both be natural and talk German."

There is no certainty that we will win, unless we work harder than they do. It isn't enough to outsit the Commies; we have to outwit them.

Another of these comforting assumptions is that we will, of course, win in any exchange of persons program. If we can just avoid a shooting war and have enough people go back and forth, editors, professors, businessmen, farmers, youth, Congressmen, the Russians and we will get to know and understand each other better. Our system is better and will rub off on them. Theirs is bad and won't rub off on us.

This is an attractive idea; but it isn't necessarily so. I am all for exchange of persons—if we understand it is a tough contest and are willing to make the effort necessary to win. We won't win automatically.

The first reason is because there cannot be a real exchange. Who goes over from our side? Anybody who wants to go. He may be the most ignorant and naive person in our country, may never have read any of their rule books, may be totally unequipped to deal with them. But he can go if he wants to. He is like a brave soldier going into battle—with no training.

Who comes over from their side? Any Russian who wants to? No; only those who are reliable, which means so thoroughly indoctrinated and tested that their bosses are sure they can trust them. And, further, they are skilled in presenting Communist ideas, trained in the dialectic—that is, agents.

Who goes over from our side? Farmers. Whom do they send over? Agents.

Who goes over from our side? Journalists—to get information. Who is sent from their side? Agents—to sell their ideas.

Who goes over from our side? Professors. Who comes over from their side? Agents.

From our side, Congressmen and Senators. Their side, agents.

From our side, clergymen. Their side, agents.

From our side, students. Their side, agents.

From our side, businessmen. From their side, agents.

Why are they now opening a chink in the Iron Curtain? The reasons are easy to see, I think. First, they don't need the curtain so much now. In the beginning, they didn't want to us to see how weak they were, because they assumed that if we saw how weak they were, we would move in on them, as they would move in on us if they saw we were weak. But now they don't need to keep things so concealed, because they are not weak; they are strong. They are glad to have us see that.

Besides, they may have waked up to the fact that the Iron Curtain was probably a historical mistake in the beginning. They don't need to have an Iron Curtain in order to maintain a dictatorship.

Hitler didn't have an Iron Curtain. Who were his best salesmen around the world? Goering? Goebbels? Not many believed them. His best advertisers were American tourists—especially those who boasted that they were hard-headed, practical business people. They didn't need to bother with ideas, or words. They could tell by what they saw.

What did they see? Streets clean, trains on time, no unemployment, no beggars, maternity benefits for the women, summer vacations at public expense, highest standards of living in Europe. What was wrong with that? A system with such fine results must be all

right. Don't look in the gas chambers over there. "We can do business with Hitler."

Who believes Khrushchev? Not very many. Some believed Mikoyan. Not so many believed Kozlov. But if our own Americans come back from Moscow and say, "We found the people of the Soviet Union very friendly and earnestly desiring peace," doesn't that prove we can get along with the Soviet Union? No. It merely proves that the people of the Soviet Union are very friendly and earnestly desire peace. It doesn't prove anything at all about the Soviet Government.

The people in every country are friendly. The people in every country want peace. But the people don't have anything to do with their government in a Communist state. That is the point.

We want to make it easy. If the Russian people are friendly, we conclude that, therefore, we can trust the Soviet Government. Or if the Soviet Government is evil and aggressive and we must resist it, then we seem to think we have to hate the Russian people, for some immature and nonvalid reason.

We will lose, not win, in this exchange of persons if the Americans who go over and see that the ordinary Russian people are friendly conclude that therefore we can relax and trust the Communist rulers.

We aren't so foolish in other walks of life. We don't say, "Put the rotten apples in with the good ones. There are only two rotten ones in the whole barrel. The good apples will prevail over the rotten apples."

We don't say, "It is too cruel to isolate and quarantine that TB case or that smallpox case. How can the patient get better if he isn't allowed to associate with healthy people? Put the diseased with the healthy. The healthy will prevail over the diseased."

No; it is the other way around. If you want to live, you had better keep persons with a vicious, contagious disease quarantined until cured or the disease has run its course.

In economics, we don't say, "Don't worry about that unsound currency; don't worry about the bad Communist economic system. Ours is sounder and it will prevail." It will? Almost the first and most elementary law of economics is that bad currency drives out good.

What goes on that these simple themes that they play over and over again still have such plausibility and appeal? Why do we still insist on believing what we want to believe; or that our honest words mean to them what they mean to us? We just won't do our homework.

VI

There is another fact I want to mention which still remains the same. It is still true that meeting them with firmness and strength, what I call the four P's—power in support of principles, pledges, and peoples—prevents aggression.

Six times in the years after the war they probed us, tested us; and we stood firm. The first three probes were in Azerbaijan, in Greece and Turkey, and the Berlin blockade. We and others stood firm, defied them—and worked hard. The Kremlin blustered—but backed off. No war.

The fourth was the NATO proposal. The Kremlin threatened that it represented Western war-mongering and would lead to war. We all went ahead and formed the alliance anyway in order to build greater strength and unity. The Soviets haven't moved a foot against any NATO country.

The fifth test came over the proposal to give Germany her independence, allow her to rearm, and bring her into Western European union. The Soviets screamed that this was a reconstruction of Hitlerism. (They are playing that record again now.) They warned that this would surely lead to war. To underline their threat, they unilaterally abrogated their treaties of nonaggression and friendship with England and France. Some people panicked, but the West kept its nerve.

You know, when they get tough, we generally do pretty well. It is when they smile that we get confused.

We all went ahead to give Germany her independence. She threw in her lot with the West, began to rearm. Did it lead to war? No. A few weeks later the Kremlin said, Let's sit down and have a nice, chummy conference about Austria.

We got the only diplomatic victory in Europe in all these years—the first time they have withdrawn troops—right after we had sttood firm when they were threatening war.

The next was in the Formosa Straits in 1954–55. We had been backing up in Asia for a decade, except for 1 year in Korea. The Chinese Reds shouted that nothing could prevent their taking Formosa. Finally, the President said one day in a press conference: "If they take Formosa, they will first have to run over the Seventh Fleet." Apparently they went out and took a look at the Seventh Fleet—and decided not to take Formosa. Instead, they went down almost immediately to the Bandoeng Conference and said, "We don't like bloodshed; we are men of peace. Let's all sign agreements based on the five principles of peaceful coexistence."

Confronted with strength on their west, no war; "Let's negotiate."

Strength at last on their east, no war; "Let's negotiate."

Why? They wanted to go south for the moment, where there wasn't any strength. They could come back to the east and west later—whenever we relaxed.

Here was the Middle East—a strategic prize second only to Western Europe. The bridge to Africa; the Suez Canal; oil. Besides, it was boiling with conflicts. England, Greece and Turkey quarreling over Cyprus; North Africa against France; and the Israel-Arab dispute. Where was there ever better fishing?

Logically, the first of the three probes they have made in the last year was in the Middle East. Some asked, "Why are our troops going to Lebanon? Why are you Congressmen always so interested in greasy oil for Wall Street millionaires?"

Now, we weren't interested in greasy oil for millionaires anywhere. We were interested in the fate of the United States, Europe, and the whole free world.

The fate of Europe was directly involved in the Middle East. And we are vitally interested in Europe's survival. We have put quite a bit of effort and money into it—two wars plus the Marshall plan.

In Western Europe is the largest body of highly skilled manpower in the world—275 million people as against our 175 million. Just as capable, and, all the countries together constituting the world's second best workshop. But they don't have adequate fuel. They don't have enough coal; and atomic energy is not yet economically or technically feasible. So, most of their fuel is oil.

Europe gets its oil from three main sources: The Middle East, Venezuela, and the United States. The largest amount comes from the Middle East which has two-thirds to three-fourths of the world's known reserves of oil. The Soviet Union doesn't need the oil, but if it can shut it off from the West—if it can break the pipelines or disrupt the oil fields of the Middle East, then Europe is dependent upon the other two sources.

What is the second largest? Venezuela. Is there any mystery about the preoccupation of world communism with Venezuela?

If they can knock that supply out also, then Europe will be dependent upon the third source, the United States. Again, we are the target. Bleed the United States—bleed her oil, bleed her money.

If these things should happen and Europe become dependent on us, and we don't furnish the oil, then Europe's wheels will grind to a halt; Europe's people won't have work to do; soon they won't have food to eat; there will be unrest and revolution. And the Soviet Union can get Europe—through Iraq and the Middle East. This is part of why we had to go into Lebanon. The Soviets threatened atomic missiles. We all stood firm and acted resolutely. No war.

Their second test in the last year was at Quemoy. People asked, "Are we going to go to war over Quemoy?" No. There never was a chance of that. The President made that assurance repeatedly. But the issue never was Quemoy.

We got into a war a hundred years ago, a terrible war, following the bombardment of an island that lies off the coast of South Carolina just about the same distance as Quemoy lies off the coast of China. But you wouldn't contend that we got into the Civil War over Fort Sumter. We got into the Civil War and fought 4 years over what kind of a country this was to be; or whether it was to be one country—an issue with which we had been struggling for almost a hundred years.

Fort Sumter was an incident, an occasion. It was not the cause. The same with Quemoy. The issue was not Quemoy, a pile of rocks. The issue was conquest by the use of force. Are disputes to be settled by lawless violence and aggression, or by civilized means?

The stake was not Quemoy; the stake was the whole Far East. The Communists were not trying to get just that island. We were not trying to save just that island. They were after—and they said it openly many times—Quemoy, Matsu, Formosa, and "expulsion of the United States from the Western Pacific." Our position in the Pacific was the real target.

If they could show the people of Korea, Japan, Taiwan, Philippines, Vietnam, Indonesia, India, Burma that the United States is what Mao has called it, a paper tiger, that it is an undependable ally, one that puts its tail between its legs and runs when threatened, then the Reds would soon have the Far East. That is what they were after. The stake was Asia, and our own security in the Pacific.

And the problem never was Quemoy. The problem was, and is, Red China. People ask, "What are we going to do about Quemoy?" Well, is that island hurting anybody? We'd better keep our eye on the ball and ask instead, "What are we going to do about Red China?" That is a problem, believe me. I hope we aren't going to do anything that will make it stronger, and a still bigger problem.

Some people suggest that maybe we can solve the problem by helping the Chinese Communists win. That was Mr. Atcheson's theory for a time—that the way to make the Communists fail was to help them win. So we should work for a coalition in China, recognize them, trade with them, etc.

Other people say, "Well, they are there; realism demands that we recognize them." Now we are fully aware that they are there; but that does not mean we should recognize them officially and thereby make them stronger. It isn't because we are hiding our heads in the sand or trying to deny their existence, as some charge, that we refuse to give them official recognition. Rather, it is because we are acutely aware of their existence—and we don't want to make them any stronger.

We have negotiated with them officially 87 times in the last 5 years—at Geneva and Warsaw—trying to get them to let out our prisoners of war, as they promised to do, and to agree to refrain from the use of force in the Formosan Straits. They have demanded every time "withdrawal of the United States from the Western Pacific." That is the price.

Give up Asia—which would mean the demoralization and disintegration of the free world.

There are gangsters in Chicago, but we don't say that therefore we ought to bring the gangsters into the FBI, because how can the FBI plan its campaigns against the gangsters if it doesn't have the gangsters in the FBI to help it plan its campaign against the gangsters?

That is supposed to be realism. Of all courses, the most unrealistic is to build up one's enemies.

Then there is the universality argument. Some say, "Bring them into the United Nations, because all existing governments should be in it." Again, they won't read. The United Nations was never intended to be a universal organization. The language of the charter is plain and clear.

At San Francisco, the founders of the United Nations debated and rejected the concept of making it a universal organization. It is supposed to be an organization of peace-loving nations against gangsters, not a league with the gangsters. The charter says, "membership shall be open to other peace-loving nations which will accept the obligations of the charter." What is the first of the obligations? "To refrain from the use or threat of force in international disputes." Read it.

If you want to change the United Nations and make it a league with the gangsters, then amend the charter. But don't nullify it and make a mockery of it and its principles and commitments. Millions of people want the United Nations to be an instrument for freedom, and justice, and peace in the world. Don't drag it down to the level of the lawless; bring them in only if they are willing to come up to its level.

People said Mr. Dulles was just stubborn, capricious, arbitrary in keeping the Chinese Communists out. No, the United States is not keeping them out. They are keeping themselves out. They refuse to qualify. All they have to do to get in is to meet the entrance requirements by renouncing in a dependable way the use or threat of force against their neighbors.

A youth comes to a university and says, "I want in."

The registrar says, "What are your qualifications?"

"I went through the eighth grade."

"Sorry, you can't get in unless you have a high school diploma."

"I can't? It says 'university.' That means universal. That means everybody is entitled to be in. Besides, I have a gun. You let me in or I will shoot."

If the Chinese Reds want in, just let them qualify by giving up their aggressive expansionism. They will be admitted at the next session which begins in 6 weeks. But, of course, they can't give up conquest by the use or threat of force until they give up communism.

It is easy to see why the Communists want in. It will give them prestige, influence, power. That is why all Communists everywhere work day in and day out for Red China's admission. They know that would give them the ball game. We ought to know it too. If the strong accept them, can the weak continue to resist them? The Communists know, and so do the other peoples of the Far East, that once Red China is admitted, it won't have to fight for the rest of Asia.

Someone always objects, "But Russia is in the U.N. What's the difference?" The difference is that Russia got in at the beginning while pretending to be peace-loving and democratic and willing to fulfill international obligations. Red China does not even pretend.

It is bad enough to have made such a mistake when most people didn't know. What excuse is there for making it again when everyone does know?

The question is asked, "Well, if we are not going to admit Red China, why not kick out the Soviet Union?" It is a good question, but a useless one. It is not possible to kick out the Soviet Union. Under the Charter it can veto its own expulsion.

Someone will say, "But how can we influence the Chinese Communists if we don't have them in the United Nations?"

Well, how can we influence them if we do have them in? We have had the Soviet Union in from the beginning. Can you show me one instance where we have had success in changing its policies?

This is the argument of the lady who thinks that the way to reform a brute is to marry him. It never works, but some are always trying it. Why doesn't it work? Because once she has married him she has lost her bargaining power. Why in the world should he reform after he's already got her?

Likewise, Red China wants in without changing her ways so that she can have all the advantages of being in, plus all the advantages of being out. In both places she will be working against it. Here again, we didn't see what Communists were really after.

President Roosevelt had what he called the grand design. It was described in articles in the Saturday Evening Post or Colliers, written by Forest Davis and Ernest Lindley, in 1943 and 1944, OK'd by Mr. Roosevelt personally. The grand design was to make concessions here and there as necessary to get the Soviet Union to join in forming a world organization for peace.

In the last speech he ever made, he said that he didn't like the concessions he had made at Yalta regarding Poland, but he thought they were necessary and justified if we got the Soviet Union to come along—the assumption being that if they came in, the rotten apples would be cured by association with the good apples. I don't say this in criticism of him. We were all part of that same pattern of thought—or all who hadn't learned about Communists the hard way. We hadn't learned their basic themes.

We were too naive to realize, too decent even to suspect, that if they came into the United Nations, it would be for exactly opposite reasons from the reasons that motivated us.

We thought that everybody that joined would come in, of course, in order to use the organization as a means of resolving disputes. The Communists joined in order to be in a position to make sure that the organization did not succeed in resolving disputes.

Why? The answer is simple. They have a world organization of their own—the Communist Party. It has organized, efficient, disciplined units in every country of the world. They intend to win for their world organization. What could be more advantageous than to have a seat in the rival world organization—the United Nations—where, perfectly legally under the Charter, they can keep it crippled, emasculated, ineffective—while their world organization goes to town? They joined the United Nations to make sure it doesn't work. Naturally they have vetoed every key decision that was in the direction of real peace. It is all plain to anyone who will look.

The third probe this year was at Berlin—still going on. Remember that cool firmness and strength have not yet led to war. Weakness, softness, indecision, vacillation, have led to war four times this century. The way to prevent aggression should be clear to all.

VII

Another fact that unfortunately remains unchanged is that we have developed no adequate defense against this enemy. Why? Because we haven't yet quite accepted the fact that this is a different kind of enemy from any we have faced previously.

We have West Point to train men for land warfare. We have Annapolis to train men for naval warfare. We have added Colorado Springs to train men for air warfare. But now we have an enemy who doesn't limit himself to these ways of fighting—he wages total warfare. For that we have no academy—except, perhaps, this Seminar. No academy working to understand and systematize our knowledge of, and to train men and populations to fight total warfare—military, economic, political, educational, cultural, social, propaganda, deception, subversion—and a dozen more. We have no organization, no agency that is concentrating on just this—specializing in it.

There are recognized rules for traditional warfare. But this is a different kind of warfare—with quite different rules. We haven't learned them; in fact, haven't formulated them, as Clausewitz and others formulated the rules of traditional warfare.

We are like Braddock and his Red Coats when they came over to this country to fight the Indians. He insisted on fighting Indians according to the rules of warfare in Europe that had come down from the Knights of the Round Table. Opposing armies wore different colored uniforms so each would know which were the proper targets to shoot at. They lined up in proper order according to the codes of chivalry. Braddock insisted on fighting the American Indians according to European positional warfare—the only kind he knew. You know what happened to him. He lost.

Fortunately, he had along with him a man named George Washington, who knew something about the Indians. His scouts didn't hesitate to be so mean and unorthodox as to get down behind the bushes and fight Indian warfare. They saved the day.

We haven't any organized unit responsible for doing on a comprehensive scale or official basis, the work that is necessary to develop a science for fighting this different kind of warfare. And we don't have a body of disciplined men, either governmental or civilian, trained in total warfare as the Communists' cadres have been trained for years in how to create riots, how to organize subversion, how to break down communications, how to paralyze the will and the industry and the government of other nations.

Our Foreign Service is magnificent for the old kind of diplomacy, trained to observe, to analyze, to report, to interpret and to transmit. But now our Ambassadors are called upon to manage in some countries a $200 million foreign aid business every year. How many executives does our whole country have that are qualified to conduct such complicated operations? How many such executives are in our Foreign Service? Who is being trained to carry on the kind of total war we are in the midst of now?

VIII

We not only have no adequate defense; we have developed no adequate offense. We have not thought out and systematized the science of taking the initiative for our total cause. Not just with our arms, but with our ideas, the values and the virtues of our system which have given dignity to human beings and better living standards than any other ever has. How many can sell that system with contagious enthusiasm, or even explain it?

We haven't let loose in our world the dynamic forces of freedom in our day, as our

forefathers did in theirs causing peoples everywhere to look toward the "American dream" with stars in their eyes.

In short, we haven't got a strategy for victory. We have only a strategy for holding what we have. Can we hope to win just by holding? No, we must have a strategy of victory.

You remember what our national anthem says? "Blest with victory and peace."

The first condition is victory. It has been demonstrated again and again that it is possible to get victory and still not get peace.

But is is not possible to get a peace that will last without victory. We haven't developed a strategy of victory for this kind of war. We haven't mobilized and released in the world the truly revolutionary forces of freedom.

Well, what are we to do? First, wake up. The Communist target is not just land. The target is man—the mind of man, the whole of man.

Second, we have to study our enemy far more thoroughly. It is so elementary to say that we must know our enemy that, again, I apologize. But it is the big essential.

Some of us have introduced a bill to set up a Freedom Commission to study this whole matter—as the Atomic Energy Commission concentrates on atomic energy and the Space Committee on astronautics. It would have authority also to set up a Freedom Academy so that, somewhere in our Government, there would be an organized group of people working day and night like men in a monastery, to master this new warfare.

Third, we must know ourselves; beef up our weak spots, and concentrate on our strengths. It is by development of our own strong points that we can win victory.

It is the same old fundamentals: Know our enemy; and know ourselves.

The Commission would develop the science of total warfare, it would arrange to train specialists in it, both governmental personnel and selected civilians—journalists, professors, scientists, executives, Reserve officers just like yourselves. It would train them to be professionals in these basic Communist themes, so that our people can't be fooled.

Fourth, we must not let the Communists win any more victories. They are in trouble today—in Berlin, in the Soviet Union itself, in Red China. Keep them in trouble.

Naturally, they want to liquidate West Berlin—for at least three big reasons. One, it stands there as a showcase of freedom. Who will believe their propaganda for communism when in West Berlin people are living so well, and across the street in Communist Berlin are living in misery?

Two, West Berlin is an escape hatch from slavery to freedom. Three million people since the war have come through that escape hatch—from East to West. Two thousand every week. Two to five hundred a day—right now. Naturally, the Reds would like to close that. Especially would they like to have us help them close the door and turn the key in the lock of the jail which is Eastern Europe.

Three, they are afraid of East Germany. They are not so afraid of attack by West Germany; they know it cannot start a war. But they have 22 divisions tied up in East Germany just to hold down the East Germans.

Doubtless they would like to move into Iran—there is good fishing in the Middle East right now, and their radio attacks the Government of Iran every day. But they hesitate to start too big operations in Iran, or anywhere else, just now because East Germany and the satellites might blow up.

And yet we seem to be trying to liquidate the West Berlin situation. I don't know why. They are in far greater trouble there than we are. Let's keep them in trouble, unless and until they are willing to make real and solid concessions.

They are in trouble in Russia, especially among the youth. They wouldn't be reorganizing the educational system that has brought them world leadership in science if they did not have some real difficulties there. Universities that produce scientists—men who ask questions—produce also revolutionaries. But I haven't time to discuss that here.

They are in trouble in China. You hear people say, "Look at the power of the Chinese Communists. They can put 600 million people into communes. Now, they do have a powerful police state, but such a use of their power is not a sign of strength; it is evidence of terrible weakness. Do you know any country where the people enthusiastically support their government and the government has to lock them up every night? And doesn't dare let them to out to work in the fields by day except under armed guards like convicts on a road gang? This is a sign of incredible weakness; it reveals the mass opposition of the people.

The Communists are in trouble at home. Stand firm against any steps or concessions or deals that will help them out of their trouble.

IX

There is still one more fact that remains unchanged—the most encouraging. The urge of man to be free has not been crushed or washed out. It is stirring mightily once more in the world. Not so much among those of us who are still free, but among those who have been deprived of their liberty. And the Communists are afraid, most of all, of that yearning of man for freedom.

At the United Nations where I served as one of our delegates 2 years ago and dealt with the Communists daily, I became convinced:

1. That they are not afraid of attack by us. They know we won't start a war; and despite their threats, they are not going to start one—yet.

2. They are afraid of the people behind the Iron Curtain. Hungary really shook them. I think they believe that they have got to win the whole world, including the United States, within the next few years; or the forces of freedom at work within their own countries and the satellites will weaken them so that they will lose the whole world, including the Soviet Union, within the next few years. Therefore, they are men in a hurry.

3. Before they dare start action against the outside world, they must first break the will-to-resist at home. The people they are afraid of are the 900 millions behind the Curtain, among whom the urge to be free and to live in dignity is moving mightily again.

4. How can they break the will-to-resist behind the Iron Curtain? There is only one way: to confuse and beguile and soften us up; and get us to abandon those millions to their fate.

Their efforts are designed to break the will-to-resist of the captives by trying to weaken our will. If they can get us, under the slogan of relaxing tensions, to accept what Khrushchev calls "the historic changes"; that is, to accept the enslavement of the peoples of Eastern Europe—then that may bring the beginning of the end of the opposition of those peoples.

How long can the people there resist the tyrants if the West accepts those tyrants and appears willing to abandon their victims?

Gentlemen, the strongest weapon we have is not our atomic bomb. And our best ally is not England or any other country; it is 900 million human beings behind the Iron Curtain. They are the most dependable ally, the most strategically located, the one the Communists know they cannot fool, the one the Communists are concerned about most of all.

The test to which you and I ought to subject any proposal made by anybody is just this: If we were to follow the proposed course, would it strengthen the oppressors? Or the oppressed?

Would it give the dictators more influence, power, prestige, respectability, acceptance? Or would it weaken them?

Conversely, if we were to follow the proposed course, would it strengthen or weaken the will-to-resist of the people, their hopes, their morale, their determination to hang on and to bleed the despots by millions of pinpricks, until they can be weakened and pulled down from within?

Does America stand with the oppressors? Or with the oppressed?

Do we believe we can get lasting peace by deals with tyrants at the expense of their victims? Or do we stand with peoples against tyrants?

All this means: Do we believe in ourselves? Do we have as much faith in our faith as they have in theirs?

Steadfast firmness and strength in support of the right, of freedom, and of our own historic principles is not a sterile policy. It is an extraordinarily productive policy. Don't abandon it, especially right now when it is getting results.

The key is power. But not just power.

It is power in support of principles.

It is power in support of pledges, honorable commitments—so that freemen everywhere will know that we won't let them down, we will not break our word.

And it is power in support of peoples, as against tyrants.

It is time for freedom to be on the march. Toynbee has said, "When the frontier between two civilizations stands still, time operates on the barbarians' side." Why? Because they have the will to win. They are tough. They are willing to work.

Too many of us are saying to Khrushchev, "Please let the frontier stand still. It's too bad what you have done to those whom you have already beaten down; but if you will just let us alone, let us enjoy our comforts, what you did to them will be all right with us." This is the way of suicide.

But if, instead, our people will take the trouble to study the Communists and study ourselves and really work at our faith the way they work at theirs, I haven't the slightest doubt as to the outcome.

A Permanent Fair for the Nation's Capital

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. McDOWELL. Mr. Speaker, I include as part of my remarks, the following study prepared by Vladimir N. Pregelj, Economics Division, Library of Congress, on the contribution a permanent fair in the Nation's Capital would make to our foreign policy:

A PERMANENT FAIR FOR WASHINGTON

The importance of a fair as a means of communication between peoples, their cultures and achievements has become more recognized in distinction from that of a fair as a mere place for the exhibition and international exchange of goods. Showing what we are has taken precedence over showing what we can sell, and the favorable consequences of this change have already

begun to be noticed. Even trade fairs, designed primarily to foster international commerce, have become ties of better understanding among the nations.

In the wake of the success registered by the recent great international fairs and exhibitions in Brussels, Moscow, and New York, and the positive impact they had upon the rapprochement among the nations of the world, the United States is again bidding for the privilege of playing host to the most important of international exhibitions—the World's Fair.

But a world's fair is an event which despite its global scope, is not of a permanent nature or even regular recurrence. It is a unique demonstration of human achievements and solidarity; it is here today and gone tomorrow. Surely, the need for better understanding and closer ties between the peoples of the globe is less ephemeral than the opportunities afforded the satisfaction of this need by world fairs. Today, more than ever, cooperative efforts, feeble as they may be, of the nations of the world, especially the free world, need to be of a more enduring nature. International neighborliness has been kindled by the recent exhibitions. In order to keep the fire burning and to further mutual understanding among nations through better knowledge of each other, institutions with a certain degree of permanency ought to be established to provide a suitable forum for international cultural and commercial intercourse.

Washington, the Capital of the United States, is preparing to play host to the next world's fair in 1964. What would be more logical and natural than to use the world's fair as the anchoring post for a continuous chain of international and national expositions and cultural events, to continue its spirit by establishing a tradition in international communication, and thus provide further use for the facilities which it will develop? But even without the stimulus of a world's fair, Washington is the logical site to start a new tradition in international understanding.

Washington is the Capital of a nation born to freedom and human dignity. Its streets and parks are replete with monuments to these priceless values; its official buildings are shrines of democracy in action. In its great halls laws are made by the people and for the people and justice ruled by law is dispensed. Washington is the symbol of human dignity. What better city would be found to be the home of a new tradition whose common denominator is humanity and its progress?

Washington is the embodiment of the United States, its history, its present, its hopes for the future. To many a foreigner Washington is the United States. Its cosmopolitanism, its clean-cut face, its striving—the hallmarks of the American people—are all crystallized in Washington, the All-American city.

Washington is also the focal point of the free world, its unofficial capital upon which are the eyes of the entire world. It is the node to which lead all the roads of the free world and it is the best point of contact and rapprochement between the two parts of the divided world.

Washington as a symbol is, then, the logical site for a permanent international fair. Washington is also a natural choice from a practical viewpoint. It is easily accessible by all means of transportation—public and private; it is conveniently located for foreign visitors who would also want to see other great cities in the East. Within its own limits or in its immediate vicinity it can offer suitable grounds for the construction of permanent fair facilities. It is also fully capable of providing needed facilities for the millions of visitors who would attend it. On the latter point, Washington has the advantage of being able to secure cooperation of neighboring Baltimore and other nearby cities. There is no doubt that the Capital can handle a permanent fair.

In this effort, it can be decisively supported by appropriate legislation. The International Cultural Exchange and Trade Participation Act of 1956 has with great foresight and initiative empowered the President to provide for the participation of the United States in international events of cultural and commercial nature held abroad. The success of the President's Special International Program for Cultural Presentations in making the American way of life and the American achievement in all fields of human endeavor better known to the rest of the world and thereby helping dispel misconceptions about this country and build international understanding and good will, hardly needs further elaboration. Yet the act appears to be deficient insofar as it envisages the President's cultural and commercial program only as a one-way street and limits it to fostering U.S. participation abroad to the exclusion of foreign participation at similar events in the United States. To eliminate this shortcoming and tailor the pertinent legislation to the exigencies of a truly international cultural intercourse, H.R. 7533 introduced by Mr. McDOWELL, of Delaware, calls for an amendment of the 1956 act and provides for presidential authority to provide for participation of foreign governments and nationals in cultural events held in the United States. Another bill, H.R. 7534, also introduced by Mr. McDOWELL, focuses more attention on the matter of international cultural exchange relations by providing for an assistant to the Secretary of State for the coordination of international educational and cultural relations.

Aided by such a modified organizational machinery and direct and active participation of the Federal Government in international cultural activities, the establishment of a permanent or regularly periodic fair in Washington is eminently feasible.

The fair may take a variety of forms. It may be a Pan American exhibition placing the emphasis on the United States in relations with its southern neighbors. It may be based on the scope and framework of NATO or of any other international alliance of which the United States is a member. It may, again, specialize in some specific phase of international cooperation. Ways and methods are countless.

By holding exhibitions of this type in Washington, a twofold purpose will be achieved. On the one hand, the visitors from the faraway lands will be able to observe America at work and play not in the form of a dead exhibit, but alive. It will afford them the opportunity to become exposed to the genuineness and spontaneity of the American people; it will make them see at close quarters that democracy works, and how it works. It will give them a chance of feeling that imponderable characteristic, which so often cannot be expressed in graphs, photographs, or even movies, that makes America great.

It will, on the other hand be an excellent meeting ground where the millions of Americans who already visit Washington every year prompted by their patriotic feelings, can become aware of the characteristics, achievements, problems, differences and aspirations of other peoples theretofore entirely unknown, misunderstood or misrepresented. It will help dispel in the minds of the American public many a faulty or hazy notion which still persists about our nearby and faraway neighbors and which at times, for lack of clarity, leads to grave mistakes in our relations with other nations. It will, moreover, afford the leaders and high officials of our Nation, who are often acquainted with the outside world only through written reports, a more vivid and plastic view of the problems they have to deal with in the course of their official duties in regard to other nations.

The positive and constructive result of such an exchange of ideas and information cannot be but assuring. Whatever the immediate scope of such a fair it will always add a stone to the edifice of international understanding and cooperation and thereby greatly aid the establishment of more cordial, realistic, and firm international relations.

A permanent fair in Washington will also be of great benefit to the host city. It will be an added attraction for the visitors from near and far who will realize that Washington has become for them an experience in American life and in world orientation. While it may not be possible to predict the influx of visitors into the city, there is no doubt that a permanent fair will be a definite asset which will continually enhance commerce and culture, stimulate the growth and redevelopment of the city, foster the interest in the Nation's Capital, and help it achieve the stature that is due the Capital of the United States.

The international situation calls for rapprochement and better mutual understanding. Washington is the logical choice to be one of the leading means of implementing this policy through permanently established international exhibitions. Let it assume this role, for it is willing and able to bring it to fruition.

Legislative Report, 1st Session, 86th Congress

EXTENSION OF REMARKS
OF

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MOELLER. Mr. Speaker, this report is prepared so that the people of my district and others interested will have a ready source of information as to the activities of the 1st session of the 86th Congress. It is also intended to supply my constituents with a record of the activities of their Congressman during his first term as their representative in the Congress of the United States.

The accomplishments of the 1959 session of Congress were, on the whole, substantial and constitute a record of which we in the Congress are justly proud. We enacted legislation to meet the demands of progress in the broad areas of national defense and security, the national economy, international affairs, our natural resources, and the organization of our Government, as well as in the special fields of social security, health and welfare, veterans' affairs, and others, including some attention to the problems of agriculture. I will devote some time to each of these major fields of legislation. In addition, I will discuss at some length one of the most pressing of all the problems which face us today and that is the Federal budget; Government spending; and the difficulties the Congress surmounted in its appropriations measures in trying to keep spend-

ing at an absolute minimum consistent with the requirements of our national security and the demand that this Nation keep pace with the need for continued progress in providing for the welfare of our people, planning for prosperity in the future, and increasing the pace of our scientific achievements for the good of humanity and for our protection against the competitive menace of the Communist conspiracy under the merciless drive of Nikita Khrushchev. This in itself was no small accomplishment in the face of the administration's demands upon Congress for unprecedented amounts of the taxpayers' money.

With respect to the accomplishments of this session of Congress I want to point out that the laws finally enacted are not the only measure of what the Congress has done. Much of our work during this session will produce its results during the 1960 session and even in later Congresses. I refer to the labors of the various committees of the Congress, which held thousands of meetings, heard testimony on issues covering the whole range of problems in which the Federal Government is concerned, and prepared reports recommending action on these issues or will make such reports next year.

Using the procedures in the House as an example, there were a total of 10,676 bills introduced by its Members. Committee reports were issued on 1,090 of these bills. However, only 187 public bills of the House and 79 private bills were enacted into law. Adding to this the number of Senate-originated bills which became law we have a total of 289 public bills and 185 private bills. Thus, although many of the reported measures will probably never receive final approval of the Congress, we prepared the way during this session for future action on a great many matters of vital import to the people of the United States. The true effectiveness of this 1st session of the 86th Congress, then, will not become apparent until the end of next year's session at the earliest, and the fruits of our labors will continue to be harvested by the succeeding Congresses as they act on the basis of the work of our committees during this past year.

With this in mind let me turn now to the legislation which was enacted in the major areas I have mentioned. In the field of national defense and security the most important work of the Congress, as is the case in almost every year, was that involved in authorizing and appropriating money for the operations of the Department of Defense for the fiscal year ending in June 1960. The administration requested $39¼ billion for this purpose. Congress appropriated almost exactly the amount asked, although in doing so we directed that certain changes be made in the uses to which the money was to be put, particularly emphasizing the need to speed up our missile programs; to resolve the conflicting views of the Air Force and the Army on our vital air defense with respect to the use of the Air Force Bomarc and Army Nike-Hercules defense missiles, and a speedup in the development of the Nike-Zeus, the only missile designed to cope with attacking ICBM missiles; and to improve the United States capabilities for waging limited warfare by increasing the size of our marine forces and modernizing Army equipment as well as giving the Navy the materiel it needs to support our ground forces. These steps were taken because of increasing indications that so-called brush fire wars will continue to be a major tool of Russia and its satellites in spreading their empire, testimony from the chiefs of the armed services indicating that the administration had ignored their views on this vital strategic issue, and continuing signs that the administration itself, although headed by a military leader, is unable to cope with the urgent need for positive coordination among the three services in the defense of the Nation. I hope and believe that during the next session the Congress will take further and more positive steps to reorganize the operations of the Department of Defense if the administration itself continues its failure to recognize the present weakness in this area.

The work of my own committee, the Committee on Science and Astronautics, was of great importance particularly in the face of Soviet accomplishments in this field. In addition to authorizing over $500 million of the use of the National Aeronautics and Space Administration for the operation and development of space rockets and satellites and for a concentrated effort to permit the United States to keep pace with and eventually to surpass the Soviet in space exploration and research, we devoted great effort to attempts to overcome the handicap we face as a result of the administration's failure to develop a comprehensive long-range civilian-military space program, and inadequate coordination of NASA's work and that of the Defense Department's Research Projects Agency. As a new committee, functioning for the first time this year, we have educated ourselves greatly in this complicated field. We are now prepared to take the steps we feel will be needed in the years ahead to see to it that the United States does not fall behind in opening up for the benefit of mankind the vast possibilities inherent in the mysteries of outer space.

The Congress also extended the draft laws until 1963, a step I reluctantly supported; authorized needed construction to modernize our military installations and to implement the air defense plan, and adopted numerous measures to strengthen the organization of the Department of Defense. In addition, the House has passed certain measures dealing with subversion, passport controls, and the like in an effort to strengthen our internal defenses against the Communist movement. The Senate has yet to act on these measures.

The continued strain on our national economy as a result of inflationary pressures required the Congress to take numerous unpleasant actions. These actions, all taken at the request of the President, included an increase in the permanent debt limit to $285 billion and a temporary increase to $295 billion until June 30, 1960, which I voted against; an extension of the present corporate and excise tax rates, with certain modifications, for another year; and an increase in the Federal gasoline tax of 1 cent per gallon to permit the Federal interstate highway construction program to continue.

The Congress, after considerable disagreement with the administration, including vetoes by the President of the first bills passed in each field, took action to extend the Federal Airport Act for 2 years, with expenditures at about the present rates, and to continue the Federal housing programs. I voted against both of these pieces of legislation the first time they were before the House as I considered that they called for far too great an expenditure of tax money at a time when the Federal Government is under a severe economic strain. However, after the programs were trimmed down to what I believed to be a reasonable size, I supported the measures which were finally enacted.

Perhaps the most important measure affecting the national economy upon which the Congress took action was the labor reform bill. This measure, the result of disclosures by the McClellan committee showing that dishonest and corrupt elements had seized control of certain unions, was the cause of the bitterest controversy in Congress in many years. There were those who fought against any but the weakest legislation; there were those who sought to use the committee disclosures as an excuse to enact a law which would deprive organized labor of many of its legitimate rights and weaken the whole labor movement because of the sins of a few; and there was a third group, of which I was a part, which worked for the passage of a law which would deal effectively with crime, corruption, and undemocratic procedures in labor unions without punishing the vast majority of honest unions and union leaders. The bill which finally emerged and was signed by the President, although I feel that it was too severe in some respects, will if properly administered provide at least a part of the answer to the problem of corruption in unions. The other and major part must be played by the honest efforts of leaders in both unions and management, and most particularly by the people of this country in their demands that present laws against criminal actions of this type are honestly enforced by local law-enforcement agencies.

In international affairs the extension of the mutual security program was probably the most important issue with which the Congress was faced. Without going into detail I will point out that the President requested $4,436 million for this purpose. The final amount approved by Congress was $3,626 million. Actually, between his first request and final action the President had added an additional $400 million to his demands so that the end result was that the Congress cut the administration's estimates by $1,200 million. I supported these cuts and also supported the action of Congress in writing into the bill provisions which call for a clear distinction between military and economic foreign aid, direct the President to submit a detailed

plan for progressive reduction of all bilateral grant assistance, and establish in the State Department an Office of the Inspector General and Controller to audit and to oversee the spending of all foreign aid funds. I am sincerely hopeful that these latter actions will enable us to bring the present excessive spending in the field of foreign aid down to a more reasonable amount within the next few years. I shall watch closely the operations of the new Inspector General and Controller in the expectation that needless waste in these programs, such as that disclosed in Laos and other southeast Asia areas, will be eliminated.

It should be pointed out that under our Constitution the House has little voice in the direct conduct of our foreign affairs, and the Senate in most matters can act only in an advisory capacity to the President. Thus, the Congress has little to say about the day to day operations of our State Department in its contacts with foreign governments and must leave the establishment of policy to the President and his advisers. For this reason, the Congress took no official action in such matters as the Khrushchev visit, the Berlin crisis, the Communist crushing of Tibet and the invasion of Laos, other than the voicing of the opinions of individual Members. I personally opposed the Khrushchev visit as an affront to our allies and to the oppressed people of the nations under the heel of Communist dictatorship.

One matter involving international affairs in which the Congress can act is in the field of foreign trade. While no significant legislation in this area was enacted this year a number of studies were undertaken. Probably of most importance was the initiation of legislation looking to the encouragement of the investment of private American capital in certain foreign countries as a possible means of providing them with American dollars through this means. A successful program of this kind might make possible the reduction of direct foreign aid loans and grants at the expense of the American taxpayer. I hope that during the next session in 1960 more positive action on such legislation will be taken.

Of greatest importance in matters involving Government organization was the admission of Hawaii to statehood, thus adding the 50th star to the American flag. I supported this measure wholeheartedly. Other than certain minor legislation, there was only one additional law enacted in this area. This involved the creation of an Advisory Commission on Intergovernmental Relations to study and to make recommendations with a view to better coordination of the activities of the Federal, State, and local governments, and to reducing the present overlapping responsibilities in many of the activities in which our governmental bodies engage. Such overlaps create confusion in a wide range of Government programs, from our tax systems; our social programs; construction such as highways, airports, and so forth; and other major programs, down to the most minute matters in which the Government is concerned. The new Commission is composed of Members of the House and Senate, representatives of the executive branch of the Federal Government, State Governors, State legislators, mayors, and representatives of county governments.

The continuing growth of Government activities makes this issue of growing concern to all of us. It is my hope that through the committee and action by the Congress we can straighten out some of these problems, particularly with a view to returning to the States some of the responsibilities which they should rightfully bear and which have caused the Federal budget to grow so fast in the past few decades.

In the field of natural resources the Congress took action to remove from the Federal Treasury the necessity of providing funds for future Tennessee Valley Authority construction, while at the same time writing into law a provision which prevents TVA from expanding its activities beyond what is roughly its present territory, thus assuring that it will not enter into competition with existing power companies in the surrounding area. The Congress also provided $1,185 million for continuing the present program of planning and construction of public works projects along our rivers and in our harbors. This appropriation was finally enacted after the President had vetoed two similar measures. The important issue between the Congress and the President was the administration's insistence that no new construction be authorized, even though little immediate expenditure of funds is required. It seems to me that following such a policy hampers an orderly development of our water resources programs, which are of particular importance in the Ohio River Valley. The measure which finally passed into law contains funds for continuing this orderly development, while keeping the total expenditures for the next fiscal year at an amount which is actually $100,000 less than the President himself requested.

The Congress also passed legislation to expand our water pollution control program, also of vital importance to our area; and approved various other measures, including a resolution urging executive studies to assure a continuing sound mining industry, and a Senate committee to study the development and coordination of national water resources policy. I am sorry to report that the President vetoed a bill which would have established a Coal Research and Development Commission to develop programs for maintaining our coal mining industry in the face of competition from other power and heat sources.

In the area of social legislation, no action was taken in the field of civil rights other than to extend the life of the Civil Rights Commission for 2 years. Assurances were given, however, that civil rights legislation will be taken up in the Senate early in the next session. Since a Senate filibuster is the major roadblock to effective action on civil rights, I am hopeful that this early consideration will permit final action by the Congress during 1960 on legislation to extend equality to all elements in our population regardless of color or creed.

A number of House-passed measures in this field are awaiting Senate action next year, including bills to permit the self-employed to set aside a portion of their incomes, tax free, for retirement purposes to give them some of the advantages of those under social security; a bill to strengthen the authority of the Post Office Department in curbing distribution of obscene literature; and a bill extending controls over the manufacture of narcotics.

Programs providing health insurance for Federal employees, improving the school milk program, and extending the Federal air pollution control in cooperation with local health authorities were also enacted.

The Senate has passed another measure in which I am interested. This calls for the establishment of a Youth Conservation Corps in an effort to help curb juvenile delinquency while promoting at the same time the conservation of our natural resources in national forests and parks. I shall follow House action on this bill next year with great attention.

Major veterans legislation enacted was the bill to increase benefits for the dependents of veterans on a revised scale based upon need, and equalizing pensions of World War II and Korean war widows with those of World War I. Direct housing loans to veterans were also authorized, and in addition a number of relatively minor bills relating to medical care, housing, and so forth, were enacted.

The problem of agriculture and our farm programs in general were not squarely met either by the administration or the Congress this year. The administration failed to submit a comprehensive plan for badly needed revision of the programs and, as a result, congressional action was confined to piece meal legislation. I opposed most of those measures on the ground that they only served to contribute more confusion to an already confused situation. One measure which I supported was the extension of the Agricultural Trade Development and Assistance Act for another 2 years, broading the authority for disposition of our farm surpluses through this means. This measure also includes a provision for the distribution of surplus products to the needy at home through a trial food stamp plan. I hope that the President will see fit to proceed with this trial program so that we may find out through actual experience whether the controversial plan will actually serve the dual purpose of reducing our surpluses while at the same time contributing to the welfare of those in need of public assistance.

In these and other fields much was done and much remains to be done. It will be my purpose during the 2d session of the 86th Congress to work for the enactment of such further legislation as is needed to round out these programs as much as is possible within the limits of our national economic resources and a sound budgetary policy.

This brings me to the problem of appropriations for Federal expenditures. You will hear much debate during the next few months as to whether this is a spend happy Congress and whether the President or the Congress is responsible for such savings as were made or for excessive spending where it may have occurred. As for actual appropriations for fiscal 1960 the facts are clear. The President requested a total of $74,859,008,445 to be spent in fiscal 1960. The Congress appropriated a total of $72,997,598,352—a net reduction of $1,881,410,093.

For future years spending, the President requested authority for $6,400 million of such funds. The Congress approved $5,701 million—a net reduction of $699 million. The total reduction by the Congress in next year's spending and in authorization for future years was $2,580,410,093.

The controversy will rage as to whether some of the cuts by Congress are actually only postponements until next year or until a supplemental appropriation is required for fiscal 1960, and as to whether in the future year authorizations, the so-called back door spending, the programs approved by the Congress will actually call for more or less spending than the President and his budget experts calculate. There is undoubtedly truth on both sides of these arguments to some extent.

However, we must remember that this argument rages each year. The administration viewpoint conveniently ignores that it is the traditional and, indeed, the only practical method for the Congress to authorize the expenditure of more funds than it is anticipated will be needed. This is to provide for contingencies in any program if for nothing else. It is also to permit an expanded operation in any area if an urgent need should arise. The proof of the pudding is in the eating—and in this case the eating occurs when the Congress actually appropriates the money in each fiscal year and the administration actually spends it. Thus, in the last analysis, it is each year's appropriation bills that actually count.

The Congress this year, as it has in every previous year of this administration, appropriated less money than the President asked for. This year the cut amounted to $1,880 million. The Congress will not vote additional funds for this fiscal year in the next session unless the President asks for them. It is up to the administration, therefore, to determine whether this reduction sticks or not by using the money it has as economically as it can.

As to back door spending the administration actually asked for more than the Congress provided, although the period of years over which this money is to be spent varies. Here again we find that these funds cannot be spent in future years unless some future President puts it into his budget. Some of the programs, once started, must be finished it is true, just as when we build a house or buy a car we must keep up the payments. A great part of each year's appropriations are made up of what was last year's back door spending. For those who try to make the Congress out as a Congress of "spenders" it is manifestly unfair to count this spending twice in one year in an effort to make it appear that the Congress is not economy minded. I am confident that when next years' actual appropriations are made we will again reduce the actual spending below what the President and his advisers ask, and that is the true test.

This is not to say that I do not believe that the Federal Government is not spending more than it should. But when we consider that the administration has 2½ million or more employees under its direct control to manage our affairs, and there are 437 Members of the House and 100 Senators to attempt to oversee what the administration proposes and disposes, it is self-evident that the major responsibility for economy lies with the executive branch. I have voted for many cuts in our spending wherever I had the opportunity. I shall continue this course and I shall continue to look for every opportunity I can find that will encourage the Federal Government to reduce unnecessary programs and to economize to the utmost.

With respect to my personal activities I shall be brief. The House was in session for a total of 141 days during the first session of the 86th Congress, and I attended most of those sessions even when no important legislation was to be considered. My Committee on Science and Astronautics met a total of 146 times, including subcommittee hearings; heard 447 witnesses and listened to several million words of testimony; conducted 30 separate investigations; and issued 21 reports. I took an active part in this committee work, attending practically every meeting of the full committee and of my Subcommittee on Research and Development. In addition, I represented the committee on inspections and investigations at Eglin Air Force Base, Fla.; the Huntstone Arsenal in Alabama and at Cape Canaveral, Fla.; and at Pine Bluff Arsenal in Arkansas. These investigations were conducted in the main on weekends and at such times as they would not interfere with the business of the House.

I was given the further honor of representing the House of Representatives at the Atlantic Congress held in London in June to consider the work of the North Atlantic Treaty Organization during its first 10 years, and to make recommendations as to its course during the next 10 years. I was a member of the Spiritual and Cultural Committee at the Atlantic Congress.

In addition to this legislative work my staff and I answered thousands of pieces of mail from the people of the 10th District, involving questions on legislation, personal problems, business problems, and the like. I met with every constituent who visited my office as far as possible; conferred with legislators, Government agency representatives, and so forth, on innumerable occasions; and familiarized myself with the operations of the executive as well as the legislative branch of our Government.

It is my feeling that no Congressman can properly perform his duties unless he keeps in close direct touch with the people of his district. In fulfillment of this obligation I used every weekend on which my presence in Washington was not required to return to the 10th District, usually traveling by auto but also using planes and on one occasion the train. On these weekends I attended every public function to which I was invited and also kept appointments with as many individuals as I could to discuss their personal problems, and with State and local officials on the problems of our area. I estimate that I made at least 15 such trips, involving a round trip mileage of over 800 miles each time, and while in the district traveled thousands of additional miles by auto in making contacts with my constituents.

The above recapitulates only the highlights of the activities of the Representative of the 10th Ohio District during the 1st session of the 86th Congress. I trust that at the end of the second session of this Congress an equally impressive report can be made.

Valuable Insights Into What's Going on Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEATING. Mr. President, one of my constituents, Prof. Arthur J. May, recently concluded a trip to Europe which included extensive travels behind the Iron Curtain. Dr. May is a professor of history at the University of Rochester and a distinguished author whose volume, "The Hapsburg Monarchy, 1867–1914," was selected for the Herbert Baxter Adams Prize by the American Historical Association in 1952.

Drawing on his broad background of travel, observation, and study of Europe and European history, Dr. May penned a series of interesting articles for the Gannett Newspapers this summer. They contain learned, well-written, and keen insights into what is going on behind the Iron Curtain and therefore deserve a particularly wide readership at this stage in world affairs. I ask unanimous consent to have a number of Dr. May's valuable articles printed at this point in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[July 16, 1959]

REDS HOLD DR. MAY AND THEN APOLOGIZE

A Rochester history professor and his wife were picked up and held briefly by Red secret police for photographing the mausoleum of a Communist hero in Sofia, Bulgaria.

Dr. Arthur J. May, University of Rochester professor of history, traveling with Mrs. May through Balkan countries beyond the Iron Curtain, reported the incident today. He is writing articles for the Gannett newspapers.

Describing the Bulgarian capital, Sofia, Dr. May wrote:

The holy of holies in Sofia for devout Bulgarian Communists is a chaste, white marble mausoleum containing the embalmed body of Georgi Dimitrov, famed international Communist and leader of the movement that carried Bulgaria into the Soviet camp. When major national celebrations are staged, the roof serves as a reviewing stand for Communist worthies. Festive wreaths and bunches of flowers, some of them well past their prime, decorate the front of the tomb.

At the entryway, two guardsmen, bayonets at the ready, stand immobile. On the hour, a squad of soldiers goosesteps to the door and fresh guards take their stahd. The overall pattern duplicates the mausoleum on the Red Square of Moscow in which Lenin and Stalin line in state.

Soon after the writer and his wife had taken photographs of the Dimitrov memorial, he felt a tap on his shoulder. A pair of men, one sharp-faced and slender, the other fleshy and ruddy in complexion, mumbled something which I interpreted to mean that they wished to exchange local currency for American money, an old Bulgarian custom.

That hypothesis was dead wrong. "Sharpie" repeated "Passport, passport" several times and I answer that the document was at the hotel. After a conference, the secret police, for that is what they actually were, mentioned to us to follow them. It dawned upon us that we were in the toils of the law—or something like that—and that we might be in for a rough experience.

Protesting innocence of any wrongdoing, we marched along to a spot across from police headquarters—as was later learned. While "Sharpie" fixed his gimlet eyes on us, his colleague went into the building. After a short stay he came back with a husky, German-speaking maiden, all smiles, who sweetly said that a "terrible, mistake had been made." Her apologies were profuse nearly to the point of our embarrassment.

Pictures might be taken anywhere, she explained gaily in response to my question. Handshaking, broad smiles on all faces, hearty good-bys in several languages and the episode was over.

But the affair was a less than necessary reminder that Bulgaria like other Communist countries is a police state. Beyond any doubt, however, the rigors of control and repression have been relaxed in the last 4 years.

As for the ordinary citizens of Sofia, they are as friendly and as helpful to visitors as their counterparts in the Soviet Union.

UNIVERSITY OF ROCHESTER PROFESSOR, ON COLLECTIVE FARM IN BULGARIA, IS TOLD THAT "REDS LEARN MOST FROM CAPITALIST UNITED STATES"

(By Arthur J. May)

PLOVDIV, BULGARIA.—After a tour of this country, Premier Khrushchev of the Soviet Union called Bulgaria "a garden land." The term certainly applies to the rich, productive agricultural plains in the vicinity of Plovdiv.

Roman conquerors, Slav invaders, the rulers of the Byzantine Empire, the Ottoman Turks, and now a Communist dispensation have been the lot of Bulgaria across the centuries, but mother earth keeps yielding her bounty regardless of the political systems.

Weather conditions have not been favorable for crops this season. That fact, however, is hidden from the foreigner as he observes vast acreages of ripened wheat, corn, tomatoes, strawberries, alfalfa, sugar beets and vineyards. Canning factories have popped up in the midst of fields, and mounds used in pagan religious ceremonies before the coming of Christianity are spotted about. The famous rose-growing valley from which attar of roses is obtained lies several miles to the north.

At noon droves of peasants take shelter from the boiling sun beside haystacks or under trees. A hoof and mouth disease has severely damaged livestock. Vehicles are stopped by inspectors to ascertain whether they are hauling anything likely to spread the disease.

Fields are large because collective farms—or cooperatives as Bulgarians prefer to call them—have taken the place of pre-Communist peasant proprietorships. Collectivization, however harsh it may have been for the individual landowner, makes for greater efficiency in production, the use of labor-saving machinery and specialization in farm tasks.

Approximately 95 percent of the arable soil of Bulgaria is now in collective holdings. The elimination of the private farmstead has raced ahead. Private enterprise farming is confined to rough areas where big machinery cannot be used.

September collective, which we inspected, is described as a good cooperative, though not the best. It represents the pooling of the resources of five villages. Our hosts included Ivan Klessourski, elderly mayor of this community of 16,000, and Atanas Tabacov, president of the collective.

As we walked through fields of crops and orchards the managers explained the organization and functioning of the collective. September covers 12,500 acres, a third in vineyards. Tobacco, rice with water for irrigation sluiced in from the murky Maritza River, fruit and vegetables, wheat and sugar beets in a descending order of importance are the principal productions.

Tools and farm animals belong to the collective in common and the heavy work of plowing and threshing is performed by a machine tractor station.

Tabacov said at first many peasant farmers strongly resisted the pooling of land and livestock, but opposition disappeared as the economic advantages came to be appreciated. He denied that physical coercion had been applied.

Workers are assigned to jobs in keeping with their capacities, I was told, and compensation is related to the kind of work done and the number of days worked. Profits are split up annually in keeping with the workday units that each member of a collective has accumulated.

The net result is a higher annual income per household than was the case under individual production.

Much interest was shown in American methods of farming, though no one from "September" has been sent to America to study techniques. From Iowa, a Bulgarian delegation recently brought home seeds for hybrid corn and other crops, insecticides, and machinery.

"Bulgarian agricultural specialists who have gone to America," Tabacov commented, "have given us reports on what they found, and I have read extensively on the subject. We know of the high productivity in the United States in spite of capitalism, and we want to find out more, especially about raising livestock.

"We can learn more from the United States, than from anywhere else."

[July 27, 1959]

BULGARIA CONFIDENT IN THE RED REGIME

(By Prof. Arthur J. May)

SOFIA, BULGARIA.—Communist Bulgaria rolls out the red carpet for foreign guests with a little extra touch of hospitality for men and women coming from that strange, distant, and little understood colossus across the Atlantic.

Enticing exchange rates on money are held out to tourists and customs examination and other formalities at the frontier have been pared to the bone. As yet, arrangements for dealing with individual travelers are below par, for, as in factories and on farms, the Bulgarian authorities prefer mass production—tourist parties of 30 or more.

The warm welcome extended to visitors from free countries—who are likely to come in a critical frame of mind—testifies to the confidence of the Communists in their regime. It means likewise that living standards have attained a level not likely to provoke violently unsympathetic comment. "Tell your American friends just what you have seen," is an oft-repeated request.

Motorists find driving tame whether in city or countryside—few passenger cars, more buses and trucks. Coming in Bulgaria by train, the motor vehicles noted in hours could be counted on the fingers of one hand.

"Hooting Admitted During the Day" reads the English version of Sofia traffic regulations. Drivers respond to that invitation by blowing their horns whenever overtaking anything. Main thoroughfares are solidly constructed of asphalt or of stones.

On the other hand, roadways are narrow and signs giving directions for going from one town to another are inadequately provided. As a boon to motorists at night, the trees planted along the highways mile after mile are whitewashed for 6 feet from the ground.

"Stop and go" lights in the cities show the conventional colors of the West. Police officers, male and female alike, in trim uniforms regulate the flow of traffic with a white baton which possesses the quality of a magician's wand.

As in Soviet Russia, an official government agency, Balkan-Tourist, has custody of the visitors from foreign parts. Under its auspices, hotels are operated in cities, at seaside and mountain resorts, and through Balkan-Tourist trips into the countryside may be arranged. A profuse abundance of travel literature has been prepared in half a dozen languages.

And for the American traveler in Europe who yearns to get off the beaten track, to obtain first-hand impressions of a carbon copy of Soviet Russia, Bulgaria is just the place. It boasts, too, a surprising array of vacation spots along the Black Sea—the Riviera of this part of the world—for leisurely loafing. One can get by using the English language alone.

Typical of the new Bulgarian hotels are the Balkan in Sofia, and the Tremontioum (Three Mountains) of Plovdiv, excellently appointed, equipped with modern conveniences, and comfortable. The Plovdiv establishment encircles a large open-air restaurant with orchestra and facilities for several hundred patrons. The room assigned to us in Sofia measured 20 feet by 30 feet—far larger than an ordinary native dwelling—not counting an entry hall, and a generous-sized bathroom (in which the water sometimes ran hot).

Meal service is unmistakably on the slow side; if tips were allowed, more speed might be generated. National food specialties as well as standard international fare come in well-cooked and ample proportions. Ordering a meal offers somewhat of a challenge, for the menu is typed on four loose sheets in as many languages, with stated prices for each item, and the total bill must not exceed the figure stated on your coupon. At Plovdiv, the waiter placed an "American" flag on our table—only 16 stars on it, but a gesture of good will.

A Florida-type building frenzy has taken place in the vicinity of Vaina in recent years. From nothing but sand dunes, a resort called "Golden Sands" has come into being with a score of modern hotels, wonderful beaches with sand like fine sugar, and facilities to make holidays diverting. Hundreds of small villas dot the landscape.

In spite of all the energies lately invested in the economic growth of Bulgaria, cul-

tural enrichment has by no means been neglected. Four major universities with a supporting set of professional and technological institutions are filled with students whose tuition and living are supplied free by the government. Seven opera houses in a land of 8 million is not bad at all.

"La Boheme" was well presented in the new Sofia Opera House with K. Popova, a native star as an excellent Mimi, and an impassioned, efficient conductor from France, George Sebastian. Some of the boxes cling rather precariously to the walls, only slightly below the ceiling.

The Bulgarian Communist leadership and doubtless a large proportion of the rank and file feel confident that they are going places, as the saying runs. Greeting the traveler at the frontier are two chaste signs in French: "The doctrines of Marx and Lenin stimulate creative thought in everyone and aspirations for the good life," and, "When peace prevails, a Socialist economy thrives best and grows most rapidly."

[July 29, 1959]

A ROCHESTERIAN TRAVELING BEHIND THE IRON CURTAIN FINDS BUSY BULGARIA COMPLETELY SOVIET ORIENTED

(By Dr. Arthur J. May)

SOFIA, BULGARIA.—Since the establishment of the authoritarian Communist regime in 1948, industrial expansion has been the dominant accent in Bulgarian economic life.

Whereas previously the economy had been overwhelmingly agrarian, today 40 percent of the employed population are at work in factories, transportation, mines, and trade, and year after year this proportion continues to rise.

Private enterprise has been reduced to zero. As in the Soviet Union itself, Bulgaria proceeds on a definite, though somewhat flexible, blueprint of economic advance, blocked out in 5-year periods. After a decade of more or less successful planning, the country this year is being launched on a "revolutionary leap in national development," as the Communist chiefs call it.

If plans are actually fulfilled, by 1962 industrial output will surpass the production of 1958 by better than 200 percent and for the following 3 years the goal is 300 to 400 percent of present levels. Not content with what is being achieved, Todor Zhikov, First Secretary of the Communist Party—"the Bulgarian Khrushchev"—recently ordered a speedup, so as to fulfill the current plan in 3 years or 4 at the outside.

The Communist leadership aspires to make Bulgaria more nearly like the Soviet Union than any of the other satellites. To meet demands for labor, women and youths in their late teens have been drawn into factories and shops. Nurseries and communal kitchens are taking over chores formerly handled by housewives.

At every turn the economy of Bulgaria is tightly laced in with the other Iron Curtain states, Soviet Russia first and last. From the Soviet Union have come—and more is on the way—loans an easy terms, machinery and plant equipment of various kinds, and technical experts. On their side, Bulgarians have gone to Russia, Czechoslovakia, and Eastern Germany to learn scientific know-how. The bulk of Bulgarian exports, said to be the best quality goods, are siphoned off to Russia.

To get a firsthand look at the tempo of factory production, I spent most of an afternoon at the Low Current Works in Sofia, which turns out radio and telephone materials, electrical measuring instruments and will produce television sets as soon as the telecasting station, now in the building, becomes available.

When I suggested the similarity in manufacturing between this plant and the Stromberg-Carlson Co. of Rochester, N.Y., the managing director nodded, indicating familiarity with the name.

On the welcoming committee at the closely guarded factory entrance was Theodor Shiarpschev, 43 years in America, who returned to his homeland a few years back, perhaps in the spirit of missionary zeal. As his principal assignment he translates articles in American and English technical journals into Bulgarian.

Proudly he displayed a newspaper photograph of his granddaughter in America who had recently been crowned Miss Oakland—or something like that.

We were ushered into the spacious office of the managing director, Dimtri Yonev, who greeted us cordially. About 45 years old, he appeared to be unusually keen and answered almost all of the questions put to him without equivocation. Study, hard work, and ability, he explained, had carried him to the top post in the plant. Wine, cigarettes, and candy were set before us to give the interview a fireside flavor.

In all some 4,000 workers are employed, more women than men and none under 18. Small shops once did inefficiently the jobs carried on here by up-to-date factory methods. The working week runs to 46 hours, unless a job is hazardous in which case 33 hours is the normal stint.

For the most part, wages are paid on the piecework principle and managers are rewarded with bonuses if norms of production are exceeded.

Housing is the responsibility of the municipal authorities, not of factory management. Congestion is acute, but many blocks of apartments have recently been built and others are under construction. The size of living quarters depends upon the size of a family. My request to see the inside of a worker's apartment was vetoed.

Technical schools provide training for 2 to 4 years before youths are equipped for factory employment. Some 300 employees attend free evening schools to enlarge their technical knowledge, and others go off to Russian, Czech, or East German plants with the same purpose in mind.

On walls of workrooms are signs urging the employees to emulate the "speedking workers" of the Soviet Union and to reach the targets of the 5-year plan in 3 years and 10 months.

On parting, Shiarpschev explained Bulgarian ties with Russia this way: "We and the Russians are brothers. They freed us from the Turks in 1877 and from the Fascists and the Nazis in 1944–45. Otherwise, our country would still be under the heel of Hitler."

And he concluded, "Bulgarians want to live in peace. The cold war hurts everyone—military preparations make living harder for all of us." Flower beds graced the factory yard, but permission to take a photograph was denied.

[Aug. 1, 1959]

WOULD HAVE STARVED—YUGOSLAVS GRATEFUL FOR FOOD FROM UNITED STATES

(By Dr. Arthur J. May)

BELGRADE, YUGOSLAVIA.—Due to curious quirks of nature, crops in Yugoslavia recently have suffered from drought in even-numbered years and been bountiful in alternate years. "Without food from America, we would have starved," a grateful Yugoslav said to me. If assistance from the free world had not been forthcoming, President Tito might have been forced back into the Soviet straitjacket in order to obtain necessary foodstuffs.

Economic aid has been reinforced by military supplies and advisers for purposes of national defense. Thinking in terms of calculated risk, whatever strengthens Tito in his resistance to the Soviet Union renders the safety of ourselves and of other free nations more secure.

Since the end of the war in 1945, the United States has supplied economic aid to Yugoslavia far above a billion dollars. Britain, France and other NATO countries have likewise contributed. Help has come in the form of raw materials for manufacturing and, more importantly, of food—huge quantities of wheat, for instance, from the surpluses accumulated in American grain elevators.

Until this year, the United States also cooperated in the building up of Yugoslav defense forces. When the American military mission came to an end, Maj. Gen. Mercer C. Walter, who was in charge, expressed gratification that American experience had helped "a valiant people to reinforce their will for their own independence." Teams from the American Army, Navy, and Air Force all took part in the program.

Our military technicians assisted in training Yugoslav troops and gave instruction in the use and maintenance of weapons of war supplied by America. Yugoslav officers and men were sent to American military centers to find out about our equipment and methods.

In keeping with Communist doctrine, the Government owns all productive facilities in manufacturing, transportation, banking, and the like. Almost the only private enterprises lingering on in cities and towns are small retail stores and shops of craftsmen.

A distinctive feature of the Yugoslav economic mechanism is workers councils of management in trading concerns and industrial plants. These bodies make decisions on prices, wages, working conditions, and related matters. In practice, the top manager is picked by local units of government, subject to approval by the elected workers council. The rest of the managerial personnel is chosen directly by the workers councils themselves.

Two out of every three Yugoslavs depend upon the land for their livelihood. Traditionally, the small independent farm has prevailed, yielding only enough to maintain the family working it. After experimenting with collective farming, Tito's regime in 1953 allowed peasants to withdraw from collectives if they wished and most did so posthaste. Only around 10 percent of the cultivated soil now is in cooperatives, but they supply a high proportion of the food consumed by urban dwellers.

People on city streets are better dressed than the Russians I observed in 1955. Shop windows display a wide variety of attractive goods, seemingly at pretty stiff prices. About half the take-home of a city family goes into food, though rent consumes under 10 percent.

In areas beyond the central sections of cities, homes with tiny garden plots are seen, but most urbanites live in apartments. And housing congestion is acute because jobs in industry exert a magnetic influence upon surplus workers in the countryside. Some 40,000 stream into Belgrade alone every year.

The Communist regime prides itself on the new civic center in downtown Belgrade—buildings for government offices, headquarters of the Communist Party, stores, and model apartment.

But the showpiece is the glistening Metropole Hotel, the finest in the land. In fact for sheer elegance and luxury it will bear comparison with the grandiose hotel just beyond Disneyland in the environs of Los Angeles.

Food is excellent, the service impeccable, the orchestra good.

Patronage during our visit consisted of members of the diplomatic corps and Yugoslav political personalities and businessmen, usually accompanied by glamorous wives with snappy hair-does and stylish gowns—no stockings, to be sure. A minority of the men

appeared without ties and with shirts open at the neck—once upon a time the trademark of the authentic Communist.

[August 8, 1959]

BEAUTIFUL, COMMUNIST-RIDDEN LAND IN THE MOUNTAINS—RUMANIANS FRIENDLY TO AMERICANS, FEARFUL OF REDS

(By Dr. Arthur J. May)

CLUJ, RUMANIA.—It is not as hard for a Westerner to get into Communist Rumania as for a camel to go through the eye of a needle though there are similarities.

First of all special permission must be procured from the State Department, and once that hurdle is surmounted, the tough work really begins.

Travel in a private car is virtually ruled out because of the stickiness of the Rumanian authorities in issuing a visa, the impossibility of getting advance information on road conditions or of arranging hotel reservations. The alternative is to apply for admission with a party and if you are lucky, in you go.

Preliminaries include presentation of a sheaf of photographs and documents setting out no little personal information on yourself and your parents. Then you wait 4 weeks for a visa to be granted, and it arrives just before the scheduled time for the departure of your party.

That's not quite all. Customs inspection at the Rumanian frontier station consumes 4 dreary hours. Not much time is wasted on the luggage of Americans, but the belongings of German-speaking travelers who were born in Rumania and who are on the way to visit relatives are given the most meticulous examination I have ever witnessed anywhere. The point is that many of these Germans are bringing along dutiable goods for friends in need and high charges are exacted on new articles.

When the inspection of the bags of certain travelers is finished you are reminded of the spectacle at the counter of a shop where lingerie is being sold at bargain prices. With patience and not a little good humor, goods are stowed away again. An official guide from the Carpathian Travel Bureau joins your party and serves as escort, general manager, and fountain of information until you return to the frontier. Rigorous rules require that you eat meals with the party and sleep in prescribed hotels. Other than that, you are allowed considerable latitude of movement in a city. Upon leaving Rumania inspection once more is searching, yet less thorough than upon entry.

Ordinary Rumanians are as friendly as they are inquisitive. They go out of their way to help you in getting about and normally glum faces light up when they learn that you are from America. It's a bit disconcerting to have a man kiss your hand as a mark of affection and good will.

Across the centuries fear and suspicion have printed an indelible mark upon the mentality of this folk—fear of the longtime Turkish conquerors and rulers, fear of the unenlightened aristocratic and wealthy master class, and, today, widespread distrust of and resentment against the governing Communist oligarchy.

Herds of cattle, goats, squadrons of geese and ducks wandering along the principal Rumanian highways offer a vastly greater challenge to a chauffeur than competing motor traffic. Scarcity of private cars may be set down as an earmark of a Communist-operated country.

Main roadways themselves are generally good, suitable for a 30- to 35-mile-an-hour pace. Many a passing peasant cart has a rounded cover of patched-up canvas or of crudely made wickerwork, porous when rain falls. Instead of conventional billboards proclaiming the virtues of this commercial product or that, signs along the Rumanian highways summon workers to step up production on farm or in factory or preach in crisp phrases a tenet of the Communist creed.

Occasionally one sees a Red Cross poster, inviting help in first aid or nursing care. In varied languages, too, there are pleas for international peace and friendship, or for investment in state savings banks, vivified by pictures, easy to comprehend.

On Sunday, peasant women and men appear in their picturesque folk costumes, which vary in color and design from one district to another in Rumania and even in keeping with the preferred language of the wearer. Folk dancing festivals are a rich national tradition, which the present regime encourages, and they are done very well indeed. Music may be furnished by a small orchestra or by violins and rectangular or round wooden flutes, sometimes two-piped.

The performance may include a sort of musical play with choral speaking, extolling the virtues of the collective farm. Several folk-dance ensembles have won warm applause in foreign countries. Beyond any doubt they would attract appreciative audiences in America.

An outstanding showpiece of this city is the botanical garden under direction of Prof. George Soffa, a scientist of front rank, and enthusiastic about the treasures in his charge. Some 10,000 specimens brought from all over the globe, but especially from the Balkan peninsula, are laid out with care and intelligence in a 75-acre tract. Particularly prized are the Japanese garden containing an oriental residence and bridge and a Roman area with stone objects from antiquity. Pointing to trees and plants originating in North America—pines, white birch, and poison ivy, Soffa expressed a wish that he could obtain more specimens from the new world.

As in other Communist countries, the tourist business in Rumania is handled by a State agency—Carpathian Tourist. It arranges for accommodation in hotels which are comfortable and clean, for meals, and trips to spots of interest. It is something of a surprise to find goat cheese and ham on your breakfast plate, with tea, cocoa, or coffee covered by a thick layer of whipped cream, as the beverage. Natives favor a small dosage of ardent spirits a half hour before breakfast, to set muscles and brain in active operation early in the day.

For variety and beauty of scenery Rumania has much to commend it. Fat agricultural lands and lush grazing districts are more than matched by lofty ranges of the Carpathian Mountains. Not much has been done to acquaint western nimrods with the big-game possibilities—deer, bear, and wild hogs—which abound in the mountain regions and fill out many a native larder.

In tourism, as in so many other ways, the Communist countries of Eastern Europe take in each other's washing. In other words, while East Germans, Russians, Bulgarians, and so forth, seek out Rumania for their vacations, Rumanians in turn go off to their countries on holiday. Travel is invariably in groups which descend upon hotels and restaurants in scores of even hundreds at a time, each party shepherded by official Carpathian Tourist guides. These personal associations knit tighter the bonds of the international Communist society.

[Aug. 11, 1959]

LAND OF MAGYARS, GYPSIES, GERMANS—SHIFTING RED POLICY HURTS RUMANIAN JEWS WHO WANT TO LEAVE

(By Dr. Arthur J. May)

SIBIU, RUMANIA.—"Mammy, mammy, mammy," shrieked a middle-aged woman as the tourist bus pulled away from a Rumanian city. It was the agonized lament of a daughter who had not seen her mother for nearly a full generation and might never see her again.

As for the mother, her wrinkled weather-beaten face sweetness itself, she hastily wiped a tear away, gazed at the departing bus impasively. Doubtless her stoical calm is rooted in a deep religious faith.

The mother in question, while German in speech, is Rumanian in citizenship. Before the Second World War well in excess of a million Germans dwelt in this land of diversified peoples and religious creeds. Their ancestors, handicraftsmen and farmers, migrated into the region as much as 700 years ago and their descendants preserved their German speech, habits, folkways and modes of living.

Responding to the siren call of Hitler, nearly all the German-speaking young men, some 160,000 of them—fought in the Nazi armies or served in other capacities. Those who survived the war have not been permitted to return to their Rumanian homeland and have taken up residence in Germany. Their wives and children remain here and only recently has the Rumanian Government permitted visits.

Ravages of war, deportations to the Soviet Union, and emigration have cut down the German element to approximately one-third of its prewar size.

"Rumania is just like America," a charming lady, who knows her own country infinitely better than she knows ours, said to me. "We have many national and cultural groupings and so have you." What she was unaware of was that nothing comparable to the process of Americanization has taken place in Rumania. Whether the international article in the Communist platform will resolve old-age national antagonisms and fueds here, only the future can tell.

In dealing with the question of Jewish emigration to Israel, the Government of Rumania has oscillated uncertainly between freedom to depart and ironclad prohibition. In the early postwar period a considerable movement to Israel took place, but from 1951 to mid-1958 no lawful emigration was authorized. In June of 1958, 100 were allowed to move away and then in July the barrier was raised anew.

Reversing its policy once more, between September 1958 and March of 1959 about 29,000 passports permitting men and women of the Jewish tradition to leave Rumania were granted, though not all have in fact been used. It appears that not more than 14,000 started westward, proceeding by way of Hungary, Vienna, and Naples, thence by ship to Israel.

Emigrants have been severely restricted on what and how much they may take with them. Once the Iron Curtain is left behind the wanderers are taken care of and transported to Israel by representatives of the American United Jewish Appeal.

Possibly 200,000 Rumanian Jews desire to go to Israel where many already have relatives. Many of them are physicians, engineers and teachers—professions into which local Jews have traditionally entered.

When the door of emigration slammed shut in March of this year, thousands of holders of passports were left in dire straits. In preparation for departure they had plunked down the substantial sums necessary to renounce Rumanian citizenship and to meet other state requirements. Having sold their household possessions for these purposes and to cover the cost of transportation to the West, many Jews have been and yet are dependent on charity for their daily bread.

Outside of top government circles next to nothing is known about the reasoning behind shifting policies.

Prior to the First World War, large sections of Rumania belonged to Hungary and in them lived belts of Hungarian or Magyar-

speaking people. An interesting adventure in handling the ever-delicate problem of nationality rights and interests has been the creation of a Magyar Autonomous Region in the central part of the country, most of whose inhabitants speak a Magyar dialect.

Public leadership in the region is wholly Communist and the degree of home rule permitted is by no means broad. Official transactions are carried on in both the Magyar and Rumanian languages and Magyar is used in press, theater, and schools, though sharp bickering on this last point has occurred.

Now and then along Rumanian highways the traveler notices small encampments of gypsies or sees them in cities.

In all, as many as half a million gypsies may live in Rumania, and little or no intermarriage takes place with other segments of the population. Marriage arrangements in the gypsy communities are financial transactions, the price of a bride depending upon her beauty. A father with several handsome daughters does very well for himself.

[August 13, 1959]

A ROCHESTER PROFESSOR RIDES A ROCK-AND-ROLL BALKAN TRAIN AND FINDS YUGOSLAVS LOVE NEVER-NEVER LAND OF U.S.A.

(By Dr. Arthur J. May)

NISH, YUGOSLAVIA.—If you want to get acquainted with ordinary citizens in a Communist country, travel second class by rail.

The third-class category, incidentally, that existed before the Second World War, has been abandoned, many of the cars with hard wooden seats having been upgraded to second class. If you have a phrase-book of the Yugoslav language or a brightly colored map of the country, some American pictures or trinkets, you can attract a curious audience of passengers any hour of the day or night.

Yugoslav trains are always crowded, not only the compartments into which cars are divided, but also the corridors, and it is a fearsome battle to get through to a dining car if one happens to be attached. Strings of 20 cars to a train are not uncommon. When a stop is made, one mob tumbles out and another swarms in pellmell with utter disregard of other travelers.

Under social security regulations, every insured Yugoslav citizen is entitled to one long rail trip a year. That's one reason why so many are on the move. Or maybe they are soldiers on furlough or gangs of 50 to 100 teenagers going off to a roadbuilding or a farmwork project.

Lustily these young people sing doleful folk music or more spirited patriotic and Communist anthems on railroad platforms or from the coach or freight cars in which they travel, each group with a huge flag.

Boys and girls, men and women on the trains, all alike seize the opportunity to parade their knowledge of English, German, or French before you. Although Russian is the second language taught in Yugoslav schools, a west European language is required, too. Speaking knowledge runs the gamut from a few painfully mumbled phrases to tolerable familiarity.

Eyes pop with wonderment and pleasure, even affection, when the Yugoslavs learn you are an American. For many, America is a never-never land of their most fantastic dreams. Some tell you that they have relatives or acquaintances over across. Gaily-colored shirts worn by many boys are stamped with replicas of the State of Texas or even of the Statue of Liberty.

Give them a cancelled postage stamp bearing the likeness of Washington or Lincoln as a souvenir and the Yugoslav fellow travelers tuck them away in their purses along with other prized possessions. Quite likely they will insist on handing you a gift—a pencil, a cigarette, a thimbleful of slivovitz, which tastes like liquid fire, or maybe a bunch of flowers or a treasured trinket.

Teenagers can reel off a longish number of Hollywood stars and rock-and-roll celebrities without batting an eye, and even sing snatches of American song hits although unable to speak English at all. Frequently you are considerably puzzled by their pronunciation of Marilyn Monroe, Elvis Presley, Marlon Brando, or Doris Day, the top favorites, it appears. "Cowboy" sounds the same from Yugoslav lips as from any other. A Texas broncobuster decorated the cover of a book of songs we were shown, some of them in phonetic English.

A young soldier struggled to pronounce the names of Roosevelt, Truman, and Eisenhower. Smarter youngsters recalled a pleasing list of famous personalities in American history, but most of those with whom I talked professed complete ignorance of the subject. From his pocket the soldier pulled out a notebook with a calendar in it. He had crossed out with a pencil each day of service and rejoiced over the prospect of being in civilian clothes in another 2 months. Dislike of the routines of conscription is not peculiar to any country.

"I muss learn English better," a tall handsome student of 21 commented. "I studee heem in school and now by myself." Elvis "Praislee" he referred to laughingly as the king of rock-and-roll. "I like that and shaxx best. I want to go to America. I have a friend in Chukawgo, beeg—" and his gesture indicated broad-shouldered.

At one point, when our compartment mates left the train, we snapped a photograph of them waving back at us. Quicker than you could say Jackie Robinson, a gaunt, tough-looking militia man, revolver in his holster, and a long, ugly night-club at his side, stormed up, sputtering a torrent of Yugoslav words. Other passengers attempted to give him a bill of clean health on us, but he kept jabbering on, pointing at our cameras. The American passport however, which he examined carefully, quieted him down and he soon slumped away.

ONCE "PARIS OF EAST," BUCHAREST TODAY IS "MOSCOW OF SOUTH"

(By Dr. Arthur J. May)

BUCHAREST, RUMANIA.—Boasting a population of a million and a quarter, this capital city of the Rumanian republic celebrates this year the 500th anniversary of its foundation.

Construction on the grand scale is planned to commemorate this historic event—hospitals and schools, theaters and a circus, and thousands of dwellings to reduce the frightful housing congestion.

Side streets, frequently only winding narrow lanes, are to be broadened to take care of an anticipated increase in motor traffic. Work on these projects requiring no particular skill is being done by volunteers and groups of youngsters. If targets are reached, the plans will be translated into realities by 1965.

Bucharest prides itself on being the Paris of the East, or used to. Nowadays the Moscow of the south might be more appropriate. Broad, straight boulevards, usually flanked by horsechestnut and lime trees are distinctive features. Along them run streetcars which deserve a blue ribbon as the noisiest in the world. Coupled with blazing summer heat, the racket makes Bucharest uncomfortable for the foreigner, at least.

A wide variety of architectural styles distinguish public buildings, all the way from fairly simple Renaissance structures to the monumental massiveness once popular in the Soviet Union. The State Printing Works is housed in a smaller edition of the new Moscow University and the Dynamo Stadium for sports events is almost an exact replica of one in the Russian capital.

Parks with gay flowerbeds or pleasant lakes are numerous. Close by an immense statue of Stalin is the Stalin Park of Rest and Culture, patterned on Russian models, and lying on both sides of a picturesque lake. Busts of Rumanian authors, musicians, and other artists suggest a gallery in the open air. And in an outdoor theater, exhibitions of folk dancing and concerts are staged.

What used to be the royal palace has been transformed into an art gallery with paintings and sculpture by Rumanian and western masters and a sizable oriental collection. Villas of the dispossessed aristocratic and wealthy classes in unique Rumanian architectural style have been made over into apartments or are used by fragments of the huge state bureaucracy. It is probably no accident that the Soviet Ambassador occupies one of the very largest mansions.

Outside of the sophisticated central area and the old residential districts, extensive areas swarm with humble cottages of the peasant type. Communist orators and press keep saying that these sections, in which most Bucharesters live, will be replaced before long by up-to-date apartment blocks.

Bucharest is a city of churches, mostly small, and sometimes obscured by apartments and other tall buildings. It would be possible, you are told, to visit a different church every day of the year, and Communists tell you that the churches illustrate the philosophical outlook of the outmoded and discarded capitalistic scheme of things.

Suggestive of the traditional linkage between state and church in Rumania, the former Parliament House stands alongside of the Orthodox Cathedral, with a longish plaza of flowerbeds leading to it.

The interior of the cathedral is surprisingly cramped and across the front runs a beautifully decorated ikonostasis or picture stand.

A heavily bearded clergyman reads from a lectern, a 13-year-old girl kneels before an altar, bending her head nearly to the floor, and then kisses several objects on the ikonostasis. Her elderly grandmother follows along afterward.

A short set of stairs leads to a casket holding the embalmed body of a saint, though only the withered hands are exposed. Religious emblems lie upon the coffin. Closely another clergyman watched, with seeming indifference, the movements of tourist parties.

THEY THINK WE WESTERNERS ARE DYING OF UNDERNOURISHMENT—RED PRESS GIVES RUMANIANS FALSE PICTURE OF WORLD

(By Dr. Arthur J. May)

BUCHAREST, RUMANIA.—At a street corner, a Rumanian fired questions at me in rapid order: "You are an American? How much did your trip cost? How big is New York? Is London larger? Is Shanghai the biggest city in the world? How tall is the highest building in New York?"

When I proposed that the Empire State Building was ten times higher than the stately Hotel Ambassador across from where we were standing, an expression of total incredulity came over his face.

"Ten times bigger than that one? How much did it cost? Are you of German descent? Are you a Jew? How many passengers can your bus carry? How much did you say your trip cost?" (Worked out in relation to the purchasing power of Rumanian money, the cost must have appeared scarcely less fantastic than the Empire State Building.)

It seemed proper for me to put a few questions. "Is living getting better in Ru-

mania?" "For some, yes; for most, no; not enough money," said he.

"Do many have cars like that one?" and I pointed to a small blue job at the curb. "Very, very few," he replied, and then glancing furtively about, he ambled down the street. Exchanges of essentially the same sort were repeated many times over in the course of the Rumanian journey.

According to informed sources, widespread discontent prevails because of police surveillance, pressure upon workers to raise productivity, the housing nightmare, and costs of living.

When a pair of good shoes devours a month's wages, the popular mood can readily be understood. For half-hours on end, I observed pedestrians on main boulevards. Shoes worn by men were generally of stout quality, women's much more flimsy, as would normally be true elsewhere in summer. Necklaces were rarities, earrings commoner, and lipstick still more so.

Clothing is better than I saw in Moscow in 1955. When I made this point to a resident foreigner, he countered, "Come back in January and you'll see them in patched and ragged clothes. Only big shots in the Communist Party and the bureaucracy have anything like a decent wardrobe."

The Communist authorities have genuinely tried to grapple with the wretched congestion in housing, but diversion of funds and labor to industrial purposes has frustrated many a fine program. Of late, the making of consumer goods and of housing materials has been stepped up substantially.

Popular aversion to things as they are, sullen defiance, expresses itself in several ways such as the slowness with which pedestrians get out of the way of an oncoming car at crossings. It is assumed that every car must be carrying someone in authority.

Communists will tell you that Rumania has a free press, but in reality they have only the foggiest notion as to what the term means. Almost all the legally printed matter of the country pours out from Scinteia House, a palatial structure closely resembling the central unit of the new University of Moscow and designed by the same architect.

It is claimed that this printing works is the largest in Europe and can run off 720,000 newspapers in an hour. Eighty percent of the machinery, not all of it up-to-date, has come over from Russia and the rest from Germany. In addition to papers, books, of all kinds, among them those studied in schools, magazines, and picture postcards are printed under this roof. About a third of the output is shipped abroad, chiefly to the Soviet Union.

Newspapers are published in the various languages spoken in Rumania, but contents and format are virtually the same for all. For German readers there is Neuer Weg (the New Way; that is, the Communist way). It has 4 pages several inches larger than an American paper with seven columns to the pages and it not too badly printed.

On the masthead is a standard Communist emblem and the battlecry of Karl Marx, "Proletarians of the World, Unite." A lengthy editorial and the leading news article on page one present a thoroughly Communist-slanted treatment of the diplomatic deliberations going on at Geneva.

"The Soviet proposals offer a genuine foundation for (international) understanding," proclaims the banner headline. For the rest, the front page is given over to reports on visits of delegations from Korea, Greece, and India, stories of two factories which are turning out more goods and at the same time cutting down on coal consumption, and on the percentages of crops already harvested.

On the inside, reports relate how one province has improved farm productivity while in another trasportation is costing too much, and in a third housing projects are being badly done, but a fourth has surpassed the goal for producing building materials.

Elsewhere are an interview with the Foreign Minister, Avram Banaciu, on proposals for a zone in Southeastern Europe from which atomic weapons would be excluded, and what looks like a lopsided summary of a debate in a Canadian Parliament in world affairs. The last page carries a letters-to-the-editor section, instructions on how to use a camera, a discussion on the age of the earth, and little essays on practical subjects.

No stories on crime appear, sports are dismissed in less than a column, radio programs are tucked away in one corner, and there is no advertising whatsoever. Eight rather muddy pictures, varying as to size, illustrate such things as the progress in construction of the gigantic Lenin hydroelectric project, a Greek national hero undergoing punishment for pacifism, and striking workers in Britain who have clashed with police.

Except for Communist sheets, no foreign newspapers are admitted to the country. Inescapably Rumanians have wholly false notions of what is happening in the rest of the world.

They suppose, for example, that droves of people in the Western World drop dead every day because of undernourishment. My request for a chat with Rumanian newspapermen promised for a time to be successful, but in the end I was informed that it could not be arranged because too many writers were away on vacation. The explanation was unconvincing.

Along with press and radio, schools constitute a powerful instrument of Communist indoctrination. In Rumania, as in other Iron Curtain lands, mass education stands high on the lost of national objectives. It is said that more than a fifth of the population, chiefly in the countryside, could neither read nor write when the Communists seized power.

Today, it is asserted that literacy is universal, that all the 16,000 Rumanian villages have schools, and that the period of compulsory attendance has been greatly extended. Foreign observers think these claims are justified, on the whole. As byproducts of more schooling, standards of personal hygiene and community sanitation have been raised among the peasant millions.

On the higher educational plane, attendance has virtually doubled at the four universities of Rumania in the Communist era, not counting students enrolled in evening classes or correspondence courses. Three out of four university learners receive government grants to cover expenses. Advanced, specialized schools in engineering and science, in music and in painting have also been established.

A TOURING UNIVERSITY OF ROCHESTER PROFESSOR VISITS A POLICE STATE AND FINDS "PASSIVE RESIGNATION" DESCRIBES ATTITUDE OF HUNGARIANS

(By Arthur J. May)

VIENNA, AUSTRIA.—The ways of the Hungarian police state are too mysterious for the normal mind to fathom.

The authorities allowed me to travel from one end of the republic to the other. They allowed me to stay in Budapest long enough to eat two meals, to have a look around, and to take pictures, and they allowed me to have snacks in two other widely separated cities, but they would not permit me to stay in the country overnight.

No reasons for this irrational behavior were forthcoming.

Or again, at the frontier, a regulation just ordained requires an exit document at the price of 45 Hungarian forints, a trifle more than $2. Austrian schillings, German marks, French francs, American dollars, all were proffered to satisfy the charge, but the border officials would not so much as touch any of this filthy, capitalist money.

Forints they must have and nothing but forints. Since it was Saturday, the bank where foreign currency may lawfully be exchanged was closed and would not reopen until Monday.

To straighten out matters, better than an hour was consumed in making 8 or 10 telephone calls to functionaries higher on the bureaucratic ladder with the net result that payment of the 45 forints could be postponed until the return to the same frontier station.

Much knowledge about Hungary is available in Vienna, best of all watchtowers for the Soviet satellites in southeastern Europe.

Factual information comes from such sources as business and professional men who go into the country and from the steady trickle of refugees who contrive to get out in spite of high, barbed-wire fences and plowed fields stretching all along the Austrian frontier, masses of guards, carrying tommy-guns and binoculars, observation towers with powerful lights, and savage police dogs.

After the revolution of 1956 at least 180,000 people fled from Hungary. A lovely Budapest official escort ("call me Isabella") hastened to tell me that what happened 3 years ago was not a rebellion at all. It was in fact a counter revolution against the People's Republic, organized by a handful of conspirators, egged on by agents of the West.

That theory stands as the official interpretation of 1956, and it was useless to try to convince the dear lady that in reality the uprising had a spontaneous character rising out of active discontent among writers, students, and industrial wage-workers. On the streets of Hungary's cities, the figment of a worker's paradise exploded. Reverberations will echo for generations to come.

Most of the revolutionary refugees found temporary asylum in Austria. From here the great majority has been dispersed all over the globe.

United Nations help and assistance from the Rockefeller Foundation and other American charities have enabled the refugees lingering in Austria to get back on their feet.

I talked with members of the Philharmonica Hungarica, among others. About 50 of them escaped with their families, more or less intact, and are living comfortably in a colony on the edge of Vienna. Almost all of the musicians are young men, the conductor, Zoltan Rozsnyai, being only 33.

In the autumn this distinguished company of artists will tour the United States and present concerts in 45 cities.

Surprisingly enough, families in this colony may communicate by telephone with relatives in Hungary. Moreover, censors appear to have stopped opening and reading letters and they permit foreign books, though not newspapers and magazines, to pass through the mails.

Buildings in Budapest and in other cities which I observed, pockmarked with the fire of machinegun and cannon, bear silent witness to the heoric revolution of 1956 against the monstrous rule by the Communist lackeys of Moscow. At present the Russian garrison is around 70,000, a quarter of them in and around Budapest. In several Hungarian villages I spotted Soviet military officers and men, and I saw a truckload of young Russian soldiers being hauled to their posts.

Faces on the streets of Hungary appear to reflect the presence of the Soviet forces and memories of the savage ferocity with which murderous Russian tanks and guns crushed the 1956 insurrection. Glum and dispirited

are the words that most accurately describe the Hungarians that I saw—passive resignation to a fate that somehow must be endured.

So long as the Communist regime of Hungary is upheld by tens of thousands of Soviet bayonets no new outbreaks of serious dimensions may be expected. Besides, a fresh set of anti-Russian leaders will need to mature. For, in addition to the men and women who fled abroad, about 75,000 insurgents were deported to the Soviet Union and only 1 in 6 of them is known to have been released from vile concentration camps. Conservative estimates place political prisoners in the jails of Hungary at 100,000.

For some free spirits, the Soviet Union offers one consolation. A current Hungarian witticism asks "Why do we love Russia?" And the answer: "Because Russia serves as a buffer state between Hungary and China." Half a century or so hence this bit of humor may be converted into sober reality.

In the last half year, some of the post-revolutionary rigors have been notably relaxed. Scientific and artistic workers are given no little latitude in the exercise of their talents. And the Communist campaign against religion has softened sufficiently to enable the faithful to worship without molestation and for instruction to be given to children.

Josef Cardinal Mindszenty, on the other hand, 70-year-old prelate of Hungary, still thinks it wise never to leave the safety afforded him by residence in the American Legation in Budapest.

It is permissible for privately operated shops to carry on business, provided employees do not exceed 10. The drive to force the peasantry to pool their land and livestock in collective farms has temporarily abated, so that at the moment around half of the cultivable soil is worked by individual households.

But only collectives get any new agricultural implements and only their members receive social security benefits, free medical care, old age pensions and so forth.

Water is drawn from community pumps or lifted out of the earth by means of long poles. Where brooks exist, maidens industriously scrub away on the family washing. Moldering, unkempt graveyards are full of wreaths long since faded and dried to a crisp. Single horse wagons, slow-footed oxen, or duble-duty cows draw their loads along in the steaming harvest sun. Women, clad in heavy clothing, toil on the wheatlands alongside their menfolk. Bikinis would seem to be more seasonable.

The broad, almost treeless plains running eastward from Budapest, and known as the pusta, belong among the richest granaries of Europe. Pancake flat, they remind the American of sections of our Middle West. Corn and wheat, onions, sugar beets, and sunflowers for oil promise bumper crops this year.

Curiously, potatoes, the poor man's best friend, are not extensively raised.

A Special Report on the 1st Session of the 86th Congress

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BRADEMAS. Mr. Speaker, following the adjournment of the 1st session of the 86th Congress I prepared a special report on this productive session for distribution to the residents of Indiana's Third District which I have the honor to represent.

My special report follows:

A SPECIAL REPORT ON THE 1ST SESSION OF THE 86TH CONGRESS

The 1st session of the 86th Congress was the longest since 1951 and one of the most controversial. Congress produced a great deal of constructive legislation and completed hearings on other important bills with final action awaiting the second session next year. At a time when our country is confronted with a host of pressing problems at home and the challenge of Soviet communism abroad, there is plenty of work left to do.

Here is a report from your Representative in Congress on the first session:

LABOR REFORM BILL PASSED

Hottest legislative battle of the year came on proposals to curb racketeering and insure democracy in certain labor unions.

On September 4 I was among those Members of Congress who voted for the Labor-Management Reform Act of 1959, which is now law.

As a member of the House Education and Labor Committee, I took part in the work of many weeks to produce a fair and effective bill to rid the American labor movement of crooks and racketeers. Because of my stand, I was publicly attacked by Jimmy Hoffa's top labor lawyer.

In the 1958 campaign I promised that I would support reform legislation. I called attention to the fact that my Republican opponent, at that time the Congressman, had in 1958 voted against the Kennedy-Ives labor reform bill. He voted against this bill in spite of the fact that the U.S. Senate had already passed it by an overwhelming vote of 88 to 1.

When I said in the campaign I believed a labor reform law was necessary, I meant exactly what I said.

The final bill passed by Congress was the product of a House-Senate conference committee and represents a vast improvement over the Landrum-Griffin bill originally approved by the House. The Landrum bill imposed such harsh restrictions on decent labor unions that, as Senator JOHN KENNEDY said, it would have brought "the union movement in the South to a dead, screeching halt."

The Landrum bill was opposed by 97 percent of the Democrats in the North (including every Democratic and one Republican Congressman from Indiana) because it so obviously was an attempt to give the relatively nonunionized South a legislative license to steal industry from Indiana and other Northern States which pay union wages. I want industry to stay in Indiana.

Overwhelming Republican support for the Landrum bill was the result of one of the famous "deals" between the GOP and the Dixiecrats in Congress. The Halleck leadership in effect promised to drag Republican feet on civil rights legislation if the South would "go along" on the labor bill.

Major provisions of the new reform law include: A bill of rights for union members, financial and other reporting requirements for both unions and employers, guarantees of fair union elections and honest trusteeship procedures, safeguards of union funds, and prohibitions against convicted felons serving in union office. The bill also contains amendments to the Taft-Hartley Act which tighten up the ban on secondary boycotts, prohibit hot cargo agreements, restrict organizational picketing, and close the "no man's land" gap in National Labor Relations Board cases.

Much of the anticorruption language in the law originated in the bill which I supported in the Education and Labor Committee.

The new law is not perfect and I am still concerned that certain of its provisions will handicap the legitimate activities of the American trade union movement. But I am also convinced that the act will go a long way toward curbing the abuses uncovered by the Senate Rackets Committee which so shocked the American people.

Although honest citizens may differ over the specific provisions of this and other reform bills considered this session, I believe that the Labor-Management Reform Act will be one of the major accomplishments of the 86th Congress.

A SUMMARY OF OTHER MAJOR ACTIONS OF CONGRESS

Congress this year took the historic step of approving statehood for Hawaii. It provided a 2-year, $63-million annual program of Federal aid for airport construction; continued the draft for 4 more years; extended the life of the Civil Rights Commission for 2 years; and established a health insurance program for Federal employees.

The lion's share of the Federal budget in the cold war age goes to defense. Congress voted $39.2 billion for defense funds for fiscal 1960.

The landing of a Soviet missile on the moon in September gave added significance to the vote of $485 million to the National Aeronautics and Space Administration for work on space programs; $229 million was appropriated for Atomic Energy Commission construction projects.

Congress increased benefits under the Railroad Retirement Act, raised the interest rate on E and H savings bonds, and voted to add $200 million a year to the tax bill of the life insurance industry.

The public works bill Congress passed over President Eisenhower's veto contained funds to save human lives and property in Indiana by providing for much-needed flood control projects in the Wabash Valley.

Every Hoosier Representative, Democrat and Republican alike, except CHARLES HALLECK, voted against the 1-cent increase in the Federal gas tax Congress reluctantly accepted. I strongly favor building highways but I want to see more evidence than the Craig and Handley administrations have given that Indiana taxpayers are getting some good highways for their gas tax money.

The major veterans organizations supported a revision of the veterans pension program. The present system of flat monthly payments to all eligible persons was replaced by a sliding-scale of benefits related to other income, with the provision that no one now receiving benefits would be forced to take a cut. About 70 percent of the 1,250,000 veterans, widows and orphans eligible for payments will begin to receive larger benefits next year.

This Congress has been a budget-conscious Congress despite the Republican administration's charge that Democrats are "wild spenders." Congress cut over $1.8 billion from Eisenhower's budget requests for fiscal 1960.

Of the 17 appropriations bills passed, Congress increased only one over the President's request. We voted more money than he wanted for health and medical research. I was proud to support more funds to fight such killers and cripplers as heart disease and cancer.

The President's partisan attacks on Democrats as "spenders" were as unwise in winning support for his foreign aid program in Congress as they were unfair to the Senators and Congressmen on whom he most had to rely for passing it, the Democrats. Although I supported the mutual security program because I believe it essential in fighting communism and encouraging democracy abroad, many Democrats resented the President's curious logic that you were a "spender" if

you voted Federal funds for flood control and housing in America but you were not if you voted for similar programs in other countries in a foreign aid bill.

Congress voted $3.2 billion for the mutual security program, a slash of $1.2 billion under the President's final request. Democrat RAY MADDEN of Gary, Republican Leader HALLECK, and I were the only Indiana Congressmen who voted for the bill.

HOUSING BILL PASSES WITH BRADEMAS AMENDMENT

Every American family seeking to buy a home and nearly every community in the Third District—South Bend, Mishawaka, Michigan City, La Porte, Kingsford Heights, Goshen, Plymouth, Nappanee, Lakeville, and North Liberty—has a stake in the housing bill passed by Congress. After vetoing two excellent bills, President Eisenhower finally approved the third one.

All three included my amendment to permit some 350 South Bend families to keep their homes by authorizing the Federal Housing Administrator to modify the terms of a contract by the Southmore Mutual Housing Corp. to buy a Federal housing project. Homeowners had been threatened with foreclosure for falling behind in mortgage payments.

My amendment will allow the Southmore residents both to keep their homes and to pay their debt on a realistic basis, thus saving the taxpayers money by making costly foreclosure unnecessary.

Major provisions of the Housing Act of 1959 are as follows:

1. Authorized urban renewal grants of $650 million over a 2-year period.
2. Increased by $8 billion the total amount of mortgages FHA can insure.
3. Increased the maximum FHA mortgage from $20,000 to $22,500 and cut downpayment required on homes valued at $13,500 to $18,000 to 10 percent.
4. Authorized $50 million in direct loans for housing for the elderly.
5. Authorized 37,000 units of low-rent public housing, vital for taking care of slum dwellers displaced by urban renewal.
6. Increased the college housing loan fund by $250 million.

MICHIGAN CITY GETS $7,800 FOR HARBOR SURVEY

Passage of the public works appropriations bill over the President's veto means that Michigan City will receive $7,800 in Federal funds for a study survey by the Army Corps of Engineers of the city's proposed harbor improvement project.

I am delighted that this first big step has been taken to better the harbor facilities at Michigan City. The improvements can mean a significant increase in commerce to the benefit of the entire northern Indiana area.

The money will be used to determine if there is economic justification for deepening the harbor and for extending the head of navigation.

HARTKE-BRADEMAS BILL HELPS LA PORTE COUNTY SCHOOL

In the fall of 1958 fire destroyed the grade school in Union Township, La Porte County, near the Kingsbury Ordnance Plant. Senator VANCE HARTKE and I were able, in the closing hours of the last day of this session, to get both the Senate and House to pass a bill which in effect gives the township rent-free classroom space at the vacant Kingsbury plant.

The Army Department, now in charge of the empty plant, had at first billed Union Township $2,325 for temporary classroom space there but later demanded the township pay an additional $2,500 for installation of a new boiler and heating system.

Because the plant was idle and the township was already burdened with the construction of a new school, both Senator HARTKE and I felt the Army demands were excessive and unfair.

By authorizing the Army to credit the cost of installing the boiler and heating system against the rental, our bill in effect cancels the rental and saves the township $2,325 for its new school.

BRADEMAS URGES TAX CUT FOR MUSIC STUDENTS

The study of music has today become a normal part of the school curriculum of American boys and girls. We should do all we can to encourage young people who have the talent to play musical instruments.

In June I introduced a bill to remove the 10 percent Federal excise tax on musical instruments costing $150 or less. This bill, awaiting action next year, is aimed at encouraging the purchase of low-cost musical instruments by students for use in elementary, high school and college music courses.

At present instruments purchased by schools are exempt from this tax. Students who purchase their own instruments, however, must pay the 10-percent tax.

BRADEMAS PROPOSES "GREAT WHITE FLEET"

Last July I joined other Members of Congress in proposing the creation of a Great White Fleet to carry surplus foods and technical and medical aid to disaster and distress areas throughout the world.

Navy hospital ships, transports, and an aircraft carrier would be removed from mothballs and outfitted at relatively small expense to carry help to the world's sick and hungry.

Unarmed and painted white, this fleet would present to the peoples of the world the true image of America as a Nation dedicated to peace, friendship, and the relief of human suffering.

This bold and imaginative proposal makes a great deal more sense to me than many more expensive parts of our foreign aid program.

UNEMPLOYMENT STILL SERIOUS PROBLEM IN UNITED STATES

At a time when Soviet Premier Khrushchev threatens to bury the capitalist system by outproducing us, we must take effective action against chronic unemployment. The Nation cannot afford the lost production and loss of tax revenues caused when millions of persons are without work for long months.

The September statement of Secretary of Labor James P. Mitchell that unemployment continues to be a significant problem in some parts of the country dramatizes the importance of area redevelopment legislation now pending in Congress.

The Labor Department listed 70 major industrial areas, 17 of them for the first time, as centers of chronic labor surplus because of their heavy unemployment in good times as well as bad.

The area redevelopment bill, the first bill I introduced in Congress, is designed to bring in new industry and create new job opportunities in such chronically distressed communities. The bill, already passed by the Senate, would enable private industry to work jointly with local and Federal governments to encourage industrial growth in distressed areas.

I hope the House will have an opportunity to vote on the area redevelopment bill next year.

Two other proposals Congress will work on in 1960 are bills (1) to set better minimum standards for unemployment insurance benefits, and (2) to improve the minimum wage law by raising the figure from the present $1 an hour and extending coverage to more workers.

BRADEMAS OFFERS RIGHT-TO-VOTE AMENDMENT

In many States, especially in the South, Negro citizens are denied the right to vote through literacy tests, poll taxes, and other devices.

Because I believe such practices are in direct conflict with the American principles of democracy and freedom, in September I introduced a constitutional amendment to guarantee all Americans the right to vote in Federal elections.

This universal suffrage amendment was urged by the Reverend Theodore M. Hesburgh, C.S.C., president of the University of Notre Dame, in the recently released report of the U.S. Commission on Civil Rights of which he is a member.

My amendment, which might better be called the Hesburgh amendment, would insure the right to vote in Federal elections to every citizen who meets his State's age and residence requirements and who is not legally confined at the time of registration or election.

I will work hard for action on this proposal next year. Only those who deny the Hebrew-Christian tradition of respect for the dignity of the individual human being as a child of God can deny to an American citizen the right to vote.

STOP MOVE TO HURT GREAT LAKES SHIPPING

In late August the House voted to extend for 1 year the Public Law 480 program to dispose of Government-owned surplus food stocks to friendly foreign nations.

I voted against an amendment to this bill which would in effect have prevented shipment of surpluses abroad from Great Lakes ports. A coalition of midwest Democrats and Republicans joined to defeat the amendment by a vote of 142 to 134. It was an "anti-St. Lawrence Seaway" proposal that would have favored seaboard and Gulf coast ports.

The extended program authorizes the Government to sell up to $1.5 billion worth of surpluses from our bulging warehouses to foreign countries for foreign currencies and to donate an additional $300 million worth to nations suffering from famine or other disasters.

INVESTMENT IN EDUCATION PAYS DIVIDENDS

America's schools opened this fall with a shortage of 195,000 teachers and 130,000 classrooms.

Indiana, according to State School Superintendent William E. Wilson, is about 3,000 classrooms short and faces "a critical shortage of teachers."

The facts are plain. Many of our Nation's schoolchildren, including many young Hoosiers, are being cheated of a good education because of overcrowded classrooms and a lack of trained teachers.

Every year 2 million more children join the national school population. It has become clear that local and State governments cannot fiscally or physically meet the obvious requirement of more investment in classrooms and teachers. We cannot get much more blood out of the property tax turnip.

These are some of the reasons that, as a member of the General Education Subcommittee of the House Education and Labor Committee, I was pleased to help write a modified school-support bill under which Federal funds will be provided—$1.1 billion a year for 4 years—to the States to support them in building new schools and improving teachers' salaries.

As a former teacher, I am opposed strongly to Federal control and therefore glad to say the bill contains a provision expressly prohibiting Federal intervention.

A full Education Committee favorably reported the bill but a Republican-Dixiecrat coalition on the Rules Committee has prevented the House from having a chance to vote on the measure. I shall continue to work hard for passage of this bill. A nation that refuses to invest adequately in its

most important natural resource, educated young men and women, will not be able to meet the stern demands of the 20th century. And we are not now investing enough.

BRIDGING THE "LANGUAGE GAP"

More than 3 million Americans are stationed overseas today, yet comparatively few speak a foreign language fluently, and less than 15 percent of our public high school students now study a modern foreign language. The Soviet Union, by way of contrast, has made intensive efforts to encourage such proficiency.

There is no question that the vital interests of the United States abroad have suffered seriously because of our failures in the field of foreign-language training. Last April I analyzed this "language gap" in a speech at Valparaiso University before members of the Indiana Foreign Language Teachers Association.

I proposed the creation of a national language foundation similar to the National Science Foundation to stimulate foreign language study and also suggested granting income tax deductions to language teachers who travel abroad to improve their knowledge of the languages they teach.

BRADEMAS REPRESENTS U.S. CONGRESS IN PERU

In May, legislators from throughout the Western Hemisphere met in Lima, Peru, at the first Inter-American Parliamentary Conference. I was honored to be chosen as one of three to represent the U.S. Congress.

Congressmen POAGE, of Texas, MONTOYA, of New Mexico, and I flew to Lima for the week-long conference and joined in the unanimous adoption of a resolution to encourage the economic integration of South and Central America.

The recent crises in Cuba, Venezuela, and Argentina are dramatic symbols of why we must give greater attention to our relations with Latin American nations. As a delegate to this conference, my own conclusion is that our discussions were of real help in improving these relations.

CARL SANDBURG, ROBERT FROST, DEBBIE QUINN, SAM RAYBURN

Among the personal highlights of my first year in Congress were listening to the white-haired American historian, Carl Sandburg, hold a joint session of Congress hushed and enthralled with his moving address on the 150th anniversary of the birth of Abraham Lincoln. Spending an evening with Robert Frost, four times a Pulitzer prize winner and one of the most distinguished poets America has produced. A warm and kindly, but plain talking, man of granitelike features, Robert Forst believes deeply that we shouldn't make life too easy for people. "If I had one gift to give to man," he told me, "it would be character." Welcoming little Debbie Quinn to Washington. Debbie, 6, is the daughter of Mr. and Mrs. James Quinn, of LaPorte. Completely recovered from a serious heart operation, she was formally crowned as America's Valentine Girl of 1959 by Mrs. Eisenhower at the White House. Chatting for an hour in the office of Speaker SAM RAYBURN as he welcomed Mayor Edward F. Voorde, of South Bend, and his 18-year-old daughter, Frances Mary, to Washington.

FILMS AVAILABLE ON FREE LOAN

By writing me at my home office, Federal Building, South Bend 24, Ind., or phoning (South Bend, Central 5-5616), church, school and civil groups can obtain on free loan any of several 16 mm. sound films of interest to Third District citizens.

For example, you can borrow a 10-minute film entitled "Mr. Brademas Goes to Washington," showing the first few weeks in the life of a freshman Congressman. The film, shown to school children throughout the Nation, depicts scenes from our own district as well as shots of President Eisenhower, House Speaker Sam Rayburn and former President Harry Truman.

Other films, all 16 mm., available on free loan through my office, are listed:

"The Challenge of Civil Rights," a 15-minute discussion of the U.S. Civil Rights Commission Report by the Reverend Theodore M. Hesburgh, C.S.C., president of the University of Notre Dame, Congressman Shester Bowles of Connecticut and Congressman Brademas.

"The Ugly American and Our Foreign Aid Program," a 15-minute discussion by Eugene Burdick, co-author of the best-selling novel, U.S. Senator Hubert Humphrey of Minnesota and Congressman Brademas.

"Man on the Hill," a 15-minute color film produced by the U.S. Government describing the job of a Congressman.

"The Role of Religion in the Armed Services," an 11-minute filmed interview in which three uniformed chaplains, Jewish, Protestant, and Roman Catholic—Army, Air Force, and Navy—explain to Congressman BRADEMAS how the Armed Forces provide for the religious needs of servicemen.

HOME OFFICE OPEN DURING ADJOURNMENT

During October, November, and December I can be reached at my home office: Federal Building, South Bend 24, Ind. The telephone number is CEntral 4-5616.

I also plan to tour the four counties of the district from time to time in order that anyone who wishes to take up a problem with me can do so.

My first year of service as your Representative in Congress has been an exciting and satisfying experience. I am honored by the trust you have placed in me, and I welcome your writing to me with your views on important issues and your requests for assistance on matters where I can be helpful. I am here to serve you. Please don't hesitate to call on me.

Your friend,

JOHN BRADEMAS,
Member of Congress.

The Fight in 1959 for Education

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. METCALF. Mr. Speaker, early last month, school bells rang out across the Nation and, for the 15th consecutive year, a new record number of boys and girls answered. At least one out of every four of them is now being educationally short changed because of the continuing shortage of classrooms and qualified teachers.

Today there are some 43 million boys and girls attending elementary and secondary schools, an increase of 1,750,000 over last year. By the most conservative estimates, the education of 10 million of them is being impaired by the classroom shortage.

Recent reports on public school enrollment show 1,843,000 pupils in excess of normal school capacity. These excess students were added to an estimated 6 million in crowded urban elementary schools and more than another 2 million in obsolete or inadequate buildings. The 10 million figure is extremely conservative—because it does not include either urban high schools or rural schools.

The desirable maximum class size is 30 pupils. If a class has 40 or 50 pupils, the education of every child is being impaired—not just that of the additional 10 or 20 pupils. Even though the class size may be within the desirable limit, the youngsters are being short changed if their teacher is substandard. At the start of this year we were short 195,000 qualified teachers.

Less than 2 months ago, Secretary Flemming of the Department of Health, Education, and Welfare told a press conference this Nation is short 140,000 classrooms, or 2,300 better off than we were 2 years ago. If we close this classroom gap at the rate of 1,200 a year, it will be 117 years—the year 2076 before we have an educational plant adequate to house our schoolchildren.

And the States and local districts—reaching the point of exhaustion, exhaustion of debt capacity, exhaustion of ability of local taxpayers to bear the heavy tax burden on local property that good schools and teachers now require—cannot even maintain, much less increase as they must, their phenomenal efforts to catch up to the pupil increase.

President Eisenhower has been all over the lot on the question of whether the Federal Government shall face up to its responsibility in this crisis in our classrooms. I traced his wavering course, from study, through action to inaction and back to study, on page A1565 of the February 26 CONGRESSIONAL RECORD. Since that time, the Administration has sent up its ineffectual answer to the classroom shortage.

It would authorize $300 million a year for 5 years to underwrite school bonds in States guaranteeing a "reasonable tax effort"—undefined—and matching the Federal contribution dollar for dollar with State funds.

This proposal would do nothing for districts which already have reached or neared statutory or constitutional debt ceilings. It would do nothing for States which meet their educational obligation other than by helping build schools. And even should the States be willing to comply with this maximum Federal control—and be willing to rewrite their constitutions and laws—they would still be at the mercy of a band of bureaucrats who would determine what is a "reasonble tax effort" for the citizens of a State to make.

While pushing this program, the administration has served notice that the President would veto my H.R. 22, the School Support Act of 1959, principally sponsored in the other body by the senior Senator from Montana, Senator MURRAY.

As reported by the Committee on Education and Labor, H.R. 22 would authorize allocation of $1.1 billion a year for each of 4 years among the States on a basis of $25 for each school age child. The allotment becomes State money and is to be expended for either construction or teachers' salaries or both as each State wishes.

The Senate Committee on Labor and Public Welfare has reported S. 8, a 2-year $1.1 billion program for classroom construction only.

Both proposals are opposed by the administration, which is so serious about our schools, which President Eisenhower once called "strong points in our national defense," that it even proposes to reduce existing Federal aid programs for construction, operation, and maintenance.

This Federal aid, under Public Laws 815 and 874, goes direct to the local districts for construction, operation, and maintenance—including textbooks and teachers' salaries—in areas of Federal impact.

In the 8 years that these laws have been on the books, the Federal Government has spent more than $901 million on 4,506 projects to build classrooms to house more than 1.3 million children. More than 768 million Federal dollars have been appropriated for operation and maintenance of schools in 3,546 districts with a total enrollment of 8.6 million children.

Schoolchildren, their parents, and future generations will thank this Congress for rejecting Eisenhower recommendations that we cut back these Federal aid programs. A vast majority of the schoolchildren and their parents, from whom I have heard, hope that during the next Congress the Federal Government will shoulder its share of the heavy responsibility for the schooling of the youth of our Nation.

Exported Education Is an Explosive Force

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HART. Mr. President, Dr. Benjamin Fine has written three outstanding articles for the North American Newspaper Alliance on one of the United States most significant and growing exports, education. The total impact of this export of talent and skill is quite immeasurable, and I do not believe that Dr. Fine has overestimated the importance of this combined public and private activity when he says that this is America's E-bomb and has a greater potential for improving man's welfare than atomic energy.

In approaching the legislative program of the Federal Government in the next session, I would hope that these articles will provide a starting point by which we, in the Congress, can evaluate the truly basic importance of this great resource.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD these three articles which appeared in the Washington Evening Star.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

EXPORTED EDUCATION IS AN EXPLOSIVE FORCE

(By Dr. Benjamin Fine)

NEW YORK.—The first great need of millions of people in Latin America, Africa and Asia is to learn to read and write. In certain rural areas of Latin America and the Middle East fewer than 10 percent of the people are literate. Literacy is as low as 3 percent in some parts of Iran. Only 20 percent of the people in Libya can read and write. The percentage is 42 in Peru and as high as 50 in Thailand.

To help life these countries from this medieval backwardness, the United States has launched an E-bomb. The E is for education, and it has proved to be one of the most explosive forces known to man.

Every year the Federal Government spends from $30 million to $50 million to help raise the educational standards of underprivileged countries. An arrangement has been made with leading U.S. colleges and universities to sponsor educational projects abroad. Major coordinating agency for all this is the International Cooperation Agency.

ENORMOUS PROBLEMS MET

The problems are enormous. Eighty-five percent of the elementary teachers in Liberia have less than a ninth-grade education. Villagers in Cambodia have built hundreds of schools—but teachers will not be available until the teacher-training program now being developed with U.S. assistance is able to meet the need.

"Such things as organized courses of study, education for living and vocational training are unknown to the great majority of teachers in the less developed countries," ICA officials report. "Learning is by rote, unrelated to community life. It pays little attention to the needs of the schoolchild and his future as a productive citizen."

Here is where the American colleges and universities enter the picture. As part of the Mutual Security Act, the U.S. Government has encouraged American colleges to enter into agreements with foreign universities through which our schools aid in strengthening technical education and other services. The results have been excellent.

TEACHERS TRAINED IN UNITED STATES

Most of the help is technical, not financial. Thousands of teachers have been trained by U.S. educators. In some instances the teachers are brought to this country; in others, American experts go abroad to supervise the training.

The entire faculties of leading normal schools in Bolivia, Paraguay, and Peru have been brought to the United States. Guatemala sent 100 elementary, secondary, and vocational education teachers to the United States for 10 weeks to study and observe education in this country.

Under American tutelage, elementary teaching requirements in Lebanon have been raised from 2 years of training to 3 for a teaching certificate. In Peru, teachers now are required to have 4 years' training, instead of 3, to get the highest degree. In Iran no teacher can teach without at least 1 year of professional training.

TEACHER TRAINING BEGUN

With the help of U.S. educators, Nepal has developed its first teacher training program and established the first teachers college in its history.

American specialists have helped develop several hundred textbooks, used by a million children. Financial support from this country has helped equip more than 500 libraries. Aid from the United States has added equipment to hundreds of science laboratories, shops home economics departments, and other school programs.

Increases in the numbers of students attending school are taking place in almost every one of the 60 countries which are participating in the joint educational programs.

HOW IT GETS STARTED

How does a joint program begin?

According to the two chief architects of the program—Richard B. Farnsworth, deputy chief of the ICA's Office of Educational Services, and Ralph W. Ruffner, director of the ICA's educational services—the initial move must come from the foreign country itself. The United States does not attempt to cram any new ideas or any educational developments down the throat of the foreign people.

This is the way a typical program gets started:

The Minister of Education, or some important official of, let us say India, seeks help for the educational programs in that country. The minister may seek out the U.S. Ambassador, and suggest the help needed. A mission is then set up in India, consisting of ICA representatives.

Through this mission, details are worked out between Indian and American universities. An institution in India may want help in improving its engineering program. It can ask help from Purdue University, or from some other institution here. If the U.S. university agrees to accept the assignment, a contract is drawn up between the U.S. institution and the university in India.

IT WORKS TWO WAYS

"At no time," Dr. Farnsworth explained, "do the American universities force themselves upon the foreign colleges. This is a cooperative project, mutually arrived at, and worked out harmoniously."

Also, it is a two-way street. American educators get as much as they receive. They have left their ivory tower, and will never be the same again. College professors who never left their campuses are now sowing academic seeds all the way from Afghanistan to Vietnam. They leave on missions of from 3 months to 3 years. It is good for the professor, his college, and education generally.

Frequently, it has been found, a college professor who goes abroad for 2 years finds that the accumulated rust of his campus life quickly flakes away. He comes back a more exciting and challenging teacher.

TYPICAL PROGRAMS CITED

A striking illustration of how the program operates to improve educational standards can be seen in Formosa, where Purdue University is helping to improve the engineering school.

Purdue is developing educational facilities for engineering training at Chen Kung University. New laboratory equipment to replace wornout equipment and to meet the increases in enrollment has been furnished by the United States.

The Purdue engineers found that in Formosa engineering was taught by textbooks only. The Chinese students did not have any laboratory experience, or any practical work.

FORMOSA SENDS STUDENTS

Purdue has brought five Formosan students to its campus, where they will get the modern techniques of engineering.

What will happen after the Purdue mission ends? It is the hope of American officials that the techniques learned in the United States will become permanent features of education in Formosa.

The expenditures are relatively small. Our foreign aid bill runs into something like $4 billion a year. Only about $50 million of this goes to the educational program. Some educators believe this is not enough. We get more than our money's worth in good will.

U.S. COLLEGES RAISE WORLD STANDARDS

(By Dr. Benjamin Fine)

NEW YORK.—American colleges and universities are leaving indelible imprints on

the cultural standards of large numbers of underdeveloped countries.

At the same time, there is some grumbling by American educators. They object to the redtape and occasional unsympathetic attitude found in Washington.

Some of the errors are excusable. They are based on inexperience rather than deliberate interference on the part of State Department officials. The U.S. Government and foreign governments, or American universities and foreign universities, do not always see eye to eye on the objectives of the interuniversity programs. This has resulted in problems and frustrations.

Sharp criticism comes from Prof. Norman D. Palmer, chairman of the international relations program of the University of Pennsylvania and coordinator of the Pennsylvania-University of Karachi project.

LACK OF UNDERSTANDING

"In my judgment," Professor Palmer told this writer, "the International Cooperation Administration has failed miserably to give the interuniversity programs the proper support. The failure has been lack of understanding and of undue restrictions rather than of tangible support in a specific way. Several congressional reports have criticized ICA for its failures in this connection."

A similar complaint comes from the Cornell University controller, A. H. Petersen, who is also the campus coordinator of Cornell's project with the University of the Philippines.

Mr. Petersen says that "while the program is successful from an educational view, the frustrations of doing work under an ICA contract are such that no Administrator would be anxious to repeat the experience. In general, the ICA attitude is not sympathetic to these programs, and the administration is made exceedingly difficult."

MANY APPROVE PROGRAM

Balanced against these criticisms is the approval by many college and university officials. In the main, the program is approved, although many minor irritations crop up. Officials of the American Council on Education, reporting on a study made in 1957, point out that there are no generally accepted standards of procedures for selection of individuals who participate in the program.

Some colleges complain that Government programs involving private institutions are not planned or operated so as to take into account the policies, programs, or problems of the institutions. A clearinghouse between the American universities and the Federal Government was suggested by a number of institutions.

PRACTICES CRITICIZED

Basically, the criticism is leveled against some of the State Department administrative practices, not against the project itself. A NANA survey of 30 typical universities shows unanimous approval of the effectiveness of the program. Much has been done by American educators to help foreign countries expand their own technical, scientific and cultural facilities.

Here are some typical programs, which tend to show the nature of the relationship between the American and foreign university:

Wayne State University has developed an educational program for Thailand. Annual in-service training programs have been conducted for 150 teachers. With no text or reference books in the Thai language, and with no laboratory equipment, Thai instructors must rely heavily upon the lecture method.

Help has been given to the Thailand technical institutes. New teaching methods have been introduced. Says Prof. Gerald Baysinger, university coordinator for foreign visitors:

"As a result of my experience in Thailand, I am convinced that money is well spent in helping educational programs in other countries. Such help is of lasting values to democracy."

PROJECT AIDS INDONESIA

The University of Kentucky is cooperating with the technical and science faculty of the University of Indonesia. Kentucky is promoting development of education in the field of engineering and science, assisting in development of library and laboratory facilities and working toward the training of more Indonesian science professors.

The University of Wyoming is engaged in a program of advice and technical assistance to the Royal Afghan Ministry of Education and the Royal Afghan Ministry of Agriculture. This includes the reorganization and development of the Afghan Institute of Technology and the reorganization of a vocational agriculture school. Afghan students came to the University of Wyoming to get firsthand experience in engineering and agriculture.

Stanford University, in cooperation with the Philippine Department of Education, is engaged in a program to improve the Philippine system of vocational teacher education. The university is helping revise the curriculum in vocational education, to establish shops and libraries and aid in faculty improvement.

Many other projects, all designed to help improve educational levels abroad are now in progress:

New York University has started a program to develop education and professional programs in business administration, industrial management, and executive management training in Israel.

The University of Michigan is engaged in a program to bring industry-sponsored research to Waseda University, Tokyo. Michigan State University has cooperative programs in Brazil, Colombia, Costa Rica, Mexico, Okinawa, Pakistan, and Vietnam.

RUTGERS IN AFRICA

Rutgers University recently completed an ICA project with the Royal Technical College of East Africa in Nairobi, Kenya, involving aid in designing and equipping an engineering laboratory building. The ICA provided funds for the building and equipment.

These are but samples of the hundreds of programs carried on in every part of the world by American colleges and universities.

They are engaged in a tremendous adventure in international cooperation. To a large extent, the future of civilization and of the world depends more upon what the E-bomb does—E for education—than what tanks and guns may accomplish.

Education is a common bond. The free world needs a higher level of education. It is good to know that much is already being done by American universities to raise the technical, cultural, and scientific standards of the world.

AMERICA EXPORTING EDUCATION OVERSEAS

(By Dr. Benjamin Fine)

NEW YORK.—America is placing its most potent weapon—the E-bomb—in the hands of dozens of countries around the globe, many of them just emerging from the mule cart era.

The "E" is for education, and it has a greater potential for improving man's welfare than atomic energy. In a sense, it is the only kind of bomb which can penetrate the defenses of the Iron Curtain.

Millions of dollars are spent by the U.S. Government, through various agencies and private foundations, to raise the educational levels in many parts of the world. Particular emphasis is placed on the new countries which have sprung up since World War II.

GUNS ARE NOT ENOUGH

Basically, the program is designed to strengthen the free countries and to keep them out of the Communist orbit. Although the United States provides many of these countries with military aid, some responsible quarters believe that guns, bombs and tanks are not enough. Democracy can only be sold if the people understand the concepts of freedom and recognize the responsibilities of free government.

What the educators are doing abroad is in direct contrast to the implications made in "The Ugly American." More than 800 American professors representing every field of learning, are on loan to the governments of 32 countries of the world this year. And the number is growing steadily.

They come from every type of institution—from Harvard and Columbia, Michigan State University and Stanford, Tuskegee Institute, and the University of Chicago.

They have one major objective: To give the countries they visit the benefit of their skills, their know-how, and their achievements.

FORTY-ONE COUNTRIES AIDED

Various agencies take part in this far-reaching program. The largest is the International Cooperation Administration, a unit within the Department of State. More than 300 universities, colleges and technical schools in 41 countries are being aided in their development through the ICA.

Nearly 60 American colleges and universities, in all parts of the country, have contracts with the foreign institutions. More than $30 million a year is spent on these cooperative programs.

The assistance has been both cultural and economic. For example, Wayne State University in Detroit has cooperated with the Bangkok Technical Institute. Today the institute, which did not exist 7 years ago, has 4,600 students.

TEACHERS TRAINED

This international adventure in learning has helped train hundreds of thousands of elementary school teachers. In some instances 80 percent of all teachers have been trained through ICA-sponsored projects. In Nepal, for example, 407 new schools have been opened and training given to 2,300 teachers. School attendance has increased from 15,000 to 85,000.

But there are other important international educational programs, sponsored by private or public funds. Among the most significant are these:

1. Exchange-of-persons activities financed in whole or in part by the Department of State. Examples are the Fulbright program and the Smith-Mundt program.

2. Exchange-of-persons activities financed in whole or in part by the United Nations or its specialized agencies.

3. Exchange-of-persons activities financed in whole or in part by private individuals, organizations, and institutions.

4. Affiliation with foreign educational institutions exclusive of the university contract program of the ICA.

GAINS MADE ABROAD

A survey of the international education program, made by the North American Newspaper Alliance, indicates that vast strides have been made in the last 5 years to improve living and educational standards abroad. Information was received from leading ICA officials and from 30 of the colleges and universities which have contracts with foreign governments or universities abroad.

Despite the roadblocks that sometimes exist—mostly in the form of governmental redtape—the overall program can be judged a complete success. Enough illustrations exist to show that American educators who have gone to foreign lands have helped improve the living standards of the people.

More than 6,000 skilled American technicians today are working overseas spreading technical knowledge in 58 countries. They have trained 3 million people who are now giving that training to others.

According to ICA officials, the areas of training include agriculture, national resources development, industry, mining, labor relations, health, sanitation, education, public administration, housing, public safety, banking, and community development.

INTERNATIONAL PROGRAMS

A study made by the Institute of Research on Overseas Programs of Michigan State University shows that 184 American universities have 382 international programs at present. Nearly every type of university in every area of the country is represented. An estimated 7,000 persons participate in the overseas aspects of the international programs of American universities.

Why have the projects been established? Why do American universities and their leading professors go abroad, sometimes as much as 3 years at a time?

UNITED STATES-SOVIET COMPETITION

The NANA survey indicates that the two major objectives are (1) the general advancement of knowledge in underdeveloped foreign countries, and (2) aiding the U.S. foreign policy.

The U.S. program is in direct competition with those sponsored by the Soviet Union in many parts of the world. In India, for example, the Russians have sent teams of technical advisers and educational experts. They have done so in the Middle East and have begun to infiltrate on a cultural level in the Far East.

"The Soviet Union has a strong educational program in India," said Ralph W. Ruffner, director of educational services for the ICA. Mr. Ruffner has just returned from India, where for the last 3 years he was in charge of the American educational program.

"However, we are ahead thus far," he added. "The work done by U.S. universities has helped raise culture and economic standards in many parts of India."

RURAL YOUNG PEOPLE TRAINED

At present, American projects in India are sponsored by the Universities of Illinois, Wisconsin, Tennessee, Ohio State, Kansas State, Missouri, and Columbia University's Teachers College. They are concentrating on agriculture, engineering, and education.

The state of Uttar Pradesh in north India is now setting up a state university patterned after the American land-grant institutions. It will provide training largely for rural young people.

The Indian Institute of Technology is rapidly developing, under American auspices, as the leading engineering university in that part of the world.

America's influence throughout the world is well established on the military and political fronts. Now the United States is emerging as a major force in helping to shape the educational and culture patterns of many lands.

Our democracy will be strengthened as free peoples everywhere raise their educational and economic sights.

Address by Hon. Robert W. Kastenmeier, of Wisconsin

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I should like to place in the RECORD an address by my good friend and colleague from across the Mississippi River, Mr. KASTENMEIER, of Wisconsin. I have read the address with great respect, since it deals incisively with one of the major problems of our government and society.

In a Constitution Day address, Mr. KASTENMEIER was examining a major challenge to our heritage of constitutional government. As he pointed out, in the areas of individual legal rights, rights to economic security, and civil rights we are moving ahead to fulfill the Constitution. But as to the basic aim of the Constitution, the establishment of accountability of the Government to the governed, we are falling behind rather than gaining. Under the pressures of modern hot and cold war, we have allowed certain agencies that make the ultimate decisions to operate without being accountable to the people. Insofar as this is happening, we are losing democratic controls over Government. And, as we might expect, the result is apathy among our people. Like my colleague, I regard this trend as terribly dangerous. I believe his analysis of the situation and of its remedy deserve to be carefully studied by this House and by the people of the Nation:

I am very happy and honored to be here today to speak to you about our Constitution and our attempts to fulfill the meaning of this great document. Constitution Day presents us with the opportunity to reexamine that document, now almost two centuries old, whose interpretations and purpose are still as much the center of dispute now as when it was first presented to the various State conventions for ratification. In this, of course, rests its vitality, excitement, and validity. Thus, to me, the Constitution is not only a framework upon which to operate a government and rule a society, but also, in certain ways, it enumerates goals and aspirations which we as a Nation should achieve.

This is especially true in the area of individual personal rights. The courts, and to a lesser degree Congress, are pursuing a course in which greater rights are guaranteed to the individual.

For example, the whole problem of right to counsel is constantly under review. Because of our dual form of government, it has been generally accepted that the right to counsel as guaranteed under the sixth amendment is only applicable to a Federal court, except in capital cases and in cases where substantive due process is denied to the defendant in the State court. There is now a general feeling among many members of the Judiciary Committee of the Congress, the committee of which I am a member, that the best way to give the sixth amendment meaning as it applies to the Federal court system is actually to guarantee and place at the disposal of indigent defendants a public defender who will have the same status and stature as the local United States attorney. In this way we might go about fulfilling the Constitution as it applies to the individual defendant.

There are other areas, of course, where the problem exists of fulfilling our Constitution and our general conception of equalitarian democracy. As a result of the 1930's a series of economic rights or opportunities, not specifically provided for in the Constitution, are now considered to be almost as important as certain political rights. The protection of such economic rights means that a balance between economic groups must be maintained, since protection for one group sometimes is at the partial expense of another. Where the balance should be held is, therefore, an ethical question that depends in each case on the judgment and spirit of the citizenry.

In another area of individual liberty, the ethics are clear, and they do not in the least pit one group against another. In the area of civil rights, many now argue that the Federal Government must affirmatively guarantee certain rights if they are to be in any sense meaningful. They argue that it is not enough to guarantee on paper the right to vote, or the right to attend schools without regard to race, or the right, if you will, of first-class citizenship. For the most part the ideals of this argument are accepted in our Nation. Although the fight is hard, the pressures great, the traditions of various parts of the Nation strong, I believe that in the not too distant future this kind of equality of opportunity will be guaranteed to our citizens through the positive or affirmative use of Federal law and Federal power.

In another time, perhaps a more socially conscious age, the concept of ordered liberty will embrace rights which are not now articulated. It is this potentiality to expand as man expands which is the genius of our Constitution.

Despite this potentiality, there is a basic area involving our Constitution about which I am deeply disturbed. It does not concern the question of individual liberty or economic opportunities or civil rights, but rather concerns the entire notion of constitutional government. In order to give perspective to this problem, I wish to go over certain basic notions of the framework of freedom granted through the Constitution and the philosophy of government outlined in the Constitution. I hope that this recapitulation of basic axioms upon which our Government is based will not be an empty exercise, but will rather give us insight to a new set of problems peculiar to the authoritarian-oriented 20th century. These latter problems, for which as yet we have found neither answers nor ways to apply our constitutional directives, could erode our free society and the ideals of constitutional government.

Basic to our constitutional form of government is the belief that the ultimate power of government must of necessity reside in the people. James Madison, the philosopher of the Constitution, told the delegates at the constitutional convention: "It seems indispensable that the mass of citizens should not be without a voice in making the laws which they are to obey, and in choosing the magistrates who are to administer them."

To have adopted any other conception would have utterly abandoned the founders' enmity to the worst elements of British rule. For their rebellion against that rule had been aimed directly at the concentration of power and control outside the hands of the people.

Yet this view was not the complete picture. Certainly there were members of the Constitutional Convention who feared control by the people without any system of checks and balances over the choices of the people. The fear was suggested by the classical Greek social experience and Greek philosophy. It was believed that democratic controls quickly ended in control by the tyrant or the demagog. As John Adams once said, "Democracy never lasts long. It soon wastes, exhausts, and murders itself. There never was a democracy yet that did not commit suicide."

The problem of the founders was how to avoid unrestrained power in the hands of either small groups or the people as a whole which could lead to a form of tyranny.

What the Founding Fathers wanted and what they expressed in our Constitution was the concept of balanced government, an idea at least as old as Aristotle. Madison stated

that our Government must be so constructed "that its several constituent parts may, by their mutual relations, be the means of keeping each other in their proper places."

Thus a properly designed state was one in which interest would check interest, class would check class, faction would check faction, and one branch of government would limit the power of the other branch of government, in what one student of that period has called a harmonious system of mutual frustration.

Practically speaking the quest of the Founding Fathers may be reduced to the concept of accountability, which forces various interests to check and control one another, with ultimate power lying in the hands of the people.

Our Nation has used tihs philosophy as a basis for governing since our first days. We have believed in a system of checks and balances; of interest balancing interest and faction balancing faction so that the control of our Nation would not rest with the unchecked few, or a tyranous majority. Some philsophers of American history have suggested that our Founding Fathers' theory of man was not a sanguine one, and hence they conceived of their task in the public realm as balancing vice against vice, or interest against interest. That is how our Government operated through the 1930's.

Since that time—I would say since about 1940, with American involvement in the Second World War—the system of checks and balances, of vice balancing vice, and of accountability, has suffered rapid erosion. Unfortunately, there has arisen the notion of nonaccountability, either to the people or their elected representatives on the part of various defense and other policymaking groups in this country. Under present world conditions, these groups literally have the power of life and death over all of humanity. Such groups have been able to evolve by cloaking their activities under the phrase "national security."

The meaning of this phrase as it is now applied could never have been guessed by the most farsighted of our Founding Fathers. For example, the National Security Council, the Central Intelligence Agency, and other units organized specifically for the purpose of protecting democratic government are, in the name of national security, removed from the normal controls of democratic government. Congress has no control over, and indeed, does not even know, how these groups spend appropriations given to them. Decisionmaking processes and factual decisions are never disclosed until after the fact. It disturbs me to state that there are now organizations within Government, created by Government, which have no obligation to report to the Congress and the electorate which they represent. While it can be argued from a legislative point of view that these groups are responsible only to the Executive, it should be noted that until the Second World War the activities and actions of our various agencies and departments were public knowledge, open to criticism, investigation, and comment by the public and the Congress.

It has been wisely and justly said of our Constitution that it both affirms and denies the principle of affording responsibility to the electorate. Responsibility in this context means no more than that those who govern are accountable to the governed. This accountability means only that the governed have the power both to approve and to dismiss constitutionally those whom they have chosen to govern.

The burning crisis in the life of the American Constitution is that those who are constitutionally accountable are not those who govern. For example, questions as to the nuclear capacity of our Nation and of other countries of the world are questions which involve, in the words of the President, "humanity itself." And yet, paradoxically, this is an area which does not admit the electorate, but only those possessing special technical competence, to make final judgments. And we are told that even if the public did have the special competence required to make final judgments in the use of nuclear weapons, the publicity attending such a debate must necessarily be abandoned in the interests of national security. The public is told it must instruct its elected representatives to willingly foreclose whole areas from public debate or questioning because of the ignorance of the public and the necessity of maintaining the national security. These factors are said to carry such great force as to free many groups of these experts from any duty to account to the legislature. Thus it is that the very area which affects our Nation with the greatest directness is precisely the area where our electorate and its representatives are not going to be permitted to make any decisions at all.

The revolutionary implications of these developments for our constitution are tremendous in scope. We have power delegated by the legislature to experts who are responsive neither to the executive, the judiciary, nor to the legislature itself from which they derive their legal authority. The Roman lawyers had as a maxim in their law the proposition that once delegated, authority cannot be further delegated. Can the legislature, should the legislature delegate to agencies, nominally in the executive but due to the complexity and urgency of their work actually independent, powers which under the constitution are expressly granted to the legislature or the Chief Executive? These are problems with which the exposition of the constitutional law must now grapple.

It is an unhappy situation, whatever the sound reasons which necessitate it, when the feeling spreads among the voters in a democracy that though their vote may perhaps influence agricultural policy, it will not influence the decision as to what amount of strontium will be allowed in the atmosphere; whether American soldiers will be shipped to fight in police actions; whether atomic weapons will be used in wartime. The negative emotional and cultural consequences, the feeling of helplessness engendered is very dangerous in a democracy such as ours. The Constitution presupposes at all times a responsible citizenry. In some instances it provides that the will of the citizenry be responsive to the judgments of the judiciary as to whether or not they have exceeded the bounds to which the Constitution confines them. Now a whole field of problems has been removed from the governed and those who under the Constitution are given the duty of governing.

From such a cultural and political situation a feeling of alienation from government occurs among the electorate. A citizen may well feel himself lost to affect decisions; he feels himself a pawn in the hands of others. In the views of some, this makes for the beginning of a garrison state in which our citizenry may grow passive, indifferent, and atomized.

As I suggested, these problems are recent in origin and were born quite apart from the normal evolution of constitutional processes. Instead they owe their origin to an international power struggle where a society's interest in survival constantly has to be weighed alongside its determination to preserve constitutional government.

But, whatever the origin of our problem, be it a result of general history or the nature of authoritarian ideologies in the 20th century, if we believe in freedom, we must do all in our power to make the concept of government outlined in the Constitution apply to today's life. Given the present size of government and the rise of groups which are to a great extent unaccountable to the people, the task is not an easy one.

I do not believe that the task of restoring accountability and meaning to the democratic process is beyond our strength. A simple beginning might be made by returning to the basic proposition that the people must judge. And this requires only a reaffirming of our belief in ourselves. By our actions in denying information to the electorate are we not actually denying our belief in democracy? Whatever the risk—are we not surrendering that which we most wish to defend?

Accepting or reaccepting the belief that the people must judge, we must provide information so that through their representatives they may again take part in the decisionmaking process. This means that we must completely reevaluate the pernicious and insidious doctrine of secrecy, and reformulate the notion of classified information. We must completely review certain of our approaches to national security. We must know what such amorphous policymaking bodies as the CIA, the AEC, and the Defense Department are doing. We must be willing to undertake large-scale educational programs for our citizens so that when information is made available to them, they will be able to make reasonable choices.

The creativity of the American people cannot be applied to solution of the great economic, social, and technical problems of our time unless they are given the facts. I believe the American poeple have the courage to be free. Let the people and their elected representatives, the Congress, judge more fully those problems which mean life or death to our civilization. Let us return to our Constitution the idea of accountability so basic to the thought of our Founding Fathers. I firmly believe that the people can return to their rightful place as governors rather than the governed.

Finally I believe that we can again continue as a free democratic people despite the authoritarian mood which is that of the 20th century.

In the drama of government in which states are the players, the garrison state waits for its chance in the wings of the stage. It is incumbent upon us to stop it from occupying that stage, from destroying the state of freedom which our Founding Fathers so carefully won for us.

Changing the Perjury Law

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. KEATING. Mr. President, several months ago I introduced a bill, S. 1516, which would add a new section to the present perjury law to cover all cases of false swearing. The main purpose of the proposed legislation is to permit punishment in a lesser degree of perjury which does not satisfy the technical requirements of materiality under the present law. The bill is modeled after a statute which has been in effect in my own State of New York for more than 20 years, and I believe its enactment would greatly improve the present state of the law on this subject.

Shortly after this legislation was introduced, an editorial appeared in the New Orleans Times-Picayune praising its purpose. I believe this editorial will be of interest to many Members, and I ask unanimous consent to insert it at this point.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

[From the New Orleans Times-Picayune, Apr. 22, 1959]

TURNABOUT PERJURY

Senator KEATING has introduced a long-needed Federal bill to cope with contradictions in sworn testimony such as were dramatized by the Harvey Matusow case. It would remove the necessity (pointed up especially as ridiculous by that case) of Government proof that one of two such contradictory statements was false; that is, of proving which one was or is false.

The fields in which willful contradictions as to material matters would lead to perjury prosecutions are hearings of committees of Congress; grand jury sessions, and court trials. The endorsement of the American Bar Association that has been given the measure, according to Senator KEATING, applies especially to its coverage of congressional hearings. A 5-year limitation is stipulated for the punishable period of turnabout perjury.

Another area of contradictions which committees used frequently to encounter concerns the fifth amendment. It grew fairly common for witnesses to say on oath they would be incriminated by answering certain questions; and on other occasions or in other proceedings, to say or swear that they could have answered the questions in the negative, meaning that the plea of possible self-incrimination was itself a sworn falsehood. There is nothing in the statutes to deal with this misuse of the amendment; and nothing much in court decisions so far to indicate concern for its misuse in any connection.

The Fight in 1959 for Conservation

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. METCALF. Mr. Speaker, conservationists scored at least one major victory over the administration during the 1st session of the 86th Congress.

In the continuing fight for clean water, they again rejected President Eisenhower's proposal to sharply reduce, then end, the Federal grant program which has stimulated the cleanup of 19,000 miles of streams and many more miles of lake and ocean shorelines. They also overrode administration objections and voted to increase the grant authorization from the present $50 million a year.

Ill advisedly, the President again was part of a drive—spearheaded by the Chamber of Commerce of the United States, the National Association of Manufacturers, and trade associations representing certain polluting industries—to end this program.

In his budget message, as he had last year, President Eisenhower proposed to cut the grant program deeply, to $20 million this year from $45 million. Congress voted $45 million.

Despite administration opposition, the House voted to double the authorization, the Senate voted to raise it to $80 million. In the face of the threat of a pocket veto, the conference was held over until next year.

Last year, the Bureau of the Budget opposed requesting any Federal money for grants to help build State-approved municipal sewage treatment plants. This opposition continues as work goes ahead on the budget President Eisenhower will submit to Congress early next year.

Here is a brief summary of other bills of interest to conservationists:

Enacted were bills to increase the authorization for the continuing research program into the effects of pesticides on fish and wildlife; authorize Federal research on migratory marine game fishes; permit interstate shipment of black bass fish and eggs for breeding and stocking purposes; extend indefinitely the Interior Secretary's authority to use surplus grain to prevent waterfowl depredation; prohibit use of motor vehicles or aircraft or poisoning waterholes in hunting wild horses and burros.

Passed by one body and awaiting action in the other were bills to authorize fisheries research aimed at continuous good fishing in reservoirs behind Federal dams; establish a Youth Conservation Corps to combat juvenile delinquency while benefiting natural resources; for the first time acquire land for fish and wildlife purposes as part of a Federal water resource development project.

Committees in at least one body reported bills which would establish a national wildlife disease research laboratory; authorize fish and game programs and special hunting and fishing permits on military reservations; create a 9-million-acre Arctic wildlife range; establish the Chesapeake and Ohio Canal National Historical Park; settle the dispute over the Des Plaines public hunting and refuge area in Illinois.

Committees heard measures giving the protection of law to areas now being administered as wilderness areas in national parks, game ranges, migratory waterfowl refuges, primitive, wilderness, and wild areas; adding State wildlife departments to the public agencies eligible to receive donable Federal surplus property; establishing, in varying degrees, the supremacy of State water laws on Federal lands and over Federal programs.

Pending are bills to save our shorelines, purchase and develop 10 principal seashore and Great Lakes coastal areas; amend the Federal Power Act to provide protection and consideration of fish and wildlife resources in the Columbia River Basin, eliminate Federal subsidies for draining wildlife-producing wetlands; make fish and wildlife and recreational values an integral part of the planning of Federal reservoir projects; extend and enlarge the conservation reserve; establish a Council of Resources and Conservation Advisers to the President and a Joint Committee on Resources and Conservation; give formal sanction to the long-existing program for the training of graduate students in wildlife sciences under the cooperative program of the Fish and Wildlife Service, land-grant colleges, State fish and game departments, and the Wildlife Management Institute.

During the recess, the new Senate Select Committee on National Water Resources, studying the Nation's present and future water needs, will hold 19 public field hearings in all parts of the country. The committee is to make recommendations to the Senate by January 31, 1961. And I hope that long before that date we also have received from the Bureau of Land Management and the Fish and Wildlife Service comprehensive long-range programs for the development and management of the public lands and resources in their custody. The Forest Service already has submitted its program.

First Session Wind-Up Report From Washington

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. KARTH. Mr. Speaker, I take this opportunity to report to my constituents, the people of Ramsey County, the Fourth Congressional District of Minnesota.

Many have been the descriptions of achievements of the 1st session of the 86th Congress. These rank from "finest" to that of "abysmal failure." As usual, somewhere between the truth lies.

Many people long tired of the vacuum of leadership in our Government out of plain frustration did a lot of wishful thinking that an 86th Congress with a whole new platoon of freshmen Democrats elected in a popular reaction against the 1958 recession could somehow work miracles.

It was unrealistic to think the group of Democratic freshmen without influential committee positions could overcome, with veteran liberal Democrats, a "spoiler" coalition of Republicans and high seniority conservative Democrats who wield effectively, through their one-third votes of the House, an effective veto backstop. In addition, there is the massive opposition of the Federal bureaucracy. As economic recovery took hold, the public pressure for new recovery programs vanished. The administration and the Republican Party capitalized on this shifting sentiment—or the lack of public pressure—by tagging the "spender" label on a Congress that had not even gotten down to serious legislative work.

The strategy, if it was meant to chop the budget, was overwhelmingly successful because the conservative congressional leadership of both parties vied with each other to be fiscally responsible

and to pin the "spender" tag on their opponents. As a result, badly needed programs requiring some investment in order to resume national social and economic progress were stopped dead. Area redevelopment, aid to education, the Youth Conservation Corps, health insurance for the elderly as part of the social security program, and an adequate farm program are very much the unfinished business for our Nation during the 2d session of the 86th Congress.

The result of the budget mayhem was that Congress finally appropriated or obligated some $78,678,600,000, or $2,580,410,000 less than the President requested. I am sure the Republican congressional leadership is secretly gloating at having maneuvered the Democrats into using the meat ax on the budget and killing off necessary new programs for our national growth and development.

There is tremendous opportunity for eliminating wasteful expenditures in the budget, particularly in defense spending. I was shocked at the unbelievable performance of the Pentagon in almost literally throwing away millions of dollars on projects of dubious value. About one-fourth of a billion dollars was thrown away in the boron, so called exotic fuel program when two plants were completed and never operated because the Navy and the Air Force junked the whole idea before the machinery could start up. To me the criminal part of this is that money continued to be poured into the project although the upper echelon in the Department of Defense had already abandoned the program.

The same story could be repeated for the jet seaplane program. The Seamaster was abandoned with a loss of $400 million to the taxpayers. Many millions more have been squandered through loose practices in defense contract awards and supervision. The General Accounting Office has forced General Motors, Boeing, Douglas, North American and other defense contractors to return millions of dollars in Government overpayments.

To my mind it is in the area of defense expenditures—for which this Congress has approved over $39.2 billion—that I believe Congress can most profitably achieve the greatest economies.

LABOR LAW

There is no doubt that in the public mind the Griffin-Landrum law is the most important piece of legislation the 86th Congress has thus far passed. This law is the bitter fruit of 2½ years of antilabor propaganda fostered by the McClellan committee hearings.

The Griffin-Landrum bill is a blow at decent unionism which will now be harassed by yards of bureaucrat red tape—already $2 million has been appropriated to hire at least 200 new Government workers and to establish offices so that the anticipated mountain of reports can be processed. A more serious blow to legitimate unionsm lies in the new roadblocks to organizing new plants, especially in the South.

I have contended all along that northern Congressmen who voted for the bill in order to punish Hoffa and other malefactors have unwittingly done their constituencies a grave disservice by giving industry and business in the unorganized South an unfair competitive advantage.

The South is already undercutting decent northern employers with its right-to-work laws, with no unemployment compensation, with little or no workmen's compensation, unfair labor standards, lack of factory health and safety standards, and antiorganizing laws.

Small businessmen who look to the Griffin-Landrum law for solution of their labor relations problems may soon find their hopes illusory, especially in States with no substantial body of labor relations law.

The Griffin-Landrum legislation, in my opinion, is bad law which will require years of expensive court action before we can find out what judges think the language of the bill means. It will prove to be a full employment act for lawyers.

I introduced the labor bill, H.R. 8540, which while it would penalize the crooks and racketeers who prey on the labor movement, would protect the interest of union members and the legitimate activities of labor unions. A similar bill sponsored by Representative SHELLEY was offered as a substitute to the original committee bill but was defeated by a vote of 132–245. Subsequently the move to substitute the Griffin-Landrum bill was passed by a vote of 229–201. I, of course, voted against the Griffin-Landrum substitute and voted against final passage in the House on August 14 when it was adopted by a vote of 303–125.

After a historic series of conference committee meetings during which some of the most vindictive aspects of Griffin-Landrum were modified, the bill was reported out and then passed by the Senate on September 3 by a vote of 95 to 2. The next day, September 4, the House adopted the bill 352 to 52 and sent it to the White House where it was signed into law.

OTHER HIGHLIGHTS OF THE SESSION

DEFENSE

Although the Government is led by the outstanding American military figure of our time, it is becoming apparent that the country's expectations heightened by the promise in the Madison Avenue advertising agency's slogan "more bang for a buck" is doomed to disappointment. The sorry record of wasted millions of dollars, of silly and expensive interservice rivalry, as confusion and the working at cross purposes especially in the missile program could well prove tragic for our country.

The Gaither Report which was kept secret longer than it should have been said in part:

The United States is moving in a frightening course to the status of a second class power.

The Rockefeller report said:

Unless present trends are reversed, the world balance of power will shift in favor of the Soviet bloc. If that should happen, we are not likely to be given another chance to remedy our failings.

Adm. Hyman G. Rickover stated:

I think it is almost too late. This is what I worry about. Some of my money for fiscal 1958 which was appropriated by Congress several months ago has not yet been made available to me.

Secretary of Defense McElroy said:

By 1962 the Russians may lead the United States in guided missiles by as much as 3 to 1.

These are grim facts. The Congress has showed itself willing to appropriate over $39.2 billion for the Defense Department and to give NASA nearly a half billion dollars to spend to facilitate our space program. The Congress extended the draft to 4 years, extended the Renegotiation Act to allow the Government to recapture excess profits on defense contracts and, in general, did its best to overcome the administration's avowed intention of lagging behind the Soviet Union in long-range missiles and thermonuclear instruments of war.

INTERNATIONAL AFFAIRS

The cold war can continue for generations, experts say. If this is so, it will be necessary for the United States to bolster the economic and military strength of our allies for that period.

The mutual security measure which passed in the closing days of this session appropriated $2.1 billion in military assistance and another approximate $1 billion in economic assistance.

HIGHWAY PROGRAM

The whole Federal highway program was practically faced with financial disaster until the Congress most reluctantly passed a 1-cent increase in the Federal gas tax and made other changes in allocation of excise taxes to insure the financial soundness of the program. The tax, effective from October 1, continues for 21 months.

RAILWAY WORKERS

Congress approved a bill increasing pensions and jobless benefits under the Railroad Retirement and Unemployment Compensation Acts. This law, which I supported, is of extreme importance to the many thousands of families in our district which depend on railroads for their livelihood.

FEDERAL EMPLOYEES

A long overdue improvement in work benefits for Federal employees—the underwriting by the Government of up to 50 percent of the cost of their health benefit plans—was provided by the 86th Congress. This plan is to go into effect next July 1.

Employees hereafter will also be given a day off on Fridays preceding those national holidays which fall on Saturday.

VETERANS

Congress provided $100 million for direct housing loans to veterans. Congress passed a readjustment non-service-connected disability pension law and also provided new pensions for some widows.

AGRICULTURE

Congress has not yet come forth with an adequate program to preserve the family farm, backbone of the greatest agricultural system in the world. During the last session there was passed the surplus farm products law and the Fed-

eral food stamp plan for needy families in a few trial areas in the country. A ceiling of $50,000 was placed on price support payments to single recipients in order to halt the outrageous raid on the Federal Treasury by the corporate farms.

AIRPORT PROGRAM

Sixty-three million dollars a year in matching Federal aid to States was approved for airport improvements for the fiscal years 1960 and 1961. This was far from adequate to complete necessary work, for example, on the airports serving St. Paul and Minneapolis.

CIVIL RIGHTS

The long sought for amendment to the civil rights law was bottled up in the House Rules Committee by hostile southerners and northern Republicans. Only minor progress made in the name of civil rights was the extension of the Civil Rights Commission for an additional 2 years.

NATIONAL DEBT

Congress again, at the request of the President, raised the debt limit to $295 billion. When President Eisenhower took office in 1952 the debt was $265 billion, or approximately $25 billion less than at the present time.

BOND RATE INTEREST

One of the greatest behind the scenes struggles to take place during this session was over the administrations determination to increase the interest giveaway to bankers who already are enjoying the greatest profits in history. The Ways and Means Committee blocked an interest rate increase on the long-term debt but granted a hike on E and H savings bond income.

The interest rate increase fight is a basic economic struggle between the industry-banker-oriented administration and a substantial people-oriented group in Congress. Higher Federal bond interest rates are a cruel indirect tax on all people who pay income taxes and an increased cost of living to anyone who buys anything or even pays a utility bill.

HOUSING

One of the major points of contention between President Eisenhower and the Congress was housing. Three bills were actually passed and two were vetoed. The bill in its final form provides an extension of authority for the FHA to continue the guarantee of funds for home construction.

Maximum interest on rental housing and management type mortages insured by FHA would be raised from 4½ percent to 5¼ percent with the interest ceiling on sales type cooperatives raised from 5 percent to 5¾ percent. The maximum insurable mortgage would be raised from $20,000 to $22,500 for one family units.

The bill also contained authorization for 37,000 new units for low rental public housing to be built as stop gap step toward helping cities rehabilitate blighted areas.

Unfortunately the provision authorizing direct loans to colleges for classroom construction and equipment was a casualty of the President's disapproval.

CIVIL WORKS

The President vetoed two public works bills complaining of the inclusion of 67 projects which the Bureau of the Budget did not include in its 1960 Budget. Congress upset the cherished Eisenhower tradition of "no overridden vetoes" on the second bill by mustering better than two-thirds vote against the President.

The bill means that $159,000 will be spent for the planning of a flood control project in St. Paul and South St. Paul, where damage of approximately $7½ million was suffered in 1951 and 1952. Estimated final cost of this project will be $6.8 million.

HAWAII

Our 50th State was admitted to the Union this session.

CONCLUSION

I believe those who have hastened to disparge this Congress for not having assumed our Nation's leadership in this first session will have reason to be more charitable at the end of the 86th Congress.

Much of the first session's confusion and turmoil engendered by the 1957–58 recession and the windup of the McClellan committee antilabor hysteria will have disappeared and the long overdue task of promoting the general welfare of our country will be earnestly attended to by Congress which is anxious to get down to the task of building.

Some of the urgent legislative issues which I believe will be considered and upon which I am confident action will be taken are:

First. Legislation to relieve chronically depressed areas.

Second. Strengthening the civil rights law.

Third. Providing for aid to education.

Fourth. Plugging tax loopholes, including amendments on (a) 27½ percent depletion allowances, (b) 4 percent dividend credit, (c) tax withholding at source on interest and dividend income, (d) examination of capital gains, (e) examination of nonlegitimate business expense deductions, (f) investigation of undesirable effects of new depreciation provisions.

Fifth. More realistic minimum wage and broadened coverage.

Sixth. Adequate unemployment compensation legislation.

Seventh. Adequate farm legislation.

Eighth. Implementation of laws to promote the growth of small businesses.

Ninth. Health insurance for the elderly as part of the social security program.

Tenth. Post-Korean GI benefit bill.

Eleventh. Measures to promote the economic development of backward foreign areas and to provide immediately urgently needed medical assistance and food to the poor and starving people of these lands.

Twelfth. A water pollution law to save our water resources.

There are other important issues, but I think these must have urgent priority in the consideration of Congress in the next session.

During the recess I will make every endeavor to see and talk with as many of you as is humanly possible. My meetings with you always prove to be stimulating and valuable.

Report on 1st Session, 86th Congress

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. SMITH of Iowa. Mr. Speaker, as the 1st session of the 86th Congress comes to an end, I would like to review, for the benefit of my constituents, friends, and neighbors, some of its record.

It has been a long and hardworking session. It has been a session which encountered the problems that are bound to arise when a government is divided with one party in control of the executive department and the other party in control of Congress.

But the length and the work and the difficulties are only incidental to what actually resulted. Though in some instances Congress has not stood sufficiently firm in meeting the Presidential veto or for good and needed legislation, nevertheless this has been, in my opinion, a fairly productive session in terms of national needs. In some respects, this Congress has also refused to pass some legislation which would have been detrimental to the national interest. While it takes a two-thirds majority to pass legislation over a veto, a simple majority can refuse to pass bad legislation.

Congress was faced with the problem of meeting the Soviet menace, of placating the administration in its request for the highest budget in peacetime, of grappling with an $8 billion interest on the national debt, of increasing the limit on the national debt, and of passing a Mutual Security Act. Domestic issues became secondary and/or dependent upon the cost of meeting the Soviet menace, balancing the budget and controlling inflation.

The entire policy of the Eisenhower administration was in a state of fluctuation. A cooperative state of mind and action on the part of Congress was tried to the point of frustration. President Eisenhower requested legislation and then vetoed bills because they were too much or too little or not in exactly the wording he as a matter of hindsight said he would have preferred.

LABOR-MANAGEMENT REFORM LEGISLATION

The most controversial and heated piece of legislation to reach the floor of the House was the labor-management reform bill. Pressure was brought to bear upon the whole Congress, and was accentuated through mass media by the President, the Senate Rackets Committee, and prolabor and antilabor forces. On both sides, misinformation was the

order of the day. As a result, Congress was besieged by carloads of mail and the Capitol was crowded with hundreds of lobbyists and pressure groups. Labor-management reform was supported almost unanimously by Congress, but how to effect remedial legislation that would clear corrupt elements out of unions without imposing punitive measures on clean unions and impairing the collective bargaining process, caused much heated disputation on the bills.

The Senate passed the Kennedy-Ervin labor-management reform bill on August 25, 1959, by a vote of 90 to 1. When the legislation reached the floor of the House, the committee bill was sidetracked, and the Landrum-Griffin bill was substituted.

The bill that was finally agreed upon by the House and the Senate and which became law was 95 percent like the sidetracked House bill known as the Elliott bill. It provides for a secret ballot in union elections, financial reports to union members, and some restrictions on organizing activities. It also adopted the Landrum bill provision which denies the protection and services of the National Labor Relations Board to employees and employers of businesses which purchase less than $500,000 from outside the State. Most Iowa businesses are in this category. I vigorously opposed this section of the bill because I don't believe small businesses and employees of small businesses should be discriminated against.

HOUSING LEGISLATION

The last week of Congress was highlighted by the drive for adjournment. Congress, for the third time this session, passed an omnibus housing bill. The President vetoed the first two. After the Congress refused to be a rubber stamp, a third bill was requested which was almost the same as the first two, and many Federal housing projects, including the Des Moines urban renewal would have been eliminated or drastically curtailed for lack of funds had the President not finally agreed to accept such a bill.

Representative government is based on the art of compromise, and I feel Congress performed its obligation by reconciling its original request to some extent in this field to gain the approval of the administration. In turn, it is my belief that the President failed to meet the Congress halfway, by objecting to the program for housing for the elderly, urban renewal, and loans for college dormitories until a third bill was passed by the Congress. This needlessly absorbed much time of Congress that was needed to work on other bills.

NATIONAL DEFENSE

We live in an age of pushbutton warfare, and we are one of the great powers on earth. Another big power, Soviet Russia, through her leaders, has said on numerous occasions that it has the thermonuclear power to destroy the United States within half a day.

Members of Congress, even before this session, have made every effort to determine whether this Nation is adequately prepared to deter Soviet aggression.

The Gaither report, which was kept secret longer than it should have been, said in part:

The United States is moving in a frightening course to the status of a second-class power.

The Rockefeller report said:

Unless present trends are reversed, the world balance of power will shift in favor of the Soviet bloc. If that should happen we are not likely to be given another chance to remedy our failings.

Adm. Hyman G. Rickover stated:

I think it is almost too late. This is what I worry about. Some of my money for fiscal 1958 which was appropriated by Congress several months ago has not yet been made available to me.

Secretary of Defense McElroy said:

By 1962 the Russians may lead the United States in guided missiles by as much as 3 to 1.

Gen. Thomas Power, Air Force Strategic Commander, said:

I think you are just risking the whole country. That is how important I feel it is. The force which is now programed is not adequate because it is not coming fast enough.

Faced with these grim facts, the Congress approved a measure to create a new National Aeronautics and Space Administration with nearly $500 million to spend; extended the draft authorization by 4 years; extended the Renegotiation Act under which the Government recovers excessive profits on defense contracts, and in general did its best to overcome the administration's avowed intention of lagging behind the Soviet Union in long-range missiles and other thermonuclear instruments of war.

CIVIL WORKS

The President vetoed the two bills that contained the Red Rock and Saylorville Dam projects. I worked hard to get these projects and found that they could be sold to Congress on their merits. While we paid for dams and public works for other areas year after year, central Iowa has never before received $1 for construction of a flood control, recreation area, valley development project. With the large-scale movement of population to central Iowa, we need more water in dry weather and less in time of floods and, also, more recreation areas. The Red Rock Dam bill will bring $71 million into this area by the time of completion, and the Army Engineers estimate it will return more than $1.50 of benefits for each $1 of cash cost over and above the value for recreational purposes. These measures have been termed "pork barrel," but there is nothing "pork barrel" about a flood. There have been years when the flood damage totaled in 1 year more than the cost of the flood-control projects in the bill that was passed over the President's veto.

I realize some people do not agree with me and do not approve of these dams on the Des Moines River. It is often said that an elected representative should avoid controversy. That may be good politics, but I think we have better Government when the Congressman takes a stand for or against. I aggressively supported and promoted the Red Rock bill and will accept the blame by those who oppose it.

TAXES

Congress extended for 1 year the Korean war corporation taxes and certain excise taxes. The transportation and local telephone taxes were reduced.

New levies were imposed on life insurance companies which will return the Government another estimated $215 million annually.

HIGHWAY PROGRAM

It looked for a while as if the Federal highway program would be faced with a financial roadblock. As a final resort, Congress yielded to part of the demand of the President and increased the Federal gas tax from 3 to 4 cents. This tax becomes effective October 1, 1959, and continues for 21 months.

This bill did not provide the full amount of money needed by States to continue their program and also absorbed more of their traditional source of revenue, the gasoline tax. Highway users are now paying $1.6 billion more than is used for roads. I believe this bill is due for some revision and improvement in the next session.

RAILROAD WORKERS

The Congress approved a measure increasing pension and jobless benefits under the Railroad Retirement and Unemployment Acts. The Government does not pay these benefits.

VETERANS

Congress provided $100 million for direct housing loans to veterans. Readjusted non-service-connected disability pensions and provided new pensions for widows.

AGRICULTURE

Congress extended the surplus farm products law. Introduced a Federal food stamp plan for needy families in a few trial areas of the country. I regret that Secretary of Agriculture Benson has indicated that he will not put the plan into effect despite the action of Congress.

The wheat bill, designed to reduce production and cost to the Government without reducing farm income, was vetoed. A tobacco bill was also vetoed. In spite of the fact that the Benson corn law put into effect this year is proving very costly to both the taxpayers and farmers, Benson said he would recommend a veto for any corn bill that reduced production without reducing prices and so there is now a sort of stalemate with Congress refusing to further lower prices and increase production and Government costs.

I think this is a very serious problem and I introduced a bill, H.R. 7710, which I believe would help considerably. I testified for this bill and am going to continue to do all I can to help solve this problem.

POSTAL AND BOND INTEREST RATES

The 1st session of the 86th Congress refused to increase postage rates and interest rates on the long-term Government bonds held by the big banks. The administration wants to increase the maximum interest on these bonds above 4¼ percent. Authority was given to increase the interest rates on the E and H

series savings bonds that are held by individuals.

AIRPORT PROGRAM

A $63 million matching Federal aid to States was approved this session for airport improvements for the fiscal years of 1960 and 1961. The Des Moines Airport is being improved under this program.

INTERNATIONAL AFFAIRS

The President requested an extension of the economic and military assistance programs to other countries. I believe in supporting the President on international affairs unless I am fully convinced the national interest demands a contrary action. In the field of foreign policy, we must depend greatly upon any President and without regard to politics because he is the Commander in Chief of the Armed Forces and has access to all of the secret information necessary to make decisions. I consider these matters completely above party politics.

THE NATIONAL DEBT

Congress, at the request of President Eisenhower, raised the legal limit of the national debt to $295 billion. The national debt in 1952, when President Eisenhower assumed office, was $265 billion, or roughly $30 billion less than the present amount.

With increases in interest rates, this is becoming a serious matter. Congress reduced the President's spending requests by a net of $1.9 billion. The two sessions of the 85th Congress had reduced his spending requests by $5 billion. Congress spent a lot of time finding ways to cut the spending requests without sacrificing programs necessary to the strengthening of our economy. $259 million was added to the budget for cancer research and health programs, but other nonessential spending requests were reduced enough so that the net reduction was $1.8 billion. Some would have us believe that such a reduction would stop inflation, but I notice the cost of living has continued to rise. The fact is that some basic industries, like steel, are able to set inflationary prices which increase their profits by 600 percent in 1 year and these inflationary pressures more than offset the savings made by Congress.

A joint committee of Congress is now working on an economic study which I hope will help point the way to some needed legislation.

NEAL SMITH RESOLUTION ON NATIONAL FORESTS AND MINERALS

One reorganization plan by the administration would have permitted the sale and transfer of Government minerals in forest lands without notice to the public or approval by the Secretary of the Interior. An employee of the Agriculture Department would have been authorized to make such transfers. Under the law, such administrative plans go into effect unless Congress acts within 60 days. I introduced House Resolution 295 to stop this authority and protect us against what I considered an invitation to another Teapot Dome scandal. My resolution passed July 7 by more than a two-thirds vote. It seems to me that we must protect our Government property and evidently the overwhelming majority in Congress agree.

HAWAII STATEHOOD

A 50th State was born this session of Congress with the admission of Hawaii. The borders of the United States now extend northward to within a few miles of Soviet Siberia and into the strategic Pacific.

There was other legislation passed which was very important to those affected but space will not permit discussing each of the 385 bills which became public law. There are also some laws upon which I believe the Congress should enact but did not, and this means that there is a great deal of work to be done next year.

The 1st session of the 86th Congress came to an end at 6:21 a.m. Tuesday, September 15, after working all through the night giving final approval to the mutual security bill and extending the life of the Civil Rights Commission for 2 years. A broad civil rights bill was blocked by a coalition but is scheduled for early action in the second session. The 1st session of the 86th Congress was in continuous session longer than any other session of Congress since 1951.

I appreciate the opportunity to represent the 5th District of Iowa at the 1st session of the 86th Congress and hope the next session will enact more legislation that is good for our area.

Reins of Riches Match Means of Destruction

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article published in the Washington Post on August 16, 1959, over the byline of Gerard Piel, publisher of the Scientific American. The article is condensed from a speech which Mr. Piel made at St. Johns College in Annapolis last April.

The article is a very significant one, I believe, in the light of the recent proposals which have as their objective the reduction of armaments. Not only do I feel strongly that we should use the power of the atom for peaceful purposes, but I also believe that we should realize that a nuclear war might well end civilization on this globe.

Mr. Piel is a magna cum laude graduate of Harvard, a former editor of Life magazine, and presently is the publisher of the Scientific American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REINS OF RICHES MATCH MEANS OF DESTRUCTION

(By Gerard Piel)

In the darkest hours of human despair, life could never have seemed so transient as it appears to the present generation. Man has survived the cruel trials of natural selection only to face at last the direst of all threats to his existence: himself.

In an arms race that consumes the treasure and genius of civilization, one side—the one we tremble to call our own—has accumulated sufficient destructive capacity to annihilate the other 25 times over. And that other side, by this time, has equipped itself with 10 times the power to destroy us.

Between us, we are in a position to exterminate the entire species seven times over. Neurosis, senility, stupidity, accident—any of these at any moment may push the button on Apocalypse.

WONDER AND IRONY

While time permits, we may stand in wonder at what man has wrought. He has taken in his mortal hands the source of energy that lights the universe through all eternity—or at least for 10 billion years past and 50 billion years to come, in the finite terms in which we measure infinity today. He can ignite stars on earth hotter than any that shine in the firmament.

In the dread rehearsal of our last hour, more than 300 such stars have already winked their blinding light under the roof of our increasingly polluted atmosphere.

It is ironic, though it is inevitable, that the threat now laid to human existence should be leveled by those same nations in which human life has for the first time experienced abundance.

HOW ELSE DECIDE?

Why is it that the most fortunate people on earth should be on the verge of treason to the entire human race?

There are unquestionably many reasons, to be traced at last to the forgotten bloody age, before the beginning of history, when Homo sapiens exterminated the less gifted species of the human genus. The habits learned then still take over on occasion in the behavior of individual men.

In the behavior of States the resort to force and violence is sanctioned by all but one or two churches and by the most eminent moral philosophers. How else could States decide which is to have enough when there is not enough to go around?

But in the very age in which we live there has come an essential change in the condition of human existence. The revolution in man's labor that has come with the present amplification of our capacity for mass murder makes it possible for all men at last to enter into the human estate.

But this declaration does not come escorted by a thunderclap. Its truth is not widely credited. The possibilities of human fulfillment to which it points are not generally comprehended even by those citizens and statesmen whose own style of existence furnishes the most compelling evidence in its support. The revolutionists try to forget the revolution.

We embrace the good fortune that is ours and claim it as our birthright. In fear, we suppress the memory of the recent past and, in a world of increasing impermanence, persuade ourselves that our estate is perpetual.

THE LAST 15 SECONDS

To such a state of mind it may be salutary to recall that the entire biography of man is but a recent event in the history of the earth. We surmise that our genus originated in a recognizable approximation of its modern form not more than 1 million years ago. In the 5 billion years that the earth has

revolved around the sun, those million years are the last 15 seconds of a day.

The first evidence of our species is dated on the order of 100,000 years ago, within the last 2 seconds of the earth's first day. In the flaked stone and sharpened bone we see that evolution has already assumed a new dimension.

The history of civilization, of the settled urban community, goes back no more than 10,000 years, less than two tenths of a second ago. By that time the food-gatherers had brought all of the food crops and all of the domestic animals we know today under cultivation and husbandry. They had learned also another use for fire.

By confining it in a furnace they could raise the temperature from the 400 or 500 degrees of the open campfire to 1,000 degrees. Such temperature drives out the water of crystallization in pottery and bricks and made it possible to store the harvests and build cities.

INVENTION OF SLAVERY

Now, at last, want and the daily struggle for enough food to survive were lifted for a few members of the species. The new technology of agriculture required the labor of only four families on the soil to produce enough food to support themselves and one more family.

The allocation of this surplus was secured by a social invention: the institution of slavery. In the ruins of the earliest cities we see the image of societies that built them: At first temples, later palaces, surrounded by fortifications and the hovels of the slaves.

Since it was now possible for the labor of four families to support a fifth in occupations other than agriculture, the range of technology broadened. The furnaces became hot enough to smelt copper and iron. The wheel and the sail appeared. The pulley and the level, the pump and the bellows and other mechanical contrivances came into use. The way was opened to high civilization and the beginning of recorded history.

In the record we discover three major centers: The Mediterranean, India, and China. Later, in apparent independence of these, came the high civilizations of the Western Hemisphere. But everywhere within the marches of civilization the ratio of four families out of five enslaved to the soil prevailed. And the first urban masses freed for other crafts and functions were enslaved in other ways.

POPULATIONS GREW

Civilization, however, was a success. The human population expanded. Where it had taken 10 square miles of wilderness to support a single human being in the primitive economy of food gathering, now a few acres of agricultural land sufficed to sustain each human life. But the population of the agrarian civilizations pressed everywhere, at all times, on the margin of subsistence.

As the land under cultivation expanded, so did the population; when harvests failed—or when the land failed under unwise exploitation—the population shrank. The fortunes of the most ancient states waxed and waned with the harvests and with outbreaks of epidemic disease.

From the outside, they were threatened by those called barbarians, peoples still in transition from the Stone Age to neolithic culture. But as the slow trial-and-error advance of technology furnished weapons and more secure means of communication, and the rulers learned to manage ever larger social organizations, states blossomed into empires, and history moved into the modern era.

In one form or another, the institution of slavery persisted in almost every center of civilization on into the history of our own Republic.

If we wonder what life was like for ordinary people in those high and far-off times, we need not dig into archeology or scratch for illumination in the history books that have so largely ignored them.

We can see their technological contemporaries struggling for the same sort of life in the world today. They constitute, in fact, nearly two-thirds of the human race. Principally in the Southern Hemisphere, they are the peoples of what we have come to call the underdeveloped regions of the world.

There, four out of five families are still bound to scratching their subsistence from the earth. Their life expectancy, until very recently, was between 30 and 40 years. Their nutrition ranges from 1,300 to 2,000 calories per day, at least 500 calories below the minimum required to sustain the vigor of life.

Contrast their condition with that of the inhabitants of Western civilization. In our own country, the labor of one family in six on the farm yields a harvest equivalent to an average of more than 10,000 calories per capita for the entire population.

From this cornucopia we consume an average of a little more than 3,000 calories each. Life expectancy is moving from 60 to 70 years. Famine and pestilence are echoes of Sunday School Bible lessons. The primary source of energy is the combustion of fuel.

So far as our citizens are concerned and for the overwhelming proportion of Europeans west of the Urals, material want has been effectively abolished. From 150 million in 1770, the white population has increased sixfold to nearly 900 million.

In the same period the colored people of the world have only doubled their numbers, the largest increase coming in the last 50 years.

Beginning in the 18th century, science gained in ascendance as a major enterprise of our civilization. Newton's physics was extended to every branch of inquiry into nature and everywhere extirpated the fallacies, myths, and nonsense that had been cherished from earlier years.

During the past century, the movement has gathered constantly increasing acceleration. It was a century and a half, for example, from the discovery of the force of gravity to the discovery of electromagnetic forces; less than a century thereafter, to the discovery of the force that binds the atomic nucleus, and now less than a generation to the measurement of the weak forces that attend the mysterious decay of the ultimate particles of matter.

Most recently, the search for unity in nature has uncovered the subterranean, looking-glass world of antimatter. Nature apparently guarantees that there shall be no end of our inquiry. Each successful generalization uncovers new gaps in our experience and asks new questions.

Now invention has entered a new phase. It exploits understanding already established, it responds not merely to necessity but to opportunity presented by new knowledge. So long as the enterprise of science is nurtured by society, technology will move forward with it.

Does our appetite for metals at last exhaust the abundant ore beds of the world? According to Harrison Brown and his associates at the California Institute of Technology, we may turn to the granite of the continental masses and extract not only the full spectrum of mineral wealth but the fissionable elements that will provide the energy to power this "Age of Granite."

Or we may turn to the oceans, with their limitless supply of hydrogen for energy, plus all of the minerals leached out of the continental rock by the rains and rivers.

Do we require food? According to studies by the Food and Agriculture Organization, we can, with sufficient investment, expand the world's arable land seven times.

The outcome of the revolution in man's labor thus brings the elimination of want within the reach not only of the living generation of men, but of all the generations we can foresee.

Those latter-day Malthusians who panic at the world's immediate prospective population growth may leave it to later generations to decide how numerous they want to be. Want is no longer a challenge to technology, but to economics and politics. It is a social problem.

Not the least of the social problems posed by technology is the question: How can human dignity and freedom be maintained in a world organized to sustain the logistics of abundance? The management of the high technology of the future might find it in its power and convenience to tamper with the genetic constitution of the species or with the psychological process of individual human minds.

But such questions beset us already in a society that is willing to contemplate suicide and listens every noontime to the wail of sirens. Is this the only face that we can turn to the world's dispossessed, to the 1,500 million beyond the pale of Western civilization?

They have heard the news of the revolution in man's labor. They are impressed by the example of our own Nation, more than that of any other. Thanks principally to death control, they are living longer and feeling well enough to do something about their plight.

The political turmoil of the no longer colonial peoples provides the principal dynamics of this era of international political conflict. It is the power vacuum created by the breakdown of the old order in those regions that sucks the two great power systems to the edge of catastrophe.

In an acutely tender way, the wishes of these aroused people should be on our conscience. They are still extracting the irreplaceable resources of their lands to feed our voracious appetite for raw materials.

We cannot stop at the churlish counsel that the colonials should reduce their numbers. Their population is rising because the modicum of sanitation introduced to protect the white colonials in their midst has reduced their rate of mortality as well.

Their numbers are increasing, according to United Nations studies, at a rate that exceeds 1 percent per year. Since the end of the second world war, their material condition has been in corresponding decline; their calorie intake has actually fallen.

To offset the claim of population growth and reverse the decline in their condition, they must increase their production at a rate greater than their population growth. The larger the differential, the faster will their lot improve. Such an objective is not only technologically but politically and economically feasible.

Our own industrial growth has averaged 5 percent over long periods; it has even reached 8 percent under intense pressure. The growth of our agricultural output has correspondingly proceeded at the rate of 2 percent in normal times.

The success of both kinds of political and social management is proving increasingly attractive to the emergent economies of India, southeast Asia, Indonesia, South America and Africa. In their eyes, it is the results that count.

The task of industrialization involves some simple equations from classical economics. It is well known that the creation of capital requires savings. Savings means that the satisfaction of current want must be set aside to provide for future satisfactions. But when there is not enough to meet current wants to begin with—which is the case in a Malthusian economic system—someone must starve to provide capital. Compulsion is usually necessary to persuade people to starve.

In the present mood of the colonial peoples, however, they are ready to starve if it will do any good. And there are plenty of indigenous leaders ready to furnish the compulsion.

If we had conviction in our political and economic institutions and traditions—and a better understanding of their place in history—we would not willingly see these peoples submit themselves to compulsion. Out of the surplus capacity that troubles our market place we could meet a substantial portion of their need for capital equipment. Thanks to the labors of the international civil service of the United Nations and its accessory technical organizations, we have a pretty good idea of what it would cost.

Something on the order of $500 billion over the next 50 years would secure an average per annum gain of 2 percent in industrial production and a corresponding increase in agricultural output in the areas concerned. This global figure comes out of reasonably detailed local studies; many of the projects are ready for preliminary cost accounting.

Not all of the $500 billion would have to be supplied from outside. At about the halfway point, the new industrial centers would begin to generate some additional capacity of their own.

The bed rock investments, however, are not particularly attractive to the world's capital market. These involve such elementary public utilities as communications systems, including highways as well as railroads, and dams for flood control and irrigation. Investment in such projects would call for the kind of funds we now write off on armaments.

On the whole, we would have to take a long-range view in looking for return on our investment. It would come eventually, however as these economies cross the first hump toward the solution of their food problem.

But the demand for huge volumes of energy, heavy equipment, and big investment would not come at the outset. First there comes lead time for planning, and then engineering. Many of the early gains in these areas would be achieved, anyway, with very little expenditure on capital goods. The first requirement is for brains and knowledge.

Somewhere in our material and intellectual resources we can cetrainly find the capacity to make a beginning. We would soon have additional wealth and brains available for the task as a result of the attenuation of the arms race on which our prosperity now rests so heavily and insecurely.

Whether our present distribution of values permits us to think we can afford action on these lines or not, political and economic necessity will soon supply crude compulsion.

As the principal revolutionists in the revolution of man's labor, our people more than any other have created the conditions that now confront mankind with the choice between extinction and the achievement of its yearning to fulfill its humanity. Surely it will not exceed our capacity for social invention to assume the role that ought to be ours in the making of that choice.

Eric Sevareid: The Great Art of Leadership Is a Necessity for the Ideal Candidate in 1960

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BRADEMAS. Mr. Speaker, I should like to include in the CONGRESSIONAL RECORD some excerpts from an article in a recent issue of Esquire magazine in which Mr. Eric Sevareid, the brilliant and dedicated news analyst, describes in moving words the importance of Presidential leadership to the future of our country.

The excerpt follows:

EXCERPTS FROM "THE IDEAL CANDIDATE FOR 1960," BY MR. ERIC SEVAREID

Woodrow Wilson once said that the purpose of liberal education is to enable one to know a good man when he sees him. Universal free education has worked well enough so that Americans never elect or even nominate a truly bad man. In spite of the adulation of many, Senator McCarthy would never have come within miles of a presidential nomination. But whether we are educated enough to know the better man is a different question. Choices can be very hard to make.

The only rule of thumb I have been able to come to for myself is the "rule of the men and the boys." My observation about politics in many countries is that its practitioners fall into these two groups. The boys in politics are those individuals who want position in order to be something; the men are those who want position in order to do something.

And it is my own personal conviction that the United States has now arrived at a point in the world story when it is utterly imperative that we elect one of the men. I believe this so deeply that I would now much rather take the risk of choosing a man who often acts wrongly than a boy who will not act at all. Most mistaken actions can be corrected; for action begets counteraction and, in any case, the people can only "know what they want" when alternatives are not only presented to them but tried. We do not need a presiding officer; we do terribly need a constitutional leader. Our worst danger at this stage is not that of making mistakes, it is of continuing a political state of blandness, continuing to dull the sharp edges of issues, not by the practical compromise which must often happen, but by compromise as an article of faith. Leadership does not consist of endlessly trying to conciliate "the other fellow," of feeling all possible pulses before making the first timid steps in any direction. Only by boldly taking the steps and accepting the consequences are effective policy or the people's deepest desires discovered.

History will not wait for us; it threatens to bypass us even now. It is rushing on. We are caught in the tides not only of a scientific revolution but of political and social revolutions which we ourselves, not the Communists, inspired in this world generations ago. Even semiprimitive societies in darkest Africa have caught the tides, are taking us at our word—not our present words, uttered hour by dreary hour over the Voice of America, but our old words, the words of Jefferson and Thomas Paine. Millions of people are seeing visions, the same visions we saw so long ago that now we seem to regard them as nightmares.

William Faulkner asks, "What happened to the American dream?" He answers, in part, "We dozed, and it abandoned us. And in that vacuum now there sound no longer the strong loud voices not merely unafraid but not even aware that fear existed, speaking in mutual unification of one mutual hope and will. Because now what we hear is a cacophony of terror and conciliation and compromise babbling only the mouth-sounds, the loud and empty words which we have emasculated of all meaning whatever— freedom, democracy, patriotism—with which, awakened at last, we try in desperation to hide from ourselves that loss."

Truly there is a quiet desperation among those Americans sensitively aware of what is happening in the world today and of what is not happening in America. A great nation cannot stand still; it either moves forward or it moves backward. It is my belief that we are losing touch with the world, indeed with ourselves. Not only do we not know what we want any more; we do not know what we are. Like old women touching their beads, we endlessly count and recount our "blessings" in the form of our "gross national product," our "per capita income," and our production units, whether babies or block-long automobiles; and we call to the gods of "economy," "prudence," and "the middle way," trying to believe that this shall save us, knowing in our hearts that it will not.

We have no national gods in America. Even the one we name on our coins was not there until it was stamped on by an Episcopalian Secretary of the Treasury during the Civil War. We have never had a Fuehrer and want none; we have no king, no Delphic oracle, no Platonic academy of the all-wise. We have only the President of the United States. We cannot be led by our political institutions, admirably organized as they are. Government, as Wilson wrote 4 years before his election, "is not a machine but a living thing. It falls, not under the [Newtonian] theory of the universe, but under the theory of organic life. It is accountable to Darwin, not to Newton."

The Presidency is the only truly national office we have. And, as Wilson said, if the President "rightly interpret the national thought and boldly insist upon it, he is irresistible; and the country never feels the zest of action so much as when its President is of such insight and caliber. Its instinct is for unified action, and it craves a single leader. It is for this reason that it will often prefer to choose a man rather than a party. A President whom it trusts cannot only lead it, but form it to his own views."

This is what the American people now deeply want, and need—to be formed to the views, the faith, the working vision of a great man, who is great because he understands the present and anticipates the future, because he is one with the people, yet above them, because he has the capacity to call up their best instincts, not merely to comfort their expediencies, and because he can stand to the world in their image and as the living symbol of the America they once knew in their schoolbooks and felt in their hearts and have not yet entirely abandoned.

This must come back to us, this leadership, or the marvelous story of the American spirit in the world may soon unwind to a tattered and meaningless end. It is impossible for me to understand how anyone saturated in the history of this land cannot feel this need. And it is strange but true that human nature never changes: we have acted as if opinion polls and committees and the mechanics of organization could find the way for us, and yet, again and again, we are thrown back to the simple, ancient truth that only a man—one man—can lead us.

Leadership of a great and vigorous people is not a process of calculation or organization. Government is not a business. The true function of the Chief Executive has little to do with administration. If these things were not so we would elect businessmen as Presidents and we have never done that. On the level of the presidency there is no such thing as political science. Leadership is an art, not a science or a business, and what our people need and instinctively want is an artist. They have need, now, of a very great artist; for the immense canvas of our national life, our mirror to ourselves and our world, is frayed and obscured with a thousand tiny cracks. The American portrait is growing dim, and only the boldest strokes from the boldest hand will restore the original in its strong and vivid colors.

Report on Major Legislation, 1st Session, 86th Congress

EXTENSION OF REMARKS
OF

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JENNINGS. Mr. Speaker, as this 1st session of the 86th Congress ends, the appraisals of our work over the past 9½ months are coming from every side.

We have heard praise; we have heard criticism. Both have been tempered to a great extent by the political affiliation of the person making the statements, or by the action taken—or not taken—on a particular piece of legislation or program.

Objectively, we can say that this has been a long and hardworking session. We have encountered problems that are peculiar to government when the executive branch is controlled by one party and the legislative branch by another. Of course, not everything has been done. In our growing and complex society, in the maze of governmental organization and actions, new problems and proposals are constantly pressing upon the Congress even before the old ones are dealt with in the lengthy legislative process.

Mr. Speaker, under leave to extend my remarks in the RECORD, I want to review some of the major achievements of the session.

DIVIDED GOVERNMENT

For the fifth straight year, the Congress has been Democratic-controlled while the administration has been Republican. This has created difficulties in reaching agreement on much legislation. However, again this year, as in the 84th and 85th Congresses, the Congress has made a sustained effort to do more than its share in making this divided Government function efficiently.

We have endeavored to cooperate with the administration; we have sought to pass legislation rather than create issues; and we have devoted months of work to controversial bills in the effort to meet the national needs.

Unfortunately, in many instances, the administration has refused to give its half of the cooperation needed to produce the desired results. The President's veto has nullified congressional work, and the threat of a veto has prevented action on other pending bills.

BUDGET APPROPRIATIONS

Again in this session, as in the previous four sessions of Congress, a reduction has been effected in the record-breaking budget proposals of the administration. Despite misleading statements to the contrary, Congress has been constantly concerned with the need for economy in Government. The facts clearly illustrate that substantial savings were made on various appropriation bills.

In approving 17 regular and supplementary appropriation bills, $1,881,410,093 was cut from the budget estimates submitted by the administration. Actually appropriated was a total of $72,077,598,352; the bulk of this is for fiscal year 1960 but a nominal amount was included for the old fiscal year, 1959. Certain permanent appropriations that become available automatically under previous law, such as the interest payments on the public debt, are not included in this total. Also, new obligational authority for Government spending outside the appropriations process has not been included. These, of course, will have considerable effect on total Government spending for fiscal year 1960.

The appropriation bill for the Departments of Health, Education, and Welfare and Labor, was the only one of the 17 bills increased over budget requests. Much of this increase will be utilized in the vital research programs of the National Institutes of Health, which seek to find the causes and cures of crippling and killing diseases.

The largest of the appropriation bills was again that of the Department of Defense. Adequate funds were provided for the activities of the Army, Navy, and Air Force—over $39.2 billion. Congress cut almost $20 million from the budget request for the Department of Defense.

OTHER FISCAL LEGISLATION

The administration again presented a twofold request for an increase in the public debt limit, which was approved. The statutory limit was raised from $283 billion to $285 billion, and a temporary increase of $10 billion was granted to provide "elbowroom" in meanaging the Nation's debt. This means that the debt limit will be $295 billion until June 30, 1960, when it will drop to $285 billion.

In the general field of taxation, legislation has been passed to extend for 1 year the present corporate tax rate and certain excise taxes. Provisions were written into this measure to reduce the transportation tax on persons from 10 to 5 percent and to repeal the tax on local telephone, both changes to become effective on July 1, 1960. In another tax bill, an equitable formula to tax the income of life insurance companies was approved to replace existing temporary tax rates.

Agreement was also reached late in the session on a bill to provide additional revenues for the highway trust fund from which Federal shares of highway construction costs are allocated to the States. Of immediate concern was the continuation of the interstate highway construction, but other Federal aid to primary and secondary highways would have been curtailed without this legislation. As passed, the bill authorizes a 1-cent-per-gallon increase in the Federal gasoline tax; the increase would be in effect for 21 months. It also provides that a portion of certain automobile excise taxes will be transferred to the highway trust fund to keep the construction program—interstate, primary, and secondary—moving along on schedule and on a pay-as-you-go basis.

The House Ways and Means Committee, which has jurisdiction over tax legislation, will conduct a general revenue revision study during the adjournment period. This study will be the basis for any tax legislation reported from this committee in the second session.

LABOR-MANAGEMENT REFORM

One of the landmarks of this session was the passage of the Labor-Management Reporting and Disclosures Act of 1959, which resulted directly from the lengthy McClellan committee investigation of abuses and racketeering in the labor-management field. As it became law, the legislation contains portions of three bills brought before the Congress and represents the best that could be achieved to correct the exposures of the McClellan committee while protecting the legitimate interests of both labor and management.

I voted for passage of this legislation.

VETOES KILL FARM BILLS

Mr. Speaker, the prime example of how effectively the veto and the threat of a veto stymied needed legislation this session was in the field of agriculture. As in the past two Congresses, we have found our efforts to write and approve reasonable farm legislation met by an unsympathetic and uncompromising attitude on the part of the administration, especially the Secretary of Agriculture.

The House Agriculture Committee, on which I have again had the privilege of serving in this Congress, held many long and thorough hearings on the several hundred bills referred to it. The record on farm legislation would be much better had we received cooperation from the administration in working out modified approaches to the problems brought before the committee.

The two bills that were passed by Congress to meet the pressing and specific needs of two important commodities—wheat and tobacco—were vetoed.

The wheat proposal would have cut wheat acreage and reduced the wheat surplus. It would have reduced the cost of the program, but it was vetoed. Why? Because it included price support provisions to prevent great hardships on the farmer while wheat acreage was being drastically reduced.

The tobacco legislation, which was of great concern to the tobacco producing areas of Virginia and the Ninth District, had the objective of stabilizing the level of price supports so that American-produced tobacco would be more competitive in the world market. This bill would have aided materially in the retention and expansion of our export market. It was vetoed, although it had the combined and united support of tobacco-grower organizations, farm organizations, and the many other people directly concerned with the tobacco program. The consequences of this veto will be unfavorable to the tobacco farmer and the tobacco industry in general.

Last year we made an extensive study of the tobacco export situation. As a member of that study group and as the sponsor of the House bill to stabilize tobacco price supports—the vetoed bill—I certainly feel that a grave mistake was made by the President in following the Secretary of Agriculture's advice to veto this legislation.

One of the major agricultural bills passed was that extending the Agricul-

tural Trade Development and Assistance Act for 2 years and strengthening its provisions. This bill includes permissive authority to establish a domestic food stamp plan for distribution of additional surplus commodities to needy people here at home, and it also specifies that insofar as practicable the Secretary of Agriculture shall make surplus commodities available for distribution to the Nation's needy before selling them overseas.

Among other agricultural bills given final approval were those to provide additional funds for the school milk program in fiscal year 1959, to authorize $81 million for the program in fiscal year 1960 and $85 million in fiscal year 1961. Awaiting final approval—different versions have been approved in the House and Senate—is a proposal to create an Agricultural Research and Development Commission, to establish more effective research programs to expand markets for agricultural and forestry products, and to reduce farm surpluses. I sponsored a bill similar to that reported from the House Agricultufe Committee.

Renewed efforts will be forthcoming in the next session to pass reasonable and adequate agriculture legislation. The key to the success of these efforts will be the attitude of the administration and the Secretary of Agriculture.

MAJOR MISCELLANEOUS

Also approved in this session were: Statehood for Hawaii; a self-financing program for the Tennessee Valley Authority's future construction of power-producing facilities within its present service area; an extension of the draft until July 1, 1963; a health insurance program for Federal employees under which the Government will share the costs on a 50–50 basis; a 3-year continuation of the Renegotiation Act to provide for recovery of excessive profits on defense contracts; exemption of news-type radio and TV programs from the equal-time requirement of the Federal Communications Act for political candidates; an increase to 4¼ percent in permissible interest payments on savings bonds; additional lending authority—from $500 million to $575 million—for the Small Business Administration; authority for the Federal Reserve Board to lower the reserve requirements for member banks; improved benefits under the Railroad Retirement and Unemployment Compensation Acts.

The omnibus housing bill, which was approved three times before the final version was signed by the President, gives the Federal Housing Administration authority to insure up to $8 billion in new home loans and reduces downpayments on such insured housing. This measure also contains provisions on urban renewal, a loan program for housing for the elderly, and public housing. Airport developments throughout the Nation, including four now under construction or planned in the Ninth District of Virginia, will be able to proceed because of the congressional approval of a 2-year Federal-aid-to-airports program. The military construction bills in this session included authorization and appropriations for additional work at the Abingdon Army Reserve Armory.

VETERANS' PROGRAMS

In addition to several minor changes in the laws governing the various veterans' programs, two bills were approved in this session of general interest to veterans and their families.

The first of these became Public Law 86–211, which modifies and liberalizes the non-service-connected pension program for veterans of World Wars I and II and the Korean conflict, their widows and children. This new law provides a sliding scale of pensions based on income and dependency status of the recipient; places World War II and Korean conflict widows and children on the same basis as the widows and children of World War I for purposes of pension eligibility; and makes several other changes and improvements in the existing program. This new law goes into effect on July 1, 1960.

The second major veterans' bill was aimed at improving the opportunities for veterans to secure home loans. This measure authorized $100 million in direct home loan funds, which will enable the backlog of direct home loan applications to be reduced to a great extent. This type of loan is primarily for veterans in rural areas where conventional home financing is not easily available. Authority was provided in this bill, also, for an increase in the maximum interest rate on GI home loans. The rate was increased from the previous 4¾ to 5¼ percent with the hope that additional mortgage funds would become available for veterans desiring to utilize the guarantee home loan program.

VETO HITS NINTH

Mr. Speaker, the President's veto of several bills in this session hit sharply and frequently at the Ninth District of Virginia. The short and long range economic effects of these vetoes can be severe to large segments of my district.

The veto of the tobacco price support stabilization bill, which I have mentioned, will further weaken the position of American-produced tobacco in the world export market. Several thousand farm families in my district depend on burley tobacco as their primary cash crop.

It will be my intention during the adjournment period of Congress to talk with all segments of the tobacco industry—from growers to exporters—and to develop new legislative proposals for the next session. It is my hope that the Tobacco Subcommittee, on which I serve, can again hold hearings next year on the general subject of tobacco legislation and perhaps report a bill to the full House Agriculture Committee.

Although twice vetoed, the public works appropriations bill was finally approved—the first time Congress has overridden a veto of the incumbent President. Additional funds will thus be provided for a flood protection project in my district. The Flannagan Dam and Reservoir located on Pound River in Dickenson will be allocated approximately $2,438,000 to complete planning in the last half of 1959 and to initiate construction early in 1960.

The Corps of Engineers, which recommended this project for construction as one of the flood protection dams on the Big Sandy River tributaries in Virginia, is currently working on preconstruction planning under appropriations granted by Congress in the last 2 years.

The budget for fiscal year 1960 requested only enough funds to complete planning. Approving just this request would have delayed the project another year and only resulted in further increases in costs. I appeared before the Public Works Subcommittee of the House Appropriations Committee and asked that funds be provided in the bill to begin construction in fiscal year 1960. Following this hearing, and testimony from the Corps of Engineers it had the capability to efficiently and economically utilize additional funds, a total of $2.5 million was put in the bill for the Flannagan Dam and Reservoir. This bill, after it had been passed by the House and Senate, was vetoed. The President objected to the inclusion of several new starts on construction in this fiscal year.

Following the veto, a second public works appropriation bill was reported and a reduction of 2½ percent was made in all projects and programs, bringing the funds for the Flannagan project down to approximately $2,438,000 and reducing the overall total funds below the fiscal year 1960 budget request. This second bill was also vetoed because of the new starts insisted upon by Congress as the continuation of a reasonable and orderly program of flood control and water resource development. This second veto was overridden.

The House approved an omnibus rivers and harbors authorization bill—projects must be authorized before funds can be appropriated for planning and construction—but it will not be passed by the Senate before adjournment. Incorporated into this omnibus bill are provisions of my bill to authorize construction of a flood control reservoir on the North Fork of Pound River above the town of Pound, Wise County. It is hoped that final passage of this bill can come next year.

It has been rumored that a veto message will be forthcoming on a third bill of great interest to the Ninth District—the bill to establish an independent coal research and development commission to coordinate and expand research into new uses and new markets for coal. This proposed research program is of vital concern to the coal industry and the communities dependent on coal production as the basic element in their local economy.

I sponsored a similar bill in both the last and in this session of Congress. Final action was not taken on a coal research bill last year, but we have succeeded in passing a bill this year to carry out the recommendations of the subcommittee for an independent commission to guide the way to new opportunities for coal.

It should be pointed out that recommendations of the subcommittee were almost unanimously those of the coal industry and those leaders in related industries concerned with the future of coal. As in the case of tobacco, the President will be ignoring these united

recommendations if a veto is announced for the coal research bill.

BILLS SPONSORED

In addition to the four bills already mentioned in this summary—coal and agricultural research, tobacco price support stabilization, and authorization of the North Fork of Pound Reservoir—I have sponsored several bills on other subjects.

My bill to designate the Pound River Dam and Reservoir in Dickenson County as the "John W. Flannagan Dam and Reservoir" was passed and became Public Law 86-189. This gives an appropriate name to this flood control project and eliminates the confusion existing between it and the other dam proposed for the North Fork of Pound River in Wise County.

The House approved a bill to make volunteer fire departments eligible to receive donable surplus property from the Government. One of my bills had this objective, but would have also made rescue and first aid squads eligible to receive such property. The Senate has not acted on the House bill as yet. I am considering the introduction of a new bill pertaining to rescue and first aid squads, and hope that further attention will be given to this subject next year.

Two of my social security bills are pending in the House Ways and Means Committee. These would eliminate the requirement that an individual be 50 years of age before receiving disability benefits and provide full benefits to both men and women at age 62. A special study of the disability provisions of the social security program is to be carried out later this year by a subcommittee of the Ways and Means Committee. This study is aimed at determining whether the disability program is being administered in an efficient and fair manner and in accordance with the intent of Congress. The term "disability" will be scrutinized and the subcommittee will study allegations made that disability determinations have been slow and that appeals have been unduly delayed. This is definitely a needed study.

Undue criticism has been made of the Nation's farmers because of the cost of the programs conducted by the Department of Agriculture. In reality, much of the Department's work is for the benefit of the general public or serves a dual role of aiding the national welfare and of also benefiting the farmer. There are many examples of these programs too numerous to include in this brief statement. I have introduced a bill to provide that the costs of the surplus food programs, the national school lunch program, surplus foods distribution, and the national school lunch and school milk programs shall be attributed to the Department of Health, Education, and Welfare instead of the Department of Agriculture. This bill is pending in the House Government Operations Committee.

A resolution was passed by both Houses calling upon the President to have reviews made of existing programs in the executive branch of the Government with the purpose of utilizing them more fully, to increase employment in the domestic and mining industries, to advise Congress of the actions taken or proposed, and to submit any recommendations for legislation. The coal research bill, which may be vetoed, tied in directly with this resolution. A third proposal, which I have joined in sponsoring, would establish a joint congressional committee to make a full investigation and study of the available fuel reserves, and to formulate proposals for a national fuels policy. This resolution is currently pending in the House Rules Committee.

Mr. Speaker, this report on legislation is brief; it does not attempt to convey my position on every subject discussed; nor does it present arguments for or against bills in each instance. The purpose is to simply review the major subjects and those of particular interest to my district. Inquiries on the contents will be welcome and will be answered fully.

With Careful Administration of Government Expenditures Both Tax Relief and Debt Reduction Can Become a Reality

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. STAGGERS. Mr. Speaker, the administration has been engaging itself in a series of discussions on financial matters to which Members of Congress should give very serious consideration between now and the opening of the second session in January.

The Budget Director recently stated that U.S. citizens could be given a tax cut without any reduction in military spending if proper measures of economy were effected in other areas. I would certainly not disagree with this theory; on the contrary I am confident that highly important budgetary gains can be accomplished if the executive department will only try to follow the very fiscal policies that it has echoed from time to time. Rather than challenge such appeals for a sensible spending program, I shall assume that the White House and its various departments and agencies are sincere in their expressed concern about the cost of Government and particularly the size of the national debt.

I have always been eager to support any realistic measures—regardless of their political heredity—that are designed to save public funds without interfering with necessary Government services or threatening the general welfare. The executive department must also adhere to these principles if the Nation is to remain economically sound.

Recently a statement was issued in the name of the President. Some of the more offensive political implications need to be corrected, if only for the sake of harmony in setting up the budget for the next fiscal year.

The President said that his biggest disappointment in the record of this Congress was its failure to remove the interest ceiling on long-term Government bonds. Then he said that he deplored the action of Congress in slashing foreign aid. I submit that confidence in Government bonds can best be restored by checking inflation and reducing the national debt. I remind you that by next June 30 the national debt will have risen to $284.7 billion, a gain of more than $18 billion since 1953 when the administration first stepped in with the assurance that the debt would be reduced.

Under the circumstances it is difficult to understand the attacks on Congress for cutting mutual security appropriations. With the flow of gold away from this country and imports gaining as exports drop, the $3¼ billion made available for foreign aid would seem to be ample. Congress has been shown so many instances of poor judgment and waste on the part of administration officials handling the overseas program that the White House should set out to clean up the program as a primary responsibility, and to cooperate in reducing its cost wherever and whenever possible.

To check inflation requires a concerted effort on the part of Congress and the White House. In the recent statement the President patronizingly observed that our farmers are entitled to legislation that will allow them to plan for a secure future. Of course the farmer wants to plan for a secure future. So does the railroader, the factory worker, the coal miner, the truckdriver, the schoolteacher, and the housewife. The man who puts his money in the bank or in insurance certainly cannot feel very secure unless he has some indication that the inflationary spiral is going to level off. What about the pensioner whose income is barely enough to get by on at the present time? How can he feel confident about the future if groceries, fuel, clothing, and other necessities continue to cost more and more?

Regardless of how much talk we hear about wage increases contributing to inflation, you and I know full well that inflation gets its thrust in Washington. Our first target has been to be trimming of Government expenditures, with the savings to be applied to tax reduction and/or debt reduction. Interest on the national debt has now reached the frightful figure of $9 billion per year. Thus the interest alone is now equal to the total cost of more than 3½ million automobiles valued at $2,500 each. It is enough to buy 600,000 homes priced at $15,000 each. Or look at it this way: to pay the annual interest on the national debt requires the Internal Revenue to take $500 from each of 18 million taxpayers.

Yes, the consequences of an enormous national debt are obvious enough. America is going to have to pitch in and start paying off this deficit, and I agree with the Director of the Budget that our objective can be attained if we make the cuts in the proper places. I suggest only

that our own people be given the benefit of any questions involving funds for domestic versus foreign uses.

Mr. Speaker, on March 12, 1959, I introduced H.R. 5634, a bill to establish a program of economic relief for distressed areas through a system of loans and grants-in-aid. This program would have cost a very small percentage of the amount of money that the President wants to send overseas. While a very large part of the funds that are sent abroad are used to purchase foreign materials and equipment that compete with the products of American labor, the revolving funds called for in my bill would have been the means of stimulating the economy of surplus labor areas. My bill was intended to make it possible for West Virginians and other citizens idle through no fault of their own to get back to work. Once returned to a payroll, they would begin buying the things they need so desperately—including clothing, household goods, automobiles, and electrical equipment. This increased buying power would have a very beneficial reaction throughout the producing centers of our land. It would also result in increased tax revenues—local, State, and Federal.

Let me emphasize that I am pleased to hear the administration denounce inflation and appeal for reduced Government spending. To realize this objective during the second session of Congress will require only the proper determination of where cuts are to be made, and it is my hope that the White House will, at that time, show as much concern for the surplus labor areas of this country as has been voiced in behalf of a bigger and more expensive foreign-aid program. When our people have the opportunity to get back to work, the consequent economic stimulation will be felt throughout the country. And, with careful administration of Government expenditures, there is reason to believe that both tax relief and debt reduction can at long last become a reality.

Another Honor for the Padre of the Americas

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLYNN. Mr. Speaker, it is with distinct pleasure that I call the attention of the Members of Congress to another award given the Wisconsin-born priest, Father Joseph F. Thorning. This latest award is the Military Order of Christ, with the rank of commander, bestowed upon Father Thorning by the Government of Portugal for his achievements in the promotion of friendship between Portugal and Brazil, and for his contributions to the knowledge of the culture of these two countries in the United States. I want to join with his many other friends in congratulating Father Thorning—better known as the Padre of the Americas—and hope he may continue his outstanding mission of working for an effective Latin American good neighbor policy for many, many years to come.

To give Members of Congress and the public a better picture of Father Thorning's background and his many accomplishments, I am inserting in the CONGRESSIONAL RECORD a story from the May 14, 1959, issue of the Milwaukee (Wis.) Journal. I know that, after reading this story, Father Thorning's background and accomplishments will be greatly appreciated by all people interested in maintaining and improving good relations between the United States and the Latin American countries:

PRIEST CITED BY PORTUGAL—GIVEN DECORATION

WASHINGTON, D.C.—A Milwaukee-born priest, Father Joseph F. Thorning, 63, has been invested with the insignia of Portugal's highest national decoration, the Military Order of Christ, with the rank of commander.

The presentation was made at the Portuguese Embassy by Ambassador Luis Esteves Fernandes. He praised Father Thornton for "splendid achievements in the promotion of friendship between Portugal and Brazil and for his contributions to the knowledge of the culture of those two countries in the United States."

HAS OTHER DECORATIONS

Father Thorning, who was graduated from Marquette Academy in 1914, has specialized in inter-American relations as an educator, author, and lecturer. He also has been decorated by Brazil, Venezuela, Haiti, Cuba, Colombia, and Spain. He is now associate editor of World Affairs here and pastor of historic Saint Joseph's Church at Carrollton Manor, Md.

In recognition of his unceasing work in behalf of the good neighbor policy, Father Thorning has been asked to deliver the opening prayer in the House of Representatives on Pan American Day for the last 15 years.

On these occasions, Senators and Representatives have praised him as "a great American and a man of God." Senator MANSFIELD, Democrat, of Montana, called him the padre of the Americas, a title that has stuck with him.

PRAYERS FOR LEADERS

In his prayer this year the priest asked divine help for Western Hemisphere leaders in their efforts "to maintain the peace and to win victories against the international masters of deceit, who continue to foment hatred and destruction."

Father Thorning's Viking father, C. M. Thorning, who worked as a shipbuilder on the shores of Lake Michigan, died 2 years ago at the age of 94. Two of the priest's sisters are Mrs. M. Paul Reilly, 2200 Stratford Court, Shorewood, and Mrs. C. R. Reilly, 1908 North 73d Street, Milwaukee.

The Challenge of the Future

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I insert in the RECORD an address delivered by the Honorable PAUL H. DOUGLAS, of Illinois, on July 24, before the National Strategy Seminar conducted at the National War College, Washington, D.C., on "The Challenge of the Future."

The address follows:

During the past 10 days, you have been engaged in an examination of the world conflict which Russian communism has created; the nature of this conflict, the tactics and techniques employed by the Communist forces, the strengths and vulnerabilities of both the free world and the Communist forces, and the courses of action which are open to us—both as a nation and as acknowledged leaders of the free world. The formal curriculum for this seminar gives encouraging evidence of a political realism which I hope will be contagious, particularly in those circles which are responsible for the forming and carrying out of our foreign policy. The commandant and faculty of the National War College are to be congratulated for acting as hosts to this timely Reserve Officers Seminar on national strategy, and the Institute of American Strategy, and the Reserve Officers Association which have prepared the voluminous documentation are deserving of all praise. I take special pride in the fact that the idea and the main drive for this seminar came from the Midwest and, indeed, from my own city of Chicago, the home of the Institute.

I fear, however, that you are more or less exhausted by this strenuous program of lectures and study and that my comments, prepared during the spare moments of a somewhat crowded life, may be the crowning indignity of all. For I well know the saying that the mind cannot absorb more than the posterior can endure.

I

Political realism dictates that we accept the fact that we are in a form of war with the forces of world communism. This is not a war of our making or choosing but one which has been forced upon us. It is vital that we recognize the full meaning of this fact, understand the nature of this conflict, and then engage the enemy to the fullest of our capabilities. Otherwise, we shall perish as a free society. The forces of communism leave us no other alternative.

It is the unorthodox nature of the war in which we are engaged that makes it difficult for some to recognize the harshness and the cold reality of our present situation. The nature of the conflict is political, or more accurately stated, geopolitical. By long-standing dogma, unmistakable public declarations, and a documented record of actions over the past 40 years, the Communists leave no room for doubt that the ultimate object of their political warfare is world domination. They are determined, by any and all means, to impose their system upon all nations and people of the world. The tactics they employ to this end are diversified, deceptive, and well organized. Individual liberty as we know it, representative and self-government as we practice it, have no place in the kind of world planned by the elite class—the new aristocracy—spawned by these past 40 years of Communist experience in Soviet Russia. The same type of absolute dictatorial control which they now force upon the people of their captive empire is the dismal and reactionary way of life which they plan for all the people of the world.

THE NATURE OF THE THREAT WE FACE

To understand fully the source and nature of present-day Communist power requires a realistic view of the historic origins of its theory and practice.

Communism as a theory was developed in a setting of great empires and amidst conditions of grave injustices in the then ex-

isting social order. The world of Marx and Engels was controlled by a few great powers, most of which were ruled by hereditary aristocracies. Class distinctions were hard and fixed. The destiny of the individual in terms of his personal dignity and possibilities in life were regulated largely by the accident of birth. Wars were waged for the extension and preservation of empires. These were the conditions against which the Communist manifesto of 1848 was issued.

It should also be recognized that the industrial revolution which brought such a great increase in productivity and which strengthened the middle class and political democracy also brought with it terrible abuses. The spectacle of little children working 12 to 14 hours a day in the textile mills and being whipped by brutal owners for sleeping at their posts properly excites horror and indignation. So does the practice of making women drag coal cars underground, crawling on all fours like animals. And in our own country, the men and women of my generation can remember the horrors of child labor in the sweatshops, as breakerboys, and in the textile mills. Nor can the starvation wages paid to women in stores and factories be ignored nor the 12-hour day which prevailed in steel until the 1920's.

When all this was combined with the waste and luxuries of the rich, as evidenced on Fifth Avenue and in Newport on this continent and in Mayfair in London and their lesser counterparts all over the Western World, is it any wonder that sensitive people were moved to outrage and sought to improve matters? And when these noble souls such as Florence Kelley and Jane Addams were then denounced for their efforts as unpatriotic by many of those who profited from these abuses, is it any wonder that the fires of radicalism were fed and that communism was able to make converts by posing as the champion of the disinherited? But communism in practice has also been a cruel exploiter of the people and has raised a new set of masters over those who do the back-breaking work of the world.

In 1850, self-government was a relatively new political phenomenon, struggling toward stability and permanency. The United State of America, as the repository of this great hope for the future of the world, was still the frequent target of imperial intrigues. But the powerful human appeal of this new way of life was undeniable. By the turn of this century, it had caught the attention and support of the common man in the Western Hemisphere and throughout the European Continent. With the coming of World War I, this spirit—this striving for a better way of life, both political and economic—was reflected in the birth of the national independence movement which shook and finally shattered three of the European empires. I refer to the Czarist Russian, the Austro-Hungarian, and the German Empires. Along with them, the Ottoman Empire also passed into history.

A new world order was taking shape. The fallen empires were replaced by a large number of independent nations. Self-determination was the popular demand by nations long submerged by imperialism. Nationalism emerged as a worldwide political force.

It was in these circumstances that the Communist theoreticians—led by Lenin—seized power in Petrograd, the historic seat of the broken Russian Empire. It was at this point in history (1917–18) that the political war in which we are now engaged began.

The first phase of this war witnessed the conflict between theoretical communism and the national independence movements. No less than 12 independent national states had emerged from the yoke of Russian imperialism. Among these were Estonia, Latvia, Lithuania, Byelorussia, Ukraine, Georgia, Armenia, North Caucasus, Azerbaijan, Turkestan, Cossacia, and Idel-Ural. The leaders and people of these newly independent nations rejected communism as a way of life. In their declarations of independence and constitutions, most of them made it clear that they would settle for nothing less than the modern forms of democracy with representative governments and individual liberty. With Russia as a base of operations, the bolsheviks—as the Communists were then known—launched a campaign of terror, infiltration, and armed aggression against these newly independent nations. In the absence of any effective support from the democracies of the West, all but Estonia, Latvia, and Lithuania were occupied and put under Communist military control by 1922.

The flame of nationalism, however, continued to burn brightly in these once-independent nations. By 1925, the internal pressures of this spirit forced the Communist leaders to create a political safety valve. The Union of Soviet Socialist Republics was manufactured, along with a high-sounding but meaningless constitution, in an effort to placate the independence-minded people of the non-Russian nations and, at the same time, to conceal the colonial and imperialistic nature of the new regime in control of the partially reconstructed Russian Empire.

In the 10-year period which followed, Stalin made an all-out effort to apply the economic and social theories of Marx, Engles, and Lenin. These efforts were met with failures after failure. Nevertheless, Stalin pressed forward with his experiments, extracting a frightful price in human suffering and life.

The determined resistance of the masses of the people forced the Communist theorists to develop the technique of conflict management. They recognized their system was not capable of winning the voluntary acceptance and support of the masses. They also accepted the fact that a constant state of war would exist between their regime and the people, extending over many decades. The immediate task at hand was to establish the organizational mechanisms to manage the conflict so as to keep the masses of people under control.

Gradually, the Communists reverted to the methods of old-fashioned Russian despotism as the system of internal control. The secret police became all-powerful. A network of slave labor camps expanded to unbelievable proportions. Terror tactics and mass purges spread fear everywhere—even among the Communist Party members. Monopolistic state capitalism emerged as the new economic system with slave labor as a calculated, basic element of this system. The Commissariat of Foreign Affairs was charged with developing a worldwide system of espionage and indigenous Communist action elements.

By 1939, the merger of Russian imperialism and theoretical communism was completed. The emotional appeal of theoretical communism gave the Russians an external weapon their imperial system lacked during the long reign of the Tsars. Just as the slogan of "liberty, equality, and fraternity" had enabled the French Revolution to expand beyond the borders of France, so the promises of a classless society, of a fellowship of workers and the abolition of race prejudice, enabled communism to broaden its appeal and to seduce large numbers of well-meaning persons.

One of the great tragedies of modern times is the way in which so many originally decent people have gradually become corrupted by the immoral tactics of the Communist elite and have changed into malevolent beings. And a companion tragedy is the waste of precious energies which men, women, and nations have suffered in worshipping false gods. For the Communists have installed not a new day, but a new and more terrible night.

The despotic system of internal control developed by the czars over the centuries was perfected as the tool of conflict management. With the coming of World War II, the Russians were well prepared with the global plan of conquest tailored to any opportunity which might present itself for extending their Empire.

The nations bordering on the Soviet Union were singled out as the first targets. Their geographical location made them susceptible to a combined forces attack, including military, diplomatic, propaganda and heavy agent infiltration. The military were assigned the primary task with the diplomatic, propaganda and agent cadres playing a supporting role.

A long-range plan was worked out for those nations beyond the immediate reach of the Red army. It was no less complete and, in some respects, it was more elaborate than the short-range plans. Involved was the development of indigenous cadres of skeleton governments, infiltration of existing governments by skilled agents, local Communist Parties, fronts, action groups, covert agent networks, and propaganda operatives. No strata of existing society in the free world was overlooked in the development of these plans.

THE NEW EURASIAN EMPIRE

By 1950, imperial communism was in control of a huge land mass extending from the Baltic Sea to the Pacific Ocean. Over 800 million people and some 20-odd nations were forcibly incorporated into this empire. In every case, without exception, military power was the primary instrument of conquest. Diplomacy by ultimatum, intrigue, indigenous Communist Parties, manufactured governments in exile, Russian-style elections, the united front tactics, and a massive global propaganda program were in a carefully coordinated support role. The short-range political objectives of imperial communism had been completed. The new Eurasian empire had a geographical contiguity which offered unique opportunities for geopolitical warfare.

THE RESPONSE OF THE FREE WORLD

Alarm over the growing evidence of Communist aggressive intentions toward the world produced the Truman doctrine of 1947. This saved Greece and Turkey. Continuing Communist aggressions produced the North Atlantic Treaty Organization in 1949. These were purely defensive measures expressing the collective will of freemen to resist aggression. By them, we have unquestionably saved Western Europe and have helped, at least partially, to offset Communist gains in Asia and the Middle East.

But the reaction of imperial communism to these defensive measures was the war of aggression which they launched in Korea in 1950. By this military campaign, in an exposed and then vulnerable area, the forces of imperial communism sought to destroy NATO and to break the will of freemen to resist. Here they made a serious miscalculation. This challenge and the resolve with which it was met, under the leadership of President Truman, provided the spirit and determination needed to build a global defense system against further Communist aggression. The Communist efforts to manipulate the national independence revolution in Indochina, the Communist-provoked crisis in the Quemoy-Matsu strait, and the crisis in the Middle East served to stiffen and strengthen the growing alliances of free nations.

COMMUNIST TOTAL POLITICAL WARFARE

Political warfare is now the primary instrument employed by the forces of world communism. This warfare is supported by an elaborate system of military, diplomatic, economic, psychological, subversive and propaganda support programs. Each of

these support programs are manned by trained action elements prepared to play a well-defined role in the master plan. The master plan, including its time phasing, is directed by the Communist central authority in Moscow. No nation, no organization, no group is immune from its efforts of penetration and manipulation. Thus, this political warfare is total in character.

THE BERLIN CRISIS

Communist diplomacy by ultimatum is an essential part of this political warfare. The thinly disguised threat of Communist nuclear war has been directed at the nations of the NATO community since November 1957. At that time, the Russians delivered diplomatic notes to our European allies expressing this threat. The sputnik success of October 1957 was quickly translated into the image of precise intermediate and intercontinental ballistic missiles by Communist propaganda. Every European nation has been subjected to the relentless pounding of this imagery ever since. Meanwhile, Khrushchev was clamoring for another summit conference without making the purpose of his demands clear. However, Khrushchev was also calling for a status quo, that is, recognition by the free West that the political status of Central and Eastern Europe was frozen. Then came the ultimatum on Berlin. Khrushchev demanded that the United States, Great Britain, and France surrender their legal rights to be in Berlin and thereby desert the free people of West Berlin. He set a due date for our retreat from responsibility. When President Eisenhower made it clear that we would not be intimidated, and that we would hold the Russians responsible for whatever resulted from the ultimatum, Khrushchev then backed off. He then claimed that the due date applied only to the holding of our agreement to hold another summit conference.

It was then that the first serious break in the solidarity of the free nations occurred. The British leaders expressed support for another summit conference. We were finally dragged into a foreign ministers conference, under terms largely controlled by the Communists, to take up a limited agenda tailored to Communist needs. The months of propaganda buildup for this conference caused the people of the world on both sides of the Iron Curtain to turn their eyes and ears toward Geneva. The results of the first round of this conference produced a serious net loss to the free world.

Before the conference got underway, we largely surrendered our position of nonrecognition of the East German Communist regime. By agreeing to their admission as advisers to the conference, we virtually extended de facto recognition to them. The admission of the Federal Republic of Germany to the conference did not raise this question for the Russians, since they had long before extended de jure recognition to it. We have been party to opening the door to legitimizing the communist regime in East Germany. The political pressures on us to complete this defeat will be tremendous in the months immediately ahead.

During the exchange of views which followed, we have more or less agreed to neutralize Radio Rias in West Berlin—the most powerful voice of freedom for the East Germans and very large numbers of people in captive Central Europe. In exchange, the Communists agreed to be less violent in the use of anti-Western propaganda beamed to free Germany and Western Europe. Here we traded a potent weapon for peace for a highly dubious promise.

It was to offset this serious defection on the part of our policy makers that some weeks ago I introduced a resolution making this third week of July "Captive Nations Week" so that we could let the people behind the Iron Curtain know that some of us, at least, did not intend to desert them. I am happy to report that this resolution passed Congress 2 weeks ago and that efforts are being made to carry the message behind the Iron Curtain. This has evidently struck home since Mr. Khrushchev complained about it on Tuesday in Poland. But I see no reason why we should tie our hands propaganda-wise while the Russians are so active beyond their borders.

During the entire course of the first round of discussions in Geneva, we failed to raise the question of the future status of the Communist-occupied nations of central and eastern Europe. By this failure, we made ourselves a tacit party to the acceptance of a status quo in that area. Time and time again, Khrushchev has called for such recognition, particularly through his public offers of pacts of nonaggression and peaceful coexistence with the free West. In the central arena of political warfare, acts of omission are as important as acts of commission. Communist propaganda has made this abundantly clear since the summit conference of 1955.

This estimate is not offered as criticism of the Eisenhower administration or Secretary Herter. The nature of the war in which we are now engaged allows no room for partisan feelings or negative criticism. It is offered as current evidence of Communist political strategy, the tactics they employ to attract world attention to their actions and the reactions of free nations, and the manner in which the central arena of political warfare thus created is used to further their objective.

The meeting of the foreign ministers in Geneva stands as an excellent example of high-level Communist tactics in political warfare. The outmoded forms of passive negotiation which have characterized our efforts at the summits can lead nowhere but to peaceful submission to Communist long-range strategy. While we remain bogged down with useless forms, the Russians move steadily forward to win the battle of substantive political objectives.

THE NEW ISOLATIONISM

The United States, as acknowledged leader of the free world, has been preoccupied with building the military shield required to deter Communist aggression in all parts of the world. The major support effort for this shield has been our economic assistance programs on a global basis. Our international information program has been treated as a questionable experiment, more or less as the fifth wheel on a wagon. We have grown accustomed to reacting to Communist actions. In the process, we have developed an unrealistic dependence on the United Nations for tasks it is either unprepared or unwilling to perform. National attitudes are being fostered which nourish a trend toward a new isolationism, that is, political isolationism. Such descriptive language as "strategic withdrawal," "peaceful competition," and "political evolution" are symptomatic of this trend.

THE REVOLUTIONARY ERA

In our preoccupation with the threat of armed Communist aggression, we have been seemingly asleep to the worldwide revolutionary era in which we are living. The revolutionary era to which I refer is reflected in the acute political awakening of old civilizations long in a dormant stage, the awakening of less advanced civilizations now moving toward modern forms of statehood, and the politically restless spirit which permeates life within the many nations submerged by imperial communism. The motivating force of this revolutionary era is the strong desire of large numbers of people for self-government and their corresponding demands to be free masters of their destinies. They also want to improve their economic position as rapidly as possible. In south and southeast Asia, the old empires have fallen. They have been replaced by self-governing and independent nations. In the Near and Middle East, the former protectorate system has given way to another group of independent nations. In Africa, still more nations have emerged from colonial status and the dual slogans of "Dawn" and "Liberty" which are shouted in every language and dialect of the continent herald the gathering storm of the national independence movement on the march. Within the Communist empire, the political uprising in East Germany, the freedom riots in Poland, the freedom revolution in Hungary, the revolt in Tibet, together with the growing evidence of political unrest in the non-Russian nations of the Soviet Union and on the China mainland, portend a great political upheaval which could well dwarf the revolution against the empires of the 1917–18 era.

In the Western Hemisphere, this spirit is in evidence as the popular demand for more representative and constitutional forms of democracy and for land reform increases to the south of our borders.

This is the kind of world in which we free Americans live. This is the kind of realistic world view which reflects the hopes and strivings of the common man the world over for peace, for justice, and for a way of life which befits his dignity as man.

There are those who, liking the old order, dislike these modern movements and wish to oppose them with all the power they possess. It is, of course, the free right and privilege of these men so to think and act. I merely wish to suggest that this is a sure way of enabling the Communists to take over the popular movements of these countries and by picturing the United States as the supporter of the present economic and political rulers, to be able to identify us as defenders of reaction. In this way, the new nationalistic and social movements would be turned against us. Now, I happen to be one who does not want this to happen and I therefore wish to utter a solemn warning that, from the standpoint of our national interest, this would be a great mistake. But based upon a long experience in domestic politics, I have some doubt as to how effective any such warning is likely to be upon those who exercise power.

THE CHALLENGE OF THE FUTURE

A declaration of intentions alone will not suffice to bring us into a position becoming to our beliefs and free political institutions in this revolutionary era. We must demonstrate by a program of action that we believe the future belongs to the many, that representative self-government offers the best hopes for the fulfillment of mankind's yearning for a better life and that a just and lasting peace can be won despite the communist threat of nuclear warfare.

But we must act now before the divisions which have developed in our European alliance deepen still further and threaten the stability of our military shield against communist aggression.

May I raise the following very simple questions which may point to some answers?

1. If we permit our defense of West Berlin to be weakened or to be abandoned by one face-saving device or another, how much reliance will the West Germans or other members of the NATO alliance put in our pledges to defend them against attack? Will there not be an inevitable and rapid disintegration of NATO and a scramble by various countries to make terms with Communist Russia?

2. Is it wise to accept the present domination of the captive nations by Russia? Without encouraging any premature revolts, would it not be well to keep the fires of independent and democratic nationalism burning

and to hold out hopes for their ultimate redemption when in God's good time the Russian Communist empire begins to break up? Therefore, should not the Voice of America and Radio Free Europe be encouraged to keep on with their work instead of being dampened down as so many influential persons are quietly advocating?

3. Would not the non-Communist countries of Asia be much less inclined to resist communism by the admission of Red China to the United Nations and by our granting diplomatic recognition to it?

4. Did American encouragement of Batista, Trujillo, and the dictators of Venezuela and Colombia improve our standing with the great masses of Latin America?

5. Will the new loans of $375 million to Franco, plus a probable $130 million more, make it easier to win over the Spanish people to our side? And should we not think about the effect of such a policy upon non-Communist countries?

6. Can we afford anti-British, anti-French or anti-German talk and feelings?

7. Can Italy and Greece be disregarded, and could a modest change in our immigration policy improve relations with those countries?

8. Is it safe to cripple our capacity for limited war by approving the cuts which this administration has made in the Army and Marine Corps?

9. Are we making an adequate effort in the field of missiles?

10. Are there not wastes in our defense establishment which could and should be eliminated or reduced so that the funds thus released could be used to improve our combat efficiency?

11. In view of the fact that the uncommitted peoples of the earth—nearly a billion in number—are almost entirely members of the brown, yellow, and black races, can we help to win their support by displays of race prejudice? Has the spectacle of Little Rock and all that that implies strengthened us in the struggle with communism? Have we properly emphasized the improvements which have been made?

12. Does the existence of the slums of our cities and the conditions under which millions of our children are being brought up present such an attractive picture of life here that other peoples will spontaneously rush to imitate these features? Can we also emphasize such constructive steps as we have taken in these fields?

13. Do the working, living and traveling conditions of migratory workers who harvest many of our crops help us to win the allegiance of the farm laborers of the world?

These are just a few of the questions which I think we should ask ourselves as we enter upon this long struggle with communism.

Some people may resent my raising many of these questions and feel that it is somehow unpatriotic for me to touch upon them. I will merely reply that Communist propaganda is raising them every minute of the day in all parts of the world. The best answer we can make is to deal constructively with them.

It is my conviction also that, since the struggle is a total one, the old distinction between domestic and foreign policy no longer holds good. Our answer must be integral.

I furthermore wish to suggest that there is but one way for us to go, namely, forward into the future in an effort to make good the implicit promise of America, which is a better and a freer life for all the children of man.

Ours is, fortunately, an open society where—despite all our faults—we have the power to correct them. We can do so if we have the will.

And there is one final moral question which we need to answer both individually and collectively and that is:

What is the worst fate which could befall our Nation and the world?

Different people may have different answers, but I have a very simple one—tyranny or slavery.

This is true today as it was in the era of flintlock muskets. Once we agree upon this and also the need for helpful compassion in the world, I believe our duty becomes clearer and the tactics which we should adopt are more evident.

Finally, may I propose that we take the lead by calling a true summit conference of the free nations of the world, both of those who are committed to our side and of those who are uncommitted. Such a conference, under our leadership, might be able to work out a charter and a program for future progress which would bind together the free world.

It could reduce the danger of Communist subversion by setting up a positive and constructive program for improving the economic, social, and political life of mankind. But, if we convene such a summit conference, we should be in earnest and be resolved to back up our words with deeds. Talk is not enough.

In this seminar, you have seen that the struggle is for survival; that it is complicated and that it will be protracted.

You have learned that, while each of us may have our individual viewpoints and criticisms, dedicated men of ability and good will are working tirelessly in the State and Defense Departments, and in the Congress on both sides of the aisle.

You now know—if you did not know before—that there are no magic or simple or easy answers. Acheson, Dulles, and Herter, to name only a few, all fought to the limit of their abilities. Our private and our military people know their grave responsibility.

But this you must recognize; that the President, the executive branch and the Congress require in our free society the support of an intelligent citizenry with a firm national will. This type of seminar, in my opinion, is one of the best means of carrying the message to the people. Nonpartisan studies of our problems, understanding the grave threat which confronts us, reexamining and articulating what free America stands for, and forging our national determination is your job.

I congratulate all those in the Defense Department and the other executive departments who have made this seminar possible. I again congratulate the civilian sponsors, the Institute for American Strategy and the Reserve Officers Association.

I hope that you participants, when you leave here as private citizens, will continue to support the Institute and similar organizations in the continuing and eternal struggle to preserve our hard-won freedoms and human dignity.

National strategy, liberty, and morality is still everyone's responsibility.

The Fight in 1959 for Federal Employee Legislation

EXTENSION OF REMARKS

OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FOLEY. Mr. Speaker, with the conclusion of the 1st session of the 86th Congress, it should be noted that considerable progress has been made on legislation affecting Federal employees. It is pertinent, however, to keep in mind the necessity for continually reviewing these programs with an eye to improving working conditions for career employees so as to maintain the high morale conducive to providing an efficient civil service. As the country's largest single employer, the Government of the United States provides a working model for better employer-employee relations in private enterprise.

In the field of fringe benefits, the Government has lagged behind private industry. With passage of S. 2162, the Federal Health Insurance Act, we have taken a long step toward narrowing the gap in a crucially important area. By establishing a contributory health insurance program for Federal employees and their families, the Congress affirmatively has made Federal employment more attractive to young people concerned with their families and futures. Under the provisions of the law, Federal employees may secure protection against many types of ailments. Employees will not only be able to obtain more hospitalization but twice as many benefits as well for each dollar invested, since the Government will be making a matching contribution. Moreover, should the individual Government employee increase his premium, he will be eligible for a higher level of benefits.

Despite opposition from the executive branch to present consideration of proposed legislation for the extension of similar coverage to retired civil service employees, the House will have an opportunity during the next session to consider the Senate bill providing health insurance coverage for these deserving people.

Final hearings were completed on H.R. 5178, which would establish a badly needed medical and health program for oversea employees so that they may avail themselves of appropriate health services and facilities on a uniform basis. In addition, the House passed two other bills relating to overseas employees: S. 96 increased compensation for oversea teachers and other school employees thereby improving overseas school activities while reducing personnel turnover and recruitment problems to a minimum; H.R. 7758, which establishes a uniform system of compensating U.S. citizens for hardships and inconveniences incidental to their overseas assignment. These three bills were concrete actions taken upon recommendations of the 84th Congress to strengthen and improve civilian personnel administration in the oversea activities of our Government.

Other legislation enacted by the House provided for the following:

First. For employees over 65, liberalized Government employment life insurance values so that those remaining in service and paying premiums do not suffer a loss in value.

Second. Increased from $400 to $750 the amount of unsecured loans that the Federal Credit Union may lend to members. Increased the payment period from 3 to 5 years.

Third. Gave Federal employees the preceding Friday off whenever a legal holiday falls on Saturday.

Fourth. Over 400 Public Law 313 and supergrade jobs in defense as well as nondefense agencies.

Additional legislation passed by the House dealt with annuities, residence requirements of postal workers, and increased travel allowances. Also, the Federal Government is authorized by H.R. 7577 to defend employees involved in suits as a result of operating motor vehicle on official business.

While the accomplishments of the House during this session on behalf of the Government employee have been substantial, an increasing number of Federal employee questions will become evident in the second session of this Congress. Among these will be matters relating to the whole spectrum of problems raised in the daily relations between the civil servant and his employer, the Government of the United States—pay raises, leave and travel allowances, promotion policy, retirement, the Hatch Act, automation, union recognition, and other related matters. Many of these are similar to the most vexing problems facing labor and management in the field of private enterprise. Actions taken on behalf of this great group of loyal, and efficient employees who have had their competency tested by competition and their loyalty by investigation, will be reflected not only in the quality of service performed for all the people by its Government, but also in the type of judgment, skill, and good will prevailing in employer-employee relations throughout the community. The Federal employee is deserving our continuing interest.

A Proposal for Tax Equity

EXTENSION OF REMARKS
OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BAKER. Mr. Speaker, on June 11, 1959, my able and distinguished colleague, the gentleman from Louisiana [Mr. Boggs] and I joined in sponsoring legislation to tax all fire and casualty insurance companies alike—on the same basis and at the same rate as corporations in other industries. These bills, H.R. 7671, Mr. Boggs, and H.R. 7672, Mr. Baker, will eliminate the discrimination which presently exists in the taxation of stock companies as compared with the taxation of mutual and reciprocal fire and casualty insurance companies. The proposal covers all insurance companies other than life companies. It is expected to result in approximately $25 to $30 million additional revenue to the Treasury for a normal year. Under these bills small companies will receive special treatment comparable to that in existing law. It is not our purpose to subject to tax those small mutual and reciprocal companies now exempt.

The Congress recently passed a bill relating to the taxation of the income of life insurance companies. It was the purpose of that legislation to provide increased revenue to the Treasury from the life insurance companies based on both their underwriting and investment income. In framing the life insurance bill, both the Committee on Ways and Means and the Senate Finance Committee repeatedly emphasized the importance of not discriminating in tax treatment between stock and mutual life insurance companies. It is equally important not to discriminate in the taxation of the different types of fire and casualty insurance companies. Our bills will place all fire and casualty companies on an equal tax basis so that equal incomes will bear equal tax liabilities.

There are three types of fire and casualty insurance companies: stock companies, mutual companies, and reciprocal insurers. The existing Federal tax law discriminates against stock companies in favor of mutual companies and reciprocal companies. Simple equity requires that all be taxed on the same basis and at the same rates.

Our recent hearings before the Committee on Ways and Means have disclosed that all insurance companies have two types of income: First, underwriting income; and, second, investment income. Both types of income should be taxed. No basis exists for excluding either type of income from a fair tax. Under existing law, stock fire and casualty companies are taxed at the full corporate rate of 52 percent on both underwriting and investment income. Since the inception of the Federal income tax, stock companies have paid the regular corporate rates paid by other business corporations. However, mutual companies are taxed on an entirely different basis. Under existing law, mutual companies pay the higher of (a) 1 percent of their premium income plus 1 percent of their gross investment income, or (b) 52 percent on their net investment income only. Reciprocals have never paid any tax whatsoever on their substantial underwriting income, but are taxed on their investment income only. These different methods of taxation are highly preferential in favor of the mutual and reciprocal companies and give them an unwarranted competitive advantage. Federal taxes of all stock companies for the 15 years ended with 1957 amounted to 2 percent of their net premiums written. Federal taxes of all the mutuals and reciprocals for this same period were only 1 percent of their premiums.

The mutuals and reciprocals have earned and retained substantial profits from underwriting and investments. Such retained profits during the 15 years ended with 1957 amounted to $920 million. This increase in surplus was accumulated on a tax-favored basis. The mutuals and reciprocals, by reason of their lesser tax burden, were able to retain much more of their net income than they otherwise could have. They also retained more than twice as much, proportionally, as their stock company competitors.

Under existing law, a large number of small mutual companies are either exempt from tax entirely or receive special tax consideration. The bills we have introduced do not disturb this. Of the 2,500 mutual companies in the United States, approximately 1,750 are tax exempt and their exemption would be continued under these bills. In addition, some 150 mutual companies are partially tax exempt under existing law and our proposal would not increase their tax burden. It would impose no hardship upon small farm and local mutual insurance companies.

The remaining 600 large mutual companies would be taxed at regular corporate rates. These large mutual companies write the same lines of insurance as stock companies in the several States. They use the agency or brokerage system as well as the direct writing system, just as the stock companies do. All are subject to the same State regulation as stock companies. There are no basic methods found in one type that are not found in the others. There is no reason for a disparity in tax treatment.

These 600 large mutuals write 98 percent of the volume of all mutual fire and casualty insurance companies. Under our bills these companies will pay substantially more tax than they have previously paid. For example, the five largest mutuals and the three largest reciprocal companies have for the 16 years ended with 1958 paid total Federal income taxes of $96 million. If they had paid taxes on the corporate basis as proposed in this bill, these eight companies would have paid $182 million, an increase of $86 million, or 90 percent. Of course, equality of taxation between these companies could be achieved by reducing the stock companies' tax basis to the level of the mutual companies. However, this would result in a great loss of revenue to the Treasury. I believe that the most equitable basis of tax for insurance companies is the basis provided for stock companies and companies in industry generally, that is, regular corporate rates. This would bring the taxes of mutual and reciprocal companies in line with the taxes of their competitors.

There is no reason to continue the existing discrimination between fire and casualty companies in the Federal tax laws. Our proposal would eliminate the present competitive impact of the different methods and formulas now applied to these companies. It involves few of the complexities found in our consideration of a permanent bill for the taxation of life insurance companies. On the contrary, it is simple. In summary, this bill would eliminate the existing inequities in the taxation of the various types of fire and casualty companies and would increase the revenue to the Treasury by a substantial amount.

It is my hope, Mr. Speaker, that favorable legislative action can be taken by

the Congress on this meritorious proposal in the 2d session of the 86th Congress.

A Proposal To Encourage Young People To Buy Musical Instruments by Removing the Excise Tax

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BRADEMAS. Mr. Speaker, earlier in the 1st session of the 86th Congress, on June 15, I introduced in the House of Representatives a bill, H.R. 7725, to remove the 10 percent excise tax on all musical instruments costing $150 or less.

The purpose of my proposal is to encourage students in elementary, high school, and college music courses to purchase low-cost musical instruments.

Today, Mr. Speaker, the study of music has become a normal part of the education of American boys and girls, and I believe that we should do whatever we can to encourage young people who are musically talented to play musical instruments.

Let me make very clear that, although music instruction in some form is required in most elementary schools and is an elective course in most high schools, students who buy their instruments are under present law required to pay the 10-percent excise tax.

Musical instruments purchased by schools, however, are exempt from this tax.

Mr. Speaker, I should also like to point out that 93 percent of the sales of band and orchestra instruments in the United States are made to parents, students, private teachers, schools, and religious and character-building organizations. More than two-thirds of these sales are made by or for students.

Indeed, over 80 percent of all musical instruments manufactured are purchased for educational purposes.

Mr. Speaker, I think the case for removing the excise tax on musical instruments to help the many young people who study music in our country is best summed up in the following excellent editorial published in the Elkhart (Ind.) Truth and entitled "Lift Instrument Tax, Help Kids."

The editorial follows:

LIFT INSTRUMENT TAX, HELP KIDS

A bill to remove the 10 percent manufacturer's excise tax on musical instruments costing $150 or less has been introduced in Congress by Representative JOHN BRADEMAS of our own Third District.

It is a good bill and should be passed.

As the band instrument capital of the world, Elkhart obviously has a community interest in this matter.

But our support of the bill is not based simply on the Elkhart interest, but rather upon our belief that this would serve the welfare of the entire Nation—and in particular, the Nation's children who buy the lower priced instruments.

The excise tax on musical instruments was placed some two decades ago at a time when materials for such instruments were scarce. That is no longer true.

Like many other excise taxes, this tax continued—no doubt—because of the Federal Government's revenue needs during World War II and succeeding crises.

But relief from excise taxes has been granted in the case of certain products and services outside the music field.

And in fact the 10 percent tax is waived when schools and churches buy musical instuments.

This is judged to be in the public interest. But it seems to us that the public interest also would be served by giving a break to school kids who buy their own instruments.

Since instruments selling for $150 or less are generally of the beginner type, the $150 exemption idea would thus largely benefit students rather than professional users.

An industry source tells us that 93 percent of instrument sales are now made to parents, students, private teachers, schools, religious and character-building organizations.

This is a much higher percentage than in years past, and certainly the further encouragement of such use is a matter of public concern.

From the educational and character-building standpoint, the expansion of school bands and orchestras has been one of the finest developments of recent years.

Relief from the tax on the lower priced instruments would permit either a lower retail price or would forestall a price increase which inflation would otherwise require.

One way or another, we may be very sure that the consumer pays excise taxes—even those levied directly on the manufacturer—and thus stands to benefit when such taxes are lifted.

The proposed exemption on low-priced instruments would itself remove an estimated $3.5 to $4 million of tax revenue.

But if more youngsters buy, they become potential customers later for higher priced instruments which still bear the tax, and thus much of the revenue may be recouped.

Mr. Speaker, I hope very much that Congress will adopt my proposal.

The Fight in 1959 for Fair Labor Standards

EXTENSION OF REMARKS
OF
HON. JAMES G. O'HARA
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. O'HARA of Michigan. Mr. Speaker, it has been over 20 years since the dark depression days when Franklin D. Roosevelt looked around him and saw "one-third of a nation ill fed, ill clothed, and ill housed." Since then as a nation we have come to enjoy unparalleled prosperity.

It would be pleasant to think that the poorest among us have shared equally in that prosperity. It would be even more pleasant to think that the poor are a rapidly diminishing group that will entirely disappear as our technology improves and as our productivity increases.

Poverty is not, however, a condition that is disappearing. Studies by the Bureau of Labor Statistics, the Commerce Department, the Federal Reserve Board and others make it increasingly evident that tens of millions of our people have not shared in our growing national prosperity, nor can they reasonably expect to do so unless Congress does something about it.

Tens of millions of our people are still ill fed, ill clothed, and ill housed. In large part their plight is caused by the payment of wages that are too low to cover the bare necessities of life. No matter how hard they work nor how long they labor, they cannot hope to have the basic minimum standard of food, shelter, clothing and medical care that they have a right to expect.

When the Fair Labor Standards Act was enacted, the 75th Congress pledged "to correct and as rapidly as possible to eliminate conditions detrimental to the minimum standard of living necessary for health, efficiency, and general well-being of workers." Not only has that pledge never been redeemed, but, relative to their fellows, the poorest paid of our workers are worse off than they were in 1938. They have come to form a class increasingly isolated from their fellow workers, a class disorganized, without influence, without voice, without power. They are the forgotten workers of our affluent society.

Liberal amendments to the Fair Labor Standards Act can do much to relieve this tragic and indefensible situation. Democratic Members of both Houses of Congress have introduced a number of bills designed to remove the inadequacies of this law, by raising the minimum wage itself and by extending the protection it affords to millions not presently covered.

In keeping with the Republican tradition of despair and accepting the premise that a little misery is inevitable, the administration has opposed these changes, both as to an extension of coverage and as to the increase in the minimum wage.

Typical of the fine measures introduced is the Kennedy-Morse-Roosevelt bill—S. 1046 and H.R. 4488—which would raise the minimum wage to $1.25 per hour and extend the protection of the Fair Labor Standards Act to about 7¾ million not presently covered. While no action was taken on this measure in the House, the Labor Subcommittee of the Senate Committee on Labor and Public Welfare held extensive hearings, and on July 10, favorably reported S. 1046 with amendments. As sent to the full committee, the bill would raise the minimum wage to $1.25 and bring 10 million additional employees under the protection of the act. For the 25 million wage earners now covered by the act, the minimum wage would be raised to $1.15 per hour the first year and $1.25 the second. Newly added groups would receive $1 the first year, the minimum gradually being raised to $1.25 over a 4-year period for most of them. Those not receiving the four-stage raise to $1.25, numbering 2.7 million, are mostly in retail and service trades doing a business of less than $750,000.

This very modest measure was immediately attacked by the President and his Secretary of Labor as, among other things, "inflationary." This was to be

expected, of course. The administration's obsession with inflation is not new. Lacking the energy to act or the intelligence to know what to do on any given issue, inflation is invariably seized upon as a permanent and universal alibi for inactivity. A perfect excuse for a do-nothing government.

As a matter of fact, no significant price effect need be expected from the passage of this legislation. The best estimates place the increase in wages that would result at about $2.5 billion—less than one-half of 1 percent of our gross national product and less than 1 percent of the total compensation paid in wages and salaries for the Nation. This increase will take place gradually over a 4-year period and would mainly affect industries characterized by substantial price competition. Not only would the total impact be slight and slow in coming, but it is unlikely that the entire increase in wage costs would ever be reflected in consumer prices. This reasoning is supported, of course, by studies of the economic effects of the original act and subsequent raises in the minimum wage, with which Mr. Mitchell, at least, should be familiar.

This increase in purchasing power would have beneficial rather than harmful effects on the demand side of the economic picture. Studies of low-income consumer expenditures show that over half of this increase would be spent for food and clothing. Very little of it would be spent on items for which there is a limited supply. This increase in purchasing power would, in fact, give a boost to those very sectors of the economy most in need of a stimulant. It would contribute, in a small way perhaps, to a reduction in our farm surplus. Incidentally, some $100 million would be drained off in excise, income, and social security taxes.

The administration's objections to this type of legislation are not, of course, limited to the inflation issue. I see no reason at this time, however, for a rehash of the tired old alibies that reactionaries have consistently relied upon to excuse inaction in this field.

The fact is that failure to extend coverage of the Fair Labor Standards Act and failure to raise the minimum wage would be indefensible—morally, socially, politically, and economically indefensible.

Failure to act will encourage the continuing growth of a depressed class numbering millions, whose members cannot realistically hope to share in our prosperity, nor to share in what we think of as the American way of life. For those whose earnings are presently geared to the Federal minimum wage and for a substantial portion of the 20 million who are without wage-hour protection, there is no hope unless Congress acts. They are for the most part unorganized, immobile, and ignorant of alternative employments.

The gap between what they suffer along with and what the average American worker earns continues to broaden each year. Nor is their plight tragic merely in a relative sense. The fact is, a dollar an hour is simply not enough to get along with. Yet millions of workers are expected to raise a family on that or less. Humanitarian considerations aside, Ricardo's "iron law" of wages would dictate better treatment of the wage earner.

As a nation we can ill afford the costs of such cheap labor. Poverty below the subsistence level quickly translates itself into slums, crime, delinquency and disease for which ultimately we must pay the price. A generation of tens of millions of physically weak and ignorant children constitutes economic waste as real as any of which we might conceive.

I, too, am critical of the measures thus far proposed. I am critical of the fact that they do not accomplish enough. Coverage should be given all the unprotected millions who need it. The constitutional limitations of our power and feasibility of administration are the only justifiable limitations on our action in this regard.

I am particularly concerned that coverage should be extended to the factories of the field, to the farm laborers, to that group which is always left out when leglislation is written, whose rights are consistently bargained away and eliminated from social legislation as the price of getting something else in. I speak of all farm laborers, of course, but particularly the migrants. The exploitation of these people has for much too long imposed a heavy burden on our conscience as a people.

It is imperative also that more effective procedures for the enforcement of FLSA should be provided. The inability of the Labor Department to enforce the act lends encouragement to the unscrupulous employer whose failure to comply is cheating workers of over $350 million a year.

Finally, I urge support for H.R. 8297, a bill which I introduced making the child-labor provisions of FLSA applicable to agricultural employment. It will give to the child working on a "factory" farm the same protection provided years ago to children in other employments. The exploitation of children in this area is a vestige of an older and crueler era which long ago should have been removed.

Amendment of the Fair Labor Standards Act along the lines I have suggested should be the first order of business for the second session of the 86th Congress. The needs of millions of our people should be sufficient to stimulate action on our part, but remember, too, that the eyes of the world are upon us. While our standard of living may be impressive, our belief in human dignity is tested by the way in which we treat those at the bottom of the economic ladder.

Hon. Isidore Dollinger

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MACK of Illinois. Mr. Speaker, one of the outstanding Members of this Congress and an able and hardworking member of the Interstate and Foreign Commerce Committee will not be with us when we return for the 2d session of the 86th Congress. Our esteemed colleague, ISIDORE DOLLINGER, is resigning after this session of Congress so that he can serve the people of New York as the district attorney of Bronx County.

ISIDORE was elected to Congress in 1948, the same year I was first elected to serve in this great legislative body. I have had an opportunity to observe his work during this entire period and he served with honor and dignity. He is a man of principle who as a dedicated public servant served the interests of his constituents.

During the past two years I have had the pleasure of having ISIDORE DOLLINGER serve on my Subcommittee on Commerce and Finance. He was one of the most outstanding members of that subcommittee and I relied heavily on his advice and counsel in the conduct of our committee business. I am very sorry that ISIDORE DOLLINGER is retiring from Congress but I certainly wish him well because I know that he will appreciate this opportunity to serve his friends in New York as their district attorney.

Figures—of Principal and of Interest—of Speech and of Principle—and of Interest

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, the dropping of your gavel coincident with your pronouncement that this 1st session of the 86th Congress has ended, will surely come in a matter of moments. I therefore ask your indulgence, while I recount briefly our congressional activities.

We have done much in which we can take pride as Americans and as Democrats. The thing we prevented, even though important to our American way of life as well as to the world at large, will soon be forgotten.

There is still much to be done. Most of that we will do in the second session of this Congress, which will start on January 6, 1960. But in a never-ending fast-moving world, new problems will always beset us. Instead of delving into the future, a most uncertain task at best, I will dwell on the immediate past.

We have enacted into law some 400 laws of general national and international interest. Of that number, about 100 can be labeled of major importance. Merely to list all of these would take much more time than is now available. I, therefore, will refer only to the most important.

SPENDING

We appropriated more than $39 billion for national security and defense; that is almost 60 percent of the total sum appropriated for the fiscal year for all purposes. This is $20 million less than the President asked for.

The total sum appropriated for all purposes, including what Republicans invidiously refer to as back-door financing, was $75,051,880,215, almost $2 billion less than the President requested.

It can never be sufficiently emphasized that the Congress can merely authorize expenditures and appropriate the money therefor. Only the President and his appointees, under his direction and control, can spend the money. Surely we, the Congress, can refuse to authorize or appropriate. But even after we do both only the Executive—the President—can spend. Under our form of government there is but one spender—the President. Repeatedly, the incumbent now in the White House, has ignored congressional intent and directive. He has refused to spend money as directed, spent it contrary to congressional directives and even spread out and cancelled out contracts authorized and let.

Let us never forget that when our Republican friends and campaigners start calling names, the only spender, reckless or otherwise, in our National Government, is the titular head of the Republican Party, President Eisenhower. By doubling the cost of operation of his own office, he has set the spendthrift example which all his appointees seek to imitate.

While on the subject of spending, let me remind you that a major part of the cost of Government is the interest we pay on U.S. obligations. This administration without the help of Congress and over our vigorous protests has run up that cost from 1953 to date by more than 100 percent. Starting with short-term interest rates of under 2 percent and long-term rates of not more than 2½ percent, President Eisenhower has approved our paying 4¾ percent and assents to the threat of his Secretary of the Treasury that we may yet pay 6 percent. The President and his big-moneyed friends are demanding that the Congress eliminate the limit on the interest rate on long-term bonds so that he can and I quote the President, "demonstrate responsibility in the management of our Federal debt."

Responsibility, indeed. He may have forgotten but we cannot forget that this is the same fiscal genius who in two political campaigns—1952 and 1956—promised to reduce the national debt. Three times since his first promise, at his request we increased the debt limit. This year by $2 billion to $285 billion permanently and to $295 billion temporarily until 1960.

I am proud that this Congress increased the interest rate payable on savings bonds and refused to increase it on long-term bonds. I have been introducing a bill to accomplish that in each of the last four Congresses. The administration has at long last seen the light and gone along with me.

Note the difference between savings bonds, the E- and H-bonds, and other Government securities. The savings bonds are anti-inflationary because they tend to immobilize savings. Other securities produce money that flows into the money stream to pay bills for construction, experimentation, material, services and the like.

Savings bonds traditionally, until 1953, paid an interest rate higher than savings and thrift accounts. Our people are not so stupid as to keep their savings in bonds at minimum rates, when they can keep them in institutions paying maximum rates, all guaranteed by U.S. Government agencies.

I suppose it is human nature to take care of ones friends. So let us not be too hard on Ike and his big business, big-moneyed friends, who say let the devil take care of the masses, the wage-earners and little businessmen and his E and H savings bonds. Be sure these big business operators in Government will take care of their friends with more and more profits and higher and higher interest rates. They will continue to complain about being in the 90-percent tax bracket, to try to make us forget that the little fellows pay 90 percent of the gross tax collection.

Before I leave the fiscal affairs of our Nation I wish to comment on the scare campaign the Republicans are engaging in about inflation.

The one thing they learned from President Roosevelt was "there is nothing to fear except fear itself." The difference is that he tried to teach us to be unafraid. They are using that concept in reverse, to scare us into ignoring the facts of life.

If they can cry inflation loud enough and long enough, we may look away from administered prices that ignore the law of supply and demand. We may not learn that the worst kind of inflation comes from administered prices coupled with unconscionable interest rates. The very people who are demanding that we cut Government expenses are the same ones who are pushing prices up, demanding higher interest rates and tax cuts allowances and exemptions and all to balance the budget.

In 1958, the banks and moneylenders of the country had their best year in our history, in gross receipts, and in net profits—both before and after taxes. Nineteen hundred and fifty-nine will be even better.

The same is true of corporation profits. Eight hundred and eight leading corporations showed a 56-percent increase in profits this year over the same period for 1958—$6,915,729,000, as against $4,438,065,000, or $2,477,644,000 more net profits after taxes. More than half of these did better than that average. Four hundred and twenty-eight of these corporations improved their corporate profits by more than 75 percent in the second quarter of 1959 as against the same quarter in 1958.

These 808 companies are the very ones paying for full page ads to frighten us out of our skins because of inflation they created and as a result of which they made these profits.

BANKING LAWS

In the financial field, we also enacted bills that increased our subscriptions to the International Monetary Fund and the International Bank for Reconstruction and Development—the World Bank—to set up a new Inter-American Bank for Central and South America similar to the World Bank, some modernization of the National Banking and Federal Reserve Acts, restrictions on holding companies in the savings and loan association field and the first complete revision in 25 years of the Federal Credit Union Act. I was most pleased that the credit union bill was enacted in almost the exact form in which I had introduced it.

FOREIGN AID

The mutual security authorization and appropriation bills were a fine example of the operation of our Government in true bipartisan spirit, with both parties in Congress and the President moving forward in the best interests of our country and of world peace.

What irked me however, was that in his messages to us asking for legislation in the international field the President indicated we had enough money for loans and grants abroad, for housing abroad, for highways abroad, for reclamation and community facility projects abroad, for schools and education and health programs abroad, in short for almost everything anyone could ask for abroad. But the domestic scene was different. From his veto messages it became apparent, he thought we did not have enough money for any of these things needed so badly at home; not even enough for loans to our cities and States.

My position on these matters was and is quite simple—I am for all of these things for foreign friends. I have always voted for them. But I have and always will vote for them for our people at home as long as we need them.

If the time is here or ever comes that we do not have enough for both, we must first take care of our own and use the surplus, if any, to take care of those abroad.

This is not a matter of charity begins at home. This is fiscal responsibility as to taxpayers' money. I can apportion my personal funds, charitywise as I please. I have no right to do so with taxpayers' funds.

RULE BY VETO

Incidentally, it is well to note, that although we overrode a Presidential veto only once, each of the other votes by which we failed to override, demonstrated that the overwhelming majority of the people and their representatives were against the President. The Constitution requires a two-thirds vote to make a bill law against a Presidential veto. In neither House does the Democratic Party control a two-thirds vote. In the Senate there are 35 Republicans and 65 Democrats. In the House there are 153 Republicans, 283 Democrats, and 1 vacancy. We failed to override vetoes by from one to six votes on important measures, thus permitting one-third of either House plus one to six votes to thwart the will of a vast majority of the people's representatives.

VETERANS' AFFAIRS

Veterans' affairs were given considerable attention. We extended their direct loan program, although in my opin-

ion not sufficiently nor in the right direction. Among other things we should not have increased their interest rates. At the urging of this administration, these rates have now been pushed up by 32 percent since 1953. We wrote a new Veterans' Pension Act and extended veterans' preferences and entitlements. Still pending is much needed legislation for a civilian pardons board to review sentences imposed upon members of the armed services.

MISCELLANEOUS

Business has been helped by amendments to the antitrust laws, the Small Business Administration Act and the Small Business Investment Company Act. Much more needs to be done in these fields.

Increased benefits to retired employees, extended temporary unemployment compensation, changes in our immigration laws, the extension of the Draft Act, establishment of a National Space Agency, aid to Federal airports and a TVA self financing act are among our creditable accomplishments.

HOUSING

Two vetos of the housing bills were further demonstration of smoke screens blown up to camouflage real issues. The third housing bill, which the President approved is just as inflationary as the two he vetoed. The only real difference in substance is that the final approved version omits $50 million in loans for college classrooms. The President admits we need the classrooms but contends that in the $8 billion housing loan guaranty program, which he approved, a $50 million loan program is inflationary. He had his way—a Phillipic victory, if ever there was one. No one will ever be able to assess the loss to the Nation and the world if only one potential genius is denied a college education because these loans are postponed to an election year.

CIVIL RIGHTS

Hawaii became a State, thus establishing another beacon light along the path of true democracy and affirming the divinely inspired sentiments of our Founding Fathers that "all men are created equal" and "are endowed by their Creator with certain unalienable rights" and that "governments are instituted among men, deriving their just powers from the governed."

Our citizens in the District of Columbia have not fared as well. Five times in the last 10 years, the Senate has passed a bill granting home rule to the District. Not once during that time has the House District Committee reported a bill. Not once in that period, until I filed a discharge petition, to bring a home rule bill before the House, did the House District Committee even conduct any hearings. Congressional courtesy dictates that I do not characterize those hearings. Suffice it to say, that if some members of that committee and of the Rules Committee have their way, no bill will reach the floor in this Congress.

A home rule bill will be acted upon by this Congress only if 219 Members sign my discharge petition. Up to this time 104 Democrats and 16 Republicans or a total of 120 Members have signed it.

Home rule for the District of Columbia is pledged by both party platforms. The public is fast learning that we are getting a lot of double talk from our Republican friends. No one expects southern Republicans or southern Democrats to support home rule for the Nation's Capital. That eliminates about 112 Members, 103 Democrats, and 9 Republicans. Four hundred and thirty-six less 112 leaves 324. One hundred and fifty-three Republicans less 9 southern Republicans leaves a net balance of 144. Two hundred eighty-three Democrats less 103 southern Democrats leaves a net balance of 180. One hundred four of the 180 Democrats have already signed the discharge petition. Only 16 of the 144 Republicans have signed it. That is a terrible indictment of the Republican Party. I am certain that if the Republicans will sign that petition in the same ratio as the Democrats have, in the first 2 weeks of January 1960, enough additional Democrats will sign the petition to bring the bill to the floor.

THE LABOR BILL

One other important piece of legislation that was enacted has been hailed as the labor reform bill. Time will prove, in my opinion, that this was the worst piece of anti-industrial-city and anti-labor bill ever enacted by any Congress.

I impugn no Member's motives, good faith or integrity. I trust that those who voted for that bill will credit as much to me and the 200 colleagues whom I joined in voting against that bill. It ill behooves any citizen, capitalist, union leader, businessman or wage-earner to pretend to be so omniscient as to have the right to accuse anyone on either side of a vote of 229 to 201 of having voted except in accordance with what his conscience dictated was best for our country. If as few as 13 Members voted the other way, the bill would have been defeated by a tie vote of 215 to 215, with the Speaker casting the deciding negative vote. If the four absentees had been present and voted nay—since they were not paired, I do not say they would have so voted—it would have required only a switch of 11 votes to defeat the bill.

No one will dare say that there is any Member of this House, regardless of how he or she voted on this bill, who would not vote to eliminate racketeering and crime not merely from union activities but from every sphere of activity on the American and even on the world scene.

The same must be said about legislation that would make unions more responsible and more responsive to the needs and desires of their members. Again that must also be said of legislation that would protect business as well as the public against illegal or improper activities of unions.

This bill was represented as accomplishing those ends. I will concede, for the sake of argument only, that that was the purpose of the bill.

I am convinced, however, it does not and will not accomplish those ends. To the extent that it tends to, I am afraid it does so by means that the courts will condemn. There are now more than enough laws on our statute books to arrest, indict, and convict every criminal, in and out of unions, whether the crime is perjury, embezzlement, forgery, fraud, bribery, theft, assault, murder, or conspiracy to commit any of these crimes or merely the attempt to do so. On that score, we do not need more laws but better enforcement of those we do have.

To the extent that this bill may make criminal, that which heretofore was legal, though perhaps immoral, under our Constitution, the law must be prospective and not retroactive in its effect.

It follows, therefore, that it will oust from unions, on account of past conduct, no one, no matter how bad and no matter what his name.

Despite all of the foregoing, I could have brought myself to vote for the bill if it had not been for its other many bad features. I believe they far outweighed all the good sought to be accomplished.

In voting on all bills I try to keep in mind our fundamental law, the Constitution, and particularly that portion of it known the world over as the Bill of Rights. I will never vote for any piece of legislation, no matter how well intentioned, which does not square with it. If it violates the Bill of Rights, I cannot support it. That Bill of Rights must forever remain inviolate. If we chip away even the slightest part thereof we begin to destroy it.

This bill, in my opinion, oversteps the bounds of propriety; it makes second-class citizens of unionists and of workingmen who might desire to join unions; it denies them rights guaranteed to them by our Constitution.

Furthermore, this bill can be used to entice business out of our industrial centers and into labor surplus parts of the country. It is not sectionalism that prompts me to take this position. It is part of the free enterprise competitive system, for business to move to the place where it can operate most profitably.

However, the best interests of our country, of the whole country, demand that no part of the country be permitted to entice businessmen to come there because of the promise or intimation that by moving there they will have cheap labor, sweatshop conditions, or nonunion shops. This misnamed labor reform bill practically guarantees to every unionized business firm that it can freely move to nonunion States and be forever free from unionization. To me that means destroying unions and enslaving the working men and women of our country. I am all for raising the standards of our citizens to the highest prevailing. I am opposed to lowering those standards to the lowest prevailing.

A PERSONAL NOTE

Permit me at this time to inject a rather personal note. During this session, I was incapacitated by illness, from which, thank God, I have recovered. For a long time I was out of Washington and for an even longer period prevented from giving full time to my congressional duties. But everything in this world has its compensating balances. My misfortune brought me the good that comes from learning how much our colleagues are genuinely concerned about each

other. They extended to me a spirit of fellowship and camaraderie close to kinship. It crossed district and State lines as well as party lines and religious and color lines. The assistance and offers of aid to me and more particularly to my staff, were immeasurable. I am forever in their debt. I am, indeed, grateful. Some say, only in America can it happen. I say only in America it does happen.

If the Soviet Union Can Afford Scientific Progress and Education Why Can't President Eisenhower—President Eisenhower Should Keep a Scorecard on His Sure-Fire No. 1 Issue for Winning in 1960

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. McDOWELL. Mr. Speaker, it would be well, I think, if the President kept a scorecard on his economy record for there is a growing belief that his performance is not quite up to his promises.

You will recall that he recently described economy as the most important single issue for winning the election in 1960 to a $100-a-plate Republican political rally in Washington, D.C., so his performance has to be judged in this context too. The President told the rally that—

It is the Republican Party that fights for responsible, sensible fiscal policy.

The Democratic Party is so deeply interested in genuine economy that Democrats in the Congress have cut the President's budget requests by $10 billion in the past 5 years.

In 1952 the Republicans promised to bring the best business brains to Washington. A few of them are still here, but most of them are gone. If these businessmen had run their own companies the way they have run the Government their companies would be facing bankruptcy. Billions of dollars of tax money are being wasted because of poor management.

If the Soviet Union can afford scientific progress and education why cannot President Eisenhower? This is a good question and gets to the heart of our problem. A balanced budget looks good, but you cannot win wars with one and in this cold war period we may well find that if it means an inadequate education, and a lack of missile progress it may be too expensive to afford.

We cannot afford scientific progress and education in part because our economy has failed to expand and grow as it should have during the past 7 years. It is not keeping up with the growth of the economy of the U.S.S.R.

During these years private investment opportunity has been down about $40 billion, and the unnecessary idleness of plant and manpower has caused us to lose about $150 billion in national output. Net farm income has been $31 billion less than it should have been and wage and salary income almost $100 billion less. Labor Secretary Mitchell and Health, Education, and Welfare Secretary Flemming have been doing some fancy talking about hiring the older workers, but we are losing some of our best brains and skills by an unrealistic Federal hiring policy which makes it practically impossible for a man of 45 or older to get a job in the Federal Government. No other nation can afford this kind of waste, and we cannot either.

In his 1952 campaign President Eisenhower promised to tidy up the national debt. Now we know what he had in mind. On June 30, 1959, the fiscal year ended with the largest Federal budget deficit in our history—$12 billion. During the time the President has been in office the public debt has increased from $267 billion to $285 billion. The cost of interest on the public debt has risen from $5.8 billion to $8 billion.

Let us all take note of the fact that the total Federal budget in 1939 for all purposes was only $7.9 billion during the height of the New Deal era under President Franklin D. Roosevelt.

One of the leading spokesmen for the Eisenhower administration, Senator CLIFFORD P. CASE of New Jersey, recently called for a reform of the fantastic farm program. According to the New York Times he asked:

How much longer will the American people tolerate a net expenditure of $4,500 million a year for an unfair and self-defeating farm program which constitutes a major obstacle to a balanced budget?

And, he added—

Only a quarter of American farmers benefit from this program. The average American family is beginning to realize, too, that it is hurt as a consumer of foodstuffs by our high price-support program.

FEDERAL SPENDING FACTS COMPILED BY COUNCIL OF STATE CHAMBERS OF COMMERCE

I include as part of my remarks an excerpt from Bulletin No. 173, Federal Spending Facts, issued in September 1959 by the Council of State Chambers of Commerce which gives the box score on appropriations for 1960:

THE BOX SCORE ON APPROPRIATIONS FOR 1960

On the last page of this analysis is a table [not printed in the RECORD] which shows the results of actions on all appropriations bills for the 1960 fiscal year. Exclusive of the permanent appropriations (mainly interest on the public debt) on which congressional action is not required, the total 1960 appropriations requests considered by Congress was $71,458 million.

The House approved $68,663 million, or $2,795 million less than the total requested. The latter figure, however, does not represent the actual reductions made by the House because the requested total includes $717 million of requests which were submitted to Congress after the House had acted on the bills involved and it includes $28 million of Senate funds not considered by the House. Thus, the net reduction effected by the House in requests that it considered is $2,795 million less $745 million, or $2,050 million. The Senate approved more than the House in every bill but two and effected a net reduction from the total requests in the amount of $419 million.

After differences in House and Senate actions had been resolved by conference committees on the various bills, the final total voted by Congress was $70,213 million, or $1,245 million less than the total requests. Some reduction in dollar amount was made in every bill except one, but many of the reductions were hardly more than token cuts. The one increase was in the bill for the Departments of Labor, Health, Education, and Welfare and was in the amount of $260 million over the request.

Harley O. Staggers Reports on the 86th Congress

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. STAGGERS. Mr. Speaker, the 1st session of the 86th Congress was a hardworking body of men and women, determined to fight for its goals and undaunted when faced with Presidential vetoes. We are armed with the knowledge there is another session coming up in January 1960, and with it will be renewed action to pick up the unfinished business of the first session and stand ready to shoulder the new challenges of America's needs and world problems.

So many were the issues studied, passed on, or awaiting further action at the next session that it would be impossible to mention all of them here and treat each with proper coverage.

Therefore, I shall refer only to those principal issues which, I believe, to be of the most importance and interest to West Virginia, and particularly to the Second District, which includes the eastern panhandle counties of Jefferson, Berkeley, Morgan, Hampshire, Mineral, Hardy, Grant, Pendleton, and Tucker. Toward the south extending the slice down the Virginia border is Pocahontas County, and lying well within the State are Webster, Randolph, and Barbour Counties. Toward the north on the Maryland and Pennsylvania borders are Preston and Monongalia Counties.

It is my great privilege to serve the people of the Second District as their Representative in Congress and it is my desire to present informally the following:

RAILROAD

Whatever affects the railroad worker affects a very large segment of the people of the Second District of West Virginia. Having once been a railroader, I have a pretty good insight into the problems and hopes of the man at the throttle, the one who carried a braking stick or oil can, or uses the brawn of his muscles to keep the cars rolling and the track in shape. I know full well that these men have hopes and ambitions and plans for a good life and comfortable retirement for themselves and their dependents.

In 1958 Congress passed a 7-percent social security increase which did not apply to railroad employees, who have their own railroad retirement system.

However, on April 29, 1959, an opportunity beckoned to me to strike a blow for the railroad worker. With the combined efforts of my colleagues, we brought forth legislation that promotes the welfare of this group of workers, who, as many do not know, cannot look to social security for assistance, and who must look to Congress for specific legislation.

The passage of H.R. 8610, which became Public Law 86-28 is a milestone in human relations, exemplifying the brotherhood of man, providing for the widows, orphans and aged as well as assisting those who are thrown out of work through no fault of their own. It took a long time to bring about these amendments to the Railroad Retirement Act, but the long hours, loss of rest, pleadings and tempers totaled little compared to the great good that has resulted. This improved legislation corrects many inequities in the old act and provides long overdue benefits for railroad workers.

COAL RESEARCH

Knowing how important a successful outcome would be to the State of West Virginia, I worked eagerly and diligently for legislation that would establish a Coal Research and Development Commission. House and Senate Members gave their support, knowing coal and its potentialities mean a great deal to the industrial development of this country and to our national defense.

The coal research bill went through Congress with excellent support only to die at the hands of a Presidential veto. Notwithstanding this defeat, renewed effort will create new legislation on this subject when the 2d session of the 86th Congress comes to bat. A Coal Research and Development Commission would put new hopes and new life into the crippled coal industry so well-known by the operators and workers in West Virginia coalfields.

LABOR

Labor legislation was one of the controversial subjects of this past session of Congress and perhaps received more interest than any other issue. The Labor-Management Reporting and Disclosure Act of 1959 became a law September 14, 1959.

I felt the committee measure which was approved by the Labor and Education Committee after 3 months' hard work by those experts on labor matters would have effectively stamped out racketeering and wrongdoing in labor unions and would have been more equitable to both industry and labor.

We cannot judge labor leaders by the few who have taken advantage of the trust placed in them by the members of their organizations. We do not judge all the Disciples by Judas who betrayed Christ. Labor, which in my opinion, includes the factory workers, the builders, teachers, farmers, the homemakers, all city, county, State, and Federal employees, and workers in every field of endeavor which has made this a great and mighty Nation—and it is as essential as brains and capital to our way of life.

History has proven that when we chip away at the liberties of any one group we slowly chip away at the liberty and freedom of all.

VETERANS

Many veterans will be pleased to know that legislation was enacted that makes $100 million available to the Administrator of Veterans' Affairs, upon his request, for immediate use in the direct-loan program for the purpose of reducing existing waiting lists.

Public Law 86-211 modifies the pension programs for veterans of World War I, World War II, and the Korean conflict, and for their widows and children. It provides a sliding scale of pension based on the income and dependency status of the recipient. No person on the pension rolls on the day before the effective date shall have his pension reduced or shall be removed from the pension rolls because of the enactment. All persons on the pension rolls on the day before the effective date will be permitted election to the higher rates if they qualify under the new program.

Of the several new laws pertaining to veterans, these two, I believe, will be of most interest to the majority of veterans wishing to secure loans or receive a pension.

PUBLIC WORKS

Just about everybody benefits by and enjoys the net results of the public works program. It took an overriding vote of the President's veto to get the public works bill through. "Pork barrel" spending and inflationary recklessness were accusations unfairly thrown at Congress, yet Congress stood firm and voted its convictions.

Many of our national leaders think it is all right to send millions abroad for foreign aid—both economical and military—yet they hold up their hands in horror when a proposal for public works is mentioned for the homefront.

West Virginia came in for close to 70 projects, including a fair number for the Second District: Hildebrand lock and dam on the Monongahela River near Morgantown, $1,246,050; dam 8 on Monongahela River below Morgantown in Pennsylvania, $706,875; flood control project on the Potomac River near the Keyser area has been approved by the Army Engineers; and an engineering investigation toward flood control program on Decker's Creek, $14,625.

HOUSING

Housing legislation had a rough and rocky journey. To combat inflation was the reason the President was said to have had for vetoing the two housing bills that went to his desk. Failing to muster sufficient votes to override the veto, the third—a watered-down and insufficient housing bill—went to the White House where it met a better fate.

There is much clamor about the cost of housing for the low-income groups, yet few of us stop to consider the terrific cost of crime and punishment, of disease and poverty, of ignorance. While not implying that better housing would obliterate these foes of mankind, I believe that it would, at least help to check their upward climb. Environment does not necessarily make a saint or a sinner, but it most certainly plays a great part in determining sound moral, physical, and educational habits.

EDUCATION

For many years the question of Federal aid to education has been discussed by Members of Congress, by educators, and by interested lay citizens. Little or nothing had been done. Then suddenly Russia's sputnik aroused this Nation to its shortcomings in the field of education. Some legislation was passed, and some plans and programs are being studied and talked about, but there still remains the great need for more classrooms, more teachers, more opportunities for higher education for students who can qualify for advanced and specialized training.

I would recommend an all-out crash program to inform and alert every community, every county, and every State to the second-class status of the great majority of our teachers and schools. Bombard the people with the unvarnished truth in understandable terms. As an eye opener: During the year 1956 this Nation spent for liquors over $9 billion; for tobacco almost $8 billion; and for cosmetics, beauty, and barber shops, close to $4 billion which makes a sum of almost $21 billion.

Now, compare $21 billion with $11 billion spent for education. Half again more for liquor, tobacco, and beauty than for education of our youth. It just does not make sense.

I urge all elected officials from the county level up to the President of the United States recognize our situation and prove to the mothers and fathers their trust is well placed.

AGRICULTURE

One job the 86th Congress and the administration must do is to help alleviate the distress in the agricultural situation. As I have said many times in the past, agriculture is the greatest industry in the Nation, and I sincerely feel this problem should be given our first consideration.

Attention must be given to the plight of the small farmers in West Virginia and the Nation. Action must be taken to help the desperate circumstances of this worthy group which has been struggling to earn a livelihood for themselves and try to keep filled the breadbasket of the Nation.

The small farmer is the fundamental strength of the United States. History has shown that when small farmers get into trouble, sooner or later the remainder of the economy is in trouble—and today the small farmers are at the danger point.

I know the farming problem is desperate as I live on a farm in Mineral County myself and I know firsthand some of the difficulties being encountered.

Although the national income has increased 100 percent during the past dozen years, according to Government statistics, figures reflect that the agricultural income for the same period has declined 20 percent. This is further worsened by the fact that the purchasing power of the dollar has been reduced 33 percent. In terms of dollar purchasing power, agriculture is receiving only about half of the amount received 12 years ago. And bringing this down to the farmer, it is even worse because, considering the decline in the purchasing power of the dollar, the farmer is receiving only a net income of about one-third of the amount he received during the previous period. We must agree that this is an intolerable situation which—unless checked—can only lead to further confusion and, eventually, chaos.

SOCIAL SECURITY

This year I introduced legislation to lower the age limit for receiving benefits from social security, in the case of a man to age 60, and in the case of a woman to age 55.

Personally, I do not advocate the compulsory retirement at these ages, but I do feel that those men and women who have worked hard and have reached the ages of 55 and 60, and do want to retire, should have that privilege with full social security benefits.

Statistics of the National Institutes of Health show that some human beings age before others, and some people do not have the life expectancy of 65. Lowering the age limit will give many the opportunity of enjoying their retirement years while they are still physically able to do so.

DEFENSE

A mixture of the 1958 recession with its lower revenues and the spiraling cost of public borrowing, high cost of national security, and the inflationary headaches that face both Government and individual buying have forced the national debt to an alltime high.

Congress endeavored to trim here and there, study item by item, and was able to cut the President's budget by $1.5 billion. The big expenditures still remain for national defense, foreign aid, and capital for World Bank.

STATEHOOD FOR ALASKA AND HAWAII

Now, West Virginia may not have been as interested in Hawaii's becoming our 50th State as some other actions of Congress, but I am sure most of us hope at some time in our lives to visit this beautiful and romantic land.

Last January 3 Alaska became officially the 49th State, and caused the flagmakers to lose some sleep; and then Hawaii donned her official statehood bonnet on August 21, and the flagmakers went into an extended period of insomnia.

To these two new States, we, as the hospitable Americans we are, extend a warm welcome to our family, now numbering 50. To those men and women who worked long years, suffered many disappointments, but never gave up the struggle in building their stairways to statehood, I am sure the majority of our great Nation say "a job well done."

Great dangers beset civilization today from every side—the atom bomb, guided missiles, and diseases of all kinds—but the greatest danger of all is communism. It is more deadly to the human body and soul than poisonous gas or the bite of the cobra.

The greatest struggle today is for the control of the people's minds. A new doctrine is being spread in America and the world that for the sake of peace we can coexist with the antireligious evil called communism; that evil which denies the existence of God and the dignity and eternal life of the human soul.

The communistic propagandists are already at work saying Communists are not so bad, that they want peace, too, and we can coexist with them.

In Biblical days, Job was tempted, as was Jesus, to compromise with evil. To save their lives they were offered worldly pleasures and power, but both resisted these temptations.

Imre Nagy, Premier of the anti-Communist uprising in Hungary, yielded to temptation and agreed to compromise with communism. He lost his life. His last words were, "I want the world to know that there can be no compromise."

Jesus said, "What shall it profit a man if he shall gain the whole world and lose his own soul?"

This, I believe, is the key to man's eternal future: Faith in himself and faith in Almighty God as the compassionate ruler of destiny.

A Report to the People of the 7th Congressional District of Maryland on the 1st Session of the 86th Congress by Representative Samuel N. Friedel

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I would like to give the voters of the 7th Congressional District of Maryland a brief review of the accomplishments of the 1st session of the 86th Congress, together with a summary of my votes on major bills as well as my activities on their behalf.

The 1st session of the 86th Congress has been a constructive and productive one. Much has been accomplished in the public interest, notwithstanding the difficulties encountered by a politically divided Government. Historically, such a division inevitably brings with it conflicts in basic philosophies on vital issues. As always, the Democratic Party has put the welfare of our country above partisanship considerations and has endeavored to achieve amity with the executive branch of Government whenever possible.

As an American citizen, and a representative of the people, I have always advocated an adequate national defense. That is why I voted for ample funds for our Armed Forces as well as for space research. The only way to insure peace and continuance of our way of life is to be fully prepared against any eventuality.

In the field of international affairs, the Congress took cognizance of the enormous and growing Communist potential to launch a full-scale nuclear war. To stem the rising tide of the Red menace, I supported mutual security legislation, thereby assisting the free world in our fight for freedom.

As an ardent advocate of economy and efficiency in Government, I point with pride to the fact that the Democratic-controlled Congress appropriated $1.9 billion less than the President requested.

For many years I have advocated some relief in the amount of Federal income taxes that persons have to pay. Accordingly, I have introduced measures to increase the personal tax exemption of a taxpayer, including the exemption for a spouse and dependents and the additional exemption for old age and blindness, from $600 to $800. This will be of greatest assistance to those persons of small income.

My deep interest for the welfare of labor and my profound concern for the aged of our country are well known. We are all aware of the continuous rise in the cost of living. This is a particularly acute problem of the aged of our Nation, as well as for those who receive support under our survivor programs. To assist in the solution of the problem, I introduced a bill to amend the Social Security Act in order to increase the amount of outside earnings permitted without deductions from benefits under the act. I also introduced two different bills to amend the Railroad Retirement Act and the Railroad Unemployment Insurance Act so as to provide increases in benefits and also to increase the amount of outside income which a survivor annuitant may earn without deduction from his or her annuity.

Because of my interest in the veterans, those valiant defenders of our great Nation that we all love, I am happy to report that the Congress increased pensions to veterans disabled by illness, even though not directly connected with their military service. Widows and orphans of such disabled American veterans are to receive increases, too. In addition, the veterans of the Korean war were given more leeway in the use of educational benefits.

Realizing the great importance of the small-business segment of our economy, the Congress enacted a variety of new laws to assist the small businessman. The Small Business Administration was granted additional authority to make loans. A bill amending the Clayton Antitrust Act to expedite procedures for

enforcement of cease and desist orders of the Federal Trade Commission was enacted. Another measure to help small business was the passage of a statute which provides that no State shall tax the income of any firm whose sole interstate commerce activity within the State is the solicitation of orders by salesmen or by mail, and when orders resulting from such solicitation are approved and filled outside of the taxing State.

As a result of congressional action, a new star will be added to our country's flag. Hawaii was brought into the Union as the 50th State, thus giving due notice to the world that our national frontier is further extended into the Pacific and thereby giving full recognition and citizenship to all Americans of whatever creed or former foreign origin. This will go a long way toward creating a stronger protection of democracy in a most vital part of the world.

This session of the Congress will be remembered for the enactment of a labor reform bill to curb racketeering and corruption that has been brought to light by a Senate committee during public hearings. The individual workingman must be protected against dishonesty and abuse by corrupt union officials. I shall watch how this new law works and see in what manner amendments to it may be indicated or be necessary, as I believe in fairness and equity to labor and management alike.

Believing as I do that every American, of whatever color or creed, is equally entitled to all civil rights, I was pleased that the Congress extended the life of the Civil Rights Commission. Needless to say, such measure had my affirmative vote. The privilege of expression of our political preferences through the franchise should not be restricted or impeded in any manner whatsoever. The right to vote is the cornerstone upon which our democracy is built.

The pages of the CONGRESSIONAL RECORD reflect the fact that I have at all times been the spokesman for Maryland's and Baltimore's interests. When the occasion demanded affirmative action, I never hesitated. My many activities on behalf of Friendship International Airport and on behalf of the port of Baltimore are well known. In fact, the Baltimore Chamber of Commerce recently complimented me for my efforts to prevent the exportation of American grain through Canadian ports. I have time and again, strongly protested to the Executive against the removal of various Federal installations and facilities from our city or State. In the interest of industrial peace, I have contacted the President of the United States urging him to take active measures to end the current steel strike. The Bethlehem Steel Co. was urged, in a speech I delivered on the floor of Congress, to sit down with the Industrial Union of Marine and Shipbuilding Workers to agree upon a contract. On every occasion when Baltimore's favorable freight differential was attacked by northern interests, I immediately did my best to demonstrate that Baltimore was equitably entitled to retain such differentials becauses of its natural advantages of location.

In summarizing, I include the following brief summary of my voting record on the major issues enacted during the 1st session of the 86th Congress:

Hawaii statehood: Yes.
Foreign bonds: Yes.
TVA bonds: Yes.
Amendment of labor bill: No.
Passage of labor bill: Yes.
Public works: Yes.
Housing bill: Yes.
Federal Aid Highway Act, increase gas tax: Yes.
Interest rise on savings bonds: No.
Mutual security appropriations: Yes.
Extending Civil Rights Commission: Yes.

The door of my office has always been open to everyone, and I am always available when needed by my constituents. I subscribe to the principle that a Congressman's job is to serve the people and be a vital link between them and the Federal Government.

Respect for Law

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. TOLL. Mr. Speaker, adult and juvenile delinquency is an evergrowing problem of such importance that all the resources of the Nation must be mobilized to combat it.

There are many agencies in the field which are engaged in a perennial battle against this expanding evil. Present efforts obviously are not enough. We must mobilize our resources to a much greater extent.

Hearings which have been held in various portions of the country by a special Senate committee disclose the need for laws to control the sale of firearms and other weapons; illicit narcotics traffic; transportation of obscene literature and photographs; and for other Federal, State, and local controls.

Rehabilitation programs like the Pennsylvania forestry camps for delinquent boys should be supported. The bill for a Youth Conservation Corps, which has already been passed by the U.S. Senate, would help those who have not become delinquents. Studies which can be undertaken by the National Conference on Children and Youth will also contribute to the solutions which are needed.

It is time to concentrate more firmly on solutions to the problem, and programs should be initiated which would tend to reduce the incidence of delinquency and to create more respect for law.

The Federal Bar Association, Philadelphia chapter, has initiated a program to mobilize the resources of the community to promote respect for law and legal processes. The program is designed to educate adults and juveniles alike in the importance of the role of law in a civilized society and to build a healthy attitude toward the law and legal processes. Through the use of communications media—speakers, educators, the clergy, and community groups—the need, function, and operation of existing laws as well as the importance of adherence to these laws in everyday life will be explained and publicized.

All bar associations, civic organizations, newspapers, radio and television and similar groups throughout the country should mobilize their resources and join in a nationwide crusade—on a never-ending day-to-day basis—to promote respect for the law and adherence to its concepts.

Protests Rise as Imports Increase

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, in recent months the impact of unreasonable foreign competition has created distress in a growing number of American industries. More and more domestic producers are seeing their markets invaded, and the jobs of more and more American workers are jeopardized.

Documentation for this spreading economic malady can be found on page after page of the CONGRESSIONAL RECORD, the official and historic journal of the Congress. Numerous Members of the 86th Congress, in both Houses, have called attention repeatedly to the plight of domestic industries.

To provide my colleagues with authoritative evidence of the alarming dimensions of this national problem, I have compiled a compendium of material from the CONGRESSIONAL RECORD bearing on foreign trade. While covering only a few months, this digest will serve as a ready reference to the scope of market losses and job displacement already suffered by domestic industry and workers.

Governmental policies are making Americans dependent upon foreign factories for some goods which this Nation once produced in greater quantity than all other countries combined. As the gentleman from Pennsylvania [Mr. DENT] declared, certain public officials have misinterpreted public opinion. The real public opinion, he said, is that of the displaced American worker, his family, his creditors, and, soon, his local merchants who will have shelves full of—

foreign goods and streets full of unemployed Americans (June 4, 1959).[1]

Real economy may be served better by buying domestic materials at a higher price than by procuring strategic materials from foreign sources. For this reason, among others, a sound national minerals policy is needed in this country. (Senator MURRAY, of Montana, June 9, 1959.)

The jobs of 1,919,200 textile workers are threatened by U.S. trade policies regarding the subsidized exportation of raw cotton and the indiscriminate importation of finished textiles. Congress should act against this grave threat to the American textile industry. (Senator TALMADGE, of Georgia, June 9, 1959.)

The State of Massachusetts faces serious unemployment problems, largely because of the plight of the import-distressed textile industry. Many areas are rapidly becoming distressed because the contraction of this industry is accelerating. (Representative LANE, of Massachusetts, June 12, 1959.)

Has the United States kept Japan out of the Communist trading sphere by sacrificing our domestic textile industry? The fact that Japan has recently contracted to buy 6,000 bales of raw cotton from the U.S.S.R. would indicate that this is not the case. The Lancaster (S.C.) News, in an editorial, points out that it is not inconceivable that products woven from Soviet cotton will find their way into Japanese exports to the United States. (Representative HEMPHILL, of South Carolina, June 12, 1959.)

Leading business firms in the United States are purchasing Soviet-produced materials although these materials are readily available here from domestic sources—often in overabundance. This is only one indication that U.S. foreign trade policy is an area which has too long been neglected. (Senator SCHOEPPEL, of Kansas, June 15, 1959.)

Representative BAILEY, of West Virginia, proposed that the Buy American Act be amended to give it real effectiveness. An alarming trend is underway to buy from foreign manufacturers more and more items essential to national security (June 15, 1959).

In denying the request of American manufacturers of heavy electrical equipment for reasonable controls on imports, OCDM has struck a blow against national security and threatened the jobs of American workers. (Representative STRATTON, of New York, June 16, 1959.)

Must the United States helplessly watch the extinction of a great natural resource? It is important to the U.S. economy to safeguard the North American salmon. Present Japanese commercial fishing methods may destroy the commercial value of the red salmon runs. (Senator BARTLETT, of Alaska, July 1, 1959.)

Contrary to the fears of many, mandatory controls on imports of crude oil have not increased the price of crude oil in this country. The price has, in fact, declined. It would appear that fears of excessively high petroleum prices as a result of the mandatory import control program are completely groundless. (Senator CARLSON, of Kansas, July 6, 1959.)

"Is our textile industry expendable?" This is the question asked by Donald Comer, chairman of the executive committee of Avondale Mills, in a letter addressed to Assistant Secretary of Commerce Henry Kearns. Mr. Comer points out the great need for relief from many adverse conditions threatening the American cotton industry today. (Representative HUDDLESTON, of Alabama, July 6, 1959.)

Migration of American capital abroad carries with it the transfer of job opportunities from these shores to countries abroad. In addition, goods made abroad by American capital are being shipped back to the United States to compete with domestic industry. Congress should know much more about the implications of this movement of capital, both in the short run and in the long run. (Senator PROXMIRE, of Wisconsin, July 8, 1959.)

The U.S. Pacific tuna fleet is being put out of business by mounting tuna imports from Japan. This serious situation is discussed in detail by Ronald J. Ostrow in the Wall Street Journal, July 7, 1959. (Senator ENGLE, of California, July 8, 1959.)

The rising tide of imports hurts not only domestic industry but also the dealer who sells, and the consumer who buys, foreign-made items. By destroying domestic producers, we are undermining the American economy and will foreign manufacturers. (Representative eventually find ourselves at the mercy of BAILEY, of West Virginia, July 13, 1959.)

The domestic shrimp industry will find itself in bankruptcy unless help is provided soon. Shrimp imports are uncontrolled at present and a quota system or reasonable tariff is a dire necessity. (Representative PRESTON, of Georgia, July 13, 1959.)

All of the fleets fishing for tuna out of San Diego and San Pedro have been hit by the vast amount of Japanese tuna being imported into this country. Only responsible safeguards can help the domestic tuna fleets during this critical period. Representative UTT, of California, July 13, 1959.)

The present international competitive situation is dramatically illustrated in a letter from the Japanese Brass Mill to the American Brass Co. The Japanese manufacturer solicited business in this country on grounds that he can purchase rough copper and brass in the United States, fabricate it in Japan, mark it with the name of the American company, and ship it back to the United States for sale with the guarantee that the finished product can still be sold here for less than U.S.-fabricated articles. (Representative MONAGAN, of Connecticut, July 14, 1959.)

It is unfair to American rye growers to import large quantities of rye while U.S. surpluses keep mounting. The Tariff Commission should consider this problem, bearing in mind the effect of rye imports on the producer, the taxpayer, and the national economy. (Representative LANGEN, of Minnesota, July 14, 1959.)

Total world cotton production has increased 9.4 million bales since 1954, while U.S. production has declined 3 million bales. While this country is making a desperate fight to preserve the domestic cotton acreage, imports of cotton textiles continue to rise, from an equivalent of 87,060 bales in 1950 to an estimated equivalent of 286,630 bales in 1958. This not only displaces American textile sales but represents an estimated 500,000 acres that would otherwise have been cultivated by American farmers. (Senator STENNIS, of Mississippi, July 15, 1959.)

It is imperative that American farmers and textile workers be given the safeguards which they have a right to expect from their Government. Unfair competition, both in the price of cotton and in the form of cheap imported textiles from Hong Kong and Japan, is throwing cottongrowers off their farms and putting textile employees out of work. (Senator TALMADGE, of Georgia, July 16, 1959.)

Liquidation of at least 2 million spindles and the jobs connected with this manufacturing capacity can be prevented by the passage of S. 314, a bill to assist the U.S. cotton textile industry to regain its equitable share of the world market. (Senator SMITH, of Maine, July 16, 1959.)

Private investment abroad raises serious problems which Congress has a duty to consider. There is a vast difference between the jobs made available in this country by American exports and the jobs not made available in this country but provided abroad by U.S. foreign investment. (Senator PROXMIRE, of Wisconsin, July 17, 1959.)

The security of workers' jobs should begin at home, say Patrick E. Gorman and Thomas J. Lloyd in their article about rising meat imports, "Ghost Plants in Packing Towns." While the United States does not begrudge foreign workers their new-found prosperity, it must be remembered that, "we have a right to live too." (Representative SILER, of Kentucky, July 17, 1959.)

Imported textiles are having a dangerous impact on the American economy, and the situation is bound to worsen unless steps are taken to safeguard domestic industry and workers, stated Leon Lowenstein, a leader in the U.S. textile industry. (Representative HUDDLESTON, of Alabama, July 20, 1959.)

"Chicago, once the heart of the giant meat industry, is now but a shadow of its former self," warn Patrick E. Gorman and Thomas J. Lloyd in their article, "Ghost Plants in Packing

[1] Dates in parentheses refer to publication dates in the CONGRESSIONAL RECORD.

Towns." Beef from Australia, dumped on the open market cheaper per pound than the American packer can produce it, creates unsound competitive conditions. (Representative PRICE, of Illinois, July 21, 1959.)

The domestic textile industry must be strengthened before the rest of the world become dependent upon the American market. J. Craig Smith, president of Avondale Mills, contends that great ill will could result if the United States encourages other countries to build an industry on the expectation of supplying a market which they will eventually lose. (Representative ROBERTS, of Alabama, July 22, 1959.)

National security is aided by a robust domestic economy, which might not remain so healthy if imports of manufactured products continue to increase. H.R. 8345 would require the Government to award bids on contracts for public works to the lowest domestic bidder if such a bidder had a net income of less than $1 million in the preceding year. (Representative BETTS, of Ohio, July 23, 1959.)

On June 29, the National Cotton Council petitioned the Secretary of Agriculture to act under section 22 of the Agricultural Adjustment Act. This section contains provisions for relief from imports if it is found that foreign products are disrupting the agriculture program of the Government. Compelling reason for this action are abundant. (Senator THURMOND, of South Carolina, July 24, 1959.)

A thorough investigation of the cotton import problem can lead only to recommendations for a quota schedule on foreign cotton textiles. This would be a realistic answer to the severe problem besetting the domestic cotton textile industry. (Representative OLIVER, of Maine, July 28, 1959.)

The domestic textile market has declined steadily since the United States launched its postwar program to revitalize the economies of other free nations. Present U.S. policies toward cotton textile imports deny this country the rewards it is offering to others. (Senator JORDAN, of North Carolina, July 29, 1959.)

The first meeting of the Textile Industry Advisory Council pointed up many of the basic problems created for the industry by cheap foreign imports, many manufactured of American cotton sold overseas at 25 percent less than the domestic price. (Senator PASTORE, of Rhode Island, Aug. 3, 1959.)

"By allowing Hong Kong's cotton goods to flood the United States we are, in effect, trading with Red China," said J. Craig Smith, president of the Avondale Mills, as quoted in an editorial in the Sylacauga (Ala.) Advance. In 1958, Hong Kong bought 114 million yards of cotton fabric from Red China. During 1959, if the present rate continues, 114 million yards will be shipped from Hong Kong to the United States. The State Department, however, seems unwilling to safeguard the domestic textile industry, even from a hostile power, Red China. (Representative ROBERTS, of Alabama, Aug. 3, 1959.)

Importation of shrimp are steadily increasing to the great detriment of the domestic shrimp industry. Imports totaled 85 million pounds in 1958, and are even higher for the first 5 months of 1959 than for the corresponding period a year ago. (Representative SIKES, of Florida, Aug. 6, 1959.)

Since World War II, over 1 million U.S. jobs have been "exported" and over $27 billion in U.S. capital have been invested in factories, mines, oil wells, and other enterprises abroad. H.R. 5, calculated to induce still more American companies to invest abroad, is a suicidal bill which would sap the foundation of the American economy. (Representative BAILEY, of West Virginia, Aug. 10, 1959.)

American cotton sold abroad for 8 cents less per pound than it can be purchased by domestic mills creates a severe problem for the entire textile industry and related trades, stated Donald Comer, leading American textile manufacturer. American-grown cotton is used to manufacture the very imports which threaten the domestic industry. (Representative HUDDLESTON, of Alabama, Aug. 13, 1959.)

Vanishing American markets pose a real threat to the Nation, according to Mill and Factory magazine. Action must be taken to offset U.S. disadvantages in world trade. (Representative HENDERSON, of Ohio, Aug. 13, 1959.)

Progressive demolition of U.S. tariffs under the trade agreements program instituted in 1934 is a major cause of the exportation of American industry abroad, according to E. F. Tompkins in the New York Journal-American. Some of the largest U.S. industries can no longer compete effectively in the world market. (Representative KNOX, of Michigan, Aug. 14, 1959.)

A recent survey conducted by the magazine Mill and Factory shows that 75 percent of 150 American industrial companies polled expect to lose a greater share of the domestic market to foreign products. Furthermore, nearly two-thirds of these companies anticipate rising unemployment as a direct result of this market invasion. (Representative SIMPSON of Pennsylvania, Aug. 14, 1959.)

The U.S. steel industry provides a most dramatic instance of market penetration by imports. This country now buys more steel abroad than it sells, and the industry's production would be far below capacity even without a steel strike this year. (Representative BETTS, of Ohio, Aug. 14, 1959.)

H.R. 5 would injure the Nation by exporting still more American jobs and capital. Domestic industry is already threatened by foreign competition to a dangerous degree. Encouraging American industries to move abroad is not the solution. (Representative BRAY, of Indiana, Aug. 17, 1959.)

Three hundred textile mills have been closed and 345,000 millworkers displaced by the U.S. trade agreements program, warned Representative W. J. BRYAN DORN, of South Carolina, over the Manion Forum radio network on August 9, 1959. Mr. DORN stated that unfair imports are severely damaging the U.S. economy. (Representative LANE, of Massachusetts, Aug. 20, 1959.)

Textile imports must be controlled unless this Nation is willing to write off the domestic textile industry as expendable, according to an editorial in the Lancaster (S.C.) News of August 13, 1959. The United States has already lost foreign markets, but this will be a relatively minor blow should the domestic market be exposed to further invasion of textiles from low-wage countries. (Representative HEMPHILL, of South Carolina, Aug. 20, 1959.)

The rapid rise in imported stainless steel flatware from Japan has caused serious injury to the domestic industry. In a letter to President Eisenhower, the U.S. Stainless Steel Flatware Manufacturers Association asked for relief in the form of a global quota of 4 million dozen annually on all imports of stainless steel flatware having a foreign value up to and including $3.50 per dozen. (Representative DENT, of Pennsylvania, Aug. 20, 1959.)

Tax concessions for American industry abroad are unfair to every American taxpayer. H.R. 5 would, in fact, offer bounties to American industries which do business in foreign countries. (Senator AIKEN, of Vermont, August 25, 1959.)

Steel imports in the first 6 months of 1959 seem sure to have exceeded the 1.7 million tons imported in all of 1958. Ray Vicker and Jeffery Pemberton, in the Wall Street Journal of July 29, 1959, point out that as imports rise, exports are falling steadily. (Senator GOLDWATER, of Arizona, Aug. 25, 1959.)

A large segment of the U.S. labor movement insists on a modernized trade policy geared to meet the current import crisis. Labor will welcome the cooperation and support of farsighted industry groups such as the Trade Relations Council in their campaign to prevent the wholesale destruction of American jobs. (Representative BAILEY, of West Virginia, Aug. 27, 1959.)

Labor and management have joined to discuss the threat of imported textiles to the garment industry. The jobs of 400,000 American workers and the billion-dollar investment of American management are now in jeopardy. (Senator KEATING, of New York, Aug. 27, 1959.)

Huge importations of lamb from Australia and New Zealand must be controlled or the American sheep industry will be led to economic slaughter. (Senator MCGEE, of Wyoming, Aug. 28, 1959.)

The United States must be extremely wary in trade talks with Khrushchev. Before entering into trade agreements with Communist countries, this Nation

must be very sure that American security will not be threatened. (Senator WILEY, of Wisconsin, Aug. 31, 1959.)

The flood of foreign imports and the decline of U.S. exports create a truly alarming situation that may well be disastrous for many great American industries. Foreign made sewing machines, watches, typewriters, automobiles, textiles, and other manufactures are bringing unemployment to vast areas of this country. Congress must act soon to prevent the Nation's economic collapse. (Representative PHILBIN, of Massachusetts, Sept. 1, 1959.)

The United States must take a firm stand now against international cartels and monopolies. Restrictive business practices abroad are undermining American economic development. (Representative WOLF, of Iowa, Sept. 2, 1959.)

The American workingman is suffering the disastrous effects of foreign trade policies injurious to the American economy. Imported textiles, wire, automobiles, and countless other manufactures have cost thousands of American jobs. (Representative DENT, of Pennsylvania, Sept. 4, 1959.)

"Exports of U.S. goods are declining while imports from abroad are rising," Leslie Gould observed in his article, "Our Trade Gap Dwindles—Why It May Soon Be Unfavorable." Loss of American technical advantage, restoration of foreign industry, and the passing of the sellers' market can be blamed for this critical problem. (Representative DORN, of South Carolina, Sept. 4, 1959.)

The United States must insist on reciprocal treatment for every tariff concession it grants at the GATT meeting in 1961. Only a reversal of the State Department's past policy of tariff giveaways can preserve the American economy. (Representative SIMPSON of Pennsylvania, Sept. 4, 1959.)

Imported crabmeat and canned oysters from Japan threaten prosperity and employment in the Pacific Coast shellfish industry. (Representative MACK of Washington, Sept. 4, 1959.)

For America's coal miners and workers, TVA seems to mean "Take Vittles Away." The United Mine Workers Journal of September 1, 1959, reports that the Tennessee Valley Authority spent $17,900,000 on foreign-made manufactured goods for the fiscal year ending June 30, 1959. (Representative SILER, of Kentucky, Sept. 7, 1959.)

The Treasury Department is failing to safeguard American industry from foreign producers who dump their products in the U.S. market. (Representative SIMPSON of Pennsylvania, Sept. 8, 1959.)

Japan seems about to destroy completely the U.S. clothing industry. U.S. producers cannot compete with foreign wages, but we can safeguard our right to earn a living. (Representative BARRETT, of Pennsylvania, Sept. 9, 1959.)

Congress, responsible to all U.S. citizens, will be guilty of a grave dereliction of duty if it permits unnecessary deterioration of any domestic industry. (Representative SAYLOR, of Pennsylvania, Sept. 10, 1959.)

Cheap men's wear from the Far East threatens the U.S. market and distresses the domestic industry, Laurence G. O'Donnell reported in the Wall Street Journal. (Representative HEMPHILL, of South Carolina, Sept. 11, 1959.)

Agricultural imports from Australia and New Zealand pose a serious threat to U.S. farmers. (Representative KNOX, of Michigan, Sept. 11, 1959.)

Will the introduction of smaller American-made cars restore U.S. export markets lost in recent years? This will be a true test of reciprocity. (Representative KNOX, of Michigan, Sept. 11, 1959.)

A quota and tariff are essential to safeguard the domestic sulfur industry from the disastrous effects of imports from nations where substandard wages and preferential shipping rates prevail. (Representative SIMPSON of Pennsylvania, Sept. 11, 1959.)

Prompt action must be taken to assist the crippled domestic mining industry. Imports are working untold hardships on mineworkers and mineowners alike. (Representative PFOST, of Idaho, Sept 12, 1959.)

Before the next GATT negotations in 1961, the American people must be alerted to the dangers inherent in the Government's policy of tariff handouts. There is still time to prevent economic catastrophe. (Representative KNOX, of Michigan, Sept. 12, 1959.)

U.S. typewriter exports sag badly while imports rise, according to a research report by the Business and Defense Services Administration. The United States dominated the world typewriter market before World War II, supplying one-half to two-thirds of world demand. In 1958, less than 10 percent of the world market was supplied by U.S. producers. (Representative BETTS, of Ohio, Sept. 12, 1959.)

U.S. farm imports exceed farm exports despite overwhelming farm surpluses (Representative DORN of South Carolina, Sept. 12, 1959.)

An editorial in Tradeways, the publication of the Trade Relations Council of the United States, points out that further offers to cut our already decimated traiffs cannot hold back the trend toward large trade blocs abroad. The only certainty would be to expose American industries to the increasingly injurious effects of imports from low-wage countries. (Representative SIMPSON of Pennsylvania, Sept. 12, 1959.)

The United States cannot compete with low-priced foreign imports, and it is time for the Government to stop assisting American industries that move abroad. (Representative GROSS, of Iowa, Sept. 14, 1959.)

The U.S. textile industry is in serious difficulty, largely because of irresponsible trade policies. At long last, American labor has raised its voice in protest. (Representative SIMPSON of Pennsylvania, Sept. 14, 1959.)

Low-wage, low-taxed, low-priced, subsidized goods entering the United States to compete with high-wage, high-taxed, high-priced domestic products threaten 10 to 15 million American jobs, George E. Sokolsky noted in his syndicated column of September 12, 1959. (Representative BECKER, of New York, Sept. 15, 1959.)

A partial listing of ships and cargoes entering U.S. ports on September 9, 1959, points out the tremendous variety and volume of goods being imported from abroad to compete with American products. (Representative DENT, of Pennsylvania, Sept. 15, 1959.)

Since June 1 of this year alone, between 40 and 50 of our colleagues in the House and Senate have proposed legislation designed to correct some of the injurious effects of the current trade policies of the United States.

Mr. Speaker, it is time for this Nation to insist that other nations discontinue their trade discriminations against our exports; it is also time that realistic legislative action be taken to end those trade policies that permit imports to saturate our domestic markets, destroy our jobs, and weaken our defense potential. Our American way of life must be preserved and strengthened by a new trade policy that is in the national interest and that contributes to the welfare of every American.

The Milk Price Crisis in Southeastern Wisconsin

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FLYNN. Mr. Speaker, early this spring, a number of Wisconsin Congressmen spoke on the floor of this House, pointing out the urgency of the situation existing in Wisconsin insofar as the milk market was concerned—and with particular reference to the prices Wisconsin farmers received for grade A milk.

It was a pleasure to participate in this discussion, which took place at the time the Maryland-Virginia Milk Producers Cooperative was engaged in fighting uniform standards for the interstate shipment of fluid milk. In this discussion, we Wisconsin Members, pointed out that for some unknown reason, grade A milk being produced under the highest sanitary standards existing anywhere in the Nation, was being produced in Wisconsin and being sold on the Chicago milk market—or Chicago milkshed as it is commonly known—for $2 less per hundredweight than milk sold on the eastern and southern markets. I inserted in the RECORD on March 9, 1959, page 3238, a letter from the Pure Milk Association, Chicago, Ill., to the effect that the PMA could deliver grade A Wisconsin milk, meeting these highest standards, to the District of Columbia area for $1.02 less per hundredweight than the Washington dairies were paying for milk from the Maryland-Virginia

Milk Producers Co-op. This price, on Wisconsin milk, was after the cost of shipping—about $1 per hundredweight—had been paid.

We, from Wisconsin, could see no reason then and see no reason now why we should sell milk in the Chicago milk market for $2 less than what the same milk would bring in the eastern and southern markets. Wisconsin does not want to engage in tactics which would cause the prices in the eastern and southern markets to come down to the Chicago level when the economic facts are that the Chicago market prices to the farmers should be higher. The discrepancy in prices comes from the fact that the Department of Agriculture, in issuing its marketing orders, uses one formula for basing the price in the East and South and another formula for basing the price in the Chicago and other Midwest markets.

In order to correct this situation, we asked the Department of Agriculture to hold hearings in Chicago so the Pure Milk Association, the Pure Milk Products Cooperative and all other interested organizations and individuals could appear and offer testimony to establish the need for a higher price in the Chicago area and for the use of a different pricing formula. I was only too glad to join in this request with the other Wisconsin Congressmen.

However, the Department of Agriculture refused to hold any hearings and insisted that the Chicago milk price formula continue to be applied. I have been in constant touch with the Pure Milk Association of which a constituent of mine, Arnie Agnew of Milton, Wis., is vice president, and with other associations, and there has been no improvement whatever in the Chicago milk price situation and no constructive action has been taken by the Department of Agriculture.

As a result, while as announced this week by Mr. Benson, the net farm income of all farmers in the Nation has dropped 12 percent in 1959 from a comparable period in 1958, the income of the dairy farmer has dropped even more than 12 percent. With the dairy farmer caught in the price squeeze—costs going up and income going down—these dairymen are unable to meet their bills with their monthly milk checks. They are operating at a loss and the situation in my district in southeastern Wisconsin has become so acute that the sound, conservative, hardworking, old-established dairymen, farmers who are not given to threats or violence, have recently met at Evansville, Wis., to discuss their mutual problem. The result of this meeting is that these same farmers have been giving serious consideration to starting a milk strike. This will be a strike that is justified in every economic respect. It will be a strike that the most fairminded and reasonable person will admit is long overdue. If this strike occurs, as it now appears likely, I predict it will spread from the First Congressional District of Wisconsin to milk-producing areas in Illinois, Minnesota, Ohio, and Michigan. We must remember that the last price increase which dairy farmers received under the milk marketing order administered by Mr. Benson, did not come until the Michigan dairy farmers went on strike and tied up the Detroit milk supply.

I have been interested in an editorial on this subject published by the Janesville Gazette of Janesville, Wis. This paper, which has historically and uniformly supported the Republican Party and its policies, has come out on the side of the dairy farmer, even though the Secretary of Agriculture is a Republican, because the Gazette knows the merits of the case presented by the dairy farmers and knows their financial distress in the area.

A milk strike seems a high price to pay to secure a fair return to keep pace with our present economy. I say to you, Mr. Speaker, and to all Members of this House, that Secretary Benson not only continues to follow unsound policies with his farm program with its astronomical costs and fantastic surpluses, but he has also, in spite of economic charges, refused to schedule hearings on the Chicago milk prices and prefers to ignore the plight of the Wisconsin dairy farmer rather than listen to testimony relative to the merits of these farmers' complaints. Why should our farmers be forced to strike in order to gain recognition of their need for a price increase? Why should Secretary Benson refuse to hold the requested hearings on milk prices?

I take the time to bring this deplorable situation to the attention of the Members of Congress, in the hope of showing why it is necessary for the Wisconsin dairy farmers, in the Chicago milk market, to take the extreme step of giving serious consideration to a milk strike in order to secure for themselves fair treatment and a decent income. I sincerely hope that in this crisis we can operate under the rules of law and reason and not under the rule of economic pressure which would prevail in the event of a milk strike. I call upon the Secretary of Agriculture to act on the dairy farmers' request for hearings on the Chicago milk prices and the pricing formula. I call upon him to act and not to let the situation get out of hand by arbitrarily refusing to act even though duty and responsibility dictate that he should act.

PROCEEDINGS OF THE SENATE SUBSEQUENT TO SINE DIE ADJOURNMENT

ADDITIONAL APPOINTMENTS BY THE VICE PRESIDENT

Pursuant to the provisions of Senate Resolution 198, 86th Congress, 1st session, on September 30, 1959, the Vice President approved the appointment of the following Senators to represent the Senate as a special committee at the ceremonies to be held in Honolulu, Hawaii, on November 26, 1959, to commemorate the first official observance of the admission of Hawaii into the Union as a State: Mr. MANSFIELD, chairman, Mr. HOLLAND, Mr. LONG of Louisiana, Mr. KUCHEL, Mr. MARTIN, Mr. NEUBERGER, Mr. COOPER, Mr. FONG, ex officio, and Mr. LONG of Hawaii, ex officio.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Long of Hawaii, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS
JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.
First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.
Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.
Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.
Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.
Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.
Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.
Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.
Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.
Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.
Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Thompson of Texas, Jones of Missouri, Hagen, Johnson of Wisconsin, Bass of Tennessee, Jennings, Matthews, McGovern, Coad, Breeding, Stubblefield, McSween, Hogan, Levering, Hoeven, Dague, Belcher, McIntire, Dixon, Smith of Kansas, Teague of California, Quie, Short, Mrs. May, Messrs. Pirnie, Latta, and Fernós-Isern.

Committee on Appropriations

Messrs.
